A PRACTICAL TREATISE on the peculiar TONIC PROPERTIES of the BOUND-LEAF CORNEL (Cornus Circinata); with full Directions for its Use in Cases of Debility of the Stomach, and other Local as well as General Debility from Intemperance, a residence in a Tropical Climate, or breaking up of Constitution, with full instructions for the choice of articles of Diet, Wine, Spirits, &c., &c., for weakly and aged people; Remarks on Digestion, &c., &c. To which are added, an Account of the Anti-spaemic Properties of the *Lobelia Inflata*, a most efficacious Remedy for Asthma, with directions for its use, &c., &c. By J. H. ROBINSON, M.D., of St. Croix.

'The Bound-leaf Cornel we have found in cases of indigestion from weakness of the stomach, and other cases of debility, local and general, very superior to the sulphate of quinine or any of the tonics in general use. Weakly and aged people, and those whose constitutions have suffered either from intemperance or a tropical climate, will derive more information of real practical utility from Dr. Robinson's work than from the methods of preserving health, and other contemptible medical works for popular reference, puff'd off by quotations from deminicalian religious periodicals, the editors of which certainly display not a little ingenuity in practising imposture on their credulous dupes.'—*Monthly Medical Gazette*, Feb. 1835.

Printed for S. Highley, Fleet-street; and sold by all Booksellers.

THE COLOSSEUM, REGENT'S PARK.
THE Public are respectfully invited to an inspection of this magnificent Exhibition, in its progress towards completion. It consists of the stupendous Panorama of London, taken from the summit of St. Paul's; a Saloon for the reception of Works of Art; a long range of Conservatories, stocked with the choicest Plants; and the Swiss Cottage.—Admission, 6s. each person; Tickets to be had at the Lodge only, on entering.

MAJOR'S ETON LATIN GRAMMAR, with the Accents and Quantity marked.

This day is published, price 2s. 6d., a new and greatly improved edition, being the thirteenth, of

DR. MAJOR'S ETON LATIN GRAMMAR, with Explanatory Notes, and useful Additions to assist the learner. This edition has been most carefully revised, and the Accents and Quantity marked. By Dr. CAREY.

The sale of twelve very large editions, within a few years, is the best evidence of the value and estimation in which the notes of Dr. Major are held; and the patronage so liberally given, has induced the proprietors to spare no expense in rendering this edition in every way worthy of their support.

London: printed for Harding and Lepard; Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; Whitaker; Treacher and Arnott; J. Richardson; T. Boscawen and Sons; Simpkin and Marshall; J. Duncan; Hamilton, Adams, and Co.; E. Williams; Harvey and Darton; Poole and Edwards; Baker and Fletcher; Hurst, Chance, and Co.; Cowie and Co.; Sustance and Stretch; J. Collingwood; and C. and J. Rivington.—Of whom may be had,

PERRIN'S FRENCH SPELLING, the twenty-first edition. Edited by C. Gros. Price 2s.

TO THE INHABITANTS OF BIRMINGHAM.

MR. BUCKINGHAM cannot quit the Town of Birmingham without expressing his regret that the rapid success of his engagements should render it impossible for him to pay his personal respects to the many distinguished Families and Individuals from whom he has received, during his short stay among them, so many unequivocal and flattering proofs of sincere and deep interest in the great public object of which he is the humble advocate—a Free Trade to every part of the Eastern World. He takes this, therefore, as the only practicable method of assuring them, that at no place previously visited by him with the same view, has he received higher gratification, or more certain indications of a powerful sympathy being awakened by the Lectures which he has recently had the honour to deliver before them. He hopes, at some future, and not very distant period, to have the happiness of meeting them again, and offering further illustrations of the benefits which they have it in their power to secure for themselves, this country, and undisturbed, by preventing the further renewal of the existing monopoly of Trade to the East.

In the mean time, and with the hope of thus assisting, at least, to keep alive the interest now so powerfully excited, Mr. Buckingham takes the present occasion to say, that out of the proceeds arising from the delivery of his lectures, a portion has been laid aside for the supply of such Bibles as may be most desirable for reference and use to any Association that may be formed in Birmingham with the express view of promoting the great question of Free Trade to the East; and that an equal portion will be appropriated as Rewards for the composition of certain Prize Essays descriptive of the present state of Birmingham and its surrounding districts, especially with reference to its trade and manufactures, its commercial relations with other parts of the globe, and an enumeration of the probable advantages which the town and neighbourhood would derive from the opening of a free commercial intercourse with all the vast and populous regions of the East.

These Essays are to be composed, as nearly as the candidates may find practicable, on the models of the Account of Bussorah, the chief Emporium of the Persian Gulf, which will be found in 'The Oriental Herald,' vol. 10, page 72, and page 473; and the Account of the Trade to Smyrna, the principal Mart of the Levant, which is contained in the same work, vol. 19, page 56. For such as may be presented before the 1st of August next the following Premium will be given:

For the first in order to merit £35.
 For the second 10.
 For the third 5.

In addition to which, the sum of 51. will be given for any other article illustrative of the local resources and manufactures of Birmingham, which may be deemed sufficiently complete and interesting to deserve insertion in 'The Oriental Herald.'

The principal object of thus inviting compositions of this nature is to make 'The Oriental Herald' the channel of conveying to the inhabitants of the Eastern World, among whom its circulation is much greater than that of any other English Publication that can be named, the best information respecting the manufacturing and mercantile power of Great Britain, so that India and England may be each intimately acquainted with all the articles respectively produced by either, and thus to bind the two hemispheres more closely together by the most indissoluble of all ties—natural and reciprocal interest—and perpetually increasing demand and supply.

It is intended also, by this graduated scale of rewards, to encourage the exertions of several Candidates; but Mr. Buckingham leaves the decision of their comparative merits to better judgment than his own, for which purpose he proposes to submit such compositions as may be deposited at the Philosophical Institution before the 1st of August next, to the judgment of the following Public Officers and Gentlemen of the town of Birmingham, who have kindly undertaken the arbitration, and whose award shall be final:—

William Hamper, Esq., Magistrate; the High and Low Bailiffs, the President, the Vice-President, and the Secretary of the Chamber of Commerce; the President, the Vice-President, and the Secretary of the Philosophical Institution; Edward Johnston, M.D.; John Johnston, M.D.; Rev. Rann Kennedy, M.A.; Thomas Attwood, Esq., Banker; Joshua Scholefield Esq., Merchant; E. T. Moore, Esq., Merchant; William Phipson, Esq., Assay Master; Joseph Frederick Ledsam, Esq.; Mr. Hill, of Haleswood.

CONSTABLE'S MISCELLANY.
 This day is published, Vol. 20, price 2s. 6d., or on fine paper, 5s., containing
A PERSONAL NARRATIVE of a JOURNEY through NORWAY, PART of SWEDEN and the ISLANDS and Strips of DENMARK. By DEWEY CONWAY. London: Hurst, Chance, and Co.; and Constable and Co., Edinburgh; where may be had, by the same Author, price 16s., a second edition of
SOLITARY WALKS THROUGH MANY LANDS, with TALES and LEGENDS.

In one thick volume 8vo., price 7s. 6d.
REFLECTIONS on the PRESENT STATE of BRITISH INDIA. Dedicated to Woolryche Whitmore, Esq., M.P.

'We strongly recommend this excellent Work, as one of the best that has been published on India for a very long period.'—*Oriental Herald*.

London: Hurst, Chance, and Co., 64, St. Paul's Church-yard.

Published by J. Robins, Bridge-court, Strand, and
LONDON CHARACTERS. By GEORGE CRUIKSHANK. 18 coloured etchings, price 6s.

'This is the latest of G. C.'s admirable productions, and among the very best.'—*London Weekly Review*, Feb. 21.

THE HARP of INNISFAIL. By D. S. L. Demy 8vo., price 2s.

'It is one of the most surprising first poems we have ever perused; it is exuberant in magnificent images and gorgeous delineations.'—*Birmingham Journal*, Feb. 21.

THE DOOM of DERENZIE, a National Poem. By the late T. FURLONG. Post 8vo. 5s.

HEAVEN OPENED. By A. ADAMS. Demy 8vo. Price 6d.

THE LADIES' POCKET MAGAZINE, for March, price 6d., is embellished with two coloured Prints of Fashions, and two other Engravings.

'A third edition of the Number for January is ready, containing the unpublished Irish Melody by Mr. Moore, and the splendid Steel Engraving of 'The Elval Fairies.'

THE GENTLEMAN'S POCKET MAGAZINE, for March, price 6d., is embellished with 'The Baker,' a coloured Etching by G. Cruikshank; an Engraving on Steel, after R. Westall, R.A.; a Portrait of Mr. Kebley; and a Wood-cut.

'We have each of these Monthly Publications, and must say, that, for sixpence, to have both Literature and Fashion—Dresses—Engravings of fancy subjects—and a tolerable selection of prose and verse, is a good and sufficient claim upon the patronage of the public.'—*Literary Gazette*.

ÆGINA MARBLE.
 Just published in folio, consisting of Sixteen Plates with Letter-press, and printed on Superior Royal Tinted Paper, Price 11. 12s.

OUTLINES of the ÆGINA MARBLE, drawn from the Statues of the Royal Liverpool Institution. By EDWIN LYON.

London: published by Edwin Lyon; by Moon, Sons and Graves, printers to the King, 6, Pall Mall; and sold by all Book and Print-sellers in Liverpool, &c., &c.

'The lovers of art have now an opportunity of examining the Library with a copy of a work which we do not think it necessary to say is not only highly honorable to the talent of the artist, but creditable to the town where the work has been executed; and we strongly recommend these faithful copies of some of the finest specimens of Ancient Sculpture to the patronage of an enlightened community.'—*Liverpool Mercury*.

Of whom also may be had, an Engraving of the TEMPLE OF JUPITER, in the Island of Ægina, from the celebrated picture by J. M. W. TURNER, Esq., R.A.; in the possession of the Publishers. Dedicated, by permission, to the Right Honourable John Singleton, Baron Lyndhurst, Lord High Chancellor of Great Britain.

The Plate is engraved in the very first style of the art, by John Pye, Esq. Size, 25 inches by 19 inches. Prints 11. 12s. 6d.; French Proofs 31. 8s.; India Proofs 41. 4s.; Proofs before the letters 61. 6s.

This day is published, price Five Shillings, No. III. of **THE LAW MAGAZINE; or, QUARTERLY REVIEW of JURISPRUDENCE.** Contents:—ART. I. Practice of the English Courts of Common Law; French Procedure, including the History of a French Suit, with its incidents; Law Abuses of France. 1. An Inquiry into the Present State of the Civil Law of England. By John Miller, Esq., of Lincoln's Inn. 2. Rationale of Judicial Evidence specially applied to English Practice. From the Manuscripts of Jeremy Bentham, Esq., Bench of Lincoln's Inn. Book VIII. On the Technical System of Procedure. 3. Des Institutions Juridiques de l'Angleterre comparées avec celles de la France, et de quelques autres États Anciens et Modernes. Par Joseph Rey, de Grenoble, Avocat, ancien Magistrat.—II. Medical Jurisprudence. No. III.—Mercantile Law. No. III.—IV. On Conveyancing. No. III.—V. On the Wife's Separate Estate, and the established Restriction upon the Alienation of it by Anticipation.—VI. On the Right of the Ordinary to Dispose of Seats or Pews in the Chancel of a Parish Church.—VII. The Law relating to Fences.—VIII. Poor Laws: 1. A Summary of the Law of Settlement, by Sir Gregory A. Lewin. 2. A Summary of the Laws for the Government and Maintenance of the Poor, by Sir G. A. Lewin. 3. A Treatise on Parochial Settlement, by Edward John Gambier, Barrister at Law.—IX. Codification Controversy: Mis-statements and Mistakes of Mr. Humphreys; a Contre-Projet to the Humphreysian Code, and to the Projects of Redaction of Masson, Hammond, Unalack, and Twiss; by John James Park, Esq., Barrister at Law.—Digest of Cases: Common Law; Equity; Ecclesiastical.—Queries circulated by the Common-Law Commissioners: Queries on Pleading and on certain Matters of Practice; Queries as to the Welsh Jurisdiction; Queries on the Regulation of the Courts and the Dispatch of Business.—Expected Changes of Police.—Benefit Societies.—Events of the Quarter, &c.—Notices to Correspondents.—Recent Law Publications.

Price 8d.

REVIEWS OF NEW BOOKS.

OLD ENGLISH BALLADS.

The Legendary Cabinet, a Collection of British National Ballads, Ancient and Modern, from the best Authorities, with Notes and Illustrations. By the Rev. J. D. Parry, M.A. Joy. London, 1829.

WERE we called upon to name the source from which the justest representation of England in the olden time was to be gathered, we should not refer the inquirer to Simeon Dunelmensis, nor any of the *Decem Scriptores*, nor to Fabyan, nor Hall, nor Grafton, nor Stow, but to one of the collections of Old Ballads by Percy or Ritson. From the chroniclers he would indeed receive a far more detailed and elaborate catalogue of facts, and perhaps, if he were of a fact-loving disposition, far more amusement, than he would from the ballad-writers; but he would assuredly obtain a much more confined insight into the national feeling and character. For, the historians being, without an exception, men removed, either by their birth, their education, or their pursuits, from the body of the people, however they were themselves modified and influenced by the spirit of the times in which they lived, could not be as unexceptionable representatives of that spirit as the popular songs which were its immediate outgrowth. To borrow an illustration from botany,—a colour may be given to some flowers which are naturally white, by constantly watering the plant with dyes; but no one will contend, on account of its shape, that the flower so tinted is a legitimate representative of its class. It will not be surprising to our readers, under these circumstances, that we should attach a very high value to all those poetical reliques of former days which the zeal of antiquarians has ferreted forth from the dark nooks and hiding-places in which they have been treasured,—a value which we give to the early poetry of all nations, but which, in the case of our own, we feel to be greatly enhanced by the benefits it has conferred upon us in these later days, benefits which have been noticed by our own great modern poet, and which we shall gratefully confess to be far beyond even the acknowledgment which he has made, since we have his own authority for stating that he feels himself to have been modified by their study. We do not know whether our solicitude to understand the English feeling in old times, may not appear of itself to require to be accounted for, and whether, in general, the importance which we attach to the less obvious, and, as it were, lurking tendencies of poetical compositions, may not call for some defence, or some explanation. We are, we confess, not of those who would scorn to give way to our feelings till we had carefully analysed them; much less are we, we hope, of those whose feelings are only to be brought out through analysis. We are moved by poetry, and we know it to be poetry because it has so moved us; but we hope, and it is in all humility that we do so, that it is only by awakening our good feelings, our sympathies with all that is lovely and that loves, our ardent pursuit of the beautiful through all the forms in which it is partially realised, and, above all, by confirming us in

Our cheerful faith, that all we see
Is full of blessings,

that poetry produces any effect upon our minds; in short, we consider that, as every active exertion of the mind is necessarily good, poetry, by awakening power within it, and stimulating it into activity, is, in this sense at least, a means to the high

end of enlightening and purifying the heart. Poetry is, therefore, in our view, something more than a mere amusement, something more than a mere dram, which affords, indeed, a momentary intoxication, to be followed by a correspondent depression of the spirits. Poetry is not the mere supplier to the mind of the means of getting rid of vacuity without the trouble of thought; but, as it has its very essence in energy, it can only exist for that mind in which its power is manifested by its calling into activity, or retaining in that state of exaltation, the feelings, hopes, and affections, which it has excited. It is on this account that we have often waged violent war on the works which many persons would very likely consider undeserving of severe censure, from being unpretending, light works, intended only to amuse; but we cannot look upon them in this way, knowing, as we do, that whatever does not awaken power in the mind naturally prostrates the mind, and renders it more and more incapable of rousing itself into activity at any future period; and feeling, moreover, that it is works like these whose general reception in society keeps out more deserving authors from holding the situation to which they are entitled and which posterity will confer on them.

In a very early state of society, poetry being much less the result of a determination to supply the market with a commodity which happens to be in demand, or an inordinate craving after reputation, than the outgrowth of a real inspiration, called forth by the circumstances and answering to the moral wants of a people, we are naturally led to look upon it with very different views from those with which we should examine the compositions of an age such as our own. Convinced that it arose out of, and immediately represented, the national character, probably at its birth, we feel that it is interesting to us, principally as showing what was, and how was formed, that national character; and the knowledge which we thus obtain we are particularly anxious to possess, because we know, however remote we may be from them in point of time, that the circumstances which first formed the national character, contributed to form that variation of it in which we partake, from its being peculiar to the period in which we live. In fact, we hold it necessary, in order to peruse with benefit the writings of any author whatsoever, that the feeling of the individual, modified by the feeling of his time, should be thoroughly understood; and those feelings are only links in the one great chain, the effects of prior causes and the causes of subsequent effects.

Such are the reasons which induce us to pay more attention than their merits as poems would seem to claim, to the ballads of all nations, and especially to our own. And, in proportion to the admiration which we feel for the ballads themselves, and our conviction of their utility, is our gratitude to any person who either supplies us with new copies of favourite compositions, or discovers some which have hitherto escaped the search of antiquarians. But we also consider these specimens of early song as likely to be of no trifling use under the particular circumstances of the English people: we believe that a saner spirit has grown up among us, silently, indeed, but effectively, and that its manifestation is the rescuing of poetry from that miserable haze of words which clouded it during the last century; that the wretched drivelling of the minor stars of the Popian school has long ago been consigned to the condempt it merited; and that the great arch-sorcerer

himself, with his cup of poisonous sweets, has had his rod snatched from him, to the rescuing of poetry and real feeling from the enchanted chair wherein they were spell-bound. Vague generalities, and an absolute ignorance of nature, have been replaced by strength and distinctness of thought, and a minute acquaintance with the sciences of the metaphysical and material world, in all of our great modern poets, and with various degrees of approximation, in all of our minor writers; except, indeed, in Lord Byron, whose frequently misty diction, and profound ignorance on all subjects whatsoever, would have won him a high place amongst the poetical idols of the eighteenth century. In producing a consummation so desirable, we believe the study of the old ballads to have had much influence; and we are very sure that the more they are studied the more they will enforce the sterling rule, that poetry is of the thought and not of the word, and that ostentatious combinations of sounding phrases no more constitute it in reality than the polished reflectors of a lamp are in themselves the light that dazzles us.

The book which has induced us to make these observations, is, from its size, calculated for general circulation, and may assist in the good work which Percy and his coadjutors advanced; but it is far from being what we think such a work should be; it contains a number of very interesting ballads, reprinted from Percy, Evans, and others, and has one advantage over the previous collections in the opinion of many which, however precious to the antiquarian, were a little too plain-spoken for the taste of this externally very moral age; but we are of opinion that its pages have been very unnecessarily shut against some of the very most beautiful of our ancient minstrelies. Why, for instance, have we been deprived of that most affecting ballad, 'Childe Waters,' and that most striking one of 'Edward?' We think we may complain, too, of our author's taste in reprinting the modernised 'Chevy Chase' instead of the olden one, which is so far beyond it in felicity of expression. These are sins of omission which we are willing to pass over lightly, in consideration of the beauty of many other ballads which we find in this collection; but how can we ever forgive the author for reprinting such trash as Mickle's 'Hengist and May,' Percy's 'Hermit of Warkworth,' or 'Watkin's 'Athelgiva?' How could a man, after transcribing the spirited lines of 'The Child of Elle,' 'Sir Andrew Barton,' or 'King Estmere,' bear to put pen to paper for the purpose of commemorating that

Now the sympathising cause
Of Edwy's hap, shall tell;
And what, amidst his nightly walk,
That gallant youth befel.

Before we conclude this article, we shall take an opportunity of quoting some very fine lines from another and an early ballad; and, by way of relish, we think we can hardly do better than give our readers a specimen of the nonsense which our progenitors of the last century could bring themselves to write and admire. We would call attention to the contrast which this, in common with all the other writings of the eighteenth century, offers to the bold, and distinct, and nervous spirit of the sixteenth and fifteenth. He continues to give an account of Edwy's journey, in which the hero comes to a hermitage, and relates all his affairs to the hermit, who, being a young and dashing fellow, but who has been crossed in love, is equally communicative.

In the course of conversation it is discovered that the lady is Edwy's sister, and that she still loves the hermit.

'With flustered cheek, young Edwy turned
At Athelgiva's name;
And, "Gracious powers! it must be he!"
He cried; "it is the same!"
"I know full well, I have not now
More of thy tale to learn;
'Twas heard this morn, ere from the wave
You could the sun discern.
"My sister loves thee, gallant youth!
By all the saints on high!
She wept last night, when thy hard fate
She told with many a sigh.
"Forgive her, then, and in her cause
Thy limbs with steel enfold!—
Was it not Ardolph's daughter, say,
Who late thy heart did hold?"
"It was—it was!" Hermanrick cried:
"I heard her brother's name;
'Tis said he was a gallant youth
Who fought abroad for fame."
Then Edwy sprang to his embrace,
And clasped him to his breast;
"And thou shalt be my brother too!"
He said—and looked the rest.

We wish he had! Looked the rest, indeed! and yet the intolerable prosier goes on in the same drivelling strain for fifty-seven stanzas more. This, to say the least of it, is abominable tautology. As a compensation to our readers for the labour of perusing this miserable trash, we subjoin a few spirited stanzas from the ballad of 'Sir Andrew Barton, date about the time of Queen Elizabeth. The story is soon told: King Henry VIII., enraged at the representations made to him by an English merchant that a Scotch pirate is lord of the seas, and plunders them, gives letters of marque to the Earl of Surrey, and sends him out to destroy the rover. His Lordship meets with a merchant who had been plundered, and they sail on together in pursuit of Sir Andrew.

'The Merchant set my Lord a glass,
So well apparent in his sight,
And on the morrow, by nine of the clock,
He showed him Sir Andrew Barton, knight.
His hatchboard it was gilt with gold,
So dearly dight it dazzled the eye—
Now, by my faith! Lord Howard says,
This is a gallant sight to see.
'Take in your ancients, standards eke,
So close that no man may them see,
And put me forth a white willow wand,
As merchants use to sail the sea.
But they stirred neither top nor mast,
Stoutly they passed Sir Andrew by.
What English churls are yonder, he said,
That can show so little courtesy?
'Now, by the rood! three years and more,
I have been Admiral over the sea,
And never an English, nor Pontingall,
Without my leave can pass this way:
Then called he forth his stout pinnace—
Fetch back yon pedlars now to me;
I swear by the mass, yon English churls
Shall hang at my mainmast tree.
'With that, the pinnace it shot off,—
Full well Lord Howard might it ken,
For it stroke down my Lord's foremast,
And killed fourteen of his men.
Come hither, Simon, says my Lord,
Look that the word be true thou said,
For at my mainmast thou shalt hang,
If thou miss thy mark one shilling braid.
'Simon was old, but his heart it was bold,
His ordinance he laid right low,
He put in chain full nine yards long,
With other great shot, less and more;
And he let go his great-gun's shot,
So well he settled it with his eye,
The first sight that Sir Andrew saw,
He saw his pinnace sink in the sea!
'And when he saw his pinnace sunk,
Lord! how his heart with rage did swell:
Now cut my ropes, it's time to be gone,
I'll fetch yon pedlars back myself.
When Lord saw Sir Andrew loose,
Within his heart he was full fain,—
Now spread your accents—strike up drums,
Sound all your trumpets out again.

'Fight on, my men, Sir Andrew says,
We all, however, this gear will sway,
It's my Lord Admiral of England
Is come to seek me on the sea.
Simon had a son who shot right well,
That did Sir Andrew mickle scare;
In at his deck he gave a shot,
Killed three score of his men of war.'

Being oppressed, Sir Andrew determines to let fall certain beams or beams,—for there is a dispute about the reading,—and which appears to have resembled the leaden Dolphins mentioned by Thucydides, intended to fall upon the enemy's ships and sink them.

'Come hither to me, thou Gordon good,
That eye wast ready at my call,
I will give thee three hundred marks
If thou wilt let my beams down fall.
Lord Howard he then called in haste,—
Horseley, see thou be true in stead,
For thou shalt at the mainmast hang,
If thou miss twelve score one penny braid.

'Then Gordon swarved the mainmast tree—
He swarved it with might and main;
But Horseley with a bearing arrow,
Stroke the Gordon through the brain—
And he fell unto the hatches again,
And sore his deadly wound did bleed:
Then word went through Sir Andrew's men,
How that the Gordon he was dead.

'Come hither to me, James Hamilton,
Thou art my only sister's son,
If thou wilt let my beams down fall,
Six hundred nobles thou hast won—
With that, he swarved the main-mast tree,—
He swarved it with nimble art,
But Horseley with a broad arrow
Pierced the Hamilton through the heart.

'And down he fell upon the deck,
That with his blood did stream again;
Then every Scot cried, Well away!
Alas! a comely youth is slain!
All woe-begone was Sir Andrew then,
With grief and rage his heart did swell,—
Go, fetch me forth my armour of proof,
For I will to the top-castle myself.

'Go, fetch me forth my armour of proof,
That gilded is with gold so clear:
God be with my brother John of Barton!
Against the Portingalls he it wear;
And when he had on his armour of proof,
He was a gallant sight to see,—
Ah! ne'er didst thou meet with living wight,
My dear brother, could cope with thee.

'Come hither, Horseley, says my Lord,
And look your shaft that it go right;
Shoot a good shoot in time of need,
And for it thou shalt be made a Knight.
I'll shoot my best, quoth Horseley then,
Your Honour shall see, with might and main;
But if I were hanged at your main-mast,
I have now left but arrows twain.

'Sir Andrew he did swarve the tree,—
With right good will he swarved then,
Upon his breast did Horseley hit,
But the arrow bounded back again!
Then Horseley spied a privy place,
With a perfect eye, in a secret part,—
Under the spole of his right arm,
He smote Sir Andrew to the heart.

'Fight on, my men, Sir Andrew says,
A little I'm hurt, but yet not slain:
I'll but lie down and bleed a-while,
And then I'll rise and fight again.
Fight on, my men, Sir Andrew says,
And never flinch before the foe;
And stand fast by St. Andrew's cross,
Until you hear my whistle blow.'

This secures Lord Howard's victory.

Interspersed with the ballads are a few, too few, of the beautiful songs of our poets of the sixteenth century. This part of the work is the one which, from the extreme beauty of the materials, might have been made most interesting: it was also one which was by far most wanted. There are a number of exquisite songs throughout the works of Shirley and Fletcher, and other contemporary poets, that are absolutely unknown; and we sincerely hope that Mr. Parry will, in fulfilling his promise of giving us another volume similar to

this, not neglect those 'wells of English unde-fled.' It is indeed marvellous that the miserable collection which Johnson dared to call the works of the British Poets, should be heard of at the present day; and yet what better have we? Chalmers's is hardly worth naming, Campbell's selections might have been made with greater care, and Lamb's selections from the dramatists are so few as to be very unsatisfactory. Aikin's is a small octavo volume, and far too much of that is occupied with the mawkish rhymes of the French school; so that, in spite of the attention which has been awakened towards them, we still want a fine collection of the real poets of Britain. Marlowe, Chapman, Shakespeare, Sidney, Spenser, Cartwright, Forde, Marston, Shirley, the Beaumonts, the Fletchers, the Herberts, Crashawe, are too little known among us. How long shall Theobald's audacious and miserable assertion respecting Shakespeare's sonnets remain uncontradicted? Do we indeed need an Act of Parliament to compel readers into their service? God forbid! for only in a corrupt and heartless age, dead alike to poetry, and religion, the sister of poetry, could the works of the men we have mentioned above be neglected. Among the songs which Mr. Parry has quoted, is Marlowe's beautiful one, beginning, 'Come, live with me, and be my love,' &c., which has been so often quoted that we will not reprint it in our pages, and which Isaac Walton mentions with no light commendation. Appended to this is a note which a Christian clergyman might think it his duty to write, but which, we think, contains an assertion that wants proof, to say the least of it: 'Christopher Marlowe was a poet of very superior talents, but unhappily of unusually evil principles, and, in consequence, of very dissolute habits. This, however, the reader would hardly discover from the noble tragedy of Faustus, the conclusion of which, in particular, is very finely worked up. Marlowe died disgracefully in 1593.' We will explain the last sentence, which is obscure, by saying that he is reported to have been stabbed in a house of ill-fame. We gather from Marlowe's writings—for, as well as we remember, none of his friends ever took the trouble to refute the charge that he was accused of atheism, a charge often brought against those who are more deeply religious than their accusers; against those who have religion in their very soul, whose very spiritual existence is in religion, and who are, therefore, incomprehensible to their gross maligners. Are we asked for a refutation of the charge, we point to his poems, filled as they are with the noblest feeling, with love that renders all things beautiful, and will that makes its own freedom by its own quenchless energy. Marlowe was no atheist, but he dared to tell the formalists who surrounded him, that something more was needful than obedience to outward ordinances, and a blind faith in outward ceremonies; he told them that sensuality, and selfishness, and over-righteousness, were irreligious, even though they swelled the heart of a high-priest of the temple, and

'That let the brain-bald world prate what it will,
That's the grand atheism that reigns in it still!'

We have had painful evidence in our own days what shameless falsehoods may be circulated with impunity, concerning some whose purity of thought, word, and act, is as light shining in darkness; warred with, uncomprehended, and oppressed by it. And if Marlowe shared the fate which Shelley underwent, we can find in the noble feeling which pervades their works, and in the unparalleled loftiness of their imagination, ample cause for the persecution they suffered from those who have neither imagination nor feeling.

There is a purifying influence in the imagination which renders it impossible for a great poet to be a sensual and a profligate man. There are no examples which will countervail this assertion; for the imagination is an active and energetic power, it is incompatible with the prostration of mind which sensuality induces, and subsists only

in the life and motion which it gives to all the holier feelings and affections of the heart and head. There is a divinity in good which for ever renders it more powerful than evil: the two cannot long co-exist in the mind; one must prevail, and that one, we assert, will be the good in every case of the poetical inspiration. If this be true, there never was a highly poetical passage which was at the same time capable of exciting one sensual thought or feeling: and this we assert to be the case. Perhaps the three passages which most strikingly illustrate the truth of this assertion, are to be found in Shakspeare's 'Venus and Adonis,' Marlowe's 'Hero and Leander,' and Shelley's 'Alastor.' In all these passages, descriptions are given of scenes such as the Rochester and Sheffield have delighted to draw; with, perhaps, an equal minuteness of portraiture, with a more than equal intensity of feeling. Why, then, do the former nauseate us with their profligacy, while the latter, far from awakening one sensual thought, one unworthy feeling, wrap us only round with undefined admiration of all the beautiful and all the lovely which the vivid description of the poet raises up into life before us? Why, but that in the one we trace the effete mind endeavouring, by a gross imitation of the past, to conjure up a sort of present pleasure; we see a faint and fleeting shadow of the evil gone by called up at the instigation of some foul sorcerer to do the work of mischief: in the latter, we find the sensual fact subordinated to the imagination which depicts it; the active powers of the mind brood over the beautiful images of the poet's creation, every better feeling is awakened into life within us, and the outline of the material vanishes away, in the exceeding brightness with which the spiritual has invested it. The remarks which Mr. Coleridge has made on the Shakspearean poem are equally applicable to either of the other two; the following are the words of that splendid criticism:

'You seem to be told nothing, but to see and hear every thing. Hence it is, that from the perpetual activity of attention required on the part of the reader; from the rapid flow, the quick change, and the playful nature of the thoughts and images; and, above all, from the alienation, and, if I may hazard such an expression, the utter *aloofness* of the poet's own feelings, from those of which he is the painter and analyst; that though the very subject cannot but detract from the pleasure of a delicate mind, yet never was poem less dangerous on a moral account. Instead of doing as Ariosto, and as still more offensively Wieland has done, instead of degrading and deforming passion into appetite, the trials of love into the concupiscence; Shakspeare has here represented the animal impulse itself, so as to preclude all sympathy with it, by dissipating the reader's notice among the thousand outward images, and now beautiful, now fanciful, circumstances, which form its dresses and its scenery; or by diverting our attention from the main subject by those frequent witty or profound reflections, which the poet's ever active mind has deduced from, or connected with, the imagery and incidents. The reader is forced into too much action to sympathise with the merely passive of our nature. As little can a mind thus roused and awakened, be brooded on by mean and indistinct emotions, as the low lazy mist can creep upon the surface of a lake, while a strong gale is driving it onwards in waves and billows.'—*Biog. Lit.* ii., 16, 17.

If this be true of the reader, how far more true is it of the writer of such poems; to his poems, therefore, we refer our readers for Marlowe's character, assured that such a writer was no profligate, and assured, moreover, that to no profligate would Chapman, the continuer of his friend's unfinished work, have addressed the beautiful lines with which he began his task:

'Then now, most strangely intellectual fire,
That, proper to my soul, hast power to inspire
Her burning faculties, and with the wings
Of thy unspeared flame, visitest the springs
Of spirits immortal, now (as swift as Time
Doth follow Motion) find the eternal clime
Of his free souls, whose living subject stood
Up to the chin in the Pyrean flood,
And dwelt to me half this Masman story,
Inscribing it to deathless memory,

Confer with it and make my pledge as deepe,
That neyther's draught be consecrate to sleepe:
Tell it how much his late desires I tender,
(If yet it know not) and to delight surrender
My soules dark offspring, willing it should dye
To loves, to passions, and society.'

Hero and Leander, iii.

Our zeal in defence of this great but neglected poet, the father, be it remembered, of the English stage, has led us beyond the limits which we should have prescribed to ourselves. The remainder of 'The Legendary Cabinet' must be disposed of in fewer words than it deserves; for it contains a large proportion of modern ballads, several of which are excellent. We need only say that among them are two from the pen of R. Southey, two of Wordsworth's, and one of Sir W. Scott's, to entitle them to marked attention. One by Dr. Leyden appears to possess considerable merit.

Upon the whole, this little book has pleased us; and the few faults we have noted in it, may appear to many to have been too roughly treated, when in coming to a stupid ballad of the last century, they put the book aside, or merely turn over the leaves in search of a better; but we do not read for amusement only, and least of all ballads, and we are in duty bound to point out the evil which we think has been done by pseudo-poets, and the good which we believe a better æsthetic creed may accomplish. We recommend Mr. Parry's work, however, in one point of view very cordially, as placing, in the strong contrast of juxtaposition, the vigorous and manly productions of the seventeenth, the mawkish and vague and hazy imitations of the eighteenth centuries, and the newly awakened life and energetic compositions of our own time. May we hope, that, in the event of his publishing another work of this nature, (and may the success of this be such as to induce him to do so!) Mr. Parry will infuse a greater portion of the life and soul of our forefathers into his pages. He cannot be unfamiliar with their works, for his notes show him to be a man of good acquaintance with old English lore; and we trust his taste is good enough to persuade him to do at least all that lies in his power to render them more generally known among his contemporaries.

We have one or two remarks to make on the ballads of 'Robin Hood,' four of which are reprinted in this volume. There is a larger number of those ballads probably than exist on any other subject, and we wish that some more of them had been selected in preference to such absurdities as these which we have remarked above. The 'Lytel Geste of Robyn Hode,' a printed copy of which, by Wynkyn de Worde, is preserved, we believe, at Cambridge, and which contains the history of his whole life, is a noble composition. We shall take the opportunity of transcribing a few stanzas of it from a copy in our possession, as a specimen of the true English historical ballad. It is necessary to give a short account of the previous occurrences. 'Sir William of the Lee,' in great sorrow for loss of his land which he had pawned to the Abbot of St. Mary's for four hundred pounds, meets Robin Hood, and after being hospitably entertained by him, tells his distress, and receives four hundred pounds from him on the security of the Blessed Virgin:

'Nowe is the knyght went on this waile,
This game he thought ful good,
When he lokod on Berrysdale
He blyssed Robyn Hode:

'And when he thought on Berrysdale,
On Scathelock, Much and Johan,
He blyssed them for the best company
That ever in he come.

'Then spake that gentyll knyght:
To Lytel Johan gan he saye,
To morwe I must to York toun
To Saynct Mary Abbaye:

'And to the Abbot of that place
Four hundred pounds I must paie;
And but I be there upon this nyght
My londe is lost for ay:

'The Abbot sayd to his covent,
There he stode on grounde,
This day twelfe moneth came there knyght
And borowed foure hundred pounde.

Upon all his londe free,
But he come this ylke day
Dysheritye shal he be.

'It is ful erely, sayd the pryoure,
The day is not yet farre gone:
I had lever to pay a hundred pounde,
And lay it downe anone.

'The knyght is ferre beyonde the se,
In Englonde is his ryght,
And suffreth hunger and colde
And many a sorry nyght:

'It were grete pitie, sayd the pryoure,
So to have his londe,
And ye be so lyght of your conseyence,
Ye do to him moche wronge.

'Thou art ever in my berde, sayd the Abbot,
By God and Saynct Rycharde.
With that cam in a fat heded monke,
The hegh selerer:

'He is ded or hongre, sayde the monke,
By God that bought me dere,
And we shall have to spend in this place
Foure hundred pounde by yere.

'Lorde were to mete ysette
In that Abbotes hall,
The knyght went forth and kneled downe
And salved them grete and smal.

'Do gladlie Syr Abbot, sayde the knyght,
I am come to holde my day.
The first word the Abbot spake,
Hast thou brought my pay?

'Not one peny, sayd the knyght,
By God that makyd me;
Thou art a shrewd dettour, sayd the Abbot;
Syr justyce, drynke to me.

'What doost thou here, sayd the abbot,
But thou haddest brought thy pay?
For God, than sayd the knyght,
To prae of a longer daye.

'Thy day is broke, sayd the justyce,
Londe getest thou none,
Now, good Syr justyce, be my frende,
And fend me of my fone.

'I am holde with the abbot, said the justyce,
Both with cloth and fee;
Now, gods syr sheryf, be my frende;
Nay, for God sayd he.

'Now, gode syr abbot, be my frende,
For thy curtesye,
And holde my londes in thy hoade,
Tyl I have made the gree.

'The abbot aware a ful great othe,
By God that dyed on a tre,
Get the londe where thou may,
For thou getest none of me.

'By dere worthy God, then sayd the knyght,
That alle this worlde wrought,
But I have my londe agayne,
Full dere it shal be bought.

'God that was of a mayden borne
Lane us wel to spede,
For it is gode to assay a frende,
Or, that a man have nede.

'The abbot lothely on him gan loke,
And vylaneley hym gan [call]
Oute, he sayd, thou fals knyght,
Out of my hall.

'Thou lyest, then sayd the gentyll knyght
Abbot, in thy hall;
False knyght was I never,
By God that made us all.

'Up then stode that gentyll kynght,
To the abbot, sayd he,
To suffre a knyght to knele so long,
Thou canst no courtysye,

'In joustes and in tournament,
Full ferre then I have be,
And put myself as ferre in prees
As ony that ever I se.

'What wyll ye gyve more sayd the justyce,
And the knyght shal make a releyse;
And els dare I saily swere,
Ye holde never your londe in pees.

'An hundred pounde, sayde the abbot;
The justyce syed gyve him two:

Nay, by God, sayd the knyght
Yet get ye it not soo.

‘ Though ye wold gyve a thousand more
Yet were [ye] never the near,
Shal there never be myn eyre,
Abbot, justyce, ne freere.

‘ He stert him to a borde a none,
Tyll a table rounde,
And there he spoke oute of a bage,
Even four hundred pounce.

‘ Have here thy golde, sir abbot, sayd the knyght,
Which that thou lentest me,
Hadst thou been curteyse at my comynge,
Reward sholdest thou have be.

‘ The abbot sat styl and ete no more,
For all his ryall chere,
He cast bys hede on his shoulder,
And bast began to stare.

‘ Take my golde agayne, said the abbot,
Sir justyce, that I toke thee;
Not a peny, sayd the justyce,
By God that dyed on a tre.

‘ Syr abbot and ye men of lay,
Now have I holde my daye,
Now shall I haee my londe agayne,
For aught that you can say.’

How important it was not to lose one's land, and how properly anxious the knight was on the subject, may be learnt from a beautiful old play, called ‘A Woman killed with Kindness,’ where a young gentleman is introduced saying:

‘ Alas, alas, ‘tis all trouble hath left me,
To cherish me and my poor sister's life:
If this were sold, our name should then be quite
Razed from the bed-roll of gentility.
You see what hard shift we have made to keep it,
Allied still to our own name. This palm you see
Labour hath glowd within; her silver brow,
That never tasted a rough winter's blast,
Without a mask or fan, doth with a grace
Defy cold winter, and his storms out-face.’

We wish that Mr. Parry had quoted any of this ‘Lytil Geste,’ or the ballad of ‘Robin Hode and the Potter,’ rather than those of ‘Robin Hood's Chase,’ or ‘The Noble Fisherman,’ both of which are deficient in that strong humour which generally characterises the ballads of this celebrated outlaw. ‘Guy of Gisborne,’ who is quoted, is, however, an excellent specimen. We wish the editor would not alter words that he does not quite understand. Why, for instance, has he written,

‘ Yet neither Robin Hood nor Sir Guy
Them settled to run away.’

when the word, in all the copies, is *settled*; that is, *prepared, made ready*, from the Saxon word *fetil*, signifying a belt or girdle, answering to the *seae accingere* of the Latins, &c. This fault we have noticed in two or three places. Why should it be,

‘ Yonder comes that mighty yeoman,’

when the copies read, ‘that weightye yeoman; that is, active or nimble, also from the Saxon *wiht*.

RESTALRIG.

Restalrig: or the Forfeiture. By the Author of ‘St. Johnston, or John Earl of Gowrie.’ 2 vols. 8vo., Simpkin and Co. London, 1829.

THIS is a novel of the Waverley School; but, when we say that it does not rank above a third or fourth-rate production, we imagine few of our readers will thank us for spending much time in characterising it. The opening is most absurdly improbable,—an avaricious fellow, named George Sprott, being persuaded by a mysterious nocturnal visitant, to confess himself an accomplice in the Gowrie conspiracy, and submit, first to imprisonment and torture, and then to death itself, under the notion of a free pardon and a great acquisition of property. Amongst others involved in this forged confession of guilt, was the deceased father of young Restalrig, the hero, who is got up in imitation of young Waverley; and, of course, is a very uninteresting personage. We cannot,

we are sorry to confess, say much more in favour of his lady-love, Rosa Grey, the heroine; nor of Roger Dewlap, the Andrew Fairservice of the piece. The chief redeeming quality of the author is his conception of romantic situations, which he occasionally brings out with considerable effect, as in the following scene:

‘ It was a still evening; the moon had risen above the horizon, and was gradually ascending in a now cloudless sky, till the blue waves, rippling beneath, sparkled like an assemblage of countless gems. Logan, now left again alone, looked on the quiet beauty of the scene, and on the rugged aspect of the old castle, part of which was frowning on him in dark shade, until it seemed as if the spirits of his warlike ancestors spoke to him from its deserted walls, and upbraided him with pusillanimity in thus feebly bending beneath the rod of a tyrant; enjoining him, for their sakes, to retrieve the dishonour that had fallen on their name. Wrought up by these reflections, which were, in their effect, somewhat similar to the night-mare, he removed from his head the hat, which, contrary to the custom of the high-born youth of the period, was now unadorned either by plume or jewelled band, and laid it beside him, that the free sea-breeze might play uncontrolled upon his throbbing temples. He sat thus for some time, till refreshed by the pure and cool air that played over his face, and by dipping his hands now and then in the well beside him, he began to feel somewhat more calm than the sudden rush of his feelings in such a scene had given promise of, and to look around him with comparative composure as he threw his farewell glance on rock, and tower, and hill. But, roused by an obstreperous bark of his little dog, a wild wailing met his ear; and, on looking up to the top of the precipice that overturning the beach below, he saw the figure of a woman in white approach its brink, and distinctly heard again a piercing shriek. Its appearance and the sounds that issued from it were such as his vassal had just been describing, and Logan felt lost in a mass of doubt as to the possibility of the truth of what he had affirmed. But, while he intently watched this phenomenon, he was certain that he beheld against the clear blue sky a dark figure struggling with the white one, and so blended with it, that he could not discover whether it was man or woman. He saw them approach the very verge of the dizzy steep above, as they apparently contended for the mastery; and, while he uttered a cry as wild as the one that had just met his ear, he felt his flesh creep, and his hair bristle, from the fearful expectation of one or both of them being precipitated headlong to the bottom of the gulf beneath. Finding, however, that this frightful result did not immediately take place, and that they seemed to have receded a little from the edge of the beetling cliff, his first impulse was to reach the spot where they stood, that he might, if possible, prevent the threatened mischief, feeling himself impressed with the natural idea that they were human beings actuated by some extraordinary motive. To attain this object, he was obliged to climb a steep and circuitous path; but, when he arrived on the spot they had so lately occupied, they were no where to be seen. He looked around him in all directions, but nothing met his eye save the dark heath which formed the sombre covering of the ground. He next listened in expectation of catching some sound that might direct him in his search; but none met his ear except the dashing of the waters on the rocks beneath. He now approached the edge of the precipice and looked over it, more than half expecting to see some dreadful sight beneath; but there lay the smooth sandy beach, in the little retired and lonely bay sparkling in the moon-beams, while its solitary surface appeared free from any such horrible incubrance. Logan stood for some seconds looking down from this spot on the castle below, and the boundless expanse of ocean before him, while he meditated on the strangeness of the circumstances that had at length sent him so far on his journey toward the village of Eyemouth. Wondering the while where the people he had followed could now be hid from his view, or what could have occasioned the cries he had heard, and the extraordinary gestures he had witnessed; feeling, however, impressed with an idea that some cruelty had probably been intended by one of the parties toward the other, he determined to pursue his way along the sea-banks toward the place where he was to pass the night, in the hope of frustrating such a purpose; for he thought it probable, that he might fall in with them on his way, believing that they must be now hid from his sight in one of the hollows formed by the irregularities of the lands bordering the sea. Under this impression, he began to tread rapidly the

wild and lonely way, that, by a path overgrown with moss and heather, led him toward a deep valley, which he well remembered lay at no great distance; and presently, after having examined all the smaller hollows to no purpose, he arrived at this ravine, which he recollected as a place of perilous adventure to his childhood, and then associated in his mind with the most terrific ideas, from his having seen the mangled bodies of some unfortunate mariners thrown upon the little beach that lay at the entrance from the sea, and where the bulk of their vessel had been stranded.

‘ This dark dell had ever since been said to be haunted by the spirits of the men who perished at its entrance; in consequence of which report, the neighbouring peasantry never approached it after dusk, while some occasional fancied appearances, said to have been seen by those who had unavoidably or unwittingly trespassed on its precincts at such hours, had served to confirm the evil character of the “Ghaistly Gully,” as it was denominated, and to spread its fame for many a mile around.

‘ Logan was following a path along its northern side, which he had formerly pursued when in quest of the hazelnuts that grow on its brink, and which he expected would presently lead him into one that crossed the chasm, when, casting his eyes into the depth beneath, he perceived a little smooth glassy glade, of not more than twenty feet square, lying on the margin of the little burn, which, hurrying forward on its murmuring way to the ocean, trembled and glittered in the bright rays of the moon. On the surface of this little plain were scattered several small hillocks, and on one of these sat a man wrapped in a dark garment, who was almost instantly joined by a female figure, clad in white, who emerged from the underwood, which, in this part of the valley, covered the ground, being interspersed with trees of great age and large size, though still having the appearance of a crabbed growth, from their near vicinity to the sea, and the occasional blasts they encountered when the valley acted as a funnel to the north-east winds.

‘ Logan was fully persuaded that these were the same people he had been in quest of; but, there being no immediate place of descent from the spot where he stood, he crept under the shade of the neighbouring bushes, and continued to observe their motions. The female figure now stood, as we have said, upon the open space, where from the darkness in which every thing around it was enveloped, the moonlight seemed to fall with concentrated brightness, rendering what passed there as discernible as if seen by day-light. She approached the person who was sitting, and appeared to entreat for some boon which he was unwilling to grant; at least so Logan conjectured, from her twice casting herself on her knees before him, and lifting up her hands in a supplicating posture, while she as often arose and paced with rapidity the small piece of level ground at his side. A third time she returned to him; but, pursuing this time a different conduct, she took hold of him, and attempted to raise him from his seat, when, lifting his right arm, he launched a furious blow at her head, which, had it not been avoided with dexterity, must have levelled her with the earth. Logan no sooner beheld this, than, being filled with horror at the action, he sprang to the top of the bank from his hiding-place, and shouted till his voice rung in innumerable echoes from rock and cavern. The man now instantly abandoned his seat, and both he and his companion, looking upwards, fled in the contrary direction to that in which the female had entered on the little platform, and he could hear them for a short time making their hurried way among the bushes, by the rustling of the leaves and the crashing of branches.’

Had the story all run in this strain, we should have read to the end; but it fell off so miserably that we could not finish the second volume.

THE BLACK BOOK.

The Black Book: or, An Alphabetical Repertory of the Political Police under the Vileste Administration. 4 vols. 8vo. Paris, 1829.

If any publication could expose the immorality of the shameful system of espionage practised by the French Police, ‘The Black Book’ is that work. Here is no ci-devant galley-slave, or superseded spy, colouring facts to suit his own purpose, and compounding a romance which individuals compromised may always tax with falsehood and exaggeration; but a faithful chronicler, who places before us, without either preface or

comment, the correspondence between the head of police and his agents.

It is not known in Paris who it is that has thus indiscreetly lifted up the mysterious veil that has so long covered the proceedings of that base and undignified inquisition, which thought it governed France by placing it under spies; but whether this publication has been made through the treachery of some employé, or, which is perhaps more probable, encouraged by an administration which daily makes further departures from the errors of its predecessors,—the disclosure of these abominations is a real service rendered to the public.

The work is preceded by a learned introduction on the various kinds of political inquisition resorted to in ancient and in modern times, an abstract of which will be interesting to our readers:

'Nothing can be purer or more commendable than the police of the Greeks: it was the art of ruling, of perfecting the social relations, and of procuring for the inhabitants of towns a peaceful, commodious, and tranquil life. The censorship was established at Rome as an active guardian of public morals. The censors kept their eyes upon the city, and their ears open to opinion; but, magistrates and not masters of spies, they received complaints, heard witnesses, and did not retain those secret informers who foment crimes to obtain the price of their discovery. Marius and Sylla were the first who organised a paid political espionage at Rome. We know with what favour informations were received at the Imperial Court. It is in the very instinct of brute force to disdain the arts of cunning; and accordingly no prefect of police has less to do than at Constantinople. No informers, no secret reports among the Turks; they are persuaded that espionage is criminal. This has made them repel that vile instrument so contrary to their religion, and unworthy of a great empire. It is at Venice, in the very bosom of Christianity, that political espionage has re-appeared in Europe, with its train of masked informers, instigating agents, and secret punishments. We know the institution of the Council of Ten, and the furies of the State Inquisitors, so well described by Ducis:

*"Les échafauds sont prêts quand le soupçon commence,
La mort frappe sans bruit, le sang coule en silence."*

'The opening of letters is a means of which Venice may well dispute the invention with our Black Cabinet. Brazen mouths stand open in the most frequented places to receive denunciations. Venice took lessons from Rome: the Council of Ten have borrowed their statutes from the Dominicans and the Grey Friars.

'In the beginning of the thirteenth century, the flames of the butchers of the Inquisition were lighted in France by the hand of Simon de Montfort, to purify the heresies of the Albigenes. Though Rome could not succeed in introducing at Naples the familiars of the Holy Office, its terrible influence extended over the rest of Italy, over Spain, Portugal, and even to the Indies. Surprised executioners burned Jews and heretics at Goa. But the Spaniards carried to a degree of unheard-of ferocity the judgments and the punishments of the Inquisition. There it was that the monks immured in dungeons, and subject to the most cruel tortures, men who, equally with themselves, were the children of God, and then appeared in the public places, to sing and say mass to the cries of the unfortunates expiring amid the flames, in expiation of errors received from their fathers, and imbibed with their mothers' milk.

'Run over the institutions of the Jesuits, and you will see that they rest entirely on the ground of denunciation and espionage. Unskilled in the discipline of citizens, the Jesuits excel in the art of training spies and subjugating slaves. The credit they have recently enjoyed in France, explains the secret thoughts of those who would impose similar institutions upon us.

'Catherine de Medicis imported among us the diabolical maxims of ultramontane policy, founded on the book of Machiavel. But one of the chief favourers of espionage was the Cardinal de Richelieu, who made Louis XIII. himself his head spy. During the regency of Anne of Austria, and the minority of Louis XIV., political police owed fresh improvements to the Italian genius of Mazarin. The Epicurean Administration of the Regent and her Minister, Cardinal Dubois, confided the offices of espionage to the hands of courtesans. La Fillon became lieutenant of police, and it was in the boudoir of that Phryne that the Cardinal found the clue that was to guide him to the Cabinet in which was hatched the conspiracy of Cellamare. Louis XV. left the police in the vile hands in which he found it; and the intrigues of gallantry continued to furnish the oc-

casions for secret reports, the aliment of information. Under Louis XVI., a chaste prince, an honest king, and a harmless man, the degradations of preceding reigns had left such deep traces that the army was not more offended or surprised than the Court, to see the Royal and Military Order of St. Louis hanging from the button-hole of the agents of police. Louis XVI., himself conscientious amid the perversity of his courtiers, could permit the breaking of seals, the betrayal of friendship, and the violation of chastity, by the myrmidons of power! There was something too cynical and audacious in the sallies of the revolution to need the aid of the low arts of a secret police; and the privacy of correspondence was only once invaded.

'The revival of espionage was due to the Directory. During the Consulate and the Empire, the officers of police were almost as numerous as the great civil authorities and high military commands. The phalanx of informers grew continually denser without any corresponding improvement in the administration of the police, or the intelligence of the Government. For six months, Georges Cadoudal and twenty Vendean chiefs eluded in Paris the observation of as many Arguses. Long after the affair of the 3d Nivôse, the Government remained in ignorance as to the party to which was attributable the explosion of a machine which had shaken the most frequented quarter of the capital: twelve years later, when the art of espionage seemed to have reached its height, the Prefect and Minister of Police were surprised, seized, imprisoned by conspirators who, the night before, were prisoners to them.

'To the Imperial informers, immediately succeeded a tribe of men more perfidious and more odious still, who, not confining themselves to the violation of confidences obtained on the credit of their good faith, hatched conspiracies and provoked revolt, now by propositions secretly urged, as at Randon, Nantes, and Bordeaux, now in the light of day, as at Béfort, with standards unfurled, brandishing naked weapons, raising seditious cries, and then betraying to justice, and handing over to the scaffold, the deluded fools who had answered to those shouts of death. The bloody nights of November, 1827, showed afresh, in the streets of the capital, those miserable tools, such as they appeared, in 1822, on the plains of Alsatia.

'Inaccessible to pity, the police, principal and subordinate, were not less so to every sentiment of shame. Fathers and husbands called in vain for their assistance, in recovering the wife or the daughter whom the seducer had torn from their arms: they were occupied by other cares. The retreat of General Berthou was to be discovered: his sons, his kinsmen, and his friends avoided all the snares laid for them; not a word, not a sign, betrayed that important secret. One means of discovery was left: and the agents of Delaveau did not hesitate to propose its adoption. The sister of the General's aide-de-camp had a young girl for her femme de chambre: the spy charged with the discovery demanded that a clever, good-looking young fellow should be found to whom he would give the needful instructions for effecting a prompt and intimate attachment to the girl: and thus it was by the corruption of morals that the religious and devout police of M. Delaveau succeeded in destroying the fidelity of servants.'

Take another instance:

'Foy, General.'

'Private note to M. the head of the Central Police.

'May 8, 1823.'

'We observe that, for several days past, and chiefly at an advanced hour of the night, meetings have taken place at the house of General Foy, No. 62, Rue de la Chaussee d'Antin, at which there assist, MM. Méchin, Tronchon, Manuel, Voyer, D'Argenson, General Pire, the Sieur Linguay, editor of the 'Journal de Paris,' a certain colonel named Ourbatry, General Thiard, M. Girardin, and lastly an old general whose name is Dulauloy.

'We are nearly certain that General Foy, accompanied by a servant named Piétron, will leave Paris on Saturday or Sunday next, for the Department of L'Aisne, and that he will secretly betake himself thence by another route to Saint Sever, Department of Les Landes, to meet General Lamarque; that in this journey he will be accompanied by a mysterious individual, who is now waiting for him at Laon, who is said to be a great English personage, recently arrived from London; that, in fine, this projected meeting and journey to Saint Sever have relation to political intrigues of the highest importance.

'Perhaps it will be well to keep an eye on General Foy. Perhaps, also, it would be well, if possible, to buy the servant Piétron; for it is probable, that, by

means of him, possession might be gained of written and convictive evidence.

'DAB—.'

'Cab. part., No. 9913.

'May 13, 1823.'

'In pursuance of private information of the 11th of this month, I request M. Hinaux to charge M. the Officer of Peace, N—, to follow up this affair with care, and to inform me of the day of General Foy's departure, and what direction he takes.

'LE PREFET DE POLICE.'

'No answer.'

(To be continued.)

GEOLOGY.

A New System of Geology, in which the Great Revolutions of the Earth and Animated Nature are reconciled at once to Modern Science and Sacred History. By Andrew Ure, M.D., F.R.S., &c. 8vo., pp. 621. London, 1829.

THE words of Sampson, 'If ye had not ploughed with my heifer, ye had not found out my riddle,' might justly be repeated by Mr. Granville Penn to the author of this 'New System of Geology,' the first idea of which has evidently been borrowed from Penn's 'Comparative Estimate,' and several important references, criticisms, and illustrations which first appeared in the same work, are, in the volume before us, adopted without acknowledgment; and Mr. Penn's name appears not to be anywhere mentioned in it, except in a few instances, where objections are brought against some of his doctrines. As instances of what we allude to, we may mention the greater number of the quotations from Lord Bacon, Newton, and from the Bible, all of which, indeed, were, we may presume, as much within the author's knowledge as Mr. Penn's; but we can scarcely suppose that any two authors would have made so very remarkable a selection as the one alluded to of the very same passages to serve nearly the same purposes, without communication. We shall now give an instance or two in which Dr. Ure has borrowed from Mr. Penn important ideas without acknowledgment.

Mr. Penn's opinion is, that the whole globe was created at once in the same way as plants and animals. In the case of the first created tree, he considers it as consisting of a root, trunk, and branches composed of wood, which leads him to the question, What is wood? and the answer, that it is a solid substance, which gives strength and support to trees as bones do to the bodies of animals. Now wood, as we now find it, is at first soft and herbaceous, as may be remarked in the young shoots of a rose-tree, and only becomes slowly and gradually hard and solid by a progressive course; but, in the wood of the first tree, the wood could not have gone through this gradual process of hardening, for it must have been formed so at once and suddenly. Now, if a portion of this first tree remained at present, and if a chip of its wood were to be mingled with chips of other trees, that have been propagated from seed or suckers, the naturalist would not be able to perceive, by inspection, that it had not proceeded gradually and slowly from a soft to a hard state, in the same way as the mineral geologist can see nothing in rocks but crystals, which have arisen from solutions, or fusions of mineral matter, by water or by fire. Such is an abstract of Mr. Penn's beautiful and original argument, which is thus, without acknowledgment, translated, or rather redacted, by Dr. Ure:

'The instantaneous creation of the vegetable tribes, from "the herb yielding seed after his kind, to the tree yielding fruit whose seed was in itself after his kind," does not seem to have been made a stumbling-block by the botanical student, as the arrangement of the mineral strata, has been by the geologist. Yet the cases are strictly parallel. Nay, whatever difficulty any imagination may have in conceiving the brute matter of the globe to have been arranged at once in crystalline and schistose masses, it ought to feel a much greater difficulty in conceiving the whole complex structure of a fruit or forest tree to be simultaneously produced from the root to the inflorescence, with all the concentric layers of wood, alburnum, and bark, each composed of straight

or tortuous fibres and tubes, and not formed, as we see them now, by progressive development and growth. The creation of a perfect plant, the type and parent of an indefinite series, is far more wonderful to my apprehension, than the creation of an inert terraqueous spheroid. No botanist or zoologist of sane reputation inculcates that plants and animals acquired their perfect unvarying forms, through successive organic depositions and catastrophes, as geognostic theorists have taught with regard to the primitive structure of the earth. What would be thought of a naturalist, who should pretend to determine the epoch of the world at which the different layers of wood were first formed out of some primordial chaos of vitality; when branches and limbs first began to sprout from simple trunks; when feathers, wool, and hair, first came forth for the protection of naked animals.—P. 82.

We chance to have now before us the Number of Brande's Journal for April, 1823, containing a review of Penn's work, written, if we be not very greatly mistaken, by Dr. Ure himself. From this paper we shall give Penn's explanation of the creation of light:

"The light of which Moses speaks in the first day, 'proceeded from the same solar fountain of light' that has always illuminated this world; but 'ignorance on the one hand, and system and hypothesis on the other, have variously contrived to perplex or pervert this simple recital.' The late Sir William Herschel discovered, that the body of the sun is an opaque substance, and that its light and heat proceed from a luminous atmosphere attached to its surface. 'So that the creation of the sun as a part of 'the host of heaven,' does not necessarily imply the creation of the body of the sun. In the first creation of 'the heaven and earth,' therefore, not the planetary orbs only, but the solar orb itself, was created in darkness, awaiting that light which, by one simple divine operation, was to be communicated at once to all. When, then, the Almighty word, in commanding light, commanded the first illumination of the solar atmosphere, its new light was immediately caught and reflected throughout space, by all the members of the planetary system. And well may we imagine, that, in that first sudden and magnificent illumination of the universe, 'the morning stars sang together, and the sons of God shouted for joy.'"

"The body of the sun itself, however, or rather its luminous atmosphere, was still concealed from the earth by the waters on its surface, and the exhalations which the sun's heat raised from them. It was not till the fourth day, that the cause of light was to be visibly revealed to the earth. But its effects, and the alternation of light and darkness, subsisted from the first day, when 'both the solar fountain of light was opened in the heavens, and the earth received its first impulse of rotation on its axis, and in its orbit;' and, consequently, 'time, which only exists in reference to that revolution, began with the creation of the globe, and the commencement of its revolution in darkness; and the creation of light succeeded at that proportion of distance in time which was thenceforth to constitute the perpetual diurnal divisions of the two.'"

The following is the redacted version of these beautiful and ingenious comments, as given by Dr. Ure, in his New System:

'Had Moses written the record of creation, from the informations of sense, or Egyptian learning, he would not have placed the creation of light three days prior to the creation of the sun, moon, and stars. Accordingly, this apparent inversion of the order of natural causes and effects, this supposed anticipation of a phenomenon before the existence of its agent, has become a stumbling-block to many evil disposed minds, and a stone of offence to the impious, instead of being regarded as a motive to deeper study into nature, and of humbler faith in its author. When, however, in the progress of research, we come to discover that Moses has described events in their just order of sequence, an order which reason could never suggest to him, and which has lain concealed till our own days, even from the philosopher, we are then forced to conclude, that he was inspired with a knowledge truly divine.

'Not only mere space, but even the dense forms of matter, are pervaded by a luminiferous medium, by whose undulatory movements the phenomena of light are produced. To the creation of this marvellous essence, the Divine mandate, "Let there be light," seems to refer. Its pre-existence was necessary to the luciferous functions of the sun, and the other foci of vibration. As we know that its undulations may be excited by many causes independent of the sun, we can find no difficulty in conceiving that alternations of

light and darkness, constituting the evening and the morning of the first three days of creation, might have taken place. A far more vivid excitation of the luminiferous ether no doubt commenced when the solar globes were invested on the fourth with their phosphoric atmospheres, to which most gratuitously a state of igneous combustion has been ascribed. How, therefore, should purblind sciolists dare to cavil at the Hebrew prophet for recording in the sublimest language, that light, the first-born offspring of heaven, enlivened the wilderness of space before certain ponderous and inert spheroids were ordained to modify its operations! As justly might they assert that the electric power, whether substance, or quality, did not exist till philosophy mounted its cylinder, to excite luminous phenomena.'—P. 51.

Now, there can be no objection to a scientific author adopting the views of another, and transferring them, when they suit his purpose, to his own pages; but we cannot think it fair to take the ideas of others by wholesale without acknowledgment, and denominate the *melange* a new system. We are most willing, however, to give Dr. Ure credit for having produced, upon the whole, an interesting work, though exhibiting much less originality or novelty than he himself seems to fancy.

The foundation of his system rests upon Sir Humphrey Davy's opinion of the interior parts of the globe being composed of the inflammable metallic bases of the earths; which, coming into contact with water, took fire and exploded, elevating by the consequent expansion, the primitive rocks of granite, gneiss, syenite, mica slate, &c., above 'the shoreless deep' in which they had been previously enveloped. From the present appearance of these primitive rocks, the author concludes:

'That the primordial earth as it lay beneath the circumfused abyss, was at first endowed with concentric coats of gneiss, mica slate, and the other primitive schists; that at the recorded command of the Almighty, a general eruption and protrusion of the granitic, syenitic, porphyritic, and other unstratified rocks, took place, which broke up and elevated the schists into nearly vertical planes, similar to what now exist, leaving commensurate excavations for the basin of the sea.'—P. 74.

Consequent upon this disruption, the author tells us, innumerable fragments becoming agglutinated by their own pulverulent cement, soon recomposed continuous strata which bear internal evidence of the violence that gave them birth, and forming the *transition* rocks of geologists. As an example of this, he mentions the pudding-stones of Valorsine, in Savoy, a kind of grey wacke schist, containing rounded fragments of gneiss and mica slate, six or seven inches in diameter, a structure which, taken in conjunction with their nearly vertical position at present, demonstrates that these pudding-stone strata were formed in horizontal or slightly inclined beds, and erected after being accreted and consolidated. All this, according to the author, took place before the Deluge of Noah. Of this second disruption, our author thus speaks:

'When the barriers of the ocean began to give way before the explosive forces, the waters would invade the shores, and spread over the sunken land, augmenting prodigiously the evaporating surface, and thus bringing the atmosphere to the dew point, a state of saturation to which previously it could seldom, and in few places, attain, on account of the area of dry ground being great, relative to that of the sea. From this cause, as well as from the immense quantity of vapours, which are known to rise from craters, into the higher and cooler regions of the air at the period of eruptions, an immense formation of cloud and deposition of rain would ensue.

'At each successive upheaving of the submarine strata, the inundation would advance further on the land, drowning in their places the animals which the dismal preludes had driven for shelter into their dens; and washing away, by its reflux, the tenants of the plain into the slimy channels of the deep. By such a retiring billow, in the dreadful earthquake of 1755, 3000 inhabitants of Lisbon were suddenly swept off its quay, and swamped in the bed of the

Tagus. Should a revulsion ever lay that channel dry, their bones may be found buried in the alluvium. In the progress of the elevation of submarine strata, and subversion of terrestrial, the stage of equilibrium would arrive when the circumfluent waves would roll over the loftiest pinnacles of the globe. From this consummation of the cataclysm, as the new lands continued to rise, and the old to subside, mountain peaks would begin once more to appear. During the diurnal overflow, the atmosphere would remain tranquil; for the physical causes which disturb its equilibrium, inequalities of temperature and moisture, would act feebly, if at all. The universal sheet of water quenched, in fact, for a time, the equatorial heats which give origin to the trade-winds and monsoons. And in extra-tropical regions, the usual struggle between the dry air incumbent over the plains, and the moist air over the sea, whence proceed the variable winds, was also at an end.'—P. 478.

We now come to what Dr. Ure assumes to be original in his system, the solution of two enigmatic phenomena belonging to the primeval globe, for which no probable hypothesis, he says, has hitherto been offered; namely, the vast extent and magnitude of volcanic agency in the ancient world, compared with which every volcanic monument erected within the scope of history shrinks into insignificance; and, secondly, the great difference of climate in those times and the present. We shall give Dr. Ure's own solution of these two enigmas:

'If the antediluvian seas had a superficial area less than ours, their depth would be proportionally greater. Resuming, for the sake of illustration, our former ratio of an equality between the land and water, (the doctrine of Deluc and Penn assigns three of the former to one of the latter,) the antediluvian ocean would be to the postdiluvian, in surface as two to three, and in depth as three to two; whence the sea would penetrate one-half further into the crust of the earth, and thus present along its base a most formidable line of proximity with the fused and explosive metals of the interior. We may thus, also, perceive on what a tottering equilibrium the devoted dwelling-place of the Cainites was suspended. During nearly the whole period of its existence, the penal fire sent forth its convulsive prodigies, as if to repress the growing wickedness of man—but in vain. Mighty memorials of these tremendous earthquakes pervade the whole masonry of the antediluvian earth, from the deep carboniferous limestone to the uppermost tertiary beds. After many a disregarded premonition, however, the disruptive consummation arrived, the deluge rushed over the subverted lands, and a more stable terraqueous equilibrium ensued. Yet, for some time, the residuary dihaline waters would soak freely down into the still yawning crevices of the crust, and provoke fresh eruptions almost rivaling those of the primeval ages. To this epoch obviously belong those vast lava torrents of extinct volcanoes in France, Germany, Italy, Hungary, &c., of whose activity there is not a traditional vestige; probably because the eruptions occurred before the posterity of Noah had colonised those western countries.

'The second fossil enigma, which the superior depth of the primeval seas enables us completely to solve, is of still greater interest than the first to the natural history of the earth. "In the organic beings buried in the shelly strata," says Humboldt, "every thing astonishes, and nothing can be explained as to the climate which gave them birth." To the many proofs of this proposition formerly given, we shall add a few decisive documents.

'The observations made during our four Arctic expeditions, viz., the one under Captain Ross, and the three under Captain Parry, afford, according to Professor Jameson, the following general facts and inferences:

'That, previous to the deposition of the coal formation, as that of Melville Island, the transition and primitive hills and plains supported a rich and luxuriant vegetation, principally of cryptogamous plants, especially the ferns, the prototypes of which are now met with only in the tropical regions of the earth. The fossil corals of the secondary limestone, also, intimate that before, during, and after, the deposition of the coal formation, the waters of the ocean were so constituted, as to support *polyperia*, closely resembling those of the present equatorial seas.

'That previous to, and during the deposition of the tertiary strata, these now form regions supported forests of dicotyledonous plants, as is shown by the fossil *Ulmus*

tyridinous woods met with in connection with these strata in Baffin's Bay, and by the fossil wood of Melville Island, Cape York, and Byam Martin Island.—(*Edin. Phil. Journ., New Series, vol. II., p. 105; and Captain Parry's Third Voyage.*) Captain Parry observed only twelve or thirteen species of plants growing on Melville Island, among which the only one belonging to the tribe of shrubs was *betula nana*, which was there a creeping vegetable, not rising two inches above the ground. No amphibias, or reptiles, exist in these Arctic regions. The frog alone is seen, but further to the south.

'The heat applied beneath the seas, in exciting the internal motions of the aqueous particles, caused an equal distribution of warmth throughout the whole body, and in every possible direction. Though the stanting sunbeams, therefore, should have proved ineffectual to produce in the ancient Arctic regions, even under their diminished counteracting extent of evaporation, a sufficient warmth, yet the hot currents from the bottom, not only of the Arctic grounds themselves, but from the more southern sea-beds, would, by the laws of liquid equilibrium, flow towards the pole in exchange for its colder aqueous particles, and thus maintain a temperature commensurate to a vigorous vitality of the polyparies and shell-fish. The effect of subterranean fire in heating a vast body of water even to the boiling point, and the steam over it under compression much higher, is well related by Mr. Bald, in his 'Memoir on the fires that take place in collieries.'—*Edin. Phil. Journ., July, 1828.*

'The circulation of a body of waters thus rendered tepid by subagent heat, was the most direct method of diffusing a genial soft climate over all the contiguous lands. The efficiency of this process will be readily appreciated by the modern horticulturist, who has learned to heat his vineries, &c., with economy and precision, by circulating hot water in a series of iron pipes distributed through them.

'Under such circumstances as we have now detailed, that vegetation would luxuriate, which Mr. König and Professor Jameson have so fully recognised amid the circumpolar rains of the ancient earth. The chilling influence of damps, even in the Arctic zone, is well shown by the fact, that, during foggy weather, the thermometer falls on the Greenland seas, in summer, to the freezing point of water, and there remains stationary till the sky becomes clear.'—P. 498.

Upon the other numerous illustrations which Dr. Use has given of his views of Geology, we have not room to enter; but we can assure our readers, that though not always original, they are frequently ingenious, and, with few exceptions, highly interesting.

NIEBUHR'S HISTORY OF ROME.

A Vindication of Niebuhr's History of Rome from the Charges of the Quarterly Review. By Julius Charles Hare, M.A., Fellow of Trinity College, Cambridge.
Μηνυνο το το κωλίσωρ θπδωρ δυδλίσ. 8vo., pp. 63. Taylor. London, 1829.

Our readers have been thrown into a very different society of books and men from that which we have commonly encountered in England, if they have not met with persons who make it the business of their lives to divest themselves of every feeling which belongs to us peculiarly as individuals. About the most remarkable tendency of many among the more intellectual of our countrymen is that which inclines them to empty all outward distinctions of the inward law which gives to them in the concrete their character and unity, and reduce them to a mere chaos of interchangeable accidents. Thus the world is left without a God or a purpose; thus it is attempted to educate men into exemplifications of a theory; and nations are thus judged by a standard which makes no account of peculiarities in mind, position, destination, or in history as the exposition of all these. This propensity, we fear, we cannot very clearly explain to those who are so happy as not to have experienced it; but to those who have experienced it, and who are not still subject to it, there needs no other evidence of its own evil nature. In politics, indeed, we think it must be obvious to almost every one that most English writers have left the history of the world without any general meaning or shaping principles. And the persons who in this day and country have

moralised on this subject, have, for the most part, made their works a mere farrago of complaint against kings, priests, aristocracies, democracies,—all the instruments, in short, that have ever served to maintain society, as if in so doing they were libelling any thing but human nature, and God's providence, which latter, however, they seem to think of infinitely little importance.

To this bias of our speculative politicians it is owing that we hear of theories of government founded purely on dogmas. The moral law of the conscience can alone be conceived, in relation to man, as universal and necessary; and to rear our scheme of civil polity upon a similar basis, in contempt of history and national character, can lead to nothing but social confusion. The attempt thus to build up governments on abstract rights was the madness of Rousseau, and the sin of the French Revolution. The attempt to raise it on abstract expedients is the folly of a considerable class of our English reformers, and bids fair to be the curse of our generation. Under pretence of making politics philosophical, it really destroys their very essence; and, professing to arise from superior capacity and penetration, it is, in almost every instance, the symptom of an utterly immature, or a miserably perverted, mind. These reflections we should have thought sufficiently obvious to all those who study modern politics and philosophy, and who neither prate, with Mr. Gale Jones, of the rights of man, nor rave, like the explicit Mr. Bentham, and the implicit Duke of Newcastle, about the will of the people. 'The Quarterly Review' has undeceived us.

There is one book fit, above almost any that we know, to counteract, as regards history, the mischievous inclination we have spoken of, the History, namely, of Rome, by Niebuhr. This writer has done far more than any one of his popular English rivals towards fulfilling the business of an historian, and this in a case in which that business is of peculiarly difficult performance. There probably has never been so complete an exposition as his work affords of the spirit which governed a great people; and there assuredly has never been any of comparable merit, the materials for which were so obscure and contradictory. It may also be affirmed, (what, indeed, is to the wise involved in our previous assertion,) that this author is remarkable for the earnestness and reverence with which he regards whatever is in principle strong, permanent, sacred; that he views laws and institutions, and the ancient honours of nations, as aids and symbols of the morally good and lasting; and that he uniformly considers the annals of the world as records of the divine wisdom which rules it. At the same time there is an allusion or two in the book, from which it may be inferred that Niebuhr doubts whether every letter, as it now stands, in all the parts of the Mosaic narrative, must be held as inspired, and above critical examination. He has denied the accuracy of one very unimportant statement, (relating in no degree to any scriptural personage, doctrine, miracle, or prophecy,) which, if it were allowed to be an interpolation, might as easily, and with as little loss, be separated from the context of the Bible, as a weed or a cobweb might have been by the wind brushed from a pinnacle of the temple. Upon this, upon a hint that all mankind are not descended from one stock, and upon a ludicrously false assertion as to Niebuhr's political opinions, a writer in 'The Quarterly Review' has founded a virulent and impudent attack on the great historian of Rome, and the two distinguished and excellent persons who have done their country the benefit of translating the second edition of his work.

One of these gentlemen, the Rev. Mr. Hare, a fellow of Trinity College, Cambridge, whom no one who has had any opportunities for forming a judgment, can name but to honour, has published a short pamphlet in answer to the Reviewer. Much of his defence relates to Niebuhr, scarcely any to himself. He proves the inaccuracy (we

wish to be moderate) of the critic in almost every word of the passage in question; and, above all, he exhibits, in the fullest light, the wretched fraudulence and baseness of spirit in which it must have originated. In the first place, 'The Quarterly Review' has before contained a detailed review of Niebuhr in direct contradiction to the present effusion. Secondly, Mr. Hare considers the charge that Niebuhr has, at any time, been a political incendiary, which no one who has read the two editions of his work, or either of them, could ever for a moment have believed, or, one would think, have dared to utter. The accusation is refuted, in the pamphlet before us, by innumerable testimonies drawn from all the life and writings of the historian. The complaint that the translators have not criticised the obnoxious passages in the original, as, says the Reviewer, they have done with regard to other passages, is then despatched by a plain denial that they have in any case done so; and for the accuracy of Mr. Hare's assertion we are perfectly willing to pledge ourselves, having the good fortune to be familiar with the volumes to which both the charge and the defence relate. The remaining portion of the work refers, principally, to the assertion that Niebuhr is a 'pert, dull scoffer.' The reviewer has not produced a single passage to justify this slander, and his opponent refutes it by abundance of external testimony; and, above all, by extracts from Niebuhr's writings, which could no more have come from a scoffer than 'Paradise Lost' from Mr. Dibdin, the 'Pensées de Pascal' from Voltaire, or 'Hamlet' from Mr. Peake or Mr. Barrymore. These fragments have hitherto, we believe, been entirely unknown in England: they exhibit a kind, still more than a degree, of patriotic feeling and public wisdom, which might well be a lesson to us, with which the great Englishmen of old would have proclaimed an eager sympathy.

The defence is complete and triumphant; and, instead of drawing, as we had designed, a short contrast between the spirit of Niebuhr and that of the doctrines referred to in the beginning of these remarks, we will extract from it the concluding paragraph which must be far more effectual to our purpose than any thing we could ourselves offer:

'It is not to be borne, I repeat, that a man like Niebuhr, when a criticaster wants to discharge the foul words his mouth is crammed with, should be subjected to opprobrious language: if misales of this kind are cast, it must not be with impunity. In all his writings there is a moral dignity, and an enthusiastic and almost passionate love of freedom, and justice, and truth, combined with a sagacious conviction that these are the only never-failing principles of political wisdom, and with a statesmanly farsightedness in discerning the influence of institutions, and the manifold workings of time in moulding the character of a people, all which seem hardly to belong to a writer of these days, when scarcely any eyes pierce beyond the husk of things, and the great majority are busied in counting the prickles upon it. His intellect and his soul are rather those of an ancient, and have little in them of the modern except the accumulations of our knowledge and the lessons of our experience. And, in real life, among those who know him well, the admiration entertained for his prodigious learning and unrivalled ingenuity, is only on a level with the esteem and affection inspired by the warmth, the generosity, the frankness, the singleness, and the simplicity of his heart. Again and again have I been told, that it is impossible to know him well, and not to love him. What his religious faith may be, I know not: that is to say, so far as regards the peculiar doctrines and mysteries of Christianity; for that his faith in God's superintending providence and retributive justice is vivid and vivifying, I have shown. Thus much, however, I do know,—that it is very possible in Germany, under the present aspect of religious feeling and knowledge, to unite a fervent faith in Christianity, and a hearty love of it, with considerable doubts and scruples about the historical value of certain passages in Scripture. Indeed, the Reviewer himself can hardly be ignorant of this, inasmuch as he refers in the same note, part of which I have extracted, to a work containing abundant proof of it, by the great ornament and glory of the Reformed Church in Germany, Schleiermacher, a man in whom we find an almost unprece-

dented combination of the profoundest, and subtlest, and most penetrative philosophy, with an intense and pervading piety. Thus much, I say, I know; and, even if I did not know it, I would still strive to act after the spirit, as well as after the letter, of that divine precept, so full of love, and yet accompanied with such a fearful warning, which commands me not to judge. If Niebuhr is not a sincere and thorough Christian, I hope and trust he may become so; and I will not do any thing to deter him, by joining others in railing against him for falling short of a justifying faith, and by exemplifying the unchristian manner in which a person calling himself a Christian may behave. For of one thing I feel perfectly sure: with that kind of religion which manifests itself chiefly by evil-speaking, lying, and slander, Niebuhr never has held, and never can hold, any communion.—Pp. 59, 60.

We had also intended to say a few words as to what manner of man we conceive the Quarterly Reviewer to be; but, on reflection, we prefer to quote a few sentences from a postscript by Mr. Thirlwall, brother translator with Mr. Hare:

'Whether the Reviewer or myself has formed the more correct estimate of Niebuhr's work, is a question I would rather leave to more competent and impartial judges than the foregoing pages have proved the Reviewer to be. But, when he deprecates the drudgery in which I have wasted my time, he uses a word which, perhaps, he and I are in the habit of applying to very different cases. Intellectual labour, voluntarily undertaken for the purpose of communicating to others what has excited feelings of the warmest delight and admiration in ourselves, appears to me no fit subject either for shame or regret, and, therefore, not to deserve a term that implies any thing in the remotest degree connected with either. That such has been my motive in the present instance, I may profess with the greater hope of being believed, because no other at least is more obvious; and those who are best acquainted with the circumstances of the case will be most ready to admit, that, if I had acted on any calculation of profit or reputation or advancement, I should indeed have to reproach myself with a *crude and dangerous speculation*. On the other hand, intellectual labour, prompted and directed by no higher consideration than that of personal emolument, appears to me to deserve an ignominious name: nor do I think such an employment the less illiberal, however great may be the abilities exerted, or the advantages purchased. But I conceive such labour to become still more degrading, when it is let out to serve the views and advocate the opinions of others. It sinks another step lower in my estimation, when, instead of being applied to communicate what is excellent and useful, it ministers to the purpose of excluding from circulation all such intellectual productions as have not been stamped with the seal of the party to which it is itself subservient. But when I see it made the instrument of a religious, political, or literary proscription, forging or pointing calumny and slander to gratify the malice of hotter and weaker heads against all whom they hate and fear, I have now before me an instance of what I consider as the lowest and basest intellectual drudgery. I leave the application of these distinctions to the Quarterly Reviewer.—Pp. 62, 63.

IRVING'S SERMONS.

Sermons, Lectures, and occasional Discourses. By the Rev. Edward Irving, M.A., of the National Scotch Church, Regent-square. 3 vols., 8vo. Seeley. London, 1829.

It is not to be supposed that Mr. Irving is the sort of person likely to change the eccentric manner which it hath seemed good unto him to adopt, and we have here accordingly all the well known characteristics of the style of the preacher of the Caledonian Chapel,—rendered, perhaps, more prominent and obtrusive by the straining and effort after effect, which are more conspicuous now than when the author was surrounded by the crowds of the fashionable world, and visited by strangers, as one of the lions of the metropolis. We do not intend in this brief paper to enter into a detail of the many glaring defects and the occasional beauties with which these volumes are fraught. We shall content ourselves with selecting one or two passages in which these characteristics are most obviously manifested. Mr. Irving is known to wage unceasing war against the literary and scientific pursuits of the age; but, with all his prejudices, we were scarcely

prepared to hear him asserting, in the very face of history, and even of common sense, that the study of *astronomy, chemistry, physiology, and natural history, leads directly to atheism*. That we may not be accused of misrepresenting his sentiments upon this point, we shall give his own words:

'In respect to the heavens and the earth, whose regular and unchanged motions have made them to be worshipped in all ages, from the Chaldeans of old down to the scientific men of the nineteenth century, it is necessary for me to believe that there is a time coming, when they shall, of mere will, be changed and removed like a scroll; for new heavens, and a new earth, and a new condition of men and things, which shall come into being when our glorious head is revealed from the place of the right hand of God, where he is at present hidden. Otherwise for want of a manifested will, we should all become Atheists. For all astronomers, who have looked upon the steady and unchanging motions of the heavens, from the time of the Chaldeans to that of the French Institute, have, in the end, become idolaters and worshippers of them. Why? Because they seem unchangeably fixed under the law of cause and effect, and the spirit of man acknowledged unchangeableness to be an attribute of God only; and to guard against this, it is revealed not only that they were created, but that they are to be changed in the time of the bringing in of the Great Head of Creation. So have the chemists done in these latter times, and, I may say, the physiologists, and all manner of naturalists, who have no other God than that piece of matter, the constancy of whose law of cause and effect they are observing: and thus hath science become to them a religion. And why? Because, being under the law of cause and effect, it exhibits no unaccountable changes, or vicissitudes; no acts of simple will; it makes no discoveries of a will without a cause, are absolute and unconditional with the cause of itself. And therein a religion is distinguished from a science, that it proceedeth out of a will, and addresses itself to a will.—Vol. i., p. 123.

Surely Mr. Irving can never have perused the lives of any of our great philosophers, of whom we cannot at present recollect a single individual not distinguished for genuine piety and reverence for religion. Amongst astronomers, the names of Copernicus, Kepler, Galileo, Hally, and Newton, will at once occur; amongst naturalists, Ray, Derham, Newventytt, and Lesser; amongst physiologists, Galen, Harvey, and Haller; amongst chemists, Boyle; and amongst general philosophers, Lord Bacon, and Bishop Berkely, were all distinguished for their piety and religion. Mr. Irving is somewhat more correct in the contrast which he has drawn between the character of our peasantry and our manufacturing population, though here also he has dashed in a few of his caricatures, and exhibited the smarting wounds which he has received in his conflicts with an uncompromising press:

'How much sweeter, gentler, and opener to the light, and to affection, the reverential spirit of the Scottish peasantry, and of the well-instructed part of the English peasantry, preserveth their souls,—than doth the levelling, equalising, all-censuring and all-judging spirit of our manufacturing people, taught in newspaper lore; those political statesmen, no longer choosing to be called peasantry, but operative classes. What a difference there is between these two characters! The character of these self-sufficient, loquacious fellows, with whom our manufacturing towns are filled. Which cometh chiefly of this, that the one revereth all men in their places, and honoureth especially those to whose care the welfare of a nation is committed; is humble in his ideas of himself; never dreams of being able to judge those above him, to dispute it with a man of learning, or doctor of the church; to handling state questions, or sit in judgment upon kings:—to all which, and much more, the other, thinking himself quite equal, becometh vainer and more empty than the peacock, chattereth like the magpie, and, like the mocking-bird, sitteth all day long mocking, and mimicking every fowl of a deeper and sweeter song. This irreverence is the beginning of pride, the parent of cruelty, and cruelty of all destructiveness; while, on the other hand, reverence of a superior in place, in person, in mind, in honour, and in dignity, is the beginning of meekness, of humility, of docility, and of every gracious disposition. Nor is there any one thing against which this nation, against which man-

kind, have now more to be on their guard,—no one thing which is so effectually scourging the soil of the world, and making it spew forth the seed of the word,—which is so selling men to infidelity, and binding them over, under strong indentures, to Satan,—as this spirit of irreverence, which, in the vigour of the mind, is called criticism; and, reviewing which in the region of politics, is called radicalism; and, in the region of the church, thinking of oneself, where it produceth what is commonly called personal—but is, in truth, selfish—religion, that is no religion, but the religious esteem of ourselves.—Vol. ii., p. 747.

Amidst some little bombast and obtrusive effort conspicuous in the following passage, there are occasional gleams of genuine eloquence, sufficient to show, that, had Mr. Irving not been misled by affectation and bad taste, he might have written more worthy and more lasting productions than he has hitherto published, or, in all probability, will now be able to execute, tainted, as he appears so hopelessly to be, by a wayward and incorrigible perversity of style. There are few readers, we think, after perusing this passage, who will not agree with our opinion:

'One mountain climbed, another ariseth before me, and another, and there is no end of the labour. I do but get deeper into the bowels of this charmed land, and lose more and more my own liberty, and my own country, and my own being. I am hurried and hastened along with a multitude, who hurry and haste they know not whether. I could wish again for the ignorance and inexperience of my youth; for certainly I grow daily more hardened, and more cold, and more shrewd, and more artful. I am made familiar with deception, and trained to endure it, to conform to it. And what do I reap as the fruit of these earnest and laborious sowings? I reap a great increase of care, a heap of worldly pleasure. But, where is conscience gone? Where are those ingenuous thoughts with which my life commenced; the blushing of of shame, the ardours of enthusiasm, the artless simplicity, the free and delicate honour, the tender and romantic affections, the chivalrous purposes, the gay and glorious morning of my life? Where is that poetry, and the romance, and the beauty with which my early soul did invest all things? Ah! and have I reaped the loss of all these fascinations? Have I resigned this attendant angel, whom I wooed in youth, for the worldly beldam who now sits heavy upon my aged breast, and drinks the life-blood of my heart? There is hardly a wider difference between an angel and a demon, than there often is between a young man entering the world in all the rich exuberance of youthful spirit, fullness of a joyful heart, and pastime of a simple and innocent imagination; and the same being, after he hath been well drudged in Mammon's workshop, worn and wearied out with the chances of life's lottery, if not fretted and maddened at the great gaming-table of ambition. Which difference you know, brethren, better than I can describe it; for mine has been as the inland lake, compared with that boisterous sea on which you have had to steer your course. And yet I am not ignorant (as who can, who hath fairly grappled and wrestled with the world) of the fearful havoc it maketh upon the fair person of a man; which may well be likened to a brave and martial troop of soldiers riding into the field of battle, in all the freshness of morning strength, with military glees and brave banners, burnished steel, and warlike minstrels, and the troop returning slain, weary and sorrowful, covered with their own blood and the dust of the ground; and as such a troop which hath been defeated and disgraced, routed and put to flight, so is every company of men whom you may fix upon, after having contended in this world's contests, to what they were when they entered into that conflict, more dreadful to the spirits of men than ever was any battle by sea or land to their bodies.—Vol. ii., p. 562.

Upon the peculiar doctrines maintained by Mr. Irving, particularly his interpretation of Scripture prophecies, we shall not at present enter.

MORE WORDS ON THE MODERN ORATORS.

WHEN, in our last Number, we maintained that the oratory of modern times exhibits a marked inferiority to that of the ancient world, and endeavoured to show what causes had operated to prevent modern genius from developing its strength in those powerful exertions of eloquence and rhetoric which used to move the minds of Grecian and Roman men, we did not mean to assert that this decline of oratory was caused by any general decay of men's mental energies. The strength is yet in us; but circumstances have induced us to put it forth in a different direction. The strong feelings which make men eloquent, the fancy that gives form and life to the thoughts that have been kindled within, and the skill that teaches the orator how to express his own feelings so as best to excite the sympathy of his auditors,—all these exist in modern as in ancient times. But such has been the change in the institutions, such the consequent changes in the feelings and wants of men, that oratory has no longer the power which it had, and consequently has been neglected by those who do not find their account in cultivating it. The orator produces little effect on the opinions of his hearers, the writer much on those of his readers. It is now, therefore, the custom for those who wish to work on men's minds to print instead of speaking their thoughts. We are less skilful now than in former times in the use of a weapon which has lost half its efficacy; and oratory has declined very much for the same reasons that have made men worse archers, since the use of the bow has been superseded by the introduction of fire-arms.

We have, therefore, always felt that it was highly possible that at any time oratory might be revived, if men should find it necessary to become orators. And we are not, therefore, at all surprised that the very first week which has elapsed since our remarks on the decline of oratory, has seen eloquence rise, like the phoenix from its ashes, and wing its way above the highest flights of the Roman and Grecian eagle. We are not surprised that oratory has re-appeared among us, because its return has been preceded by that of the feeling and wants which make orators. And we do not hesitate to say, that we are not in the slightest degree surprised at the sudden blaze of rhetorical light that has burst upon us, because we expected it—because we felt that the Catholic Question, which had been the parent of so many metaphors, so many bursts of genuine eloquence, must, before the arrival of the term to which it is drawing, raise us up some noble monument of Anti-Catholic oratory.

We have always supposed that the restoration of oratory would proceed from the Anti-Catholic party. The object of rhetoric is to produce persuasion independently of strict reasoning; that is, to offer arguments or appeals to the feelings of an audience in such a manner as to excite a sympathy of feeling without convincing the judgment. The effects of the rhetoricians, as has been justly said, begin where those of the logician end. Now the Anti-Catholic party, from the very complete contempt which they have always entertained for logic, have had the singular advantage of being able to bestow their undivided attention on the rhetorical part of their speeches. It is obvious that those who have no logical arguments to offer, and who endeavour to persuade men of that which they themselves have no reason for believing, must require the greatest degree of oratorical skill, and are, therefore, most likely to display it in the greatest quantity.

Eloquence, or the art of expressing the feelings, which we have, or pretend to have, is the most important ingredient in rhetorical power. And in this, also, the Anti-Catholics possess great advantage. For, as the conventional language and habitual dissimulation of the higher classes has almost divested them of any power of expressing

their feelings with energy, true eloquence is, in general, to be found only among the lower orders, who are in the habit of expressing their opinions with a fearless simplicity of language. But, as the very lower orders have, unfortunately, no seats in either House, the only approximation to their eloquence is to be found in that party in the two Houses, which professes to take the opinions of the lowest orders as its guide, and has succeeded in acquiring much of the feelings, vocabulary, and intellectual habits, of the most uneducated orders.

For these reasons, we were not at all astonished at the eulogiums which were bestowed on the late wonderful speeches of Mr. Sadler and Sir Charles Wetherall. The first of these gentlemen has lately been introduced into the House of Commons, not as some young men are, in order to advance *themselves*, but in order to advance his *cause* by the singular combination of the wisdom of a sage, and the ardour of a novice. It appears from his own account, that he has long exercised a mysterious influence on the fortunes of his country, inasmuch as he confesses that he was mainly instrumental in destroying the stability of Mr. Canning's Administration. The talents of Sir Charles Wetherall have not been hid under a bushel. The style of his oratory has long been known to an admiring country; but we did not know till the evening of Wednesday last, or rather till the succeeding morning, the height which he could reach in the sublimest flights of his genius.

It is not for us, however, to attempt to give our readers a detailed criticism on these wonderful ebullitions of the oratorical spirit. When we have carefully reperused all the finest orations of the ancient and the modern world, and all the best theories that have been advanced on the subject of rhetoric, then, and not till then, shall we give a matured opinion on these grand orations. But, in order to arouse the attention, and, in a certain degree, to guide the judgments of our readers, we shall give them the deliberate criticism of the 'daily and hebdomadal sources of intelligence,' in the order of time in which they appeared; because it will be pleasing to remark, that, as the esteem in which works of great genius are held, increases with every addition to the time which mankind has for reflecting on them, so the last week has been a type of future time, and the fame of Sadler and Wetherall has grown with the growth of men's intelligence, and acquired strength with the advance of time.

We will confess that there has been considerable diversity of opinion on the subject of these speeches, and that, while one party has extolled them as the noblest efforts of human genius, their opponents have spoken of them with an equal superabundance of contempt. But it has lately been maintained by very ingenious critics, that, in judging of a work of art, we ought to consider only its merits, without any attention to the defects with which they may be intermingled. We carry this principle further. In order to form a correct estimate of merit, we should take the opinion of those who judge most favourably. Our time and our limits will not now allow us to give such copious extracts as we could wish from the Constitutional papers. In our next Number, we shall collect the progressive series of periodical panegyric. For surely a large succession of articles might well be devoted to so important a subject. The reading public will be anxious to analyse the revival of oratory. And above all, those who feel the greatest admiration for the beauties of ancient rhetoric, will linger with pleasure to gaze on the spectacle of the Muse of Eloquence reviving from the sleep which too much resembled death, and awakening to a new life and a brighter beauty in the virgin embraces of a Sadler, or the maturer endearments of a Wetherall.

(To be continued.)

POETRY.

SCENE FROM A DRAMA.

Alfred.—Here, Bertha, let us seat ourselves awhile Upon this flowering bank, which fairy hands Have cushioned with soft mosses. Ha! a wild rose, Peeping from out its home in th' tangled hawthorn, Looks as it recognised a sister blush On your fair cheek, my Bertha. Come, fond rose! Ere morning thou must die; but thou shalt shed Thy sweetness here, fading, as suits thy beauty, On kindred beauty's bosom.

Bertha.—Now a truce, At least for one short hour, to flattery. Have you no tale of old romance to tell? No legend of the phantom-peopled past, When th' wizard Fear, and his wild goblin crew, Wrought their strange miracles? Methinks each stone Of this fantastic ruin seems a tablet Storied with curious records, rudely writ In th' hieroglyphic characters of time. Canst not decypher them?

Alfred.—Yes, we may read— The vulgar eye may do't—pathetic plaints Of faded glory, and the dusty doom Of all our earthly greatness; touching hints At blank oblivion; epitaphs on pride; Sorrowful lectures on morality.

Bertha.—This savours more of th' moral than the tale.

Alfred.—Is it too gloomy? Oh, then let me turn Mine eyes on you, and straightway do I find A smiling antidote to mournful thought. There, all things speak of death; but gazing here, Death seems impossible. For how, my Bertha, How can I look upon your face and call The worm your sister, or the grave your home? The summer bloom on those unsoiled cheeks, The lively glancing of those cheerful eyes, That pleasant smile now rippling o'er your lips, (Stirred from their stiltiness by some breeze-like thought),—

Do these tell aught of death? Do they not rather Speak joyously of everlasting life, And love and loveliness unperishing? Oh! young-eyed Beauty doth immortal seem, Charmed with a heavenly spell, from which e'en time, The grand destroyer, and his angel Death, Shrink powerless.

A. V. E.

LINES.

THE trees wear a sunny gleam,
And their leaves are dancing fast
To the running of the stream,
And the music of the blast.
There is one cloud overhead,
Which the gentle wind has kiss'd,
And has on its substance fed,
Till it breaks in shattered mist.
Every vapour has been driven
From this palace of the day,
To the eastern skirt of heaven,
To meet Night upon her way;
As the gathered shades that sleep
In a banner's folds, have fled,
When in one majestic sweep
That bright banner is outspread;
As the rout and flying fear
Of an army, and behind,
Like a sword upon the rear,
Hangs alway the chasing wind;
As a tempest-scattered fleet,
When along the distance fine
Every vessel goes to meet
The horizon's level line;
As the hideous coil of night
Fear, and suffering, and crime,
When we wake to broad daylight,
In the full of summer time.
All beneath the empyrean,
Bird, and beast, and insect gay,
As of old uplift their Pean
To the conquering King of Day:

Yet, I learn that Nature's treasures,
Gentle wind and sunny air,
Which she gives, and never measures,
Which are near us every where,
Like the household flowers that lie
Unregarded at our feet,
Like the daisy's golden eye,
With the tear of morning wet,
Like the heath-flower on the moor,
Hung with purple bells all round;
That mayhap, at twilight hour,
May ring out a fairy sound,—
All are vain, nor will reveal
Aught of glory to our sight,
Save harmoniously we feel,
Save we bring our own delight.
Thus in melody of wave
And of wind, that murmurs by,
We can hear no music, save
What our tuneful hearts supply.
For we owe to Nature nought
But the outward forms alone,
From within the light is brought,
And the splendour is our own.

T.

TO A LADY,

('Tra bella, e buona, non so qual fosse più,')

Who, not having fulfilled her promise to meet me at a
certain festival, afterwards sent me a note of apology.

I.

AHI vera donna! Or dal tesasso inganno
Riconosco, chi sei: la gran vaghezza,
Ch' angelica mi parve, o fugge, e spezza
Quel caro laccio di soave affanno.

Collo, ch' i neri anelli un marmo fanno,
Tocco, che più di se l'anima apprezza
E voi, begli occhi di fatal dolcezza,
Che feci io mai per merit' tal danno?

Tu pur, notte spietata, or vieni, e dille
(Che senza testimon nol crederia)
Com' io guardava a mille visi, e mille,

E sospirava—e dissi in foco suono,
'Mille non sono, quel ch' una saria.'
Va, traditrice; e non sperar perdono!

ON THE SAME,

When suffering under severe and protracted illness.

II.

PIETÀ! Pietà! gran Dio, deh volgi omai
L' impietosito sguardo: il bel sembiante
Le luci giovanette, e vaghe, e sante,
Non merta, no soffrir dell' empio i guai.

'Mortal, mortal, che delirando vai',
Rispose quel del trono sfolgorante,
'Ve', com, ogni dolor, par che si schiante
A' puri di Gran Fede augusti rai.

Alma beata è questa! E se pur l' ange
Nel fior degli anni suoi cotanta pena,
Io la sostengo—e questa man la mena!

Coel lo spirito umil, cui nulla frange,
(O speme di virtù solda e serena!)
Beve l' amaro nappo, e mai non piange.

ON THE PROTESTANT BURIAL GROUND AT ROME,
AS SEEN BY MOONLIGHT.

III.

Know ye the Cestian* tomb of olden time
Still pointing to its own Italian blue?
And have ye felt those reverent thoughts sublime,
That ever from yon semicircle of new

And alien graves, rise on the soul, and climb
The top of Reason's sovereignty. Strange hue
Of nature's holiest sorrow is there, and chime
Of Roman bells ringeth a music true.

Many lie 'neath the sod. Some died in joy,
But more, methinks, whose paining hearts did
burst

With various influxes of life's annoy.

* The pyramidal monument of Calus Cestius is the most prominent object in the foreground of the cemetery.

Young bard, whose lay was of Endymion,
Here is thy rest: the world has done its worst;
Calm, like that fabled youth, sleep on beneath the
moon!

IV.

O NIGHTIER far, spirit of light and love,
Creative emanation from the mind,
Which in its wondrous solitude doth move
All things and thoughts that are; thou who didst
find

Earth all too bleak for passionate hopes that wove
In beautiful idea each lovely and kind
Object in land, or sea, or skies above;
Strong too with musical law man's legions
thoughts to bind—

SHELLEY, what marvel if thy course was brief!
Thou wert an earth-traced line of delicate light,
Barred by encroaching shades, that hate the
moon.

Here thou art laid. O ye, who seek relief,
In his high verse, from sorrow and dread, come
soon
Hither, and weep with me for him, who loved the
right!

JULIAN.

THE UNIVERSITIES OF EUROPE AND
AMERICA.

UNIVERSITY OF LOUVAIN.

Louvain, 13th March, 1829.

I MIGHT indite an octavo, or a quarto, and fail of accomplishing the object of your inquiries: you must, therefore, forgive me for confining myself to their main point,—a summary view of our University, especially as regards its existing state. I have a peculiar gratification in availing myself of this opportunity to make it better known amongst your fellow-countrymen; for, though it be greatly shorn of its utility and importance by the effects of a cumbrous and vicious organisation, the high literary rank it enjoyed in a former age, and the splendour of its ancient name, entitle it to the veneration of every enlightened individual, under whatever sky he may have imbibed a sense of the value so justly attached in our days to intellectual pursuits. But, before I enter upon the more immediate subject of this communication, I am in justice bound to confess to you, that it is indebted for whatever of merit or value it possesses to my learned and talented friend, the Baron de Reiffenberg,* who has evinced a readiness, beyond all praise or acknowledgment of mine, in supplying me with details, which I should probably have sought for in vain from other quarters. I can neither deny myself this recognition of the obligation he has so cheerfully conferred upon me, nor allow you to ascribe the sins and omissions of the succeeding details to any but their rightful owner. For these last, therefore, I am bound to take all the responsibility on my own shoulders: in every other respect,

Acceptissima semper
Munera sunt auctor quæ pretiosa facit.

Louvain was formerly the capital of the four provinces of the Duchy of Brabant, but was less celebrated as the residence of its sovereigns, than as the seat of a university, founded by John IV., Duke of Limburg and Brabant, in the year 1425. None, who are any ways familiar with the patriotic views for which the House of Orange has at all times signalised itself, will be surprised to learn, that this great step towards improving the intellectual state of the people of the Low Countries was ceded to the importunities of Engelbert of Nassau. Though at first restricted from teaching theology, the more general dissemination of a taste for learning, through the introduction of the art of printing in 1473, the patronage of

* Professor of Philosophy, and author of 'Archives pour servir à l'Histoire Civile et Littéraire des Pays Bas,'—'Eclésiastiques, ou Premiers Principes de Philosophie Générale,'—'Histoire des Pays Bas,' &c.

Philip the Good, and the splendid example of Erasmus, no less than the zeal and attainments of its teachers, raised the new University, within a hundred years from its first institution, to a rank scarcely inferior to that of Paris or Salamanca. The sixteenth century was the zenith of its splendour; at that time it possessed four colleges, endowed with extraordinary privileges, an extensive library, a botanical garden, and an anatomical theatre, and was frequented by six thousand students. In more recent times, the narrow spirit of a bigoted Government became extremely detrimental to its prosperity, and confined its intellect within the lifeless framework of the middle ages. Towards the close of the last century, it was Louvain, therefore, which opposed the most determined resistance to the violent reform which Joseph II. attempted to introduce within its walls; it was Louvain which openly revolted against his measures for introducing a freer and more tolerant system of public instruction, for divesting the clergy of temporal power, and compelling that clergy to acquire those more enlightened views in religious matters which should render it worthy of its elevated functions! 'His intentions,' observes De Reiffenberg, in his 'Histoire des Pays-bas,' 'were commendable; but there is a wrong way of setting about a right purpose; and such was precisely the mode which Joseph apparently preferred.' The priesthood declaimed vehemently against the establishment of a general seminary at Louvain, which stripped the heads of dioceses of the right of instructing their clergy in theological learning. And the same University, which had denounced the episcopal schools, in the years 1749, 1758, and 1784, now aided zealously with the clergy. The rector and seven-and-twenty members of the University body were dismissed, and the faculties of law, medicine, and the arts, were transferred to Brussels. No reform can be effectual for which men's minds and habits are unprepared: the violence with which Joseph imposed wholesale amendments upon his subjects, ensured their failure; and in no quarter were his projects more obstinately contested than among those theologians who, at the self-same moment, afforded a proof of the success which might have attended milder and more gradual measures on his part, by denying the temporal power of the Papacy, in answer to the famous questions raised by the English Ministry in the year 1788.

The irruption of the revolutionary hordes of France occasioned the entire dissolution of this University. At a subsequent period it was replaced by a Lyceum, and after a total interregnum of four-and-twenty years, was re-instated, by a decree for the organisation of the higher department of instruction, issued on the 16th of September, 1816, as one of the three Universities of the southern provinces of the Netherlands monarchy. Ghent and Liège are the others. The plan on which they were then formed was an adaptation of the mixed systems of the Dutch and German Universities. They were divided into four faculties, Philosophy, the Physical and Mathematical Sciences, Medicine, and Jurisprudence: and were privileged to confer the two degrees of 'Candidate' and 'Doctor,' and three initiatory grades, styled, *rité*, *non sine laudibus*, and *summa cum laude*.

The academical authority is vested in a rector, chosen annually, and assisted by an academical senate, to whom no external jurisdiction is confided. The general administration rests in a council, composed of private individuals, appointed by the sovereign, and termed the 'College of Curators': it is they who confer the professorships, decide all disputes, and interpose in all questions of discipline.

As respects tuition, freedom is the governing principle; no classical work is prohibited; the sciences to be taught are merely indicated, nor is any obligation imposed upon the professor, excepting the necessity of developing the history, divisions, and leading methods of his subject: in

other words, the methodology and encyclopedia of the science he teaches. The pupils are free agents, whom it is wished to habituate to habits of civil life; nor are there any colleges or boarding-houses, but for such as are designed for the ecclesiastical state. For this latter class, the 'Philosophical College' was instituted in the year 1825. Here they pass through a preparatory course of ancient and modern literature, history, philosophy, the physical and mathematical sciences, and canon law. This institution has been the object of the most illiberal and frantic attacks on the part of the Catholic clergy.

The courses we have had during the late winter session, have consisted, as regards the faculty of the Sciences, of 19, delivered by six professors; in Jurisprudence, 12, from five professors; in Philosophy, 33, from eight professors and three lecturers; and in Medicine, 12, from four professors and one anatomist. Besides these, extra lectures have been delivered on Pædagogogy, or the Art of Teaching, the attendance upon which is obligatory on all who are intended for the profession of public teachers.

The number of students, who matriculated at the opening of the session, 1828-9, were, in the Sciences, 83; Jurisprudence, 162; Philosophy, 98; Medicine, 71; and for the Philosophical College, 271: forming a total of 685.

The number who obtained the degree of 'Candidates,' were 129; namely, in the Sciences, 31; Jurisprudence, 29; Philosophy, 45; and Medicine, 17:—and the degree of 'Doctor' was conferred on 55; namely, in the Sciences, 2; Jurisprudence, 26; Philosophy, 3; and Medicine, 24.

The classification of the students by provinces will stand thus:—Northern Brabant, 211; Southern Brabant, 208; Limburg, 42; Guelderland, 5; Liège, 39; Eastern Flanders, 22; Western Flanders, 19; Hainault, 123; North Holland, 3; South Holland, 4; Zealand, 1; Namur, 28; Antwerp, 68; Utrecht, 1; Overysel, 2; Groningen, 1; Luxembourg, 104; and Foreigners, 4.

Our 'Library' contains about 80,000 volumes, and is to be increased annually with the leading journals and publications in all languages. During the academic year 1827-8, it received an accession of 874 works, comprising 3,600 volumes.

We have a Cabinet of Natural History, consisting of about 10,000 specimens,—a physical cabinet, chemical laboratory, museum of anatomical preparations and surgical instruments, and theatre of anatomy, which is most perfect of its kind. The clinical hospital is superintended by two salaried students; and the botanical garden comprises hot-houses constructed with great skill and elegance, and affording specimens of the rarest exotics, which could not flourish with greater success in their native climes.

The University publishes every year one or two volumes in quarto, under the title of 'Annales Academiæ Lovaniensis.' These contain the orations of the rector upon going out of office, and of such professors as have been recently inaugurated; details of the lectures; a necrological notice of the functionaries who have died during the year; and the successful prize-essays of the students throughout the universities and colleges of the Netherlands. The officers of the University themselves have not slumbered at their posts; the fruits of their industry were, last year, nineteen works, besides essays which have appeared in the transactions of the several societies with which they are connected.

Our body politic is dependent upon the Minister of the Home Department, who is assisted by an Administrator of Public Instruction. This office was formerly filled by Baron Falck, our present Ambassador at your Court, whose zeal was eminently conducive to the advancement of learning and science: he is a man of considerable literary attainments, and has proved, on all occasions, the advocate of rational improvements. In acknowledging the claims he has upon our grateful re-

membrance, it is impossible to forget those of his estimable Secretary, M. Van Ewyck.

You may be surprised to learn, that the language adopted as a medium for general instruction is the Latin. Many others, besides myself, have objected, very strenuously, against this custom, although it may, after all, be the best means of supplying the want of a vernacular tongue, and harmonising the studies of individuals, who would be otherwise severed by a medley of all sorts of dialects, besides French, Flemish, Dutch, Friesish, and German.

As your universities are unacquainted with the *Candidates'* degree, I should mention, that it is seldom of any weight beyond our academical confines. It is, in fact, a preparatory step to the obtaining of a doctor's degree, and must be accorded by the faculty in which a pupil has studied, one year before he becomes a candidate for that degree. The expense of the several degrees is as follows:—Candidate in the Literæ Humaniores and the Sciences, 50s.; and in Law or Medicine, 4l. 4s. Doctor's degree in the Literæ Humaniores, 5l.; and, in the other faculties, 8l. 8s.: and the cost of all special examinations is 50s. for each.

The remuneration to the Professors, for such lectures as it is obligatory upon them to deliver, is fixed at 1l. 5s. for a course given twice a-week, and 2l. 10s. for a course given more than twice a-week, throughout the academical year. The student pays a matriculation fee of five shillings, which carries him through the year; and a foreigner may matriculate after passing through an examination before the faculty of letters; but neither native nor stranger can be admitted, if he have been expelled from any other university.

Out of the funds annually assigned by the state in support of our Universities, of which I recently sent you the details,* there are appropriated salaries to each of our ordinary professors of 170l. a-year; and I cannot consider it an unwise regulation, that the further recompense of their labours should be made dependent upon their success in promoting the prosperity of the University at large. This further recompense consists in an equal re-partition amongst them of the sum received for bestowing academical degrees, after the proportions reserved to the University, the rector, and the secretary, have been deducted; and of a tenth of all fees of matriculation received by the rector. Another source of emolument to them is found in the delivery of such extra courses of lectures as are sanctioned by the curators. After thirty years' services, they become entitled to an addition of one-fourth to the amount of their regular salary; and, after they have attained the age of seventy, they are entitled to the assistance of an extraordinary professor, still retaining their previous salary and emoluments. Upon their decease, their widows and children receive pensions, until re-marriage in the one case, or the age of one-and-twenty in the other, which vary, according to the deceased professor's standing, from 42l. to 84l. per annum.

As an encouragement to assiduity and talent, each of our four faculties annually proposes two subjects each for essays in Latin; and the successful candidates are rewarded with gold medals of the value of 4l. 4s. each, which are conferred upon them, in public assembly, by the rector, after he has pronounced his valedictory oration. Nine-and-twenty, also, of the more indigent class of students are aided by pensions, provided by the state, of 17l. a-year. These, at the discretion of the rector and curators, may be continued for any term of years not exceeding six; but not unless the professors, under whom the pensioners are studying, give a unanimous testimony to their application and good conduct.

The accession of the new rector, styled 'Rector Magnificus,' takes place on the 1st of October in each year: he is elected from the faculty next in

rotation to that from which the rector of the preceding year was chosen, is presented by the senate, and appointed by the sovereign.

In respect of the expense of education within our walls, that will vary according to the objects a student may have in view; but you will be enabled to form a sufficiently accurate idea as to this point, when I observe that the four years' course in Jurisprudence, inclusive of the fees for a doctor's degree, does not exceed 812 florins, or about 17l. per annum.

It is now eleven years since this University, as well as those of Liège and Ghent, have risen from their ashes; and yet their success has neither corresponded with the expectations of the country, nor the liberality of the state. Public opinion points at the vices of their organisation; their decrepitude has been assailed even in the bosom of the Legislature; they are deficient in energy, and devoid of moral influence, and are neither in harmony with public opinion, nor capable of impelling it.* This is not the place for investigating the sources of so deplorable a state of things. But a most important step has been made towards remedying it. The vigilance of a patriotic Government has been roused; and a commission has been appointed to inquire into and ameliorate the defective system, which has rendered these institutions so unworthy of the free country and enlightened age to which they belong. We may look forward with hope and confidence to the results of an inquiry, directed by two individuals of such eminent experience, soundness of principles, and intelligence of mind, as my friend, De Reiffenberg, and the illustrious jurisconsult, Warnkoenig of Liège. Our good King has honoured both himself and them by his choice.

D. C.—x.

THE MUSEUM OF THOUGHTS.

II.—AUGUSTUS WILLIAM SCHLEGEL.

A cabinet in a museum ought generally to contain more than one specimen; but, when the specimen is massy and valuable, it may sometimes be allowed to stand alone. The great critic on dramatic poetry intended at one time to compose a work on the history of epic poetry: and the following observations on Homer show how admirably fitted he was for executing it. They do not indeed profess to give a complete and exhaustive character of the 'Iliad' and 'Odyssey'; they were written incidentally, and for a particular purpose, as a portion of an elaborate review of Goethe's 'Hermann and Dorothea,' but they display more knowledge of Homer, and throw more light on him, than scores of volumes constructed with that specific intention have done. It is much to be deplored, that a man fitted, almost above all other men, by his endowments and his acquirements, for giving the world a 'solid and orderly' history of poetry, should have been tempted to abandon the task: for do what he may in Sanscrit literature, he will never do a tenth part of the good he might have done by such a history.

If we wish to understand Homer, we must begin with entirely discarding all the current notions concerning the nature of epic poetry, which have been propagated by the practice of later authors, and by the theories of critics. Homer has received the unmerited honour of being called the father of the epic poetry, which has been so exemplified and described: and as the epopée, artificially hatched up, though it be out of groundless theoretical assertions, and the mistakes of what was meant to be imitation, has been pronounced to be the noblest, the most comprehensive, and the most splendid creation of poetical genius, so the simple old bard is usually placed at the head of those who have written such epopees. The investigations which have recently been carried on with so much acuteness by Wolf, touching the origin and history of the Homeric lays, have luckily given us a fixed point, from which our consideration of Homer's poetical character may proceed in a totally opposite direction. If the 'Iliad' and 'Odyssey' be made up of several parts originally independent and of considerable size, which, wherever there seemed to be any gaps between them, have been pieced together by

* 'Essai de Réponse.' Bruxelles, 1828.

* Vide 'Athenæum,' No. 72, p. 157.

the insertion of shorter passages, and that too at times with but little skill, it will turn out that, while people have always been wondering mainly at the admirable construction of those two poems as wholes, they have been setting up a merit foreign to Homer, as his chief excellence, a merit which did not belong to the Homeric age, and, from its intellectual condition, could not belong to it, and which, moreover, does not exist to any thing like the supposed extent. So unfounded is the well-meant complaint, which one often hears from the admirers of Homer, that *Wolfs* doctrines have made a breach into the sanctuary of the venerable bard, and that they threaten to tear Homer to pieces: whereas, on the contrary, these very doctrines have been the means of freeing his lays from the alien bonds which hold them together. Measure, proportion, and order, merits which Homer himself extols in song, (*Od.* viii. 489, 496,) are discoverable in the very smallest portions of the two poems, while in the great complicated body of the *‘Iliad’* and *‘Odyssey’* one often loses sight of them. A man who, though he was any thing but a competent judge on matters of poetry, and especially of ancient poetry, still had such penetration that he often hit the truth, even where the subject lay far beyond his sphere, Voltaire says of Homer: *Malheur à qui l’imiterait dans l’économie de son poème! Heureux qui peindrait les détails comme lui!* Not that an epical rhapsody can exist, any more than other kinds of poetry, without some principle of poetical unity. Only we must not look for this principle in a conception of the understanding wherein most critical writers look for it, and by so doing entirely lose the distinction of lyrical, epical, and dramatical unity. The reason will not be satisfied with any thing less than that pervading completeness, where there is a reciprocal determination of all the parts by the whole and of the whole by the parts: and this highest kind of poetical unity was attained to by the Greeks, in the organisation of their tragedy, which was perfectly independent and complete within itself. The writing of epic poetry does not pertain to the reason, which in the Homeric age was far from having been sufficiently trained, to demand any thing of the sort from a poetical work: it is only a unity with reference to the imagination: that is to say, it does not result from any thing within, but from the horizon or outline which confines the subject within a visible and definite boundary. Hence, it is impossible to lay down any rule for determining the extent of an epic poem: it may be enlarged and extended, until the point where the multitude of objects presented to the imagination surpasses its power to grasp them: and so the only reason given by Aristotle—although he tried to subject epic poetry to the rules of tragedy—in order to show that Homer had done well in not embracing the whole of the Trojan War in one poem, is, that if he had done otherwise, the poem would not have been easily comprehensible (*εὐνοητόν*). On the other hand, the unity of an epic poem is divisible; small portions of the *‘Iliad’* and *‘Odyssey’* are possessed of it: episodes of a few lines, such as *Il.* iv. 372—398, may be regarded as complete epic poems; and such episodes are probably for the most part abstracts of larger ones which no longer exist. Thus, instead of there being any necessity for using violent means to combine a number of separate rhapsodies into a larger whole, there was a harmony and a living connection between them from the very nature of legendary tradition: and this readiness to split into parts, and to combine into wholes, is a property natural to the class, as is implied in the very appropriate name of *ῥαψῶδες ἐπὶ* given them by Pindar.

Were the subject of an epic poem a single indivisible action, it is plain that this capability of partition and augmentation could not be compatible with its nature: but that subject is always manifold: the material of an epopee are incidents, events. Aristotle says, it is the property of epic poetry to have a plurality of fables: *ἐποποιεῖν τὸ*

πολλόμυθον. Metaphysical events, indeed, wherein men took no active part, or where the part they took was not in keeping with their character, would hold out little attraction to the mind. Still it is certain, that, in endeavouring to explain any occurrence, we do not regard the impulses and motives of deeds as originating in man himself and dependent upon him, but as wrought in him from without: so that we do not separate them from the aggregate mass of the powers of nature, as something distinct and opposite. Accordingly, that which is done by man in real life, does not become an action in the strictest sense, that is to say, an exertion of force in consequence of a free resolution of the will, except when it is the result of reflection: and poetry cannot express this, save by bringing the agent before us with all the workings of his soul. This is not the place for answering the question, whether the idea of the freedom of the will can be manifested in poetry otherwise than by giving a definite shape to the force which resists it; and whether it be possible to exhibit man exerting such a power of self-determination as no external force can overcome, unless by placing him in opposition to an inevitable determination from without, that is, to destiny: such a discussion would lead almost of necessity to an examination of the Greek tragedy. The hint, however, in *‘Wilhelm Meister,’* on the difference between novels,—which have, or ought to have, a great analogy to epic poems and dramas,—will excite every inquisitive critic to further reflection. ‘In a novel, (it is there maintained, *B. v. c. 7.*) the objects represented should mainly be sentiments and events,—in a drama, characters and actions. Chance may be allowed to have free play in a novel: Destiny, on the other hand, can only have place in a drama.’ How entirely the whole course of the story in the Homeric poems is swayed by chance—even in the passages where something like the decisive interposition of a superior power is introduced, as in *Il.* viii. 66—77,—is not to be mistaken.

The difference then between epic and dramatic poetry, which some writers on esthetics have classed together under the name of pragmatical poetry, declaring them to be substantially the same, would seem to be—at least if we confine our attention to what epic poetry and tragedy actually were among the ancients—somewhat deeper than the outward form, in something else than the circumstance that the one represents its personages as speaking, while the other tells us what befalls them. Indeed, it is quite futile attempting to deduce the highest rules for these two kinds of poetry, from the idea of a narrative and of a dialogue. Such an attempt could only be successful on the supposition that art were nothing further than a passive imitation of nature, into which she has unfortunately been too often degraded. But, inasmuch as art has the principle of activity within itself, and its business is to give nature a new form according to the laws of human thought and feeling, poetical narratives and poetical dialogues must take the bent of their character from the spirit of that kind of poetry to which they are subservient. The reference to common reality, which is never more than a subordinate consideration, only takes place when the point in question is to give the representation that degree of truth which is required by the principles of art. In the ancient tragedies, the personages have often long relations to tell: in Homer, they are introduced almost perpetually as speaking; and in lyrical poems we meet both with narratives and dialogues: but how thoroughly different is the style of each according to the class of poetry it finds a place in! An epic is just as remote as a tragic dialogue, which is its exact opposite, from a merely natural one: both are shaped down to their minutest parts, so as to assort with the character of the beautiful whole they belong to.

We now and then hear people talking of Homer’s enthusiastic boldness, of the impetuous

uncontrollable fire of his genius, very much as if he had been a dithyrambic poet, or animated with prophetic inspiration. This notion seems to have arisen from the confounding the theme of his lays with the person of the bard. His heroes, it is true, have vehement passions; but he himself appears perfectly dispassionate: what he relates must excite the feelings of every reader capable of feeling; but to his own he never gives utterance. Like a purely contemplative being, he stands above his heroes and above his gods, regulating and sustaining the world that lives in his mighty verse with the impartiality and tranquillity of an angelic spirit, that is, of perfected humanity. Within the compass of his mind, as beneath the brightness of a sunny sky, every thing finds its appropriate place, and is seen in its true light. In a word, the Homeric epic is a calm representation of objects in a state of progress. It is never a representation of objects at rest, or what is called a poetical picture. This is so foreign to Homer, that, when he has to describe a thing, he does it in such a way that objects at rest are set in motion; as is the case with the figures on the shield of Achilles: although this occurs in the latter and later songs of the *Iliad*, and the Homer from whom the first rhapsodies proceeded would hardly have introduced an episode of such length in which there was so little movement. The poet’s mind being thus elevated above all violent sympathy, and never disturbed by any momentary excitement or exhaustion, it sets all the parts of his subject after a certain sort on an equality, and grants them all an equal right to be represented: those which are of less importance, but necessary to the unbroken progress of the story—such as getting up, going to bed, eating, drinking, the washing of hands, the putting on shoes, clothes, and arms, and so forth—are never thrust aside, but occupy the space that belongs to them close beside things of the greatest moment. The measure of time, such as it is in real life, is suspended; and every thing is arranged in a poetical succession, so regulated that each shall have the distinctness requisite for the display of its beauty: that which is permanent, if the imagination can exhaust it at once, occupies but a single instant in the representation, while that which fleets rapidly away is arrested, until the life concentrated within it has been completely developed. Never does the song come to a standstill; nor is there ever any unseasonable hurrying forward: throughout there is the same constant and unvariable, the same measured, harmonious, and beautiful motion. The bard dwells on every moment of the past with the same undivided interest, as if nothing had gone before and nothing were to follow; and thus every thing awakens the vivid feeling it would call forth, if it were living and present before us. At every moment, accordingly, we find a gentle excitement accompanied by its immediate gratification; and the realm of epic poetry is like the garden of Alcinoüs, where the fruits ripen in uninterrupted succession, and each in its due time drops of its own accord from the tree into the hand of the person who would enjoy it.

Such being the internal and spiritual rhythm of epic poetry, the verse peculiar to it is only the expression and audible image thereof. Aristotle calls it the staidest and most majestic of metres, *σπασμωδία καὶ δοκιδέστατος τῶν μέτρων*. The Greek hexameter has neither a falling rhythm, like the trochaic tetrameter, which therefore bears us along with the sweep of passion (*καρτερικὸν, ὀρμητικόν*); nor a mounting rhythm, like the iambic trimeter, which, while it is striving regularly upward, evinces a stout resolve and seems as it were ready for action (*πρᾶκτικόν, naturem rebus agendis*); but it hovers steadily between the two, being equally inclined to pause and to move onward; and hence it can carry the hearer, without wearying him, at a middle height, to an immeasurable distance. Its variety, which must have been far less prominent when the

verses were originally sung to a uniform strain, is merely a secondary matter. The question, why such a simple material form can be allowed to recur an infinite number of times amid all the rich variety of an epical subject, while no Pindaric ode, however narrow its theme may be, can do without very complicated strophes, might be a perplexing one to those who, in the theory of metre, start from the principle of imitative harmony, and thereby in this point also would make the artist a mere copier of nature. If, however, metre, considered in the most general light, abstractedly from all particular purposes, be the manifestation of that which remains constant in the midst of the changing; if it express the identity of the poet's consciousness; it is plain that the identity should be more strongly discernible when the mind is in a state of the clearest self-possession and distinctly separated from the objects of its contemplation, than when it is transpierced and labouring with emotion. Outward objects do not impose the laws of art on the human mind, which merely uses them as its materials; but the mind imposes them on those objects: and it is the same with regard to metre. Aristotle remarks with great justice that the iambic verse has most of the tone of common conversation (*λακτικὴ ἀμικρία*), from which the hexameter is far removed; that the latter is suited to a narrative poem; and that it would not be fitting to compose an epic in any other metre or in a mixture of metres, as for instance, the narrative in hexameters, and the speeches in trimeters. Nevertheless he extols Homer, because he says as little as possible in his own person, and always after a short preface immediately introduces a man or a woman speaking. How could these remarks be reconciled? unless a dialogue in epic poetry ought to be so far divested of its natural qualities, as that its unsteady flightiness should be charmed and restrained till it partake in the uniform tranquillity of the whole representation.

Since the speeches occupy far the largest part of the Homeric lays, it is a great matter toward getting a correct notion of this class of poetry, to understand their character rightly. Even in the shortest and most passionate of them a nice analysis would be able to point out something whereby they are epicised. In the more prolix we find all the essential qualities of the whole rhapsody visibly expressed. There is no perceptible striving after a main purpose, even if there be such a purpose on the occasion and subject matter of the speech: that which prepares the way for what is to follow, seems still to stand where it is, entirely for its own sake: there is the same tarrying progress, the same vivid realising minuteness of details, the same placid regularity, the same easy transitions and loose connection, which are the general characteristics of epic poetry. This, too, is the way in which we must take the compound epithets and the episodes: in impassioned speeches, if the representation were to be regarded as a mere copy of nature, they would be extremely faulty, and they have often been very ignorantly censured. The readiness of the epic bard to indulge in episodes, whenever they can be tacked on agreeably, results from his never letting the subject get dominion over him: hence, even at the most critical moments, he can easily find leisure to bring some object that invites him from afar, immediately before the imagination. What has been said of the Homeric speeches and episodes, is also true of the similes: they are not mere instruments, but are allowed to expand freely within their beautiful well-rounded outlines, and are as it were epopees on a diminutive scale. Even in the manner of arranging and combining the words, which is the clearest, the easiest, and the most pleasing conceivable, may the epic mode of connection be discerned; and the language, with its minute pleonastic particles, and the polysyllabic richness of its inflexions, seems made on purpose to express the continuous gently gliding

flow of the thoughts. One instance among others of the astonishing consistency with which this poetry, the offspring of a happy instinct, was by the same instinct brought to perfection, is, that the figure of speech, which uses the present tense instead of the past, a figure so natural to a lively narrator, and to which even Virgil has recourse almost incessantly, does not occur a single time in the whole of the *Iliad* and *Odyssey*. Apollonius likewise abstained from it, because he preserved the Homeric form, although its spirit was extinct, and it was no longer any thing but a mere form, with greater fidelity than Virgil. He is weak and cold: that which Homer passes over the most cursorily has more life in it than the passages most fully worked out by Apollonius. Indeed, it was the practice of the later epic poets to take a great quantity of mythical materials to construct works of an inconsiderable size: the secret for unfolding the germs of beauty had been lost.

Virgil created a new and totally peculiar species of epopee, marked with the emphasis which belonged to the Roman character. He, far more than Homer, has been the prototype of the moderns; and in him the difference between the pure original epopee, and that mixed species to which we give the name, may be strikingly exemplified. Passing over the more artificial construction of his whole poem, and the attempt to subject the action to the laws of dramatic necessity, we look in vain in the *Æneid* for anything like the placid rhythm of the Homeric style. Virgil betrays or affects a sympathy with his subject; and even falls into the mannerism of uttering exclamations to his heroes or about them, see iv., 408. His diction has great solemnity, majesty, and splendour, with which he tries to clothe even common things; while Homer's language, on the contrary, is strong, but simple, without any thing of pomp or exaggeration, and only ennobs objects by the fulness with which it exhibits them. The calmer speeches in Virgil are rhetorical, the more impassioned are mimical; that is, they give a direct imitation of the turbulence and disorder of a soul agitated by passion. In passages, where his subject leads him to be calm, he is more or less Homeric, especially in the account of the games in the fifth book: but he is quite the reverse in the justly admired story of Dido, a tragic fragment, which has not only less of Homer's spirit, but more of the spirit of modern times than any other part of the poem.

In the foregoing remarks on the Homeric epic poetry, I have purposely abstained from saying any thing of its mythical element, and of all that is merely natural and local in it; for I have been speaking of that which is essential to it, not of that which is accidental. The modern imitators of Homer, indeed, have thought differently; but one need not be surprised that they should appear not to have possessed the faculty of discriminating the representation from the thing represented, the form and style from the subject-matter; seeing that the writers of theories on epic poetry, who are always referring to Homer as the highest authority, have been so palpably devoid of it. The essence of epic poetry has been said to lie in the heroic, in the marvellous, in the sublime, in the importance of the action, in the magnitude of the poem, in the dignity of the characters, in the gravity of the style, in I know not how many other things. Most especially has it been made an indispensable requisite, that an epopee should contain something of the marvellous; by which it was meant, that there should be the interposition of superior beings. Now in the ancient tragedies the gods appear frequently: they contend for and against the hero, as in the *Eumenides*; or the whole scene lies among the gods, as in *Prometheus*. And yet one cannot say that these scenes are marvellous in the sense in which the word applies to the incidents in Homer; because in them both gods and men are standing and acting within the same sphere of necessity: in Homer, on the contrary, the interference of the gods seems

to be still more a matter of chance than the conduct of the men. If the marvellous, as Aristotle says, arises chiefly from that for which we cannot give a reason (*διὰ τὸ ἀλογον συμβαίνει μάλιστα τὸ θαυμαστόν*), from that which is beyond the course of things intelligible to our understanding, then assuredly there could but be an abundance of it in Homer's age. For very little was then known touching the concatenation of causes and effects in the operations of nature; and accordingly they were supposed to be carried on by living beings: man had not yet elevated himself to the consciousness that he has the full power of determining his conduct by his own free will; and therefore he ascribed his resolutions to the influence of the gods. But who determined the will of the gods? it would look as if they would want another race of gods for that purpose; and so on to infinity. If the will of the gods, who were represented so completely like men, could be conceived to be self-motived and independent, the will of man might be conceived to be so likewise. It has been remarked with perfect truth, that Homer's heroes are less great than they otherwise would be, because so much of what they do is not their own act. If we fancy that the trouble taken by the Olympians in their behalf, and against them spreads a halo of higher dignity around them, we have not yet transported ourselves sufficiently into the Homeric way of thinking. In those days the gods took part in the very commonest business of life; they were so cheap, that Autolycus was adorned with thieving and perjury by the favour of *Hermes* (*Od. xix. 396*); and even beggars had their gods and their *Erinnyes* (*Od. xvii. 475*). Who will deny that the intensely fascinating irrationality of Homer's theology has embellished his poems with the richest blossoms of beauty, and that it is admirably suited to the wild and joyous life of his heroes? But ought we to vie with Homer in that which was a gift of his age? Ought we to put our faculties to the rack in order to produce something like it in despite of ours? Mythology, as distinguished from historical tradition, can only be favourable to poetry when it has an actual existence; that is, when it has sprung up as mythology, as the spontaneous poesy of the human race in its childish attempts to endow all nature with the feelings and the forms of humanity, and when it is still subsisting as a popular belief. A mythology can never be the arbitrary invention of an individual. Owing to this cause, the chivalrous and magical legends of the middle ages, which were nothing else than the images wherein the adventurous spirit of the times clothed itself, when they are introduced into the romantic heroic poems, have the advantage of possessing a vivid reality and popular truth, such as the artificial tissues of marvels devised for modern epopees can never attain to. Even Virgil should have served as a warning example, how little is to be effected by the interposition of the gods when it is no longer a matter of popular belief, and so does not belong to that picture of the universe which the poet's imagination frames out of the world he lives in. Yet modern writers of epopees have been studious above all things to have plenty of the supernatural: they have not only fabricated this, but have gone after the extraneous, and have at length lost their way in hell and in heaven. The only thing still wanting is, a thoroughly extramundane epopee. Their works in consequence have been confined to the learned, and have never sounded from the lips of the people, with the exception of the '*Jerusalem Delivered*,' the fate of which has been very peculiar in this respect; whereas Homer was of all bards the most popular, because his poetry sprang from real life, centered in it, and flowed back into it.

These observations may, perhaps, startle those who are wont to look on the Homeric epopees as the summit of poetry, as the highest insurpassable flight of human genius: an opinion which still keeps its ground in spite of the new-fashioned

notion of transforming the Greek minstrel into a savage child of nature, a rude northern bard: for it sorts well with the sentimental complaints about the miseries of civilization, to regard poetry as a gift of nature, which is inevitably destroyed if it be cultivated. The Greeks themselves seem to have placed Homer at the head of their poets, from a very natural confusion of that which is most venerable with that which is most perfect: and who, in truth, would be comparable to him, were a single man the sole creator of the 'Iliad' and the 'Odyssey'? But the harmony which pervaded the intellectual character of the Greeks, would of itself lead us to suppose that their poetry must have kept the same pace with the sister arts and the other exercises of their powers: and history shows us how it mounted from the easy copiousness of its epical age, to the energetic individuality of the lyrical, and at length, by the perfect blending and fusion of the two, reached the harmonious completeness and unity of the dramatical. If lyrical poetry may be compared with youthhood, and dramatic with manhood, epic poetry combines the open heart of childhood with the experience and clear-sightedness of old age. The beauty of epic poetry is of the simplest kind, and thus it would naturally be the first to be invented after those crude rhythmical effusions, which did not arise so much from the free play of the mind as give relief from the oppressive necessity of venting overpowering feelings. Sober-mindedness is the earliest of the muses that help mankind onward in their endeavours after civility: for it is in this state that man first acquires the full consciousness of his humanity. It is not consequently as the highest or most excellent kind of poetry, but as a kind which is pure, and genuine, and perfect, that epic poetry will retain its value for ever: and on account of its simplicity it may be enjoyed just as mere nature is, by such as have no feeling for art, which with works of perfect art, such as those of Sophocles, is impossible.

A STORY WITHOUT A NAME.

CHAP. IV.—VISITS TO THE PARSONAGE.

(Continued from page 172.)

MRS. MORDAUNT was a tall, bilious-faced woman, with a look of cunning which she had evidently cultivated because she fancied it denoted a woman who knew the world, and a look of self-complacency which showed that all her knowledge had not prevented her from believing that she was the most important person on its surface. Her daughter was a huge girl of five feet eleven, with a coarse face, diffuse figure, massive ankles, and splay feet. It is reported of Jekyll, that, when he was on a visit at Melcove, he saw her approaching the extremity of a field, and preparing with all delicacy to pass into the adjoining one, whereupon he was heard to exclaim, "What an awkward gait for a lady, and no style!" I rather think the joke was made by one of the parish wits, or, if it was coined by the great jester, it must have been one of his forensic facetiæ, done up for country use; but it certainly describes very completely all that was remarkable in Miss Susannah Mordaunt. The evanescent peculiarities of her character would be an excellent subject for an ambitious artist to signalise himself by describing; but a sign-painter like myself must be content to follow the example of a celebrated predecessor, who, seeing that the horses and chariots of Pharaoh were drowned in reality, very properly buried them under a deep coat of green paint in his picture.

'I have been so longing to see you, Mr. M'Kinnon, and I have been thinking of calling I do not know how often; but, what with one business and another always interfering, I have not been able to find a day. You know the poor Wil-beaches have been staying with us the last six

weeks,—a little longer than was quite convenient,—(in a whisper, as if she was afraid that Mrs. Wilbeach, who lived somewhere in Yorkshire, should overhear her;) and on Thursday, after we had got rid of them, our coachman sends word that one of the horses is out of health, and must positively have several days' rest.'

'Yes, Mr. M'Kinnon,' interrupted Miss Mordaunt, 'you cannot think what a provoking man he is: we might as well be without a carriage as be prevented using it when we want it, and so I told papa; but he treats the coachman a great deal more like a master than a servant.'

'My dear, how you run on; when you are a little older you will know, (with her woman-of-the-world wink,) gentlemen, and ladies too, are always governed by their servants, and so they ought to be. You know it is quite out of the question, Mr. M'Kinnon, for any lady, who is not very experienced, ever to procure a good servant, who does not consider it her perquisite to manage the house and sell the candle-ends.'

'Are these privileges conceded to the domestics at Hernby Cottage?' inquired Mr. M'Kinnon.

'No, Ma, that I am sure they are not,' said Miss Mordaunt; 'I am sure there is not a single servant in the house who would dare to move a finger, if she thought you were within an hour's walk of her.'

'Hush! my love. To be sure I have had a little experience; I believe I know how to manage tolerably well both my servants and my children; but it is not every one that can do this: there is your cousin Charles.' (Miss Mordaunt thought it behoved her to blush at the mention of an old playmate; she was some time in making her attempt to do so, but at last succeeded to admiration.) 'I tell his father not to keep too tight a rein upon that young man. It never answers with young men, Sir,' added the lady, forgetting her subject in her anxiety to show her knowledge of mankind. 'Though I have not seen him for several years, I am quite sure, now Charles is at College, he is doing very wild things; I have no doubt he rides his horse about Oxford without a saddle, and with his head towards the tail, as he used to do; and I dare say he half-kills himself with sucking oranges at the pastry-cooks' shops, and boxes with the other young men of the College in the street till his face is all black. He was such a quarrelsome boy. I assure you, Mr. M'Kinnon, it is the most difficult thing in the world to manage either footman or coachman, housemaid or cook, son or daughter, but most of all the last.'

'I should not have thought that Mrs. Mordaunt's experience would have borne her out in that remark. If it does, her methods must be extraordinary indeed, which have been crowned with such extraordinary success.'

Miss Mordaunt tried again to blush; but she only succeeded in a simper, which made her mouth as awful as a popular songstress in the agonies of 'The soldier tired.'

'Yes,' said her mother, 'I certainly have taken some pains with Susannah during the vacations; and, what, I believe, I may pique myself upon still more, I had the wit to find out an admirable school for her.'

'School!' said M'Kinnon, 'do you really recommend schools?'

'Nothing, I assure you, can be done without them. It is quite impossible that any girl who has been educated at home, can acquire that ease of manner, that perfect *tong de soyceatè*, which is so essential to any one who is to live in the world. Besides, where is a girl to get subjects for conversation; what does she know about the things that other people are talking about? Nothing at all, does she, Susannah?'

'No, Mamma; indeed, she does not. You know, the other day, when Colonel Johnson called upon us, he was telling Lucy Courtenay, who was

brought up at home, about Mrs. Jordan; how beautifully she acted in the character of Portia: there sat poor Lucy, not knowing what to say, and yet looking as if she wanted to say something, and mumbling some silly question or other about a casket and boy's clothes; but I, who had read Goldsmith's History of Rome, knew very well who Portia was; so I came to her relief, and asked Colonel Johnson how Mrs. Jordan looked when she was eating the fire. Now, if I had not gone to school, I should not have known that Portia was the wife of Brutus, or that she ate fire, or any thing about the matter.'

'You see there are considerable advantages in the boarding-school system, Mr. M'Kinnon.'

'Very considerable, Madam,' said M'Kinnon, inwardly chuckling at this unexpected illustration of the intellectual benefits to be derived from the system, being so nearly on a par with the moral ones. 'And I think you must allow, that a girl brought up at home, always wants that —' (*Aside.* 'What is that French phrase, child? I don't mean *tout ensemble*, nor yet *bel esprit*.')

'*Je ne sais quoi*,' said Miss Mordaunt rather indignantly.

'Yes, *je ne sais quoi* is the word. What an expressive language the French is, Mr. M'Kinnon! I was saying that a young lady is very seldom a *je ne sais quoi* who has not been at school.'

A peculiarly silent smile, as Mr. Cooper would express it, played upon the worthy Rector's features, and Susannah looked rather discomfited. Throwing herself into one of her easy, school attitudes, she remarked, that 'certainly the inexplicable grace of manner, as well as the *façon de parler*, were wanting in those persons who had not enjoyed the kind of education which her mother had so kindly procured for her.'

'I am sorry, ladies,' said Mr. M'Kinnon, 'that this is one of the points upon which even the greatest authority has no weight with me. Not even the arguments of Mrs. Mordaunt, not even the practical exception which Miss Mordaunt furnishes to my general rule, can convince me that a boarding-school is not the very worst place ever devised for the intellectual culture and the moral discipline of females. When may I hope to see my old friend, Mr. Mordaunt?'

'Why, he is just now so much engaged with this volunteer corps of his, that he is not able to see any body. By the bye, Susannah, we are to give the officers of the corps a cold collation at three; so, my dear, we must positively run away.' And with one of those formal leave-takings by which ladies are accustomed to indicate their displeasure at those men who are not gentlemanly enough to be overcome by their arguments, Mrs. Mordaunt and daughter withdrew.

THE TURKISH CATECHISM.

If the theological temperament of the Turks be estimated by the veneration with which they regard Mohammed el Berkewi's Confession of Faith, it will appear to stand on much higher ground than those who esteem themselves wiser in their generation have been disposed to allow. We do not hazard this hint at a venture: on the contrary, even the most prejudiced will agree with us, after perusing the subsequent heads of the Musulman faith, that the Turkish clergy and laity entertain in general a just and natural sense of the Creator's attributes.

'1. We acknowledge and confess that to Almighty God alone belong worship, honour, and adoration, that there is none other God besides him, or equal to him; that he is removed far above human weaknesses and imperfections; that he was not born nor begotten; that he has neither wife, nor son, nor daughter; that such as these are accidental circumstances, which never did belong and never can belong to him, the Everlasting; that he is neither in heaven nor on earth; that he has no abiding place; that there is for him neither a right hand nor a left, neither a fore-part nor a hinder part, neither an above nor a beneath; that he is invisible, and has neither

form, nor size, nor colour, nor parts; that his existence has neither beginning nor ending; that he depends upon himself and upon none else; that his nature is unchangeable; that he endures neither disease nor misfortune, and is unacquainted with hopes or fears; that he was before the world began; that he has no wants, but is omnipotent; that, if he so willed it, he could destroy the earth in one moment, and, at his pleasure, recal it into existence in another; that it is to him one and the same thing, whether he create the smallest fly or the seven heavens and the seven globes; that none has power over him, but that he is over all and cares for all; that he is affected by no impulse from without, and is unaffected by good or evil, happen what may; that, if all infidels had faith and all the godless became devout, he derives no advantage from it, nor, if all mankind were sceptics, would he endure prejudice thereupon.

'2. We acknowledge and confess that God is endued with life and wisdom; that he is omniscient; that he has equal knowledge of the hidden as well as the visible things of heaven and earth; that he can count the numbers of the leaves on the trees, of the seeds of the harvest, and the sands of the sea; that there is nothing, of which he is not informed, since his intelligence comprehends all things whether in part or in whole; that his apprehension extends both to the past and the future; that he knows both the outward and the inward man, what passeth in man's heart and what issues from his mouth; that the sensible and the invisible world lie equally exposed to his view; that it is his alone to know hidden things,—such only excepted as are blessed with his revelations; that he is without forgetfulness, negligence or error; that his knowledge is as eternal as his being.

'3. We believe and confess, that he is endued with hearing; that he hears all sounds, whether weak or loud: though we whisper into our neighbour's ear in so low a tone that none shall hear us, yet we are heard by God.

'4. We believe and confess, that God seeth all things; that, in the darkness of the night, he seeth the black ant as it crawls over a black stone, and heareth the noise of its tread. But what he hears, that he does not hear by the ear, neither that which he sees does he see by the eye; for he has neither ears nor eyes.

'5. We believe and confess that he is endued with the power of willing, that he doeth what seemeth best to him, that nothing happens but what he willeth, and that none hath power to appoint what he shall do in any event; that every worldly circumstance, whether it be good or evil, is the work of his will; that it is he that ordereth the faith of the believing and the piety of such as fear God; but that, if such were his pleasure, both the pious and the believing could be rooted out; that he ordereth in like manner the unbelief of the unbelieving and the ungodliness of the ungodly; and that, without he so willed it, there would be neither unbelief nor ungodliness; that the smallest fly cannot move its wing without the Almighty will; that, what we do, we do only according to his will; that all that he wills, comes to pass, inasmuch as, if it did not come to pass, it would be manifest that he was not omnipotent; and that, if he so ordered it, all men might believe, or if he willed the contrary, all men might be unbelievers.

'If it could be questioned, why it is not the will of God that all mankind should be believers, but it is his will that some should be misbelievers, the answer is, none must seek to inquire why God wills or does that which seemeth best to him. He alone is judge; it rests entirely with himself to will and to do according to his good pleasure. But whatsoever he doeth, that thing is wise and proper, and puts the understanding of the children of Adam to shame. If he create misbelievers, and wills that they should continue in unbelief, if he call serpents, and scorpions, and unclean animals into existence, in short, if he wills that any thing evil should exist, he is instigated by motives of wisdom and goodness, of which it is not needful for us to be informed, but by which it is our duty to feel assured that he is swayed. Finally, we confess, that the will of God is as eternal as his being.

'6. We believe and confess that God is almighty; that he is capable of effecting what he predetermines; that, if it pleaseth him, he can awake the dead, and endow a stone or a tree with utterance and motion; that he can create, and form, out of gold and silver, a thousand heavens such as now exist, and a thousand globes such as that which we inhabit; that he can annihilate both heaven and earth, and call them anew into being; that he can command the waters to flow backwards, and, as they flow, convert them into silver; that he can transport his creature in one moment from

east to west, raise him from the face of earth into the seventh heaven, and remove him back again to the spot whence he was taken; and that his power, past and to come, is as eternal as his being.

'7. We believe and confess, that God is gifted with speech, and that he does speak, though not with the tongue, as we speak; that he addresseth some of his servants without any intermediate agency, in like manner as he spoke unto Moses, and unto Mohammed in the night when he ascended into heaven, and on other nights, and that he speaketh to other men by the mouth of the angel Gabriel.

'8. We believe and confess that the Koran is the word of God, and that it is eternal and uncreated.

'9. We believe and confess that these seven attributes of the God of gods, to wit, Life, Knowledge, Hearing, Seeing, Willing, Power, and Utterance, are everlasting; that they dwell in the Deity as unchangeable and never-ending attributes.

'10. We believe and confess that God is endued with creative powers; that it is he who hath called all things into being, and that there is none other Creator besides him; that he is the cause of the actions of men and animals, of their motion and their repose; that it is he who worketh in man all virtues and vices, good and evil, belief and unbelief; that it is he who maketh the hand to move, the tongue to speak, and the eyes to open and close; that it is he who maketh the fly to move its wings and feet, and to buzz through the air; that it is he through whom we have our being and from whom proceeds our every deed, through whom the animals receive life, and from whom they derive their actions; by whom the heaven and the earth, and all that is therein, have been created: that it is he who supplies all created things with food, and sends life, and death, and diseases, and provides the means of recovery; that it is he who hath commanded that, when the hand touches the flame, it should be sensible of heat and be consumed, and when it touches snow it should become frozen; that he has power to will, that a man should be thrown into the fire, and not be consumed, like as Abraham sat on the fire of Nimrod,* and was not devoured; or that he should sleep upon the snow, and endure no cold, but perspire and dream dreams. God ordains that fire should burn and snow should freeze; but it is not fire which burns of itself, nor snow which of itself freezes; but these are operations wrought by the Almighty hand.'

THE DRAMA.

King's Theatre.

THE new opera of 'Il Messicani,' which at its first performance was listened to with impatience, had a second trial on Saturday; and from the result we may confidently assert, that, although an overture, which we believe to be Beethoven's, had been summoned to its assistance, the good nature of the public will not be put to a third test. It is, in fact, nothing else than a selection from Pacini and other 'maestri,' apparently hastily arranged by Bochsa, with a composition or two of his own added.

It has ever been deemed impracticable by all good judges in such matters to produce any pleasing effect in an Opera attempting to combine various styles, and there needs no better proof to attest the correctness of such a musical dictum than the specimen of Saturday.

A pitifully trivial plot served to connect the whole, and even the 'libretto' was puzzled to make aught of a confused tale of petty Spanish and Peruvian warfare, with the common incident of a mutual passion existing betwixt the son and daughter of the hostile chiefs. Two duetts, the one beginning 'Barbaro no!' in the prison scene between Orosimbo and Alonzo (Donzelli and Pisoni) and the other 'Nell abbracciarti (o caro,' by Alonzo and Laura (Blasis) in the second act, are certainly pretty compositions, and were very spiritedly executed; but the accompaniments throughout are wretchedly poor and meagre, and the whole so intolerably heavy as to weary the moderate 'dilettanti' in the theatre before the end of the first act.

It is but justice to add that Pisoni, Blasis, and Donzelli did their utmost; and, if their singing alone could have supported the opera, it would not have been condemned.

Really, if La Porte understood his interests, he would at this period of the season have brought forward something of a higher order.

Drury Lane.

NAUGHTY Miss Phillips! Naughty Miss Phillips! What god or what manager can have induced you to lay aside the veil of Isabella, and the night attire of

* A Mohammedan tradition.

Imogen, for the hat and feathers of Lady Townly? Did they really persuade you, that you would increase your reputation as a lady-like actress, by appearing in the character of a woman of fashion? Did they tell you, that the notions of Vanbrugh and Cibber respecting female grace and refinement, must have been more exquisite than those of the link-boy? They lied: (we are sorry to use such strong language in talking to a lady, but on this point it is necessary to be firm); and we repeat it—they lied. Isabella, Imogen, Juliet, Miranda, Beatrice, Viola, Desdemona, Cordelia, Ophelia, Perdita, Portia, Nerissa, Ann Page, Lady Macbeth,—why, there is not one among them but is fifty hundred thousand times more of a lady than Lady Townly is. And this is merely speaking of their outward distinctions, their mere social merits; for, if the question were about womanly merits, the comparison would lie, not between these we have named, but between Lady Townly and Doll Tearsheet; and, for our own poor parts, we think the latter far the more perfect woman of the two. Desist therefore, by all means, Miss Phillips, from this rash and iniquitous attempt. Do not make it your low ambition to excel in that vulgar thing called genteel comedy. We were sorry that you succeeded so tolerably, rejoiced whenever you clearly departed from the intention of the author, and were quite in ecstasies when we saw you that once, in contradiction to the whole spirit of the piece, you absolutely forgot that you were not a woman—but Lady Townly. Next time, if you should neglect our advice, we hope you will be much more unsuccessful.

The rest of the actors went through their parts well, with the exception of Young, whose Lord Townly was on the whole a failure. The family of the Wrongheads were extremely well represented by Farren, Harley, and Miss Love; and John Moody, in place of its old representative, Blanchard, was undertaken by Liston, who was altogether too good for his part. That most stupid of all stupid persons, Manly, received all the justice to which it was entitled from Cooper. The services of that indefatigable actor were needed towards the close of the evening, to intercede for the life of a piece which was produced for the first time, and which received a somewhat premature sentence of condemnation. His prayers were listened to; but we imagine that the piece expired the same evening, as we have not seen any bulletin of its health in the bills.

Covent Garden.

THE novelty of this Theatre has been the production of an operatic melo-drama, called 'The Ranz des Vaches, or Home, Sweet Home.' Chiefly owing to Madame Vestris, Keely, and Miss Goward, who, both in singing and acting, exerted themselves to the utmost, the piece was successful much beyond its deserts. The music is by Bishop, and, therefore, need not be criticised; the plot is from the French, and, therefore, ought not to be analysed.

English Opera House.

ONE of those 'trifles light as air,' almost without plot, character, or incident, which, on the English stage, serve only as a shoeing-horn for the stolidities of Liston; or the songs of Miss Love, drew forth in the last *swirl* at this theatre, as unequivocal expressions of mirth, as could be compatible with that polite philosophy of muscle characteristic of so well-bred an audience. The whole dramatic interest of the piece was comprised in the sad series of disgrace and mortification endured by Old Poudret (M. Perlet), a per-ruquier of *ci-devant* celebrity, at the hands of his cre-whilecustomers, and upstart rivals since that era. The whole exterior, as well as interior, arrangement of heads had been turned topsy-turvy by the Revolution. The eloquence with which the ancient *artiste en cheveux* recalls the glories of a by-gone age, must, if any thing can, excite a blush in those degenerate Frenchmen, alike regardless of historical recollections and hair-powder, of hereditary wig and wisdom. At last, however, the charms of Poudret's niece effect a union between antique and modern art, the classic majesty of the old and the romantic sagacity of the new school, the Socratic precepts of the veteran per-ruquier and the active energies of the youthful Alcibiade. 'La Parti de Chasse de Henri Quatre' affords an occasion for French patriotism to display itself in plaudits at the 'counterfeit presentment' by Perlet, of that sovereign whose undying claims on national remembrance have so happily superseded the vain glories of the 'Grand Monarque.' English eyes, however, may be excused from gazing with rapture on phizzes 'bearded like the pard,' and pates feathered like those of hearse-horses; nor must English yawns be disallowed from adding solemnity to the patriotic sayings of the virtuous Sully.

LITERARY INTELLIGENCE.

The Author of 'Private Education,' 'The Poor Girl's Help,' 'Early Education,' 'The Youth's French Guide,' &c., &c., has in the press, 'Leonora, or the Presentation at Court,' being the first of a series of narratives called 'Young Ladies' Tales.'

In the press, an Essay on the Deaf and Dumb, showing the necessity of medical treatment in early infancy, with Observations on Congenital Deafness. By J. H. Curtis, Esq., Surgeon Auriat to the King.

The Poetical Sketch Book, in one volume, by T. K. Hervey, including a third edition of his celebrated poem, 'Australia,' will be published in a few days.

Schiller's William Tell, closely translated from the German, is just ready.

The Rev. Wm. Kirby, M.A., F.R., and L.S., &c., &c., has in the press Seven Sermons on the Temptation of Christ, grounded on those upon the same subject by the learned Bishop Andrews.

A small volume of Sacred Poems, by Mary Anne Browne, author of 'Mont Blanc, Ada, and other Poems,' dedicated to the Rev. H. H. Milman, Professor of Poetry at the University of Oxford, will be published very shortly.

A second edition of Wilmot Warwick, by his friend Henry Vernon, is announced; as is also the preparation of a new volume for the press.

Edward's Botanical Register; or, Ornamental Flower Garden and Shrubbery; continued by John Lindley, Esq., Professor of Botany to the University of London, &c. Volume one of the new series is in the press.

Just published, Gædipus Tyrannus of Sophocles, with English Notes, Questions, &c. By the Rev. J. Jones, D.D., late Fellow of Trinity College, Cambridge.

In the press, and shortly will be published, Ein Deutsches Lesebuch; or, Lessons in German Literature; being a choice Collection of amusing and instructive Pieces, in Prose and Verse, selected from the Writings of the most celebrated German Authors, with Interlinear and other Translations. By J. Rowbotham, F.A.S.S.L.

A Novel of the 'De Vere' class will shortly, we understand, appear, entitled 'D'Erbine; or, the Cynic,' and which is likely to excite great interest in the fashionable and literary world. The scene of one of the volumes is, we are informed, entirely laid in Italy; and the vivid but natural descriptions of that beautiful and interesting country and of Italian society which it contains, combine to render it a work of unusual interest. The feelings of a misanthropist are also portrayed in that superior style of argumentative conversation which has obtained so much celebrity for the author of 'De Vere' and 'Tremaine.'

LIST OF BOOKS PUBLISHED DURING THE WEEK.

- Rev. W. D. Willis's Sermons for Servants, 12mo., 6s.
Rev. C. F. Watkin's Sacred Poems, 8vo., 7s. 6d.
Dr. Gervino on the Diseases of Children, 8vo., 10s. 6d.
Amesbury on Fractures, 2d edition, 8vo., 1s. 6d.
Flora Medica, vol. 1, 8vo., 11. 16d.
James's Family Monitor, 12mo., 2d edition, 5s.
Barker's Discourses on Revivals in Religion, 12mo., 3s.
Thornton's Councils and Cautions for Youth, 18mo., 3s.
The Youth's Calendar, by B. H. Draper, 22mo., 1s. 6d.
Horatius, new edition, 48mo., 6s.
Browning's History of the Hugonots, 2 vols., 8vo., 11. 1s.
Bloomfield's Manual of Family Prayer, new edition, 1s. 6d.
Index to Bloomfield's Glossaries to Æschylus, 8vo., 3s.
The Groom's Oracle, by J. Hinds, 7s.
Country Attorney's Guide, 2d edition, 9s.
Schulze's William Tell, translated from the German, 1 vol. 18mo., 6s.
Lingard's History of England, 8vo., vols. 11 and 12, 11. 4s.
Hewlett's Scripture History for Youth, 2 vols. 16mo. engraving, maps, &c., 18s.
Shuttle's Flowers of Fancy, 8vo. 12s.
Dr. Andrew Thompson's Sermons, 8vo., 12s.
Scott's Discourses on Religion, 2d edition, 8vo. 12s.

The Nigger	the celebrated Tyrolienne Mr. Yates	2	0
Also, the highly popular Monsieur Mallet		4	0
Quadrilles, by C. H. Paget			

Published by Barrett, Moncrieff, and Co., successors to John Gow and Son, by special appointment Music Sellers and Publishers to his Majesty, 162, Regent-street.

NEW MUSIC, published by A. PETTET, 184, Oxford-street, opposite Bond-street.
MRS. MILLARD'S BALLADS.

'Alice Grey,' second edition, highly encored at the Oratorio of the present season; sung by Miss Stephens, Miss Love, and Miss Paton, 3s.

'The Birks of Aberfeldy,' sung by Mr. Wood, 3s. For a highly favourite notice of this ballad, vide 'Harmonicon,' February.

'I prythee, give me back my heart,' introduced in 'Guy Mannering' by Mr. Braham.

'The Soldier's Return,' sung with rapturous applause at the Melodists' Club, by Mr. Braham.

The popular ballad, 'Alice Grey,' arranged, with variations, for the pianoforte by F. Knapton, 3s.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

The Publication of

THE LIBRARY OF ENTERTAINING

KNOWLEDGE will commence on the 31st of March, on which day will appear the first Half Volume of the Series, which will be continued by the publication of a similar Half Volume on the last day of every month; so that a regular delivery throughout the country may take place at the same time with the Magazines. The Half Volume will consist of about 300 pages, of a size adapted both to the Library and the pocket; and, in subjects where illustrations are properly required, will be embellished with a great number of Wood Engravings. The price of each Half Volume, or Monthly Part, will be Two Shillings.

For the convenience of those who prefer a weekly purchase of this Series, each Half Volume will be sub-divided into Four Numbers, one of which will be issued every Saturday, (after the publication of the Half Volume), price Sixpence.

The Series will commence with the following work:—**THE MENAGERIES; or, QUADRUPEDS, described and drawn from Living Specimens.**

London: Charles Knight, Pall Mall East; Longman, Rees, Orme, Brown, and Green, Paternoster Row; Oliver and Boyd, Edinburgh; Robertson and Atkinson, Glasgow; W. F. Wakeman, Dublin; E. Willmer, Liverpool; Baines and Co., Leeds; and G. and C. Carvill, New York.

ROWLAND'S KALYDOR, the most infallible specific for protecting the skin and complexion from the cold winds or damp atmosphere, and warranted innocuous. Its soothing meliorative properties immediately allays the smarting irritability of the skin, reduces the most violent inflammation, heals harsh and rough skin, and restores all disorders which disorganize the beauty of the female countenance, and, as increasing the fairness and transparency of the skin, exceeds all competition. It affords soothing relief to ladies nursing their offspring. To gentlemen after shaving, it allays the irritating and smarting pain, and renders the skin smooth and pleasant. Price 4s. 6d. and 6s. 6d. per bottle, duty included. Caution.—To prevent imposition, the name and address of the proprietors is engraved on the Government stamp, affixed on the cork of each genuine bottle, 'A. Rowland and Son, 20, Hatton-garden.' Sold by the most respectable perfumers and medicine vendors.

This Day is published, price Seven Shillings and Sixpence, No. VI. of the

FOREIGN QUARTERLY REVIEW.

Contents:—I. Arts and Manufactures in France. II. Humboldt's Political and Statistical Account of Cuba. III. Meyer on the Judicial Institutions of the Principal Countries of Europe. IV. Oginski's Memoirs on Poland. V. Desobry's new Theory of Harmony. VI. Memoirs of Vidocq. VII. Sumner's History of the Hohenstauffens. VIII. Louis Bonaparte's Answer to Sir W. Scott's History of Napoleon. IX. Language and Literature of Friesland. X. Duke Bernard's Travels in North America. XI. Wine Trade of France. XII. General Sketches. XIII. French Works. XIV. Cousin, Cours de Philosophie. XV. Musée de Peinture et de Sculpture. XVI. Histoire de l'Ecole Polytechnique. XVII. Biographie Universelle Ancienne et Moderne. XVIII. Bausset, Mémoires Anecdotes, Tom III. et IV. XIX. Almanachs Français pour 1839. XX. Almanachs. XXII. Gamba Serie di Testi. XXIII. La Padonada. XXIV. German Works. XXV. Böttcher's Geschichte der Carthager, nach Quellen. XXVI. Fallmeyer's Geschichte des Kayserthums von Trapezunt. XXVII. German Almanacs for 1839. Eighty-two Miscellaneous Literary Notices from Denmark, France, Germany, Italy, Netherlands, Russia and Poland, Sweden, Switzerland, and concerning Oriental Literature. A List of Four hundred and sixty-nine of the Principal New Works published on the Continent, from September to December, 1838.

'The "Foreign Quarterly Review" deserves the first place in our notice, because the idea of this class of works originated with its founders. It seems to us the best edited periodical in this country; and we should think no Review, monthly, quarterly, or weekly, can exert so much labour to its conductor. The mixture of subjects is admirable. Not only is there no preference shown for one country above another, no French, Italian, German, or Spanish Ascendancy visible anywhere, but what is much more difficult, the books selected from each of those languages, are those which are best calculated to illustrate the spirit of the different nations from which they have issued. This and some other points of merit, and it is very skillfully combined with the other, less expected by a philosophical reader, but highly important with a view to the pleasure of the "general," giving us the work of the English and a pleasant interest.'—*Athenæum*, January 7.

'The opinion we highly approve, that this periodical was decidedly the best edited, and one of the best written Reviews in this country, has not been changed by a perusal of the present number.'—*Ibid*, March 4.

'We wish to point out to our readers an article in "The Foreign Quarterly Review," No. VI., on the Arts and Manufactures of France. All real lovers of information—all persons interested in the true sources of national happiness—will be obliged to us for referring them to this, the first article of the new number. The quantity of instruction to be derived from it is only to be equalled by the brevity of the article in which it is written. The characteristics of this Review are the utility of its objects, and the care and readiness with which they are followed up; every thing is weighed, balanced, and serious.'—*Speaker*, January 31.

'The articles in the present number of "The Foreign Quarterly" are, we think, well selected and written with good taste and judgment; they have a fitting and proportionate length to the subject; and in most of them that learning is displayed which is the only true one, i.e. an accurate information of the matter of which they treat.'—*Ibid*. 'The fact is, we can recommend every article in this number. If the Editor brings out many such numbers, his Journal will vindicate to itself a very eminent rank among European literary journals.'—*Edinburgh Evening Post*, February 7.

'If the attributes of utility be the standard by which we ought to decide the merit of a work of this nature, it will not admit of a moment's question that the present number of the "Foreign Quarterly Review" is the best which has yet appeared. A majority of its articles are written on subjects of great practical utility; and, in almost every instance, the writer displays an intimate acquaintance with all the details of his subject, and discusses it in a masterly manner.'—*Edinburgh Evening Post*, Feb. 20.

'The present number of this most promising Patagonian Periodical is the most useful number we have yet seen.'—*Sun*, Feb. 2.

'The opinion which has been already formed of this work, the present specimen is calculated not only to sustain, but to elevate. It is a pleasing peculiarity in it, that, while it is distinguished by the possession of one or two great and prevailing characteristics, every number that has yet appeared is remarkable for a distinctive tone and prominent features, that greatly enliven and increase the value of the whole. The present one may, *par excellence*, be named the number of utility and facts.'—*Glasgow Free Press*, Feb. 11.

No. VII. will appear early in next Month.

FRENCH CHARACTERS.

By A FRENCHMAN.

No. I.—THE JOURNALIST.

THE features of the Journalist are as characteristic and peculiar as those which make up the physiognomy of the painter, the poet, or the musician. In the estimation, perhaps, of a majority of his readers, and certainly in his own, he is a more remarkable individual than any of these. He is the oracle of taste, the arbiter of fashions, the expresser of the wants of his country, the redresser of the wrongs of the administration, the dispenser of every kind of reputation; in fact, to use his own magnificent phraseology, a phraseology ratified by the trembling verdict of his ultra enemies, he is *unus pro omnibus*. It would be a deviation from all the ordinary laws of nature, if authority so extensive, an eminence so indisputable, were held without its appropriate incumbrances; and it would be strange, indeed, if the Journalist, who is brought into conflict with all the prejudices, passions, and *amours propres* of his age, were not able to make out a catalogue of miseries as ample and as heart-rending as any other of the unfortunate beings who possess greatness and pay the tax for it.

There is, in the first place, that which comes daily upon him, the duty of filling his columns. Is this a light thing in the eyes of those who find it an easy matter to devour a whole newspaper in the privacy of their tea and toast? Oh! let them reflect for a moment upon the agony which that newspaper may have cost its producer! Think of the importunate cravings which are ascending into his ear from the journal of tomorrow, before its insatiable predecessor of today is half satisfied! Think of the melancholy intelligence brought to him just at the moment that his mistress or his dinner is expecting him—that three columns are still wanting! Think of the wilderness of the disappointed man, as he sits down to compose; amidst *Minerva*, a panegyric upon some leader of opposition, or a denunciation of the Jesuits! Think of the rage with which, at the end of half an hour, he tosses aside the abortive article, and steals the requisite supply from the store that was treasured up for the use of the following day; the necessities of which he will in vain seek to satisfy by drawing a similar accommodation-bill upon the next! And think of all his continued day after day—no moment of cessation, no possible hope that the paper will at last shake into the habit of editing itself—nothing but a dull, monotonous, interminable prospect of tasks, eternally filled and eternally re-appearing; destiny of which that of the Danaides presented feeble and inadequate type!

But is there no bright haven in the distance which, though but dimly seen through the long and gloomy vista, yet reveals itself ever and anon in the eye of the Journalist, and assures him that his hope which comes to all is not yet denied to him? May he not hope, after a probation of some long twenty years, at last to repose in the easy-chair of the Academy, or the pillow of popular immortality? No! the doors of the Academy are shut, and but once have they opened to receive a Journalist into the Council of Forty. But perhaps is immortality which has rewarded Moliere and even for their exclusion from this worshipping assembly may be destined as a consolation to him. No! there is no immortality for him: for twenty-

four hours his insect thoughts live, flatter, and are observed; the next day comes, and they are gone; the paper, with its wit, its wisdom, its angry denunciations and quick replies, has vanished out of the recollections of men. The milliner sends home a hat for his wife, with a dozen pins penetrating his last best *bon mot*; and his first-born (what double anguish to the feelings of a father!) presents him with a peppermint lozenge, cleaving to the fragment of a leading article!

Then there is the horrible fatality which compels him always to write on some theme which is at variance with the feelings of the moment. Is he in remarkably good humour with mankind? He has to describe some horrible catastrophe or to comment on some deep atrocity. Has a beloved wife just presented him with a pledge of their affection? He must draw up a necrological notice. Has he been ordered a course of diet by his physician? The fumes of an electoral feast shed their fragrance over his composition. Is he labouring under a terrible fit of spleen? He must narrate some burlesque exploit with a smile, much like that which, according to Horace, moved the lips of Ixion in sympathy with the lyre of Mercury.

When at last the cruel requisitions of the desk are satisfied, the Journalist sallies forth into the air of heaven. All nature is lying in deep quiet beauty around him,—but what is nature to the Journalist? A long leading article. All the rich expanse of cloudland, with its magical hues, presents to his eye so many varieties of type: the scent of violets which is weighing down the air, reminds him of the steam from hot-pressed paper; the smoke is the only thing that brings real delight with it; for it rises in columns. The sensations with which the fresh air fills him, burn to be expanded into an article; the value of the deeper feelings with which the sight of nature fills him, is determined by the quantity of letter-press which they will occupy. In short, a savour of *periodicity* there is about the man. But then behold him among his fellow-men. What lively sympathy does he display in all that concerns humanity! With what rapture that broken leg has inspired him! A duel? How delicious! A real positive murder! He will die himself of ecstasy before he can carry home to the printing-office the harvest of pathos which he has gathered for the food of his sentimental subscribers.

In societies of every description, the Journalist is at home. They are a moving panorama, in which he observes all the manners, the little-nesses, and the conceits of his age. What a feast for a man of observation! How delightful to pin down in his cabinet of curiosities so many rare specimens of grotesqueness and absurdity! But a cruel thought interrupts these reflections. His most admirable parodies—his best caricatures, will be looked at by the subjects of them—and not recognised! nay, perhaps some person of the old regime will shake his venerable side over a portrait of himself, drawn to the very life, or some young coxcomb against whom he has conceived a particular spite, will be the first to draw the attention of the public to a sketch meant for him, but which will thenceforth pass for a mere fancy-piece.

Great is the authority of the Journalist in all matters pertaining to the drama. To him, therefore, the green-rooms respectfully open their doors; and, shortly after the appearance in his

papers of some malicious epigrams against some male or female performer, he makes use of his privilege. Straightway there is a universal charge of 'opening his columns to the shafts of jealousy'—of having admitted the one charge, that every one knew to be false, against the individual in question, or having betrayed the grossest ignorance of all the rules of the drama. Soon, however, the scene changes; and the actor, reflecting rather on the possibility of his turning his powers to right account in the future, than of his having misused them in the past,—becomes at once the most perfect of courtiers,—Orestes forgets his madness, and adopts a conciliatory tone,—Agamemnon is to the last degree submissive,—Egistheus lays aside his poniard, and offers his snuff-box,—and the Furies put on the most bewitching air in the world. To all such blandishments, however, the inexorable Journalist must be deaf. He receives his wages from the public; and, if he is induced by the most tempting bribes to flatter any tastes or prejudices but his own, he is cast off as an unprofitable servant.

Next to a Minister of State, the most extensive correspondent in the world is 'The Journalist.' Europe, Asia, Africa, and America, all contribute to fill his desk. The amusement of these communications, however, is alloyed with a sad leaven of stupidity and bad penmanship; not so his personal interviews! There is, indeed, a rich harvest of entertainment and human experience. Listen in all its grandeur—variety in all its richness—charlatanism in all its infinity. Now a deputy or peer of France coming to entreat for the insertion of a speech, (the manuscript of which, with its thousand interlineations and *varies lectiones*, he therewith presents to the Editor,) which he had improvised at the tribune; now a philanthropist revealing in confidence to the Journalist, whom he conjures not to communicate the fact to the public, that he was the author of that act of anonymous benevolence which had excited so much admiration, and the merit of which had been erroneously assigned elsewhere; a publicist with an article upon some recent brochure, written with the most paternal feeling, and a recently damned playwright, who wishes the public to understand that the furies, which ignorant people had imagined predominant, were really drowned in a tumult of applause.

Then in the anti-chamber is the crowd* of artificers, candidates for the honours of publicity. The tailor holding up his new Quiroga—the hatter with a choice specimen of *sans moullets*—the culinary artist with a tempting novelty in truffles. Nor is art in its more ambitious forms less subservient to him. The designer has struck off a likeness, which, as it suppresses all those peculiarities of form and feature that establish a distinction between the Journalist and the Apollo, can scarcely fail, if there is gratitude in man, to secure him a column of patronage. A pupil of Michalon is there, and the hair of the man of letters expands into rich profusion of glossy curls; an *artiste pedicure* appears, and the firm step of the Journalist is no longer impeded by the presence of corns or chilblains. Even the animal magnetist forms a party of the levee—eager to overcome the great man's scepticism, and promising by his incantations to compose him

* This peculiarity is owing, we presume, to the majority of the French papers appearing without advertisements.—Ed.

into a slumber, as sweet and sound as ever overtook his readers under the lulling influence of his own columns.

And now, to quit this laughing vein, and at once to speak of the Journalist in the character in which he delights to speak of himself. In other respects, he may be a very vulgar person; but, when he assumes the office of interpreter of national feelings and advocate of national rights, his office is converted into a high and honourable priesthood. Few persons in the state have an opportunity of displaying so many high public virtues; upon none certainly does a more terrible responsibility rest. Ill enough, alas! have the duties which his situation enjoins upon the French Journalist been too often performed. In the times of the Revolution he was at once the fiercest counsellor, and the most active agent, of popular fury:—when the public were mad for blood, singling out the victims—when they were satiated, plying them with stimulants. But the ferocity of 'l'ami de peuple' was not wonderful in the days of Marat, and Robespierre, and Collot d'Herbois. It would have been strange if at such a period, when justice and humanity could find no sanctuary anywhere, they had found one in the journals.

Under the Empire, journalism was an apostleship without a commission—a mere vent for disgusting panegyrics upon the tyrant, and impudent lies about the *grande armée*—a vocation without virtue, without respectability, without decency.

The era of a representative government is the age of gold to the Journalist. Since its establishment, he has become the confident of the people in all its most intimate feelings, the echo of the national conscience, the sentinel of public liberty, whose duty is to cry *qui vive?* to all the abuses, all the usurpations of power. It is owing to this augmentation, at once, of the power and the dignity of the Journalist, that some of the greatest men in France, without derogating from their rank, without degrading themselves in the eyes of the most scrupulous, have been able to appear as writers in the public journals. Such are the Chateaubriands, the Daunous, the Keratrys, the Benjamin Constant, indefatigable warriors in the good cause: whose pens have been almost as useful in defending our youthful institutions against the assaults of feudalism and jesuitism, as the bayonets of our brave soldiers, after the Duke of Brunswick's manifestos, were in repelling the legions of European tyrants who had conspired against our infant liberty.

NATURAL HISTORY.

The Menageries: Quadrupeds described and drawn from living Subjects. Being Vol. I., Part I., of the Library of Entertaining Knowledge, published under the superintendence of the Society for the Diffusion of Useful Knowledge. 12mo., pp. 432, with numerous Woodcuts. Knight. London, 1829.

This is the first of the series of works promised by the Useful Knowledge Society, to have been ready last November, and to have been published by Murray; but the delay always incident to the movements of a committee, has enabled Mr. Murray, (with whom, it would appear, a final arrangement for the publication could not be effected,) to get up a rival series of works as soon as the Society. We are not displeased at this circumstance; for the rivalry will probably produce works of greater merit on both sides, than might have appeared if the field had been under the exclusive cultivation of one of the parties. Whether this has had any influence upon the work before us we cannot undertake to say; but it has evidently been done with great care, being accurate in detail, replete with varied and frequently recondite and original anecdote and illustration, and composed in a style every where popular and frequently polished and eloquent. It is not to be concealed that the reputation of the weekly treatises of the Society has been losing ground, in consequence of want of skill in the selection of

subjects, and, in several instances, in deficiency of execution; but this loss of character is likely, we think, to be triumphantly retrieved by 'The Menageries,' which is as different from the common books on natural history, as the interesting treatise of the Society on animal mechanics is from the common books on anatomy and physiology.

The work has, in fact, been composed in the spirit so well described by St. Pierre in his '*Memoire Sur la Menagerie*,' when contrasting the actual study of nature with the perusal of books, or the examination of Museum specimens:

'Those,' he remarks, 'who have studied nature only in books can see only their books in nature; they look upon the natural world only to find therein the names and characters of their systems. If they are botanists, they are satisfied to have discovered a plant of which some author has spoken; and, having assigned it to the class and the order which he has pointed out, they gather it, and spreading it between two sheets of grey paper, they sit down content with their knowledge and their researches. They do not form a herbal to study nature, but they study nature to form a herbal. It is in the same way that they make collections of animals that they may learn their genera and their species, and treasure up their names. But can he be a lover of nature who thus studies her wonderful works? How great a difference is there between a dead vegetable, dry, faded, discoloured, whose stems, and leaves, and flowers are crumbling to powder, and a living vegetable, full of sap, which buds, flowers, gives forth perfumes, fructifies, and sows itself again, maintains a universal harmony with the elements, with insects, with birds, with quadrupeds, and, combining with a thousand other vegetables, crowns our hills, and adorns our river banks! Can we recognise,' he goes on to ask, 'the verdure and the flowers of a meadow in a hay-stack? or the majesty of the trees of a forest in a bundle of faggots? The animal loses by death even more of its characteristics than the vegetable; for the animal has received a more vigorous portion of life. Its principal qualities vanish; its eyes are shut, its pupils are dim, its limbs are stiff; it is without warmth, without motion, without feeling, without voice, without instinct. What a difference between the animal that enjoys the light, distinguishes objects, moves towards them, calls the female, couples, makes its nest or lair, brings up its young, defends them from their enemies, congregates with its kind, and gives music to our meadows! Do you recognise the lark, gay as the breath of morning, who "at heaven's gate sings," when he is suspended from the beak upon a bit of packthread; or the bleating sheep and the labouring ox in the well-dressed limbs of a butcher's shop? The best prepared animal only offers a stuffed skin and a skeleton. The life is wanting, by which he was classed in the animal kingdom. The stuffed wolf may preserve his teeth, but the peculiar instinct which determined his ferocious character is gone, and he then scarcely differs from the friendly dog.'

We were much pleased with the following just and pertinent remarks upon the means of awakening interest, which occur in the Introduction:

'The first step in the successful communication of any branch of knowledge is to awaken the attention of the mind to the object, or assemblage of objects, to which that branch of knowledge applies. Without a habit of attention to the things around them, men walk about in the world with their eyes half-shut; for they are insensible to all but the commonest external appearances, and have no perception of the minuter peculiarities, which distinguish one class of objects from another, of the beauties of their structure, or of the harmonies of their arrangement. Take an example; engaged as we are in the ordinary pursuits of life, in our business, and in our pleasures, it is but rarely that we bestow attention upon those most stupendous works of a ruling Providence, the sun, the planets, the myriads of stars, of which it might be thought that the bare contemplation would awaken in us a feeling of unbounded wonder and admiration. It is only when some singular appearance of those vast and glorious bodies presents itself, when we behold an eclipse or a comet, that the greater number of us have our attention excited to the objects with which the science of Astronomy is conversant. It is at such moments that the accidental awakening of our attention should be seized upon by us, to acquire the particular knowledge relating to the circumstance by which the spirit of inquiry was roused; for we may reasonably entertain a conviction, that if we refer to some intelligent instructor, or seek for an ex-

planation in some proper book, we shall not only satisfy ourselves upon the point in doubt, but be led forward to feel an interest in many other details which would lay the foundation of a scientific knowledge of the laws which govern the heavenly bodies. This would be to acquire the habit of bestowing attention upon a subject which we had previously disregarded; and we should find this habit a source of infinite amusement and instruction, not confined, as we might have thought, to those who survey the heavens from splendid observatories, and with the help of the most perfect glasses, but equally capable of affording delight, and being of use, to the way-faring man, who plods onward to his home, and to the labourer, who rises to his work before the morning star has disappeared. There will be delight wherever there is this habit of observation. But the habit will not come, if we do not cultivate the spirit of inquiry.

'It is precisely in the same way that a naturalist, by constantly observing the peculiarities of animal life, acquires the readiest perception of the differences in the structure and habits of the great variety of living beings; and he perceives in each of them qualities which a less practised observer would entirely overlook.'—P. 5.

In some instances animals seem to depend in a great measure upon man; yet, on considering the relative situations of both, they will be found, with few exceptions, existing independent of him, and that he is more indebted to them for their services than they are to him for his protection and support. The chief objects for which we require the aid of animals are, for food, clothing, vigilance, and strength. Though the two former are highly essential to our comforts, they are not indispensable; the vegetable world supplies them in abundance, and the companionable qualities, watchfulness and swiftness, of the dog might be dispensed with. It is the strength of animals that makes us sensible of our own weakness. By their power we build our dwellings, effect an intercourse with distant places, obtain much of our food, and the fuel of our hearths. A state of civilisation requires, as an indispensable requisite, these things and others, rendering most manifest our obligations to the animal world. Animals were created before man; but some of them were apparently endowed with their useful and valuable properties for his comfort and assistance. He gives them food and shelter in payment of service, attending them with diligence and care; yet the well-being of the creature, had it continued wild, would not have required it; indeed, most of them live longer and have more enjoyment in a wild and unrestrained state than when they are domesticated. By art and for profit, he has, in many instances, altered the very nature of the animals which he has subdued and tamed. The following curious instances, illustrative of this, are given in the work before us:

'All associations between animals of opposite natures are exceedingly interesting; and those who train animals for public exhibition know how attractive are such displays of the power of discipline over the strength of instinct. These extraordinary arrangements are sometimes the effect of accident, and sometimes of the greater force of one instinct over the lesser force of another. A rat-catcher, having caught a brood of young rats alive, gave them to his cat, who had just had her kittens taken from her to be drowned. A few days afterwards, he was surprised to find the rats in the place of the drowned kittens, being suckled by their natural enemy. The cat had a hatred to rats, but she spared these young rats to afford her the relief which she required as a mother. The rat-catcher exhibited the cat and her nurslings to considerable advantage. A somewhat similar exhibition exists at present at Broderip. There is a little menagerie in London where such odd associations may be witnessed upon a more extensive scale, and more systematically conducted than in any other collection of animals with which we are acquainted. Upon the Surrey side of Waterloo-bridge; or, sometimes, though not so often, on the same side of Southwark-bridge, may be daily seen a cage about five feet square, containing the quadrupeds and birds which are represented in the annexed cut. The keeper of this collection, John Austin, states, that he has employed seventeen years in this business of training creatures of opposite natures to live together in content and affection; and those years have not

been profitably employed? It is not too much to believe that many a person who has given his halfpenny to look upon this show may have had his mind awakened to the extraordinary effects of habit and of gentle discipline, when he has thus seen the cat, the rat, the mouse, the hawk, the rabbit, the guinea-pig, the owl, the pigeon, the starling, and the sparrow, each enjoying, as far as can be enjoyed in confinement, its respective modes of life in the company of others—the weak without fear, the strong without the desire to injure. It is impossible to imagine any prettier exhibition of kindness than is here shown. The rabbit and the pigeon playfully contending for a lock of hay to make up their nests; the sparrow sometimes perched on the head of the cat, and sometimes on that of the owl, each its natural enemy; and the mice playing about with perfect indifference to the presence of the cat, or hawk, or owl. The modes by which this man has effected this are, first, by keeping all the creatures well fed; and, secondly, by accustoming one species to the society of the other, at a very early period of their lives. The ferocious instincts of those who prey on the weaker are never called into action; their nature is subdued to a systematic gentleness; the circumstances by which they are surrounded are favourable to the cultivation of their kindlier dispositions; all their desires and pleasures are bounded by their little cage; and, though the old cat sometimes takes a stately walk on the parapet of the bridge, he duly returns to his companions, with whom he has so long been happy, without at all thinking that he was born to devour any of them.”—P. 20.

The inference which is drawn from this appears to us to be no less just and beautiful than it is profound.

“This is an example, and a powerful one, of what may be accomplished by a proper education, which rightly estimates the force of habit, and confirms, by judicious management, that habit which is most desirable to be made a rule of conduct. The principle is the same, whether it be applied to children or to brutes.”—P. 20.

Instead of commencing with the lion, as is usual in popular works on natural history, or with the ape and monkeys, as Linnaeus does, the work before us begins with the dog, from the consideration, we suppose, that this animal seems designed by its natural habits to be peculiarly the servant and dependant of man, to be fed with him, housed and caressed, and receiving more of his care than any other animal which falls under his dominion.

“He associates with him in his pleasures, is identified with and enjoys them with his master; living with him, he acquires the high bearing and freedom of his lord; feels he is the companion and the friend; reports himself as a partaker of the importance and superiority, we might almost say, of the sorrows and pleasures, of the man; is elated with praise, and abased by rebuke; submissive when corrected, and grateful when caressed. His anxiety and tremor when he has lost his master, and with himself, is pitiable; when deserted by his lord, he becomes the most forlorn of animals, a never-failing victim to misery, famine, disease, and death. His ardour may excite him at times, until overpowered by fatigue; but he is not stimulated by pain, or menaced to attempts beyond his natural powers. View him in all his progress, his life will be found to be an easy, and frequently an enjoyable one; and, though not exempt from the afflictions of age, yet his death, if anticipated, becomes a momentary evil. When in a native state, he is a wretched creature, a common beast of the wild, with no innate magnanimity, no acquired virtues; has no elevation, no character to maintain, but passes his days in contention and want; is base in disposition, mean in body, a fugitive, and a coward.”

Amongst the numerous original anecdotes of the dog introduced, we were particularly struck with the following:

“All dogs can swim, although some dislike the water, and take to it with difficulty at the bidding of their masters. The bull-dog would appear the least likely to combat with a heavy sea, as the Newfoundland dogs often do; and yet the following circumstance is well authenticated:—On board a ship, which struck upon a rock near the shore during a gale, there were three dogs, two of the Newfoundland variety, and an English bull-dog, rather small in growth, but very firmly built and strong. It was important to have a rope carried ashore, and, as no boat could live for an instant in the breakers towards the land, it was thought that one of

the Newfoundland dogs might succeed; but he was not able to struggle with the waves, and perished. The other Newfoundland dog, upon being thrown overboard, shared a similar fate; but the bull-dog, though not habilitated to the water, swam triumphantly to land, and thus saved the lives of the persons on board. Among them was his master, a military officer, who still has the dog in his possession.”—P. 48.

The work abounds with anecdotes of similar interest respecting dogs, wolves, foxes, jackals, hyenas, lions, tigers, leopards, pumas, and cats; from which, if we could spare room, we should be glad to enrich our pages, but must content ourselves, for the present, with the following:

“Mr. Southey, in his ‘Omniana,’ relates two instances of dogs who had acquired such a knowledge of time as would enable them to count the days of the week. He says, ‘My grandfather had one which trudged two miles every Saturday to cater for himself in the shambles. I know another more extraordinary and well-authenticated example. A dog, which had belonged to an Irishman, and was sold by him in England, would never touch a morsel of food upon Friday. The same faculty of recollecting intervals of time exists, though in a more limited extent, in the horse. We knew a horse, (and have witnessed the circumstance,) which, being accustomed to be employed once a week on a journey with the newsmen of a provincial paper, always stopped at the houses of the several customers, although sixty or seventy in number. But farther, there were two persons on the route who took one paper between them, and each claimed the privilege of having it first on the alternate Sunday. The horse soon became accustomed to this regulation; and, although the parties lived two miles distant, he stopped once a fortnight at the door of the half-customer at Thorpe, and once a fortnight at that of the other half-customer at Chertsey; and never did he forget this arrangement, which lasted several years, or stop unnecessarily, when he once thoroughly understood the rule.’”—P. 56.

This anecdote suggests the remark which must, we think, strike every reader who peruses it,—that the use of the plural pronoun *we* appears not a little incongruous, inasmuch as the fact could not well have fallen under the cognizance of the whole Society, and not even of one of their committees. The case is very different from that of reviewing, in which it is usual to employ the first person plural; for here is a fact coming, there can be little doubt, from an individual, for the authenticity of which the Society thus becomes pledged; and this instance is by no means a solitary one. Should any of these facts be subsequently disproved, it would place the Society in a very awkward predicament. The same principle of making the Society appear as the authors of all the books published under their sanction, imposes an injurious restraint in the detail of facts or the expression of opinion, so very obvious in all their publications, that it completely dissolves the fiction of their being the joint productions of the members, which is indeed impossible. It would be a decided improvement, we think, to write these works in the first person singular, and publish them either with or without the names of the respective authors,—still under the sanction of the Society, though not in the present fictitious form, which can impose upon nobody of the least penetration.

We cannot conclude our review without taking notice of the very superior execution of the cuts. The figures of the animals purport to be portraits; and, as we have seen almost all of the individuals from which they have been taken, we can attest their admirable fidelity. Accuracy has been studied more than picturesque effect, but even in this respect they are very superior.

THE UNKNOWN.

The Unknown. 2 vols., 12mo. Paris, 1829.*

ONE should have loved, have fought for liberty, and suffered in its cause, have been cast by political storms upon a foreign land, have endured evil, have lived in destitution and misery, in order thoroughly to understand the book that we have just closed, and sympathise in its sad and mono-

* By a French Correspondent.

tonous lamentations. Here is no intrigue—few if any great events to affect the mind or strike the imagination. Only four actors appear upon the scene, which is a faithful history of the impressions of a whole life: and these are, a young female, loving as she is beautiful; an old emigrant, the courageous defender of a tottering throne; an Italian, a furious demagogue and an implacable foe to all mankind; and, last of all, a young man, enthusiastic and virtuous, whom the excesses of the *ancien régime* have thrown into the ranks of freedom, who fights for the cause of the people, and whom anarchy deprives of an idealised mistress. The last of these pours into the bosom of a village pastor the troubles that have shortened his life, and begs a priest, the minister of the God of mercies, to apply the balm of consolation to his wounds. He does not say where was his country; but it was France. He does not mention his name; but an illustrious family prided itself in him as its only hope. In the hour of his birth, he lost his mother; and scarcely had he verged on adolescence, when his father was taken from him. A revolution—he does not say which—but it was that in which the ancient race of the Capets was dethroned—the French Revolution—had just dawned upon the world. Europe was divided into two grand parties: on one hand, the admirers of authority, of blind faith—of that which is; on the other, the advocates of reason, of investigation—of that which is intrinsically best. With these, were necessarily associated liberty, the love of knowledge, the desire of the perfectionment of their species; with those, passive obedience, dread of innovations, and fixed notions. The choice of the Unknown—for this is our hero's adopted name—was not wavering; he had received his first principles through prejudice, the rest from reason: and thenceforth he embraced the cause of liberty with as much ardour as he had formerly shown for its rival.

“Courage,” says he, “is required to resist force, and it is often required not to resist conviction. Some strength of mind was perhaps necessary thus to contradict opinions so recent, and openly declare my change of creed.” In vain did I repeat to the members of the party which I had abandoned, that they could not tax with levity and feebleness of reason a young man for throwing up a cause to which his birth only had attached him, who had till then done nothing but draw just consequences from an erroneous principle received in prejudice, and who now, after having, by the force of his understanding, analysed the principle and conquered the prejudice, had reared a fresh superstructure on the basis of evidence. All was useless; the spirit of party had condemned me without a hearing. Who does not know the fierce resentment with which the aristocracy and squirearchy punish those of their members who disown their colours? They see cowardice in all desertion; and the decrees of a fantastical honour, of which they preserve the code, smite with their anathemas every deserter of opinions imposed, as they say, by birth.

The Unknown resolved to answer his adversaries: to enlighten men, to achieve the rank which he thought he merited in public opinion, the necessity of occupying his activity, and of pouring out his heart—such were the motives which made him take the pen. Like all our young writers entered yesterday on their career, the Unknown did not want for ideas; his thought, long turned back upon itself, had accumulated them in his head; but also, like all who are composing their first work, abundant as were the ideas, it was requisite to clothe them with words, and the labour of expression he found supremely difficult. At length he finished, and published a work which betrayed the apostle of toleration and equality. Royalty and aristocracy were still ascendant; he was imprisoned, which increased his hatred of absolute power, and made his love of liberty more ardent.

One day, when his captivity was ended, chance guided his wandering course across the fields. He came to a chateau in ruins: ‘A pile of clouds in the west veiled the last rays of the twilight: an impetuous wind rang through the pinnacles of the

towers, in long-continued whistlings; and the funeral cry of the screech-owl appeared to redouble its sadness. It seemed to the Unknown that he was about to discover some mystery of horror: his whole frame shuddered; when an unexpected voice shouted in his ear, 'Death or liberty!' He turned round, and, by the light of a sepulchral lamp, recognised the altered features of a friend, a man whose history, wrapped in darkness, was unknown to him, but whom he well knew that acts of signal injustices had made sick of the society of man. This was the Italian. The Unknown threw himself into his arms, and pronounced his name with a cry of joy. 'Silence,' replied the former, in a low but emphatic tone, 'silence disturbs no mysteries.' He then drew him into the ruins; and the Unknown was quickly initiated in the secrets of one of those societies which were at that time conspiring for the overthrow of tyranny.

'How unjust is the pretence of those who favour the existing order of things, to impute it for crime and cowardice in the friends of liberty, to labour in the shades of secrecy! They seem to say to them: "Dare to attack us openly, and measure your strength with us. You dare not do it: then you are the feeble: then you are in the wrong." What a conclusion! Though the side of truth be the weaker, must it therefore be less the side of justice?'

'For the rest, it were a very gratuitous concession to grant that the side of liberty, of justice, and of truth, can ever be in the minority. The immense majority of the nations that still groan under unjust fetters, is composed of men who, though not in a situation to know where freedom and justice may be found and how attained, nevertheless long after them with all their powers, and long implicitly for whatever may lead to and preserve them. Few men possess the lights necessary to arrive with certainty at these results; and, if any one has a right to govern, to guide the people, that right resides in themselves.'

The assembly into which the Unknown was received, was the centre of a vast association, the branches of which spread themselves on every side. The Italian exercised great influence in it. His rude and fitful eloquence acted strongly on the mind. With a severe and unrelenting character, a persevering will, a powerfully organised head, he ruled supremely over all about him. The number of adherents increased daily. Long had the tempest growled in secret: it burst forth. 'We were not,' says the Unknown, 'the authors of the explosion; but the heralds who gave the signal for the encounter. The avalanche was prepared: the least shock was sufficient to set it in motion. This impulse was given, and power was suddenly extinguished. Liberty and truth arose, strong as evidence and simple as a great man.'

A legislative assembly was convoked, of which the Unknown and his friend formed a part. This was the Constituent. There is a pleasure so intoxicating in opposition, when, strong in public opinion and elated by the favour which surrounds the brave and the oppressed, it arises to put down tyranny and arbitrary rule, to vindicate justice and truth, that the Unknown could not escape from its captivating lures. He helped to burst the chains of the people, and purge the abuses of feudalism. But his enthusiasm had a bound: his thirst of public good was quenched. The old oppressors had resorted to oppression, because it was attempted to prevent them from oppressing. The people, enraged by their resistance, loaded them with the whole weight of their resentments. A second assembly, the Legislative, succeeded to the former. The ambitious and fanatical urged on the multitude in the career of crime; and, while the Unknown, like all generous souls, ever on the side of the people, forgetting the errors of the great stricken ones, undertook their defence, the multitude, misled by the Italian and demons of his class, included the victims and their champion in one common curse. The Unknown would have made an appeal to humanity, but in vain; the language of justice and of reason was ignored. Then, disenchanted from a liberty which took the form of licentiousness, his

soul full of bitterness, he withdrew himself from an ungrateful country, who proscribed the defenders of her cause.

He landed on the shores of a great empire, which he does not name; but it was the United States. 'Several men assisted to unload the vessel. One, already bowed with age, bent beneath an enormous burden: he staggered. Why did he start and turn his head? Why was fear depicted in his ebony-hued visage? Behind him went a man of a stupid and hard-hearted look, who, with a threatening gesture, said to him, "Get on, slave!"' The Unknown came seeking freedom, but he found slavery. 'Great God!' he exclaims, 'have I then crossed the sea to witness in this place the last degree of human degradation,—to hear the execrable word which no one even of our tyrants would dare to utter?' He fled: his last illusions were destroyed. His progress was without aim, for no where did a friend await him; without curiosity, for no one was with him to participate in his sensations. He came to a country entirely new, in the midst of a people of an unknown tongue. His last resources he applied to the purchase of a boat, a sail, and oars. He was on the verge of famine. He turned waterman, and became the companion of men gross and ignorant. Their tranquillity, which he could not share—their sleep, which he did not enjoy—their life, confined to the positive limits of the present, moved his envy. He had made trial of the world, and found not a single friend in it; glory, and remained obscure; liberty, and anarchy was triumphant. In his hate of civilization, which had wrought him only evil, he doomed himself to exile in the midst of a semi-barbarous tribe. 'No more dreaming,' he exclaimed: 'the time for waking up is come. No more of the ideal: henceforth I give myself to the positive of existence.' And, in order to break with this world, in which all his hopes had been deceived, he determined on establishing with those who surrounded him a community of existence: he resolved on a family, and chose a wife.

The marriage was fixed for the eighth day. Behold him applauding himself for having bound himself by a great resolution, flattering himself that he should meet, in domesticity and the society of a virtuous woman, with the happiness for which nature created man. 'Love! Ah! without doubt,' said he to himself, 'when all other faiths fail or are extinguished in the clouded breast, the faith of love may survive alone, and save us from despair. Doubtless, that, which is the immense source of human life, can resuscitate all our vanished illusions. Glory herself, that evanescent chimera, may present new charms, in the features of a beloved woman, with a crown in her hand.' Yes! these reflections are just; but to realise them one must love, which the Unknown did not. 'Doubtless, the man who has never looked beyond brute nature may burn for an associate, whom she has made like to himself. Is not the bear, in his den, made rampant with desire by the uncouth attractions of his ugly mate? But he, in whom education has developed the understanding, purified the taste, roused the imagination—such a one requires in love a companion, whose nature is equally modified by education, to whom he may alike owe the purest delights of the soul and the liveliest of the sense,—who, clothing herself with seducements, fascinations, and illusions even, to satisfy the possibly chimerical wants of the imagination, may convert to his happiness all that factitious supplement of existence which without her would remain a supplement of pain, may fill the immense void of his desires, respond to his every thought, enchant his every power, and, in a word, compose the half of his whole being.' These conditions, so necessary to the existence of true love, the Unknown was far from finding in his affianced bride. Sometimes he endeavoured to make her understand the language of reason and delicate sentiment. The stupid gaze of her big eyes, the besotted expression of her bloated fea-

tures, soon made the weary part he had undertaken insupportable. He was seized with an invincible repugnance to the ties he was about to form, and reflected with disgust on the creature who was to be his wife. Instead of love, he felt a pure hatred for her. A union so ill-assorted, and formed under such auspices, appeared to him a hell on earth: he would have preferred death; and, resolving to recede from his engagement, on the eve of his intended marriage, he stealthily quitted the wild region to which he came for an asylum and a wife.

He became the subject of despair; and death was about to end his existence, when chance brought him into precincts inhabited by an angel of virtue and of beauty. The father of this interesting creature had been the friend of the father of the Unknown. The troubles of France had driven him from his native soil. But he left his sovereign behind: he had just learned that perils of every kind threatened the royal head: he determined to lend him the support of his arm. But he wanted a protector for his daughter, and he made choice of the Unknown. He disclosed to him his plans: the Unknown wished to participate in the dangers of them. But their motives were different: neither of them sought to stem the torrent of the Revolution; the old man wished to prevent the assassination of his King, the young one to gain the heart of Zelia.

They all three set out, and arrived in the 'great city,' by which Paris is intended. The night before, the head of the monarch had fallen beneath the revolutionary axe. The man whom the Unknown had formerly called his friend had been one of the most furious abettors of this atrocity. Ever faithful to his barbarous system, he fomented every outbreak of fury, was associated in every bloody measure, and claimed his part in every crime. The Unknown had avoided seeing him, when, one day crossing one of those vast and sumptuous squares which the reign of terror had almost transformed into deserts, a man passed near, who cast on the Unknown and on Zelia a dreadful look. This was the Italian: sentence of death had just been pronounced on the old man and his daughter. They determined to fly that bloody city: they had no time to spare. On the morrow, the Unknown went out early to finish the preparations for their departure. In returning, he perceived a placard on a pillar, which appeared to have attracted the curiosity of the crowd. Involuntarily he drew near. Among many unknown names, those of Zelia and her father caught his eye. It was a proscription list. Struck with dismay, his first impulse was to fly to them; but, yielding to a confused reflection, he ran to the residence of his former colleague.

"Hullo, there," said he, "what want you?" "I described to him, with the accent and disorder of despair, my love for Zelia. I told him the news I had read. I reminded him of our former friendship, and implored his all-powerful protection for my beloved. While speaking, I had seized his hand, which remained motionless, while mine were trembling with agitation. A hideous sneer succeeded to a hideous smile.

"Thou art truly incorrigible," said he; "wilt thou eternally believe in friendship, in pity, in humanity, and in all these fooleries? The wretches! It was through them that I ceased to be a man, and they want me to be humane! At length thou rememberest me, dost thou? I'll tell you what you are. When happy, you forget—what do I say?—you disown those whom you used to honour with the name of friend, and run to them as soon as you need their assistance. But I have not forgotten thee! Ah! thou comest to call up our former friendship! Dost thou not remember that I told thee once it was founded on our common misfortunes—that, if ever thou shouldst be fortunate, thou wouldst become to me the most abhorred of mortals? And this Zelia, whose love proves thy happiness, for whom thou dardest to implore me, art thou aware that I knew her long before thee? It was to her that, five years ago, in my country, still a stranger to myself, I ventured to address a word of love; it was she whose horror and disdain revealed to me all the atrociousness of my fate; it was she who inspired me with the first

thought of the design which I am now accomplishing. She and thyself are the only mortals for whom I still feel a remnant of hatred. Now is it satisfied: she shall die, and thou shalt live. Thou troublest me—begone!"

"No; she shall not die. I will expose to the people your baseness and atrocity. I will make them blush for their credulity and their sanguinary weakness."

"Thou wilt betray me, sayest thou, in spite of the secrecy thou didst swear! Ah! who will believe thee? Thou wilt gain nothing by it but thy own destruction. If thou desirest that so much, thou mayest go. As for the others, it is already too late. This moment thy Zelia dies."

"She dies!" cried I; and, darting from the hiding-place, I flew to our abode."

In crossing a square, he came in contact with a crowd, which, in a motionless and breathless stupor, appeared to be gazing at some great spectacle. By his side passed two men half naked, carrying off the bloody and mutilated body of an old man. He raised his eyes. On a scaffold raised in the centre of the multitude, he saw Zelia. She had recognised her lover: she stretched out her arms towards him, and wafted him a last salute. The Unknown darted forward: the astonished crowd opened before him: he pierced through the guards, arrived at the foot of the scaffold, and the head of his affianced bride came rolling to his feet.

Reduced within two or three columns of our own paper, the subject which we have analysed wants neither dramatic interest nor action. But, dispersed, as it is, over more than four hundred pages, mingled with long religious, moral, and political dissertations, it will seem cold and languid to the mass of readers; to those who look for graceful ideas and not strong thoughts; to those who, having no experience of the miseries of exile or the enthusiasm of liberty, cannot know how much truth there is in the impressions of that man who devotes himself to the cause of the people, sacrifices to it his name, his fortune, and his prospects, receiving in exchange the death of what he holds dearest in the world; who, moreover, does not apostatize from his principles, or bring discredit on a cause which, though the miserable may have soiled it for a moment, is, nevertheless, the cause of reason, of justice, and of sacred humanity.

MISS BROWNE'S REPENTANCE.

Repentance; and other Poems. By Mary Ann Browne, authoress of Mont Blanc, Ada, &c. 12mo. pp. 118. Longman. London, 1829.—[Unpublished.]

ARISTOTEL remarked that those who were proclaimed conquerors at the Olympic games in early life, were seldom heard of after the day of their triumph, their begun career having been checked or stopped short by the powerful influence of praise operating as a paralyzing spell upon all future effort. By keeping an eye upon the history of those youthful conquerors, the great philosopher found, that some of them were contented to subside upon the fame they had acquired; that others did make new efforts, but, from a vain confidence in their proved abilities, permitted those of inferior powers to excel them; and that a third class had their ardour irretrievably damped by their friends unjustly expecting to excel themselves. The same remarks hold good now with respect to young aspirants in the walks of literature; for few of those who give early promise of superiority fulfil the hopes entertained of their powers of genius, and chiefly for the reasons assigned above two thousand years ago by the prince of the Grecian philosophers. The following is a vivid picture of these effects of success upon a poetess of the present day as drawn by herself, and we cannot too urgently impress the lesson which may here be read upon the attention of the young lady whose volume is now under review:

'I drank the madd'ning cup of praise; which grew
Henceforth the fountain of my life; I lived
Only in others' breath; a word, a look,
Were of all influence in my destiny;
If praise they spoke, 'twas sunlight to my soul:

Or censure, it was like the scorpion's sting.
And yet a darker lesson was to learn—
The hollowness of each; that praise which is
But base exchange of flattery, that blame
Given by cautious coldness, which still deems
'Tis safest to depress; that mockery,
Flinging shafts but to show its own keen aim;
That carelessness, whose very censure's chance,
And, worst of all, the earthly judgment passed
By minds whose native clay is unredeemed
By aught of heaven, whose every thought falls foul
Plague spot on beauty which they cannot feel.'

L. E. L.

Heavy, indeed, is the guilt, and terrible the responsibility, of these friends of young authoresses, who, merely because they are authoresses and young, praise their writings without stint or measure; or, if they exercise any discrimination at all, select for the most fulsome panegyric the passages which are the most gaudy in style, the most meretricious in sentiment, and who labour to confirm them in all the vices of thought and style which will prevent their unfortunate protégées from ever rising above the need of their mischievous patronage. As far from us be this most criminal practice as the equally dangerous and more mean ambition of wounding the feelings of those who are more susceptible than the majority, just because they are more worthy. The following lines prove, we think, that the authoress before us, who has already deserved well of the public, if she escape the miserable effects of that 'maddening cup,' to which her contemporary alludes so pathetically, and if she endeavour, with all her might, to cultivate her genius for herself, may become the kind of poetess that her best friends would wish her to be:

LESSONS.

'And this our life, exempt from public haunt,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in every thing.'—*Shakespeare.*

'Let us go to the hall, where the red wine flows;
And roses and myrtles are gaily wreathed;
Where many a cheek with its deep joy glows,
And the sweet, sweet music of lutes is breathed.
Ere morning comes, the scene will be fled;
Faded will be the dream of bliss;
The song will be hushed, and the roses dead,—
Is there nought to be learned by this?

'Let us go to the shore, where the sea shells lie,
And the sand with weeds and wrecks is strown;
Where over the rocks the cold waves fly,
And make their hollow and sullen moan!
Those desolate things were cast away
From the false breast of the raging seas;
And there they are sadly left to decay,—
Is there not a lesson in these?

'Let us go to the wood, where the hawthorn blows,
When its leaves in the soft spring time are green;
When its mantle around it the woodbine throws,
And the pearly flowerets peep between;
Oh, we shall find a moral in them,
Thus with the leaves deceitfully twined;
Decking awhile the thorny stem,
Yet dropping off with the first rude wind!

'Let us go to the fields, when the storm is o'er,
And the rain-drops sparkle like stars at eve;
When the thunder peal is heard no more,
And the ocean's bosom hath ceased to heave:
Then we shall see the rain-bow bright,
From the gloomy clouds and the sunshine wrought,
Shedding on all things its coloured light,—
Something, surely, by this is taught.

'Let us go to the graves, where our loved ones are,
And let us choose the midnight time,
When the heavens are glorious with many a star,
And silence and grandeur raise thoughts sublime;
And as we look from the mouldering dust,
Up to the cope of the beauteous sky;
So shall our spirits ascend, in their trust,
To the Holy Spirit that dwelleth on high.'

THE SLEEPERS.

'THEY are sleeping!—Who are sleeping?
Children wearied with their play;
For the stars of night are peeping,
And the sun hath sunk away;
As the dew upon the blossoms
Bows them on the slender stem,
So, as light as their own bosoms,
Balm sleep has conquered them.'

'They are sleeping!—Who are sleeping?
Mortals compassed round with woe,—
Eye-lids wearied out with weeping,
Close for very weakness now;
And that short relief from sorrow,
Harassed nature shall sustain,
Till they wake again to-morrow,
Strengthened to contend with pain.

'They are sleeping!—Who are sleeping?
Captives in their gloomy cells;
And sweet dreams are o'er them creeping,
With their thousand coloured spells.
All they loved! again they clasp them,—
Feel again their long-lost joys!
But the haste with which they grasp them,
Every fairy form destroys.

'They are sleeping!—Who are sleeping?
Misers by their hoarded gold;
And in fancy now are heaping
Gems and pearls of price untold.
Golden chains their limbs encumber,
Diamonds seem before them strown;
But they waken from their slumber,
And the splendid dream is gone.

'They are sleeping!—Who are sleeping?
Pause a moment—lightly tread,—
Anxious friends are fondly keeping
Vigils by those sleepers' bed;
Other hopes have all forsaken,
One remains, that slumber deep;
Speak not, lest they should awaken
From that sweet, that saving sleep.

'They are sleeping!—Who are sleeping?
Thousands who have passed away,
From a world of woe and weeping,
To the regions of decay.
Safe they rest the green turf under;
Sighing breeze, or music's breath,
Winter's wind, or summer's thunder,
Cannot break the sleep of death.'

Amongst the other pieces in the volume, we were most delighted with 'The Clouds,' 'The Things of the Waters,' 'The Place of Rest,' and 'Trust in Heaven,' all of which exhibit the same piety and simplicity.

THE PENTATEUCH.

Heber's Sermons in England. Murray. London, 1829.

DURING the last half-century, the authenticity of the Pentateuch has been a question much bruited among the German divines. It is hardly necessary to mention, that Volney roundly asserted that the whole work was a compilation made after the return of the Jews from Babylon; and that Hobbes and Spinoza have discriminated between the historical and legal parts, referring the former to Ezra or Hilkiah, and the latter to Moses. The controversy has long lain dormant in our own country; and, as nobody has doubted, every body has believed: and, indeed, a most fearful cry of heterodoxy has been raised against any who, wishing to find in another language what ignorance or prejudice has denied to their own—a just and fair criticism of this interesting question—have even hinted to what is called our 'religious world,' the possibility of such a doubt being entertained. We were, therefore, much pleased to find this subject the head of a discourse, when we opened a volume of 'Heber's Sermons in England.' It is with a grateful melancholy we receive a new posthumous work of a good man lately taken from us; we regard it as, in some degree, a living and acting substitute for the holy presence of the departed mind. We know that in Bishop Heber there could be nothing of proud assertion, nothing of ignorant and unchristian bigotry; and the very commencement of the sermon on which we offer these cursory remarks, proved us right.

'It is true, indeed, and it is an observation which it is wise as well as candid to bear in mind, that the faith in our Lord Jesus may be satisfactorily defended by the internal and external evidence of the New Testament alone, though we should abandon as spurious or apocryphal the volume of the law and the prophets.'

If, then, the very total rejection of these

records does not necessarily involve a scepticism in the Christian faith, how much more vain and impertinent is the accusation, when brought against those who judiciously apply the canons of criticism to these books, and without attempting to derogate one tittle from the prophetic authority, the poetic inspiration, or even (in all important points) from the historical credibility, merely claim a right of examining for themselves, how far the Bible has been affected by those external circumstances which have left such deep marks on every other ancient literary production. A far more dangerous ground in the New Testament has been safely trod by Marsh, and Eichhorn, and Gratz, and Hug, and the revered Schleiermacher, and we all know how beneficially.

Had, however, Bishop Heber treated this subject as fully and as clearly as it merits, we should have contented ourselves with recommending this volume to the perusal of all our Christian readers; but we are sorry to say that we feel compelled in a certain degree to qualify this recommendation. The view Heber has taken is at best a very crude one: there is in it nothing objectionable of commission, but a great deal of omission; and, widely circulated as this book will be, it is our duty to point out some of these deficiencies, thereby warning its readers not to consider this question as in any way decided by this discourse, but rather advising them, with it in their hand, to apply all their own powers of thought and critical acumen to the subject, and to remember that the required investigation is far deeper than any here entered into.

There seems to have existed in the mind of the Bishop a great confusion with regard to the objections he professes to confute: he could not but be aware that the belief that Ezra compiled the book we now have, from authentic and existing records, is widely different from the supposition (which, indeed, we do not think worthy of contradiction) that Ezra was the *inventor* of this new code; yet we find these sentences following close upon one another:

"Though both Ezra and Nehemiah repeatedly mention that book of the law, which Ezra read and expounded to the people; and they never intimate that he had himself compiled the work in question from the songs of the ancient bards, or the traditions of the wise men before the captivity; will it be said that Ezra was the re-builder of a decayed superstition; that it was necessary for him to support his new code by the venerable name of Moses, and to merge the vanity of an author in the darker pride of a successful impostor?" &c. &c.

Now, the second case is well confuted by some very evident argument, but the first is left unopposed, except by the simple assertion that the fact is not intimated; and here Heber ought at least to have taken some notice of Ezra vii. 11, where he is specially called, (and the title is applied to no common priest,) 'a scribe of the words of the commandments of the Lord and of his statutes to Israel.' Again:

"Ezra and Nehemiah speak of the book of the law, as of a composition with which those to whom they write had already been long familiar."

Who denies that the Jews had some book of the law long before this time? But the question is, was that book the Pentateuch? In page 113, a sort of summary of the arguments against the instrumentality of Hilkiah in composing any part of the book concludes with,

"It is evident that it was no new work which, in his days, the high priest discovered in the temple; nor could Hilkiah have, by any possibility, been the forger of a volume which, many hundred years before his time, had been read by Joshua and David."

We ask again, who denies this? But, allowing it (as, in fact, it is asserted in the Bible) to be an old work found by the Priest by mere chance, the Bishop has given us no explanation of the dilemma into which we fall. The book must either have been in substance known to the Jews or not: if the former, what is the meaning of

Joshiah's terror and contrition at the discovery, (Kings ii. 22,) his public reading of it to the people, (Chron. ii. 34,) and his public celebration of the event? (Chron. ii. 35.) If the latter, what are we to think of that state of society where the religious and civil codes, the divine authorities for all their most trivial ordinances and institutions, their rule of right and wrong, not only in affairs of moment, but in concerns of every-day life; the national annals, the revealed will of God, were suffered, not only to pass into disuse, but to be actually *forgotten*, and to be named after a lapse of years as a thing newly found, and that, too, when a college of priests existed, whose sole duty it was to take care of this very law. This point, and many others of a similar nature, provoke the gravest and most serious inquiry. Our limits will not permit us to enter upon any attempt to elucidate these difficulties, either by any efforts of our own, or by retailing the sound investigations of German critics. Bishop Heber, worthy as he was of the palmiest days of English divinity, kindred-minded as he was to such of the past as Taylor, or Hooker, or Leighton, has treated this subject somewhat, we will not say, too lightly, but too superficially: perhaps it is not at any time fit for a pulpit; it requires too continuous a chain of thought, too much balancing and keeping and rejecting; we could, indeed, wish that Coleridge would give us something more distinct on the question than glimmered forth in his 'Aids to Reflection': he must have studied it deeply, and thought on it long, and the world would be thankful for his contemplations. Perhaps we may, in another number, allude to some facts in the following sermon on 'The Character of Moses.' All the rest of the book is (can we say more?) what we expected. 'Respect due to Antiquity' is a holy vindication of ancestral feelings.

THE NAVAL OFFICER.

The Naval Officer; or Scenes and Adventures in the Life of Frank Mildmay. 3 vols. Colburn. London, 1829.

A PRINCIPAL difference between authors who have made the delineation of human character the subject of their labours, between Shakspeare and Byron, Goëthe and Kotzebue, the author of 'Saint Leon' and 'Caleb Williams' and the author of 'The Naval Officer,' is, that while the former consider that consistency is natural and, therefore, necessary, all the latter as determinately provide for the interest of their story by the inconsistency of their characters: and their success which has waited upon the gentle labours of the two first-named authors of the latter kind has seemed to afford proof of the propriety of their practice; a circumstance which, we conclude, has acted upon the author of the work before us, as it has upon some hundred young gentlemen whose ambition of being *Great Inconsistents*, the writings of my Lord Byron aroused. Like the Laras or Giaours, Mr. Francis Mildmay, the naval officer, first wins upon our feelings by being the most consummately heartless scoundrel that ever stopped short of positive crime, and then reconciles himself to the consciences of all moral readers, not indeed as his Lordship's heroes do; but by making acquaintance with a dignitary of the Established Church, reading certain pages of a religious book which the Bishop lends him, becoming a Christian and marrying Miss Somerville, the heroine of the story. As a development of character, this novel is contemptible; as a collection of interesting descriptions, for which its story and the circumstances of its hero afforded very excellent opportunities, we are also compelled to say that it is far from being what it might have been in the hands of an abler artist. A short analysis of the story must suffice. Mr. F. Mildmay, a gentleman of large property, after having been sent to a school, where the folly of the master and the avaricious disposition of the mistress at length plant every description of

vice in his breast, in place of all the virtues which previously existed there, 'discovers that there is no schoolmaster in the ship, and that the midshipmen are allowed a pint of wine a day,' and, after much reluctance on the part of his father, is sent to sea. Here he becomes, by a series of tyrannical oppressions on the part of some older and stronger midshipmen of the mess, confirmed in his evil feeling, and gradually becomes as corrupted as a weak disposition can be by the practice of a man-of-war in port. The ship is in action at Trafalgar; a few lines of the description of this affair we extract:

"One of these proved to be English, and our captain seeing her between two of the enemy, bore up to take her in tow: at the same time, one of our ships of the line opened a heavy fire on one of the French line of battle ships, unluckily situated in a right line between us, so that the shot which missed the enemy sometimes came on board of us. I was looking out of the bow-port at the moment that a shot struck our ship on the stern between wind and water. It was the first time I had ever seen the effect of a heavy shot; it made a great splash, and, to me, as I then thought, a very unusual noise, throwing a great deal of water in my face. I very naturally started back, as I believe many a brave fellow has done. Two of the seamen quartered at my guns, laughed at me. I felt ashamed, and resolved to show no more such weakness.

"This shot was very soon succeeded by some others not quite so harmless: one came into the bow port, and killed the two men who had witnessed my trepidation. My pride having been hurt that these men should have seen me flinch, I will own that I was secretly pleased when I saw them removed beyond the reach of human interrogation.

"It would be difficult to describe my feelings on this occasion. Not six weeks before, I was the robber of hen-roosts and gardens—the hero of a horse-pond, ducking an usher—now suddenly, and almost without any previous warning or reflection, placed in the midst of carnage, and an actor in one of those grand events by which the fate of the civilized world was to be decided.

"A quickened circulation of blood, a fear of immediate death, and a still greater fear of shame, forced me to an involuntary and frequent change of position; and it required some time, and the best powers of intellect, to reason myself into that frame of mind in which I could feel as safe and as unconcerned as if we had been in harbour. To this state I at last did attain, and soon felt ashamed of the perturbation under which I laboured before the firing began. I prayed, it is true; but my prayer was not that of faith, of trust, or of hope—I prayed only for safety from imminent personal danger; and my orisons consisted of one or two short, pious ejaculations, without a thought of repentance for the past or amendment for the future.

"But when we had once got fairly into action, I felt no more of this, and beheld a poor creature cut in two by a shot with the same indifference that at any other time I should have seen a butcher kill an ox. Whether my heart was bad or not, I cannot say; but I certainly felt my curiosity was gratified more than my feelings were shocked, when a raking-shot killed seven and wounded three more. I was sorry for the men, and, for the world, would not have injured them; but I had a philosophic turn of mind; I liked to judge of causes and effects; and I was secretly pleased at seeing the effect of a raking shot."—Vol. i. pp. 87—91.

To these specimens of moral development, add the following, and our midshipman is prepared for all the scenes of villany which he afterwards figures in, p. 94.

"Soon after the action, we were ordered to sort out with duplicate despatches. One morning I heard a midshipman say, 'he would do his old father out of a new kit.' I inquired what that meant, was first called a green-horn for not knowing, and then had it explained to me. 'Don't you know,' said my instructor, 'that after every action there is *sort out*—canvas, rope, and paint, expended in the warrant-officer's accounts, than were destroyed by the enemy?'

"I assented to this on the credit of the informant, without knowing whether it was true or false, and he proceeded.

"How are we to have white hammock-~~clothes~~, sky-sail masts, and all our finery, besides a coat of paint for the ship's sides every six weeks, if we don't expect all these things in action, and pretend they were lost on board, or destroyed? The list of defects are given in to the ad-

miral, he signs the demand, and the old commissioner must come down with the stores, whether he will or not. I once was in a sloop of war, when a large forty-four-gun frigate ran on board of us, carried away her jib-boom, and left her large fine weather-jib hanging on our fore-yard. It was made of beautiful Russian duck, and, to be sure, didn't we make a gang of white hammock-cloths fore and aft, besides white trousers for the men? Well now, you must know, that, as we make *uncle George* suffer for the stores, so I mean to make dad suffer for my traps. I mean to lose my chest overboard, with all my 'kit,' and return home to him and the old woman just fit for the fashion."

"And do you really mean to deceive your father and mother in that way?" replied I, with much apparent innocence.

"Do I? to be sure I do, you flat. How am I to keep up my stock, if I don't make the proper use of an action like this that we have been in?"

"I took the hint: it never once occurred to me, that if I had fairly and candidly stated to my parents that my stock of clothes were insufficient for my appearance as a gentleman on the quarter-deck, that they would cheerfully have increased it to any reasonable extent. But I had been taught artifice and cunning; I could tell the truth where I thought it served my purpose, as well as a lie; but here I thought deception was a proof at once of spirit and of merit; and I resolved to practise it, if only to raise myself a trifling degree in the estimation of my unworthy associates. I had become partial to deception from habit, and preferred exercising my own ingenuity in outwitting my father, to obtaining what I needed by more straightforward and honourable measures."—Vol. i. pp. 94—96.

We shall not follow the author through all the succeeding events, partly because they present little variety, being all on board ship, and partly because we think they might have been very frequently expressed in a less coarse style. We except the following passage:

"Early on the second morning of our departure we made Cape de Gaete. As the day dawned we discovered four sail in the wind's eye, and close in shore. The wind was light, and all sail was made in chase. We gained very little on them for many hours, and towards evening it fell calm. The boats were then ordered to pursue them, and we set off, diverging a little from each other's course, or, as the French would say, *déployée*, to give a better chance of falling in with them. I was in the gig with the master, and, that being the best running boat, we soon came up with one of the feluccas. We fired musquetry at her; but, having a light breeze, she would not bring-to. We then took good aim at the helmsman, and hit him. The man only shifted the helm from his right hand to his left, and kept on his course. We still kept firing at this intrepid fellow, and I felt it was like wilful murder, since he made no resistance, but steadily endeavoured to escape.

"At length we got close under the stern, and hooked on with our boat-hook. This the Spaniards unhooked, and we dropped astern, having laid our oars in; but, the breeze dying entirely away, we again pulled up alongside, and took possession. The poor man was still at the helm, bleeding profusely. We offered him every assistance, and asked why he did not surrender sooner. He replied, that he was an old Castilian. Whether he meant that an earlier surrender would have disgraced him, or that he contemplated, from his former experience, a chance of escape to the last moment, I cannot tell. Certain it is, that no one ever behaved better; and I felt that I would have given all I possessed to have healed the wounds of this patient, meek, and undaunted old man, who uttered no complaint, but submitted to his fate with a magnanimity which would have done credit to Socrates himself. He had received four musket-balls in his body, and, of course, survived his capture but a very few hours.

"We found to our surprise that this vessel, with the three others, one of which was taken by another of our boats, were from Lima. They were single-masted, about thirty tons burthen, twelve men each, and were laden with copper, hides, wax, and cochineal, and had been out five months. They were bound to Valparaiso, from which they were only one day's sail when we intercepted them. Such is the fortune of war! This gallant man, after a voyage of incredible labour and difficulty, would in a few hours have embraced his family, and gladdened their hearts with the produce of honest industry and successful enterprise; when, in a moment, all their hopes were blasted by our legal murder and robbery; and our prize-money came to

our pockets with the tears, if not the curses, of the widow and the orphan!"—Vol. i., pp. 142—144.

After much active service, he returns home on the death of his mother; soon quarrels with his father, and, leaving the house, falls in with a company of strolling players, among whom there is a very pretty and interesting girl, whom Mr. Frank Mildmay seduces. In the mean time, he has attached himself to a Miss Somerville, and become, through her family, reconciled to his father; and in his conduct to whom we find him to be as great a rascal as could be expected. After joining the company of players for Eugenia's sake, being recognised by his father on the stage, he goes to sea again, leaving his mistress *en route*. After a thousand scenes in which folly, profligacy, and bravery, are conspicuously displayed, dangers and repentance, safety and fresh guilt, Mr. Mildmay, now a lieutenant, falls in with an American vessel, and remains as it were prisoner on board, till he is rescued by an English frigate, which takes the American. The chase is interesting, but reminds us of the vast superiority of that in Mr. Cooper's novel of 'The Pilot.' With the prize, Lieutenant Mildmay goes back to England, and, after more profligacy and fresh repentance, a quarrel with Miss Somerville, and a meeting with Eugenia, falls in with a bishop who converts and marries him to Miss Somerville. We are inclined to think the author of this novel a man of more talent than taste. Much of what he describes he does with considerable success, and in so natural a manner as to induce us to believe that it is the result of personal observation. Bating the utter heartlessness of the hero, and the very unnatural reformation which takes place of his character, the novel is a good one: we should, however, have preferred it, if much of the coarseness which we observe in it had been omitted; it surely was unnecessary. There is a little disposition observable to carp at aristocratical captains, which we also wish had been avoided; but, with the exception of these errors, we have been a good deal amused by 'The Naval Officer,' of whom we will now take leave with a last extract. It describes the scene which immediately led to the hero's last quarrel with Miss Somerville.

"It was, indeed, a case of singular calamity, for a beautiful young creature to be placed in. She was only in her three-and-twentieth year—and, lovely as she was, nature had scarcely had time to finish the picture. The regrets which subdued my mind on that fatal morning, may only be conceived by those who, like me, have led a licentious life,—have, for a time, buried all moral and religious feeling, and have been suddenly called to a full sense of their guilt, and the misery they have entailed on the innocent. I sat down and groaned. I cannot say I wept, for I could not weep; but my forehead burned, and my heart was full of bitterness.

"While I thus meditated, Eugenia sat with her hand on her forehead, in a musing attitude. Had she been reverting to her former studies, and thrown herself into the finest conceivable posture of the tragic muse, her appearance would not have been half so beautiful and affecting. I thought she was praying, and I think so still. The tears ran in silence down her face; I kissed them off, and almost forgot Emily.

"I am better now, Frank," said the poor, sorrowful woman; "do not come again until after the wedding. When will it take place?" she inquired, with a trembling and a faltering voice.

"My heart almost burst within me, as I told her, for I felt as if I was signing a warrant for her execution. I took her in my arms, and, tenderly embracing her, endeavoured to divert her thoughts from the mournful fate too evidently hung over her; she became tranquil, and I proposed taking a stroll in the adjoining park. I thought the fresh air would revive her.

"She agreed to this; and, going to her room, returned in a few minutes. To her natural beauty was added on that fatal day a morning-dress, which more than any other became her; it was white, richly trimmed, and fashionably made up by a celebrated French milliner. Her bonnet was white muslin, trimmed with light blue ribbons, and a sash of the same colour confined her slender waist. The little Eugenia ran before us, now at my side, and now at his mother's. We rambled about for some time, the burthen of our con-

versation being the future plans and mode of education to be adopted for the child; this was a subject on which she always dwelt with pleasure.

"Tired with our walk, we sat down under a clump of beech-trees, near a grassy ascent, winding among the thick foliage, contrived by the opulent owner to extend and diversify the rides in his noble domain. Eugenia was playing around us, picking the wild flowers, and running up to me to inquire their names.

"The boy was close by my side, when, startled at a noise, he turned round and exclaimed—

"Oh! look, mamma, look, papa, there is a lady and a gentleman a-riding."

"I turned round, and saw Mr. Somerville and Emily on horseback, within six paces of me; so still they stood, so mute, I could have fancied Emily a wax-work figure. They neither breathed nor moved; even their very horses seemed to be of bronze, or, perhaps, the unfortunate situation in which I found myself made me think them so. They had come as unexpectedly on us as we had discovered them. The soft turf had received the impression of their horses' feet, and returned no sound; and, if they snorted, we had either not attended to them, in the warmth of our conversation, or we had never heard them.

"I rose up hastily—coloured deeply—stammered, and was about to speak. Perhaps it was better that I did not; but I had no opportunity. Like apparitions they came, and like apparitions they vanished. The avenue from whence they had so silently issued received them again, and they were gone before Eugenia was sensible of their presence."—Vol. iii. p. 202—206.

ATLAS OF GRECIAN HISTORY.

Numismatic Atlas of Grecian History. By Benjamin Richard Green. Priestly and Weale. London, 1829.

This is a work of a novel character, and its conception, we may predict, will be appreciated alike by the medalist and the historian. The medalist will find depicted with fidelity and elegance, and arranged with perspicuity, an unbroken series of coins, the detached portions of which he would otherwise have been compelled to seek out laboriously from different cabinets; and the illustration afforded by the plan to the period of history it embraces, calls for the peculiar thanks of the student, who, by its means, will be enabled to form the 'chain of memory' with a living and brilliant succession of links, instead of being driven, as heretofore, to the lifeless data of a chronological table.

We regret that our limits preclude us from laying before our readers such an exposition of the work, in its details, as, to do it justice, would be required. We will attempt, however, a brief reference to its more striking features.

Mr. Green has divided his subject amongst the states of the ancient continents of Europe, Asia, and Africa. In the first of these, we find Sicily, Epirus, Macedon, Illyria, and Thrace.

Asia in two divisions. The first contains, Caria, Mysia, Bithynia, Paphlagonia, Galatia, Cilicia, Cappadocia, and Pontus, including the Cimmerian Bosphorus.

In the second division of Asia, are Judea, Cammagene, Edessa, Armenia, Parthia, and Bactria.

Africa contains Egypt, Numidia, Cyrene, and Mauritania.

Some details of the Syracusan coins, and the manner in which they have been arranged and applied by Mr. Green to illustrate his historical views, will sufficiently demonstrate the object and the result of his tract, without repeating the similar course which he has adopted on the Continents of Asia and Africa, and their respective kingdoms and subordinate divisions.

The Syracusan coins differ little in their character from those of other European monarchs. They comprise a great variety, and in beauty of execution they rival any extant. The usual symbol is a figure of Victory guiding a chariot, as on the coins of Galo and Hiero II.; on the obverse, the heads of Ceres and Proserpine, who were the deities worshipped on that fruitful island. Silver coins have been ascribed to Dio-

nysius II.; but, as much doubt exists respecting their authenticity, they are omitted. They are inscribed with Phœnician characters, and probably were struck by the Carthaginians. No coins of Agathodes have yet been found with his portrait. Those of Thicetas are all of gold.

Mr. Green has pursued a similar course of research and exhibition on Epirus, Macedon, and the other European kingdoms, as enumerated at the head of our article.

In the Asiatic division, as divided into two parts, the coins of more historical character are those of Alexander the Great's successors; as Antigonus, Demetrius, Ptolemy, Cassander, Seleucus, and Lysimachus.

The coins of Cappadocia are all of silver, and, as arranged by Mr. Green, are valuable in regulating the succession of the dynasty which the conquest of Eumenes had partially interrupted.

The coins of Pontus are all of great rarity, existing in silver only prior to Mithradates the Great, who has left them of both metals: a hind feeding forms his common symbol.

We have implicitly adopted Mr. Green's corrected orthography of this prince's name, on the authority, to us indisputable, of such being the reading of the word on all the coins where it occurs, with a single obscure exception,—an instance, in passing, of the practical service of the study.

The second part of Asia presents us with Syria. It is a tempting article, and merits all the display which a much larger periodical work could admit.

Mr. Green has historically arranged the coins to mark the eventful period of its history; but the work alone can enable the reader to appreciate the value of his research and learning.

Parthia has deserved the attention of Mr. Green, having originally consisted of a colony of Scythians, who established themselves in the country east of the Caspian Sea, and continued for many centuries little known; but, in the division of the Macedonian empire, it became the share of Seleucus; and, in consequence of some internal oppressions, Arsaces, a man of obscure birth, but possessing great activity and talents, acquired a party about him and saved his country. He then founded the Arsacian Dynasty, and the name became the regal title, whilst the dominions were greatly extended; for it comprised, at length, all the countries between the Caspian Sea and the Indian Ocean, and extended westward to Asia Minor. This dynasty subsisted for five centuries, and was then incorporated into the Persian Empire, bearing the designation of Sassanidæ.

Under the division of Africa, Egypt naturally claims the historian's first attention, whether in composition or by medallion illustration; yet it appears that few coins were struck there prior to the third century B. C., when the country, having been conquered by the Greeks, its coins, in many respects, resemble the Grecian ones.

From the Ptolemies we descend to the last of that race, the celebrated Cleopatra, sister of Ptolemy XII.; and, after her reign of thirteen years, Egypt became a Roman province, and presented few events worth historic notice.

The coins of the Ptolemies, and those of their queens, (the Syrian excepted,) form the most beautiful monarchic series extant: many of them are unrivalled in execution; and the gold, both in size and number, exceed those of any other kingdom. The symbol of an eagle on a thunderbolt was adopted by Ptolemy I.; and this and the cornucopia are the uniform types throughout the series. The vast Egyptian brass coins were probably common to many of the kings. They invariably represent the head of Jupiter on the obverse, and an eagle for the reverse, with the simple legend, 'Basilæos Ptolemaion.'

Mr. Green has added a useful table of the different sizes and value of the Grecian coins.

The historical part of this valuable work is, as

it ought to be, a mere sketch, intending to urge the readers, if they may be so called, to inquiry, research, and reference, to comparing with more ancient works in a different shape. The erudite character of the undertaking will necessarily impede that rapid and extensive circulation which such works deserve, and which eventually it must achieve by its own intrinsic value. It seems to us that if it should find its way into some of our better schools, where the masters are liberal as well as learned, its value will be speedily circulated; because several young people may be employed at the same time, and without confusion, in examining these coins of ancient classics, whilst others will quickly produce the testimonies familiar to their daily occupation to determine their applicability: and we hope, too, for the sake and reward of that merit which, sooner or later, in this learned and liberal country is always acknowledged and rewarded in that best manner—the approbation of the wise and benevolent—that our brief sketch of this excellent work may attract the notice of the elder brethren in critical operations, who have greater space for the elaborate display which we think is due to the work, and also more tact and *pratique* in apportioning the distinct part of this elegant chronology.

The plan adopted in the arrangement of these medals in the Atlas is, we think, excellent. It presents at one view, on several successive sheets of drawing-paper, a chronological and contemporary series of the coins of the several monarchies of Europe, Asia, and Africa, which we have already mentioned, forming a perfect illustration of Grecian history. They commence A.M. 3504, with the kingdoms of Macedon and Sicily, and continue for 750 years, down to the era of the Roman Emperor Decius; omitting, however, all notice of the Roman Emperors, excepting where their portraits occur as reverses on the coins of those provinces which were subject to their empire, but which had a distinct Government of their own; such as the Cimærian Bosphorus, Edessa, &c.

We understand that Mr. Green intends hereafter publishing a similar numismatic work illustrative of Roman history, should he meet with encouragement: and we sincerely hope that this desirable project may not be suspended by any deficiency of patronage from the public. Mr. Green, in addition to the volume of descriptive letter-press, has given with the coins a marginal table of the principal events of general history during the period we have mentioned, which much increases the interest of the work. Many of the coins selected by Mr. Green are very rare, and some of them unique. They are drawn on stone in an exquisite manner; and from the useful way in which the whole has been conducted, they are no doubt faithful and spirited copies of the originals. The number of the obverses and reverses amounts to nearly 700.

Where there are so many claims to merit, a judicious and appropriate selection is very embarrassing,—particularly as our paper warns us that we are nearly approaching the limits which we may not transgress; but we will mention a few of the most striking coins.

The Macedonian series is generally good: we particularly admire a coin of Alexander III., or Magnus; the head is very fine. The reverse, a figure of Jupiter seated, is admirably executed; the outline of the figure, the drapery, every stroke in short, though on so small a scale, is perfectly free and distinct. Philip V. is also a good head; Antigonus I. is a fine countenance; the reverse is an Apollo seated at the prow of a vessel. In Epirus, a silver coin of Pyrrhus has attracted us; it is copied from one in the British Museum. There are also many beautiful specimens among the Syracusan coins: we may select Hiero II., and the reverse, a figure of Victory guiding a chariot. The Ptolemies and their queens are almost unexceptionably good; the heads are admirable portraits; the reverses are generally either

an eagle standing on a thunderbolt or a cornucopia: these eagles, like their prototypes, are all noble birds, and the variety of tasteful ornament displayed in the cornucopias is exquisite. We prefer the heads of Ptolemy I., II., and VII., and the heads of Arsinoe and Berenice. We cannot say much in favour of the celebrated Cleopatra, that star of historic beauty, which so influenced the then lords of the world; nor does the bust, accompanying her own, of her last all-devoted lover, realise the image with which we had previously beguiled our fancy of 'the curled Anthony.' To Berenice and Arsinoe, who flourished 250 years before her, must be assigned, according to the Egyptian chart, the palm of female beauty and loveliness: their portraits are unrivalled models for the artist. But we must terminate our levee: surrounded by so many royal and illustrious claimants, we scarce know how to dismiss them unnoticed into the obscure imprisonment of a portfolio. There are a few Judean medals, very interesting as illustrative of history, though not as specimens of art. There is also a distinct table of the bronze coins of the Seleucidæ, which contains many attractive pieces.

We cannot take leave of Mr. Green without expressing our thanks to him for some very pleasant hours spent in even a slight examination of his attractive work, as every page presents an abundant field of instruction and amusement.

MANUAL OF SCIENCE.

The Manual of Science and Literature, and Weekly Register of the London Mechanics' Institution. Nos. I. and II.

This publication is one of the signs of the times. As its title professes, it is addressed to the operative classes; but the subjects of which it treats, and the respectable tone and manner which it assumes, render it fit and instructive reading for all ranks. We observe Reports of Dr. Birkbeck's lectures on Fire-Escapes, and on the Application of Animal Power, and Mr. Dakin's lecture on Galvanism, as severally delivered at the Mechanics' Institution; articles on the intended Metropolitan Improvements, drawn, we should imagine, from official sources; notices on the Fine Arts, and other papers of general interest. If such works as this become popular and form a substitute for the trash addressed to the working classes of society, by the weekly press in general, it will, indeed, afford a striking evidence of the improving moral state of the population, of the advantage of institutions such as that to which this periodical professes itself to be the organ.

Picture of the last Protestant House of Lords.—Mr. Jones, R. A. is engaged on a painting representing the last Protestant House of Lords. Arrangements were made in the House on Thursday for affording the artist a convenient situation, whence he might take the necessary sketch. The portraits of the Catholic Peers will be introduced, but as expectants, not as forming part of the Legislative Assembly. The commission to paint this picture proceeds, it is said, from Lord Petre.

Steam-Vessels.—It appears, from returns made by order of the House of Commons, that the total number of steam-boats or vessels belonging to all the ports of Great Britain, is 310, and the number of tons 36,374. Vessels belonging to Government are not included in this account. Of the number in the return, 57 belong to the port of London. It also appears that 16 steam-boats are now building.

Mr. Aldini, of Milan, has invented a dress of asbestos, covered with metallic gauze, by means of which the wearer can traverse with impunity the flames of a large fire, for the purpose of rescuing individuals and of preserving property.

THE MUSEUM OF THOUGHTS.

IV.—NOVALIS.

A good book should be full of mind: the mind should be incessantly revealing itself therein, or at least should be frequently re-appearing anew in an altered form. It must not be content with coming forward once, at the beginning, as is the case in many a philosophical system.

Every body in whose mind a real disposition to reflection is predominant, and whose object is not merely to acquire a knowledge of this thing or that thing, must be perpetually progressive. Very many learned persons are devoid of any such disposition. They have learnt to draw conclusions and inferences, as a shoemaker learns to make shoes, without ever troubling themselves or taking it into their head to investigate the principle of their thoughts. Yet no good is to be done in any other way. With many the disposition lasts only for a while. It increases and decreases; it often decays with the advance of age; it often dies away on the getting hold of a system, which was only sought for in order that the seeker might dispense ever after with all the labour of reflection.

The highest purpose of intellectual cultivation is to give man a perfect knowledge and mastery of his own inner self, to render our consciousness its own light and its own mirror. Hence there is the less reason to be surprised at our inability to enter fully into the feelings and characters of others. No one who has not a complete knowledge of himself, will ever have a true understanding of another.

Before the exercise of abstraction, all things are one; but this one is a chaos: after the exercise of abstraction, all things are again united: but this union is a free combination of independent self-determinate beings. What was a mob has become a society; the chaos has been transformed into a varied world.

Experience is the proof of theory, and conversely. The same inadequateness which we find in the application of mere theory, and on which practical men are so fond of expatiating, occurs likewise in the reasoning application of mere experience; and it is perceived intelligibly enough by the true philosopher, but with the acknowledgment that such must necessarily be the case. The practical man is induced by this to reject mere theory altogether, and never suspects how problematical it is, what would be the answer to the question: whether the theory exist for the sake of the application, or the application for the sake of the theory?

The narrower a system is, the surer is it to please men of the world. Thus it is among this class that the system of the materialists, the doctrines of Helvetius, and those of Locke, have met with the greatest applause.

In the age when men first found out how to exercise the judgment, every new opinion it pronounced was a discovery. The value of this discovery was in proportion to the number of cases it would bear upon, and of results it would lead to. Maxims, which to us now-a-days seem extremely common-place, could not then be hit upon without an extraordinary degree of intellectual activity. It required genius and acuteness to employ the newly-found instrument in, the detecting of new relations. Above all did it excite admiration, and attract the notices of every sensible person, when it was directed toward that which is most peculiar, most interesting, and most universal in human nature. Thus originated those collections of gnomes which have been so highly esteemed in all ages and among all nations. It may easily come to

pass that our present most ingenious discoveries may in course of time experience a fate like theirs. A period may possibly arrive, when all these will be as common-place as moral apophthegms are now; and when new and loftier discoveries will be engaging the restless spirit of mankind.

Our intellectual instinct is singularly blended or compounded of mystery and knowledge.

Common logic is the grammar of a higher language, or of thought: it embraces merely the relations of notions to one another, the mechanics of thought, the pure physiology of notions. Logical notions bear the same relation to each other, as words without thoughts. The dealings of logic are only with the dead body of the intellectual system. Metaphysics on the contrary are the pure dynamics of thought: they treat of the original intellectual powers: their dealings are with the bare soul of the intellectual system. The relation borne by metaphysical notions to each other is like that borne by thoughts without words. People have often felt surprise that the two sciences have continued so pertinaciously in a state of imperfection: each of the two went on its way alone; every where there was something wanting; nothing was quite right in either. From the very beginning attempts were made to combine them, as every thing in them pointed out their affinity: but every attempt failed, because one of the two was always a sufferer, by being robbed of its essential character. The product was always either metaphysical logic, or logical metaphysics; but neither was what it ought to be. Nor did physiology and psychology, mechanics and chemistry, fare better. In the latter half of the last century there arose a new and more violent agitation than ever: the hostile bodies made head against each other with greater force than formerly; the fermentation was excessive; it was followed by tremendous explosions. At present it is asserted by some, that somewhere or other a real interpenetration has taken place; that the seeds of a union have been sown, which will grow by degrees, and incorporate all things into one indivisible form; that this principle of eternal peace is penetrating irresistibly on every side; and that soon there will be but one science and one spirit, as there is one prophet and one God.

The mere discursive thinker is a scholastic. The true scholastic is a mystical subtilizer: he constructs his universe out of logical atoms: he does away with living nature, to set up an artificial fabric of notions in her stead. His ideal is an infinite automaton. Over against him stands the mere intuitive poet. The latter sees all things in the gross: he hates all rule and definite form: he can find nothing in nature but the wild impetuous operations of its vital powers: all seems alive to him; but without anything like law: every thing is the work of chance; every thing is marvellous. His mind is purely dynamic. Thus the spirit of philosophy first begins to stir in masses entirely separate from each other. In the second stage of civilisation these masses come into contact, in a variety of ways. As it is from the combination of two infinite extremes that the finite and contracted arises, so here spring up eclectics without number: the time of misunderstandings arrives. He whose sphere is the most contracted is in this stage the person of the greatest importance, the consummate philosopher of the second period. This class is entirely confined to the real present world, in the strictest sense of the word. The philosophers of the first class look with contempt on those of the second, saying they are a little of every thing, and accordingly nothing, and holding their opinions to be the results of their weakness and incapacity for consecutive reasoning. On the other hand, the second class regard the first with pity, and charge them with an enthusiasm which has all the absurdity of madness. Now, though

the scholastics and alchemists appear to be totally severed from each other, while the eclectics appear to be united, yet the very reverse is the case. The former are indirectly all of one mind on the essential point, namely, the absolute independence and the infinite tendencies and reach of speculation; they both start from the universal: whereas the eclectics are at variance in the main, and only concur in certain derivative conclusions. The spirit of the former is infinite, but uniform; that of the latter finite, but manifold: the former have genius, the latter talents; the former ideas, the latter contrivances; the former are heads without hands, the latter hands without heads. The third stage is attained by that artist, who has at once the intuitive power of genius, and can make his own nature the material for his genius to work on. He perceives that the original separation of the independent philosophical powers arises from a separation existing in the depths of his own being, the very continuance of which implies the possibility of a reconciliation and a union; he perceives that, heterogeneous as those modes of action are, he possesses in himself the ability of passing from one to the other, of changing his polarity at will. Thus he discovers that they are both of them necessary constituents of his mind, and that there must be some one common principle in which both are united. Hence he concludes that eclecticism is nothing but a result from the imperfect defective exercise of that power of transition. He regards it as more than probable, that the ground of this imperfection lies in the weakness of the productive imagination; in its being unable to keep itself suspended and contemplate itself in the moment of its going over from one faculty to the other. The complete representation of that true spiritual life which this act would bring before the consciousness, is philosophy in the highest sense of the word: and this is the birth-place of that vital reflection, which, if cultivated with assiduous care, will afterward expand of itself into a spiritual universe infinite in the variety of its forms, being the seed and the germ of an all-comprehending organization. It is the beginning of an interminable process by which the mind will penetrate through every part of itself.

Sophists are persons who, keeping a look out for the weaknesses and the mistakes of philosophers, try to turn them to their own account, or to employ them for some unworthy and unphilosophical purpose. So that, in fact, such people have nothing to do with philosophy. If they profess to be unphilosophical from principle, they are to be regarded as the enemies of philosophy, and to be treated as such. The most dangerous class amongst them are those who are sceptics out of pure hatred for philosophy. Other sceptics may in part be very estimable persons; they are the forerunners of the third period. They have a genuine gift of philosophical analysis, and only want a spiritual mastery and concentration; they have the requisite capacity, but not the self-impelling force: they feel the insufficiency of preceding systems; no one of these is able to vivify the whole of their spiritual nature: they have a correct taste, but are devoid of the needful energy of a productive imagination. They are of necessity polemical. All eclectics are sceptics at the bottom; the more they embrace, the more sceptical are they: which last remark is confirmed by the fact, that the men of the greatest and soundest learning in former times have confessed at the end of their lives that they knew the least.

To philosophize is to dephlegm, to vivify. Hitherto, in the examinations of philosophy, people have begun with striking philosophy dead, and have then anatomized and analysed her. They fancied the component parts of the *caput mortuum* were the component parts of philosophy. But every effort to reproduce what had been slain, to recombine what had been dissolved, has always failed. It is but lately that an attempt has been made to observe philosophy in a living state; and

there may come a time when by so doing we shall acquire the art of making philosophies.

Applicableness is the criterion by which many would try the value of philosophy. There are those who would make a trade of philosophy, as well as those who revere it as an art. Another criterion of the same kind is communicableness: philosophy must admit of its being taught and learnt. Yet another like criterion is involved in the axiom, that philosophy must contain nothing anti-conventional, that it must fall in with the prevailing form of religion, the prevailing state of manners, of opinions, and so forth. A similar axiom requires, that philosophy should not overstep the limits of sensible knowledge: another, that it must have nothing to do with poetry: yet another, that it must not come within the reach of ordinary men; must have a language of its own, and dwell no where but in the schools. No, says another; on the contrary, it must be amusing, must be familiar with the mechanic and the peasant, must be perfectly common and easy, always at hand, and useful on every occasion; it must have no religion, and must shrug up its shoulders at morality; it must have an answer for every question, and that answer a full and circumstantial one: it must know something of every thing. Thus every body, in what he asks for, puts forward the favourite wish of his heart, the wants of his nature, the peculiarities of his character: and one need only know a person's philosophy, to have a pretty good knowledge of what he is. Many change their philosophy, like their servants, or their wishes. At length they conceive a hatred against every kind of it, and make their choice for the last time, and for ever. Now they think they are rid of philosophy, and they are more than ever in the clutches of the demon, who feeds them well and takes good care of them, in order some day to have a delicate morsel of them. Another well-meaning herd of people keeps clear of all these temptations. They never venture to seize this Proteus and hold him fast, because they do not know him. The cleverer among them are sure that what is said of Proteus must be an idle-headed fable; they never saw him or felt him, and positively deny his existence: the better subjects do they make him.

The primary philosophical act is self-destruction: hereby alone do we gain an entrance into the new world of philosophy; and this is the object which the disciple of philosophy must direct all his endeavours to accomplish.

Philosophy, like all synthetical sciences, mathematics for instance, is arbitrary. It is an ideal self-discovered method of observing the mind, of arranging it, and so on.

Analysis is the art of divination, or of invention, reduced to rule.

All ideas are related to each other. A family likeness amongst them is what we call analogy. From comparing several children together one would be able to divine the peculiarities of their parents. Every family springs from two elements, which become one, through their nature, and yet at the same time against it. Every family contains the germs of an infinite race of peculiar human beings.

Philosophy is fundamentally anti-historical: it proceeds from the future and the necessary to the present, and the real: it explains the past by means of the future, whereas history does the very reverse.

The meaning of Socratism is, that philosophy is everywhere or nowhere, and that we may without much trouble discover our latitude in all places, and find what we are seeking. Socratism is the art of finding the position of truth from any given spot, and thus of accurately determining the bearings of that spot with reference to truth.

Philosophy is in fact home-sickness,—a longing to be at home wherever we are.

True philosophy proceeds by the method of exhaustion, which comprehends the method of inversion. When we are studying nature, it refers us to ourselves, to internal observations and experiments; and when we are studying ourselves, it refers us to the outer world, to external observations and experiments: which outer world, when philosophically contemplated, is an inexhaustible storehouse of symbolical indications. It teaches us to look upon nature, or the outward world, as a human being; and convinces us that the only way in which we can and are meant to understand any thing whatever, is the same in which we understand our own selves and our friends and those about us. We now see the true bonds of union between the subject and the object; we see that there is also an external world within us, the connection of which with our own inner self is analogous to that between the external world without us and our outer self, and that these two external worlds are united in the same manner as our inner self with our outer self; and that consequently it is only by thoughts that we can perceive the interior and the soul of nature, as it is only by sensations that we perceive her exterior and her body.

True philosophy is a perfect combination of realism with idealism: it rests upon a higher faith. Faith is inseparable from idealism.

Error and prejudice are weights, indirect stimulants to such as are active and able to bear every weight. But the weak are rendered still weaker by them.

To know a truth thoroughly, one should some time or other have controverted it.

Falsehood from a higher point of view has an aspect yet far worse than its usual one. It is the basis of a false world, the first link in an inextricable chain of errors and entanglements. Falsehood is the source of all moral and physical evil.

There is no such thing as philosophy in the concrete. Philosophy is, like the philosopher's stone, or the quadrature of the circle, merely an object which the man of science must of necessity set before himself; it is the ideal of all knowledge. The only concrete sciences are mathematics and physics.

There are certain internal visions, which seem to have a totally different character from all others; for they are accompanied by a feeling of their necessity; and yet there is not the slightest external cause for their existence. It will sometimes seem to a person as though he were engaged in a conversation, and some unknown spiritual being were leading him on in a wondrous manner to unfold the thoughts of which he has the firmest conviction. This being must be a being of a higher order; for it carries on an intercourse with him of such a kind as no being fettered by the laws of matter could do: it must be a homogeneous being; for it treats him as a spiritual being, and only excites him to spiritual activity. This higher self bears the same relation to man that man bears to nature, or the sage to the child: and man yearns to become like it, even as he strives to make nature like himself. This fact cannot be demonstrated; every one must learn it from his own experience: it is a fact of a higher order, and he alone who rises above his fellows will meet with it: still we ought to endeavour to fit ourselves for its taking place within us. Philosophising is the carrying on an internal dialogue of this kind; it is in fact the process of an internal revelation, the arousal of our real self by our ideal self. The determination to philosophise is a summons to our real self, commanding it to reflect, to

awaken, and to become a spirit. Without philosophy there is no true morality; and without morality there is no philosophy.

They who seek after philosophy in true fellowship, are engaged in a common expedition to a beloved world; and they relieve themselves by turns at the front posts, where the greatest exertion is needed to overcome the resistance of the element they are flying through. They follow the sun, and tear themselves away from the spot which by the laws of the revolution of our globe is involved for a while in cold and darkness and mist.

In every system some one idea, some one observation, or some few, have always thriven more than the rest, which they have either dwarfed or stifled, and they are often left standing quite alone. In framing a system of the spiritual world, we should seek after ideas everywhere, and give each its peculiar soil and temperature, the nourishment best suited to it, and the neighbourhood it most enjoys, so that in this way we may fashion, as it were, a paradise of ideas: this is the only true system. Paradise was the ideal of the earth; and the question, where it lies, is not without its meaning. It is as it were spread abroad over the whole earth; and therefore it is so difficult to recognise it. Its scattered limbs are to be re-united, its skeleton to be completed anew: this will be the regeneration of paradise.

We seek after the plan of the world; we are ourselves that plan.

Whatever strikes a man who is educating himself, as most difficult, is the very thing on which he ought to try his powers, until he is able to lift and move it with ease and dexterity: thus he will grow fond of it; for we are always fond of a thing when it has cost us trouble to gain it.

One must never confess to oneself, that one loves oneself. The veiling this confession in secrecy is the vital means for preserving this love true and everlasting. The first kiss in this spiritual intercourse is the first principle of philosophy, the origin of a new world, the consummation of an internal union to the growth of which there is no end. Who can help deriving pleasure from philosophy, when its germ is a first kiss?

The higher philosophy treats of the marriage between nature and spirit.

Idealism is nothing but true empirism.

POETRY.

It is a weary hill
Of moving sand, that still
Shifts, struggle as we will,
Beneath our tread.
Of those who went before,
And track'd the desert o'er,
The foot-marks are no more,
But gone and fled.

We stray to either side,
We wander far and wide,
We fall to sleep, and slide
Down far again.
As through the sands we wade,
We do not seek to aid
Our fellows, but upbraid
Each others' pain.

I gaze on that bright band
Who on the summit stand
To measure and command
The space on high;
And, with despairing pace,
My way I could retrace,
Or, on this desert place,
Sink down and die.

As we who toil and weep,
And in our vigil sleep
The path o'er which we creep,
They had not seen,
They had not seen.

They must have taken flight
To that serene height,
And won it by the might
Of wings from Heaven!

Alack! I have no wing,
My spirit wants that spring,
And Nature will not bring
Her help to me:
From her I have no aid,—
Her light-enwoven shade,
Her streams and stars upbraid
My misery.

SONG.

To cliff and peak the falcon flies,
The eagle sleeps in stormy skies,
On icy rocks the vulture dwells,
The blackbird pipes in woodland dells,—
But Love, the flutterer of the breast,
Can it find on the earth a home of rest?

No falcon mounts on wilder wings,
No gurgling thrush so sweetly sings;
'Tis now the soft and shiny dove,
And now the thundering bird of Jove;
And, chained and caged, its pinions droop,
As a hawk's that no longer can soar or swoop.

BRANDANE.

THE LAST SONG.

GONDOLIER, from thy roaming desist,
A while let thine anchor be thrown,
Seek not other shores, but, oh list
To echoes that wake on thine own.
Thy voyage, Gondolier, hath begun,
And bright beams its course on thy view,
So mine own glittered once,—but 'tis rue,
And Death gathers round me—Adieu!

Yet I too once danced on a wave
As pure and as tranquil as thine,
And the birds and the blossoms ne'er gave
A welcome more joyous than mine.
But I wandered, like thee, from repose,
I sailed, fairer prospects to view,
And storms from their slumber arose,
And Death gathered round me—Adieu!

W. H.

A STORY WITHOUT A NAME.

A VILLAGE CHARACTER.—CHAP. VI.

(Continued from page 190.)

I SHOULD have been able to record many more visits, all undertaken with the same benevolent anxiety as those already related, to conquer Mr. M'Kinnon's obstinacy, and rescue his little daughter from her impending fate, had it not been for a circumstance which I wish, for the honour of Melcove, I could suppress all mention of. One of the fair confederates (I have promised that her name shall not transpire) proved a deserter to the general cause, and divulged the whole plot to M'Kinnon. She accompanied the traitorous communication with a recommendation either to leave the village till the storm should be blown over and the new governess fairly installed in her functions, or to barricade his door against all intruders.

This dishonourable occurrence took place the very day which was signalled by the calls of Mrs. Baddersly and Mrs. Mordaunt; and the only additional visit with which Mr. M'Kinnon was honoured, was one from Mrs. Holland, the wife of a neighbouring valetudinarian. She brought with her, two puny, shrivelled daughters, each of them endowed with one of those pale countenances which not even the poet's intercession can persuade us to call fair, and argued for two mortal hours in favour of her own and her husband's excellent schemes for averting complaints in the spine, liver, lungs, &c., mentioning innumerable instances of young ladies who had almost perished from their mothers not watching the first indications of their fearful disorders, and appealing con-

stantly, for the success of her own experiments, to the corpse-like figures beside her.

Somewhat tired of all his lectures, and considerably sickened by this last, he heard with a dismay resembling that which Bishop Hatto must have felt when the approach of the retributive army of rats was announced, that a new detachment of the enemy was marching against him. Circumstances made it impossible for him to leave Melcove, and he knew the disposition of its inhabitants too well to believe that with such an object in view they would be deterred by any plea on his part of business from invading his sanctuary. In this extremity, my duty as a faithful biographer compels me to state the fact. He fell into a temptation to which he had never before yielded, gulped his moral scruples, and ordered his footman to return the fashionable answer to all inquirers. For some days the callers gazed with astonishment and awe at the servant, as he uttered the lie with that smiling visage and pursed lip which indicate the satisfaction of a country footman at being promoted to the performance of a duty for the first time, which a city footman performs by nature. But Miss Stemwith was not to be so denied: she was one of those ladies who, by wearing cropped hair, stiff collars, and boots, by being always on horseback and speaking loud, get the universal reputation in country villages of being characters, and are always spoken of by their kind neighbours, as very clever women, but so odd! though, where the character resides, except in the crupper, or what cleverness they have abstracted from the oddity, their panegyrists might find it difficult to explain.

'Is your master at home?'

'No, Ma'am.'

'Thomas! do not lie: your master is at home; you need not show me to the study, I know my way perfectly.—Aye, M'Kinnon, my dear fellow, how are you? So you had yourself denied to me; but, my dear friend, I know your hiding-place.'

'It certainly was my fault that I was denied to the world; my misfortune, that I was denied to Miss Stemwith,' said Mr. M'Kinnon.

'Ha! ha! very pretty, very flattering, indeed. Why, M'Kinnon, you have improved vastly since I took you in hand; a little stiff in your gallantry still. Something of the old leaven still about you; but this will wear off when you have lived a few years longer. So, you are writing your Sunday sermon, on the duty of speaking the truth, I suppose; apropos, of some verse in Ezekiah—'

'You mean Ezekiel, I presume, Miss Stemwith?'

'Oh yes, very likely; but don't interrupt me, because I was going to remark what strict moralists you parsons are, who make your servants tell lies that you may have time to finish sermons about truth!'

'Why, Miss Stemwith,' said Mr. M'Kinnon, clearing his throat, 'it must be confessed, strictly considered, that even the understood, and therefore only partially deceptive, falsehood of not at home, falls within the range of prohibited offences; but seeing—'

'Oh yes, seeing it is convenient, it is quite proper. I agree with you entirely, only I really have not time just now to hear the first head of your sermon. I always hear sermons with most advantage in my own pew at church. By the by, how awfully cold the church is! One death, at least, I have known to have taken place in the parish, in consequence of the deceased performing her religious duties too strictly.'

'A death!' exclaimed M'Kinnon; 'I will have hot air introduced immediately. But who can have died from such a cause?'

'The story is a melancholy one. Poor creature! she had only been confined the week before, and eight little creatures are left to lament her loss.'

'Only a week after her confinement; and she

came to church! What imprudence, yet what piety! My dear Miss Stemwith, who was it? She must have been a friend of—'

'A very intimate one. I have often heard you speak to her, and once very lately—the recollection will be painful, but yet salutary to you—rather more harshly than is usual to you. Your remark was thought to have preyed very much on the poor thing's spirit.'

'Impossible! I cannot have done so, I have not done so—it is barbarous to talk in this way. If I have, I will do all I can to redeem my offence by providing for the motherless children.'

'Four of them, alas! are already provided for. The case must be investigated by the coroner; but there are strong suspicions in the village that they met their death by foul means.'

'And you expect me to believe that this has happened in my parish, in the village of Melcove, from attendance at church?'

'It is true, upon my honour as a lady. The very last Sunday, from a cold caught in your church, died Mrs. Shakleton!'

'Mrs. Shakleton! It is true, I did address her with some severity a few days back about her treatment of a poor little girl in her service. Oh! I shall never forgive myself, and she was good enough to come to church in those dangerous circumstances to hear me.'

Miss Stemwith burst into an outrageous fit of laughter. 'Oh! my dear M'Kinnon, you are too much for my nerves, you will positively put an end to my miserable existence. For mercy's sake, ring the bell for Thomas to carry me out—Mrs. Shakleton confined last week! Why, the woman was seventy-five three birth-days ago. I said Mrs. Shakleton's pug; and Miss Stemwith fell back in her chair again convulsed. 'However, to quit this painful subject, and cast upon another scarcely less painful to me, what is the name of this new animal that you are importing into our hemisphere?'

'You mean the name of my daughter's governess.'

'To be sure I do! What is one to pay for seeing her? Could I get an early peep by an extra half-crown? But seriously, Mr. M'Kinnon, am I to lose all hopes of promotion in consequence of the change in your plans?'

'Oh! by no means, Miss Stemwith: Miss Corrie does not undertake to educate Ellen in stable accomplishments. The post of instructress in that department of my household is still vacant, and by whom could it be filled more advantageously than by Miss —'

'Oh, my dear Mrs. George!—addressing the advanced guard of a detachment which had defiled round the back-garden of the parsonage, and had already been reconnoitring Mr. M'Kinnon and his guest through the study windows—'How are you, Mrs. George? and Emily too, and my little friend the Colonel! Well, how many of you are coming. The three Misses Millstones, and Augusta Courtenay; and therefore, of course, the honourable Francis—no, I declare it is Frederick Rivers. If there are many more behind, I shall give up counting.'

'You see we are besieging you in form,' said Mrs. George; 'what do you think of our insolence in surprising you and Miss Stemwith in a *tête-à-tête*?'

'Why,' said Miss Stemwith, not allowing the Rector to reply, 'I am bound in candour to say, that your intention was most exceedingly unreasonable. M'Kinnon was, at the time we caught a glimpse of you, making me a deeply interesting proposal. When we saw you entering, delicacy prevented me from listening any longer to the flattering tale.'

'My dear Miss Stemwith,' exclaimed M'Kinnon, how—'

'I protest, indeed, I cannot let you make your declaration before all this large company. I

should not have alluded to the circumstance at all, except that it was quite in vain to conceal any thing from our friends who must have observed the singularity of my being admitted into your presence-chamber when all the rest of the world were excluded. So I have made a virtue of necessity, and confessed the whole. Don't look so jealous, Julia Courtenay. It is not my fault that I am preferred to the rest of my sex.'

'Why, you must be aware, Miss Stemwith,' said the lady addressed, that, when such a beau as Mr. M'Kinnon is snatched away so unexpectedly, it must be a severe blow to us all.'

'Unexpectedly, my dear! Gracious Powers! how blind womankind are! Why, had you never observed the looks of intelligence passing between us as I sat in my pew and he was in the reading-desk? and did not you hear that we had arranged to meet each other by accident in the cottages, where our benevolent hearts, pouring their generous sentiments upon a common object, naturally drew nearer to each other? and did you not see me blush the other day—'

'Oh, no, indeed I have not,' said Julia, laughing, 'nor ever since I had the good fortune to know you.'

'No, really,' said Mr. Frederick Rivers, 'a friend of Miss Stemwith's would never say she was guilty of that. I am afraid that that last remark must throw some doubt upon the rest of the narrative.'

'There's my little pet Rivers—he has a right to complain of his old flame even feigning an attachment to any other object, after the tender vows that have been exchanged between us. Pray, Sir, why have you not called upon me since you came into this neighbourhood?'

'Really, Miss Stemwith, I have been only here two days, and my regiment—'

'O yes, of course, your regiment; but I did not mean to draw upon myself and this worshipful company the horrors of a long apology, with the inconvenience of causing you to invent a great many naughty stories; and, moreover, I have not yet found time to tell M'Kinnon the real purpose of my calling upon him.'

'I shall be rejoiced to hear it, Miss Stemwith,' said the Rector.

'Well, then, I must inform you I did not come here to amuse, but to instruct you. I hear that most of the ladies of this celebrated village of Melcove have been pouring in upon you their experience about the best way of making little children into women, and that they have all converted you, (see what a character you have got, old gentleman!) and, consequently, that you are going to have fifty-two governesses, each from a separate county, because one lady tells you that the Gloucestershire women have such a talent for bringing children on, and another that Yorkshire is the only place where you can get a person who will properly educate your daughter in good faith and the niceties of English pronunciation; and a third, that Ellen will positively turn out a vixen, if you do not fetch her an instructress from the principality; that, after that, she is to try the schools all round; and last—and you must not be offended if I say worst of all—you mean to take her into your own hands, to see if you cannot spoil her as well as any of them.'

'Miss Stemwith, are you speaking extempore?' rejoined Colonel George.

'No, Colonel; I hold in my hand the notes of the speech you ought to have made at the mess-dinner the other day.'

'What speech, Miss Stemwith?'

'Why, the paper says, Colonel George was then drunk, but he did not return thanks. But I dare say he returned thanks the next morning for being drunk; for, had he been sober and attempted a speech, he would have made a melancholy business of it. However, I will let you alone if you do not interrupt me. What was

I talking about? All the ladies who have called upon you hitherto to give you lessons, have brought their daughters with them, have they not?'

M'Kinnon nodded assent.

'Now it so happens that I have no daughter; and, consequently, the only instance to which I can appeal for the efficacy of my system of instruction, is to my highly respected self. You all know me; and, though you all abuse me and say that I am singular and outlandish, and affect oddities, and though I now and then offend all of you a little, I know that in your hearts you all like me. I am quite certain that you all feel that I am the Corinthian capitol of Melcove society. You cannot do without me: I know that if I were to quit Melcove it would be blotted out of the map of Europe. Well, such as I am, such have I been made by the education I recommend to your adoption. My father was a humourist and a system-monger. He was continually reading, and every new book converted him to the faith which it preached. This lasted about a week, and always gave way to one exactly opposite to that he had abandoned. By the by, is it not a pity, M'Kinnon, that gentlemen cannot give their cast-off theories to their grooms along with their coats, instead of throwing them away to be of no use to any one? You may easily guess what was made of poor me. I was the little wretch on whom all my father's experiments were to be tried; the clothes-horse on which all his moist speculations were hung to dry. One day, it was a mighty original notion to teach me Latin; the next, that was useless, and chemistry was the only subject worth a woman's attention. Now he took it in his head I was to be accomplished; two months after, my harp and piano were put up to auction. He was quite convinced on Monday, that I ought never to be seen in a party; on Thursday, he made up his mind that society was the element in which a woman should exist. Things went on in this way till I was twelve years old; about that time, my father and I made the discovery, or rather, I believe, my precocious talent a little anticipated him in it, that there was, after all, a much better plan than any which he had yet thought of—that was, to give me no education at all. From that time, my system became steady and consistent. I went where I pleased, said what I pleased, did what I pleased. Nobody thought me any thing, but I learned a great deal; I learned what very great fools men and women are; how very easy it is, only by showing that you have a proper sense of your own worth, to make every body else acknowledge it too; and how easily one may get pardoned for any breach of decorum, provided one only makes it a rule to be constantly committing them. I do not want friends, witness this respectable company; but, if they all deserted me, I could do very well, whilst my best friend, my Adolph, is spared to me, which reminds me that I have kept that dear friend waiting a considerable time; therefore, ladies and gentlemen, good morning. Like Sir Peter, I leave my character behind me; you may use it as roughly as you like; and Mr. M'Kinnon, if you desire that the mantle of Annette Stemwith, when she is too old to wear it, should descend upon the shoulders of Ellen, I have told you how you may accomplish your work.'

The conversation, after Miss Stemwith's departure, related, of course, chiefly to that lady, except that Julia Courtenay wished very much to know whether the governess came from a respectable family in reduced circumstances, or whether she was a governess born; and that Amelia Mills earnestly hoped she would not have red hair, as she had known an instance amongst her own acquaintances of a little girl's own tresses acquiring that tint from association with a person in that unfortunate case. I am not aware that any remarks were made which intimately affected the interests of the little person whom I propose shortly to present to my readers as my acknow-

ledged heroine. That very night, the long expected governess arrived, bringing with her a letter from Mrs. St. Clair, the sister of M'Kinnon, which I shall insert, because I think it a shorter method of presenting Miss Corrie to my readers, than by a personal introduction:

'MY DEAR BROTHER,—The lady whom I mentioned to you in my last letter will be the bearer of this. If one-fourth of the qualifications are really found in her which the person from whom I first heard of her assures me that she possesses, I am perfectly certain you will applaud my choice. She is, I am informed, deeply acquainted with the female character, and has minutely studied the motives by which women in general, and children in particular, are likely to be actuated. She sees the necessity of children being employed, as she knows, when idle, they are always liable to evil impressions; and she will spare no pains in introducing every kind of knowledge into the young mind. She entertains a due sense of the decorum, and propriety, and deference, to the opinion of the world, which it is so necessary to inculcate in the time of youth; and I am happy to add, in answer to an inquiry in your last letter, that she is strictly orthodox, and never omits to instruct her pupils in the principles of our religion. She is a woman of experience, and acquainted with the temptations to which our sex are liable, and, therefore, is eminently calculated to be the guide of a young lady at that period of her life when she has reached the dangerous pass between infancy and womanhood. She is accomplished, but does not value herself nearly so much on this secondary excellence, as upon the possession of those useful qualities which become most when accomplishments begin to sink in our esteem; and she will teach her pupil to consider her accomplishments rather as a means than an end. She will bestow her principal attention, at first, upon her pupil's memory, because she is aware how dangerous and how cruel it is to task the reason before it has acquired any strength or consistency. Finally, she has a fine poetical mind; you know how I value that distinction. In the few conversations I have had with her, I soon discovered that our sentiments on this subject were perfectly congenial, and that she sympathised most deeply in my admiration of the beautiful simplicity of Hayley, the exquisite tenderness of Della Crusca, and the delightful fragrance of the Botanic Garden. But I have no occasion to enlarge; I shall conclude, therefore, with hoping that your experience, and that of your daughter, will confirm all the pleasing expectations I have formed of Miss Corrie.—Believe me, my dear brother,' &c.

CONCERT FOR THE BENEFIT OF THE REFUGEES.

THE Concert given on Thursday last, in Guildhall, for the benefit of the Spanish and Italian Refugees, met with the greatest success. Upwards of 2,000 tickets are said to have been distributed, and the benevolent individuals by whom the Concert was projected, will have the gratification of redeeming from destitution many a friendless and despairing exile.

This interesting performance was under the very able direction of Sir George Smart. The first act consisted of sacred music from the works of Handel, Mozart, &c., performed by English singers; and the second chiefly of modern Italian music of Rossini, &c.; sung by the principal vocalists of the King's Theatre, an excellent arrangement, by which much interest, novelty, and variety, was most successfully exhibited. No less than twenty-four pieces were performed, of which the following is a brief sketch:

No. 1.—Handel's grand chorus in the Coronation Anthem, 'The King shall rejoice'; only a part of this was selected, which was judicious, it being rather a heavy piece.

No. 2.—Scena, Mr. E. Taylor, 'The fall of Zion,' from Paisiello. Mr. E. Taylor deserves and obtains much credit for his adaptation of old religious music to English words, and thus adding something like novelty to the stock of Oratorio music; but the perfor-

mance now noticed was rather sombre, dull, and uninteresting, especially as a composition.

No. 3.—Air, Miss Wilkinson, 'Lord! to thee,' from Handel's *Theodora*. This lady would have performed much to our satisfaction, (and that of her experienced auditors,) had she sung this chastely and without additions and interpolations, as Bartleman used to do; besides that, she spoiled the effect of the allegro, and distressed the orchestra in the accompaniment, through an evident affectation in breaking the time. Music is now so much better understood and valued than formerly, that singers are not expected to take the liberty they were accustomed to do in that respect. She made her shake also upon the wrong note, a practice, we understand, she is unfortunately in the habit of.

No. 4.—Beethoven's grand chorus, 'Hallelujah to the Father,' from the *Mount of Olives*. This magnificent composition went beautifully, excepting that the choristers hurried a little in leading the fugue.

No. 5.—Air, Mr. Phillips, 'Honour and Arms,' from Handel's *Oratorio of Samson*, also extremely well performed and much applauded.

No. 6.—Recit. and Air, Miss Paton, 'If guiltless blood,' from Handel's *Susanna*. This lady was received with considerable acclamation, and her performance was very chaste and correct.

No. 7.—'Rex tremendæ majestatis!' Mozart's sublime chorus in G minor from his *Requiem*, followed by the

No. 8.—'Recordare,' sung by Mrs. W. Knyvett, Messrs. W. Knyvett, Horncastle, and E. Taylor. This beautiful quartett was led off by the clarionets and violincellos in a delightful manner, and was altogether well exhibited, excepting only a fatal E flat instead of E natural, sung in a tenor solo by Horncastle, at the words 'Et latro sem exaudisti'; trifling as this may appear in description, it had a remarkably blighting effect at the instant of performance.

No. 9.—Scena, Mr. Braham, 'The Battle of the Angels,' composed by Bishop. In the introductory recitative, Mr. Braham sang a little out of tune, but recovered his pitch in the song, which is a clever composition, apparently written to suit Braham's voice and peculiarities of singing; for example, Bishop has afforded him a striking opportunity of exhibiting his highest A natural, in a loud and striking manner, *exactly* as he does in Handel's recitative, 'Deeper and deeper still,' at the word 'madness.' The last movement is quite 'à la Rossini,' as to mannerism and accompaniment, with an episode in slower time, much resembling Dr. Clarke's song 'Marmion.' But the whole piece went off extremely successfully, excepting only the ranting, roaring cadence, with which Braham has concluded his songs a thousand times, and always in the most possible taste; 'Tis true, 'tis pity; 'tis pity, 'tis true.'

No. 10.—Air, Mrs. W. Knyvett, 'What though I trace,' from Handel's *Solomon*,—a perfect, chaste, and excellent performance.

No. 11.—Trio, Mrs. W. Knyvett, Messrs. W. Knyvett and Horncastle. 'The Lord will comfort Zion,' and Chorus, 'O sing unto Jehovah,' introduced by Mr. Gardiner in the *Oratorio of Judah*, and adapted by him from the compositions of Haydn. There was nothing very striking in this exhibition, either in condemn or approve; it was rather common-place.

No. 12.—Recit. and Air, Miss Paton, 'From mighty Kings,' from Handel's *Judas Maccabæus*. All the brilliancy, gaiety, and charming effect formerly produced by Mrs. Salmon, in this song, (her special *chef-d'œuvre*), would have been successfully imitated by Miss Paton, had it not all evaporated in her transposing it from its proper key A natural, into A flat! How her Ladyship could have been so ill advised, or rather that she was not advised to the contrary, we wonder at, and lament!

No. 13.—Handel's grand double chorus, 'From the censer,' out of his *Oratorio of Solomon*, concluded the act; and, perhaps, his 'Hallelujah' or *Hailstone chorus*, would have appeared better for a finale.

'The morning lowers, and heavily in clouds
Brings on the day, the great, the auspicious day,
Big with the fate of Cato and of Rome.'

These lines were applicable to the early morning of Thursday last: not only so, but even a heavy snow-storm be-withered London in the most gloomy manner; however, at noon, the glorious sun shone brightly out, and was doubly welcome and delightful by the force of contrast. Typically of this, so did Weber's romantic, delicious, and original overture to *Eurandee*, No. 14, shine brightly out, as a commencement to the second

act, forming a striking contrast of modern composition, to the heaviness of the ancient, exhibited in the first part of our concert.

No. 15.—Horsley's exhilarating glee, 'See the Chariot at hand' carried on the effect; and the performance being wholly vocal, produced a delightful variety after the full overture. It was well performed by the Knyvett, Horncastle, and Phillips, and reminded us of the old glee-singing days of Bartleman's concerts, when that sort of minstrelsy was carried to an extent in all concerts that became rapid, insipid, and tiresome; on the contrary, this single specimen was quite in good taste, and showed the hand of him who put together the performance in so judicious a manner.

No. 16.—Aria, Madame Caradori Allan, 'Il soave e bel contento,' from Pacini's 'Didone Abbandonata.' This, our favourite vocalist, ushered in the Italian school, and she sang as delightfully and perfect as usual. The accompaniments were beautifully executed also, by Nicholson (flute), Willmann (clarinet), Mackintosh (bassoon); and when we unfortunately lose these excellent professors, with Lindley and Dragonetti, we may never expect to 'look upon their like again,' at least not collectively.

No. 17.—Aria, Signor Donzelli, 'Ah! si per voi,' from Rossini's *Otello*. This is the song he sang at the first Philharmonic Concert, (see 'Athenæum,' No. 71, page 140,) and all therein stated may be applied upon the present occasion.

No. 18.—Aria, Madame Pisaroni, 'Elena' from 'La Donna del Lago.' The transposition of this song from E natural to E flat, considerably deteriorated the effect; but Pisaroni exhibited the counter tenor part of her voice to advantage; her graces and cadences are appropriate, well imagined and well executed; but her general performance is more clever than interesting.

No. 19.—Spanish National Air, Mr. Braham, written expressly for the occasion, arranged by Gomis. Of this, the less said perhaps the better, as a musical work.

No. 20.—Aria, Madame Camporese, 'Parto, ma tu ben mio,' from Mozart's 'La Clemenza di Tito.' This was the first appearance of Madame Camporese since her return to England, and her reception was flattering in the extreme: the plaudits were long, loud, and enthusiastic, and particularly so from that quarter likely to be most gratifying; namely, the Orchestra. All the leading professors who for so many years witnessed and assisted her successful performances at the King's Theatre and elsewhere, were anxious to pay a tribute not only to her worth, as an excellent and delightful vocalist, but to her lady-like behaviour, urbanity, and uniform good conduct. It may be needless to say that the particular piece was quite perfectly performed, that it is one of Mozart's most delightful songs, that Willmann's clarinet accompaniment was as usual unrivalled, and that, in fact, Camporese and Willmann were the very couple Mozart could have desired to do justice to his elegant and graceful composition.

No. 21.—Tersetto, Madame De Vigo, Miss Wilkinson, and Signor Donzelli, 'Cruda sorte,' from Rossini's 'Ricciardo e Zoraida.' This magnificent and beautiful specimen of Italian modern music would have been more successful had the vocalists understood each other better: they all showed high blood, but did not go well together in harness.

No. 22.—Aria, Mademoiselle Blasia, 'Bel raggio' from 'Semiramide,' a very successful and good performance; but it created no particular sensation, nor attracted much notice, from its similarity of character to the many other productions of Rossini's that had preceded it.

After this, the following performance was promised in the programme, viz. Spanish song, Madame De Vigo, 'El Bajelito,' to be accompanied on the harp by Mr. G. Holst, composed by Garcia. There was poor Madame De Vigo, there was the manager, Sir G. Smart, there was the expecting audience, there were the stewards with their wands, and there was the harp, but there was *not* any harp player! The reason of this great man's absence remains unexplained; and we trust he will not be suffered soon again to trifle with his engagement in a similar manner.

The Conductor is so clever a man of business, and the whole concert from its regularity and exactness so fully evinced it, that it was a pity any circumstance should have blotted it. However, most probably the omission was no loss, and Mr. G. Holst has by this time very likely heard of the affair in no measured terms.

No. 23.—Duetto, Madame Caradori Allan and Madame Pisaroni, 'Lasciami! non l'ascolto' from Ros-

ni's 'Tancredi.' This did not go quite well: Pisaroni sang a little too flat frequently; and the piece would have been better if performed by male and female voices, instead of two so similar to each other.

No. 24.—Finale, Grand Chorus 'Discedi, O benefica,' from Mozart's 'Zauberflöte.' Thus concluded one of the very best concerts perhaps ever witnessed, exhibiting more variety of vocal ability, choice of subjects, and excellence of instrumental talent, than can frequently be amalgamated.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

We have often put to ourselves the question whether Mr. Martin's works will be objects of request in after-times; and, although on this point we entertain just as much doubt (and no more) as the mere arising of the interrogation implies, the answer has constantly been in the affirmative. We conclude, then, that the fame of Mr. Martin *will* survive the generation which runs with gaping wonder to gaze at his singular productions. If they do so survive, however, they will be sought after as extraordinary and eccentric performances, and as specimens less of excellence in the arts than of successful efforts at curious and peculiar effects,—as works of partial, not of general, merit. No man, probably, of cultivated taste will wholly approve them, or recommend them as models for imitation; yet neither, in candour, will he be able to withhold from them the degree of admiration ever yielded to performances which it lies within the power of only one man to conceive and execute. Mr. Martin, in his way, will, therefore, stand long, if not for ever, single. His manner is peculiarly his own: he need fear no rivals in his own age; no followers in subsequent times. None but men of considerable talents could attempt, with any chance of success, to tread in the path which he has traced; and, if a man above the standard of mediocrity make the effort, he will throw in a character and style of his own, which will establish a difference between his productions and those which suggested them. We desire no better proof of this than some of the works of Mr. Danby, and the new attempt of Mr. Roberts. Mr. Martin and Mr. Danby, rumour says, but with what truth we know not, entertain reciprocal jealousy, and tax each other with plagiarism. They may spare themselves the pain of any such unworthy feelings; for even in the certain character of sublimity, which is the point at which their mutual approach is nearest, the difference in the manner of the two artists is so discernible, that to none but themselves do they appear within reach of each other.

Mr. Roberts, in the new character in which he presents himself in the exhibition which we are about to notice, stands in a similar predicament with regard to Mr. Martin. It is impossible to view the large masses of architecture, the myriads of living beings which form the principal features of 'The Departure of the Israelites out of the Land of Egypt,' No. 7, without perceiving and acknowledging that the composition partakes in a degree of the character of Mr. Martin's works: and for the idea, we confess we think Mr. Roberts must be considered as indebted to Mr. Martin; but the resemblance, however, goes no further; the absence of the peculiar effect resulting from Mr. Martin's compositions is instantly perceived—no such effect, in short, appears to have been aimed at by Mr. Roberts, and therefore we are not obliged to view, in his new work, a proof of aspiration after rivalry with his brother artist: if he have so aspired, he must be pronounced to have failed in some respects, whatever may be his superiority in others. The principal merit of Mr. Roberts's picture consists in bold and accurate delineation, and in admirable effect of aerial perspective. Viewed in any other light than as a specimen of scene-painting, it sins extravagantly against most important laws of art, viz. propriety and truth. What signifies all this

crowding together of palaces and pyramids, except to expose a determination to produce an overpowering effect? Mr. Roberts might have displayed his learning, and heightened the effect of his picture, had he given to his temples and palaces more of the variety of colour with which it was the custom of the ancient Egyptians to enrich the members of their edifices.

From Mr. Roberts we turn to Mr. Stanfield, whose principal production in this exhibition is a large landscape, 'Erle Stoke Park, near Devizes, the seat of G. Watson Taylor, Esq. M. P.,' No. 188. This is a very attractive and pleasing picture. The gleam of sunshine on the distant prospect, illuminating the rich plain of the vale, from over which the thunder cloud is just retiring, and more feebly but with very happy effect, the whole line of hills which bound the view, is very skillfully managed. The composition of the foreground is less deserving of praise. 'The Coast Scene,' No. 36, by Mr. Stanfield, although a picture of smaller dimensions, displays no less ability than the work we have before mentioned. It is a very clever painting, and full of effect.

Before quitting the works of Mr. Stanfield, we may again place him and Mr. Roberts in juxtaposition, by drawing attention to two delightful little pictures in the water-colour room, both painted from sketches by Captain Grindlay, the one, 'Interior of the Cave Temple of India Subba at Ellora,' by Mr. Roberts, (No. 614,) the other 'Scene in Kattiawar,' by Mr. Stanfield, (No. 624.) Both are charming and masterly productions.

Mr. Glover, on this as on former occasions, has more pictures in the Gallery than any other exhibitor. Most of his works have, as usual, the peculiar character of the artist, which smacks too much of manner to be pleasing; others, while they possess the same fault, display, moreover, an attempt at particular effects which pall the taste by too frequent recurrence: at first, they keep the mind suspended between applause and disapprobation, so barely do they overstep the truth of nature on the one hand; yet, on the other, so much have they of palpable artifice, and so nearly do they border on affectation:—their repetition decidedly offends. The large picture 'Daphnis and Chloe in an Italian landscape, with the Palace of the Cæsars, &c.,' No. 43, is less stamped than some of Mr. Glover's productions with the impression of his peculiarities; but he seems to have had Claude in view in the composition of this landscape, and to have succeeded in calling to mind the works of that inimitable master just sufficiently to suggest a comparison unfavourable to his own attempt.

'Borrowdale, Cumberland,' T. C. Hofland, No. 32, is another large landscape, representing, with close attention to nature, a beautiful and well-selected scene; yet, from a certain tameness and want of energy, it forms by no means so agreeable a picture as the subject seems capable of having been made.

The works of Mr. J. Wilson, on the contrary, abound in the quality wanting in the performance just noticed; they are full of spirit and effect. 'The View on the Flemish Coast, near Ostend,' No. 94, and 'Crickeith Castle, North Wales,' No. 198, are very clever and highly attractive paintings.

Mr. R. B. Davis's animal pieces are all excellent; his various portraits of horses are perfectly drawn, and both in form and expression have great character and spirit; but the most successful performance of this artist is No. 113, 'Fox-hounds, just found, and getting together.' We are at a loss which to admire most, the autumnal tint, and the falling leaves of the season far advanced towards winter, or the animation of the hounds: as they come tumbling over the bank, they appear actually in life and motion. The ease and freedom with which the effects, in both cases, are obtained, are admirable.

Of the 'Heron alarmed,' No. 237, it is not too much to say, that this picture places Mr. Lane, as a painter of birds, in a rank with Mr. Edwin Landseer, in his animal pieces.

(To be continued.)

THE MONTGOMERY GALLERY.

AN exhibition under this startling title is now open at 209, Regent-street. It contains ten pictures painted by Mr. J. Rawson Walker, from the poem 'The World before the Flood,' of Mr. James Montgomery. The subjects chosen for illustration are the following: 'The Mount of Paradise;' 'Zillah's Bower;' 'The Patriarch's Glen;' 'An Earthquake at Sunset;' 'The Patriarch's Sacrifice;' 'Twilight;' 'The Tomb of Abel;' 'Conflagration by Moonlight;' 'The Prelude to the Deluge;' 'The Deluge.' The aim of the artist in the treatment of these subjects seems to have been to follow his text to the letter, where so to do was compatible with the art he professed; and to produce very elaborately finished paintings in a popular style. He may be pronounced to have succeeded, although in one instance, in which he has found it necessary to deviate from the original, the poetry of the idea has too evidently suffered by the change. The indulgently inclined will make due allowances, and admit the consideration of the acknowledged difficulty of representing the sublime imaginings of the poet's mind in an embodied form to the senses, in instances such as in the Deluge, where he finds that the painter has failed to depicture faithfully the 'Sun veiling his face in sackcloth.'

We are not in the secret of these illustrations or of the exhibition. It is certainly an anomalous case. If the pictures be painted by the artist on his own account, and from an impulse of enthusiasm for the works of Mr. James Montgomery, he is a most courageous speculator, and richly deserves encouragement for his spirit: if they be executed by commission from the poet himself, or his publisher, as ornaments for a new edition of 'The World before the Flood,' we sincerely congratulate Mr. Montgomery, Mr. Taylor, and the bookseller.

REIGNING PRINCES OF ASIA, 1828.

TURKISH EMPIRE.—Sultan Mahmoud II., the son of Sultan Abdul Hamed, born the 20th July, 1785; mounted the Ottoman throne upon the deposition of his brother, Mustapha IV., on the 28th July, 1808.

Egypt.—Mohammed Ali, born at Cavala, in Rumeilia, in 1769. (A.H. 1182.); a son of Ibrahim Aga; made a Pasha on the 14th May, 1805, in the room of Chorsid Pasha; confirmed by Sultan Selim III., on the 1st of August, 1806.

Bagdad.—Daud Pasha.

Moldavia.—John Sturza, a Moldavian Boyar, appointed Hospodar on the 16th July, 1822, and proclaimed at Jassy on the 21st of the same month.

Wallachia.—Gregory Ghika, [appointed Hospodar on the 16th July, 1822, and introduced by the Pasha of Silistria on the 21st of September of the same year.

VASSALS OF THE TURKISH EMPIRE.—**Tripoli.**—Jussuf-Bey, appointed 1795.

Tunis.—Sidi-Hassan Bey, succeeded Hamuda Bey the 23d March, 1824.

Algiers.—Hussein, the son of Hassan, formerly Minister of the Interior; on the 1st March, 1818, he succeeded Dei Ali, who died of the plague. He is about fifty-four years of age.

Mecca.—Yahya, Sheriff, the son of Surur; on the 2d November, 1813, he replaced his uncle, Ghaleb, who had been deposed by Mohammed Ali, Pasha of Egypt, and died at Salonica in 1818.

Yemen.—..... Imam, in 1815, succeeded Tamy, the chief of the tribe of Asar, who was taken prisoner by Hassan, an Arab, son of Calied, who was an ally of Mohammed Ali.

Sennaar.—Bady VII., the son of Tabl, the nine-and-twentieth king of the dynasty of the Funja, a tribe from the interior of Africa, which settled at Sennaar towards the close of the fifteenth century. In June

1821, Ismael, a son of the Pasha of Egypt, compelled him to recognise Sultan Mahmoud as his sovereign.

EMPIRE OF MOROCCO.—Muley-abd-er-Rahman, Sultan, succeeded his father, Muley Solymán, the 28th November, 1822.

KINGDOM OF ABYSSINIA.—Isa Guarlu, of the Solymán dynasty, who have occupied the throne in uninterrupted succession from the year 1268. He resides at Gondak; the real power, however, is monopolised by the independent chiefs, Ras Weled Selassey, Ras Gabri, Guxar, Ras Illao, Lihban, and Goga.

MUSCAT.—Seyud Said, Imam, succeeded his father, Seyud Sultan, about the year 1801. He is the third descendant of Achmed, son of Said, the founder of this state.

PERSIA.—Feti Ali Shah, of the Turkish race of the Cadjars; before his accession, his name was Baba Chan; he is a son of Hussein Kuli Chan; was born in 1768; and succeeded his uncle, Aga Mohammed Chan, in 1796. Presumptive heir, Abbas Mirza, born in the year 1785.

AFGHANISTAN.—The reigning family derives from Ahmed Shah Abdali, a branch of the Saducis. The present king's title is Shah Duri Duran. After the death of Timour Chan, on the 20th May, 1793, his sons contested the succession, and ultimately divided the kingdom amongst themselves. In 1826, Yar Mohammed, Chan of Pishaner, and Purdil, Chan of Kandahar, expelled their brother Dost Mohammed Chan, who reigned in Cabul.

BILUDSHISTAN.—Mahammed Chan, about forty-six years of age, succeeded his father, Nasser Chan, in June, 1795.

BALCH.—Was subjugated in the year 1825, by Mir Murad Bey, who drove out Nedjeb Ullah Chan, the governor appointed by the King of Cabul.

BOKHARA.—The great Chan of Bokhara and Samarcand, Bakhhar Chan, succeeded his father, Mihr Hyder Chan, in 1826. The interregnum of his brother, Mihr Hussein, did not last more than four months. Seyud Atalik Bey, father-in-law of Mihr Hyder, is Governor of Hissar.

BADAKSHAN.—Mirza Abdul Gharul, son of Mohammed Shah, resides at Faehabad, a town which must not be confounded with Badakshan, which lies to the north of it.

CHARASM.—Rahman Kuli Chan succeeded his father, Mohammed Rahim Chan, in 1826. The title of these sovereigns, who are descendants of the Usbeks, is 'Tukair Chan.' Their residence is at Chiwa.

CHINA.—The name of the reigning family of the Mantahus is *Ta-tsing*, 'Purer of the Pure.' Even in China the actual name of the present Emperor is unknown; he is the second son of his predecessor, who died in 1820. The title of honour peculiar to the government of the existing sovereign is *Tasu-Kwang*, or 'Splendour of the Understanding.'

JAPAN.—The Cobo, or Emperor, began his reign in 1804. His name is not made known to his subjects whilst he occupies the throne. The year 1811 was the eighth before his 'Nengo' Bunwa, a title of honour which is attached to his government.

N.B.—M. St. Martin, to whom we are indebted for the preceding details, is anxious that their defects should be supplied, and will be grateful for any information, which those more conversant with the subject may have the kindness to transmit to him.

THE DRAMA.

King's Theatre.

THE sluggish direction of the affairs of the Opera, which has been made visible in the failure, absolute or comparative, of some of their most hopeful performances, seems now about to be succeeded by an activity forced upon the managers in self-defence. The revival of 'Ricciardo e Zornide' was accompanied by signs of this improvement. The best strength of the present corps dramatique was called into action; great attention has been paid to the getting up of the Opera, in all its departments: to this may be added a still higher praise; viz., that with such a *become* as this in store for the wearied appetite of the public, it was not brought out for their enjoyment, until every part was thoroughly prepared, even though at a risk of their becoming nauseated, in the mean while, with the imperfect representations of previous operas. 'Ricciardo' is fresh in the memory of every one, and yet none should be content with their recollections; for in the day of Toso and Brizzi, it was but a shadow of what it is at present. Having, as we acknowledge, a certain sly and undefinable *penchant* for Madlle. Blais, it will

not be surprising. In our eyes, she appears the best representative of the captive Zoraida that has appeared on our stage. Though her voice is of thin volume and uncertain strength, and its fluency by no means commensurate either with her taste, or science, or endeavour; yet the *can amore* character of her singing covers a multitude of sins, and the malcontents may look far and long before they discover, any where, such tenderness, and delicacy, and true musical feeling. Between Mesdames Pisanoni and Brizzi, who have appeared in the same character of Zoraida, there is a wide and undoubted interval: which has the vantage ground, need not be explained; and, having said, (as a matter of course) that the former lady performs her present part with magnificent skill and power, it may also be added, for the information of the curious in such matters, that the splendour of a particularly 'rich attire' has, in this instance, gone far to disguise those personal disadvantages which do no mean injury to our enjoyment of her general accomplishments.

But, to complete this 'musical triad,' what a noble and delicious key-note have we in the rich performance of Signor Donzelli! He is the successor of Torri, and naturally throws a vein of brilliant beauty into the mass of the composition, which carries with it a luminous reflection extending even to the farthest boundaries of the performance.

We have to complain of the process by which the opera has been squeezed into one act. If this has been done out of courtesy to the ballet, we are orthodox enough to deny the justice of its being so compelled to truckle, and contrast itself as if to a superior, though it appears there has been a spirit of reciprocity between them, inasmuch as 'Massaniello' has been pinched into the limits of two acts by means of a temperate system and tight lacing.

Signor Curioni should not be forgotten, more especially as he signalled himself beyond precedent in the well-known duett, 'Ricciardo! che veggio' the latter part of which, the 'Ah! nati è ver noi siamo,' was as full of sweetness and as precise a performance of the music set down, as the composer himself ever dreamed of. The celebrated and incomparable tenor 'Cruda sorte,' which alone will be an eternal monument to Rossini's fame, was executed with great vigour, and is uniformly anchored. But to us it seemed very far from being so perfect as many of the less observed pieces in the opera; at least, the effect was so clearly the only end in view that the real gracefulness, and much of the real expression, were absorbed in the hurry, and noise, and unnecessary violence of the final passages. However, by the suffrages of all, it is a grand performance, and, with little further to particularise, it may be well now to confess our acquiescence in this general eulogy.

POPULAR SCIENCE.

'How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as is Apollo's lute.'—*Comus*.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing.'—*Genesis*.

1.—ANIMAL MECHANICS.

Swimming of Fishes and Flying of Birds.—Flying modifies all the actions of birds, swimming those of fishes. In these kindred qualities, both classes stand apart from quadrupeds, and the other land animals. Swimming and flying are, in truth, only the same act performed in different fluids. The effective instruments, organs and movements, which produce or modify these acts, are similar, or, at least, analogous. From this remarkable relation, we may expect to find many secondary analogies between the habits of fishes and birds. The wing of the bird, and the fin of the fish, differ much less from one another, than might be supposed at first sight; and hence the ancient Greek and Roman naturalists, as well as many in later times, have called them by the same name. Both present a considerable surface relatively to the size of the animal, which it may enlarge or diminish at pleasure. The fin accommodates itself to these expansions and contractions, because it is composed like the wing, of a soft, flexible membranous substance; and when it has received the size suited to the immediate want of the animal, it presents, like the wing, a resisting surface, it acts with precision, it strikes with force, because, like the instrument of flying, it is stiffened with small cylinders, solid, hard, and nearly inflexible. Though unprovided with feathers, it is sometimes strengthened with scales that possess the same texture as the feathers of a bird.

The weight of birds does not greatly exceed that of

their own bulk of air; the density of fishes is very little different from water, especially that of the sea. Birds are furnished with an organization, which renders a great volume very light. Their lungs are very largely developed; great air bags are placed in the interior of their bodies: their bones are hollow and perforated, so as to receive with ease into their cavities the atmospheric fluid. Almost all fish have a peculiar bladder, which they can expand with air at pleasure, without adding sensibly to their weight.

The tail of birds serves as a rudder, and their wings are perfect oars. The back and belly fins of fish may be also compared to powers which regulate and direct, whilst the tail, with its lengthened caudal fin, strikes the water like an oar, and communicating impulsion to the animal, is the mainspring of its rapid movements. We may, therefore, affirm, that birds swim in the air, and fishes fly in the water. The atmosphere is the ocean of the first; and the sea that of the second. But fishes enjoy their domain much more fully than birds; for they can traverse it in every direction,—rise to the very surface, sink into the abyss, or repose themselves in any part of the fluid itself.

2.—ANIMAL CHEMISTRY.

Effects of Heat and Cold on Animal Tissues.—If, in a severe frost, a cabbage be completely frozen, and instead of thawing it in cold water, it be put into water lukewarm, although of no higher a temperature than some of those in which the cabbage grew, it will presently become rancid. So, if a joint of butcher's meat, after being hung, as some joints may be, several weeks, when in a frozen state, be thawed in a warm room, it will very quickly become putrid. Again, if a person with a frozen limb be brought into a room of a common temperature, for the limb to thaw in, instead of causing it to thaw by rubbing it with snow, the limb immediately mortifies, which effects are produced by the too quick application of heat, although only of common degrees of temperature.

3.—ANIMAL ECONOMICS.

Domestication.—Apes and monkeys, notwithstanding their social instinct and intellect, are yet so violent and irritable, as to be incapable of all useful subjection. Among carnivorous animals, the seals, together with various species of the dog tribe, would be the best adapted to attach themselves to us and serve us. M. Cuvier suggests, that the seal might be trained for fishing, as the dog for hunting. Several animals peculiar to South America, having but very feeble means of defence, will, as that country is peopled, gradually disappear from the face of the earth. After other illustrations, the writer concludes, that all domestication is founded on the propensity which animals have to live together in herds, and to attach themselves to one another. We obtain it only by enticement, and principally by augmenting their wants and satisfying them. But we could only produce domestic individuals, and not races, without the concurrence of one of the most general laws of life, the transmission of the organic or intellectual modifications by generation. Here one of the most astonishing phenomena of nature manifests itself to us, the transformation of a fortuitous modification into a desirable form,—of a fugitive want into a fundamental propensity,—of an incident habit into an instinct. This subject is assuredly worthy of exciting the attention of the most accurate observers, and of occupying the meditations of the most profound thinkers.

4.—SAURIOLOGY.

Discovery of the great Dragon of Antiquity.—M. Colini, director of the Cabinet of the Elector Palatine, was the first to describe a genus of Saurian reptiles, characterized by the excessive elongation of the fourth toe in front, to which animal M. Cuvier has given the name of *pterodactyle* (wing-toed.) It was found in one of the marly stones, foliated, grey, and sometimes yellowish, of Aichstedt, which abound in dendrites, and animal petrifications.

It is hardly possible to doubt, says M. Cuvier, that the long toe served to support a membrane, which furnished the animal, over the whole length of the fore-leg, with a much more powerful wing, than that of the dragon, (*Draco Volans*, Lin.) and at least equal in strength to that of the bat. This ancient animal could fly with a vigour proportional to its muscular power; and then it could make use of its three short toes, armed with crooked claws, to suspend itself from trees. We have, here, an animal, which, in its osteology from the teeth to the extremity of its claws, presents all the classic characters of the saurians, or lizards. There is no reason to doubt of its having also had their generic characters in its integuments and soft parts; of its having their scales, organs of circulation, generation,

&c. But it was, at the same time, provided with the means of flying; an animal which, in a standing posture, could make little use of its fore-legs, if it did not keep them always folded up, as birds do their wings, which could, however, also employ its small fore-toes for hanging itself to branches of trees, though its posture of repose must have been usually on its hind feet, just like that of birds. It must, moreover, have held its neck reverted, as birds do, to prevent its enormous long head from upsetting its equilibrium.

From these data, it would be possible to figure it in the living state; but the picture we should form would be most extraordinary, and would appear to those who had not minutely followed out its anatomical structure, as the offspring of a distempered imagination, rather than a natural production. Something very like it may occasionally be seen in the grotesque paintings of the Chinese; or it may have been the original of the great dragon of antiquity, an idea which is far from improbable.

Library of George Hibbert, Esq.—The sale of this Library has excited very great interest, and the Bibles and Classics have brought high prices. The competition between the agents of certain Royal and noble collectors, and a few rich and tasteful private individuals, has on several occasions been severe.

Castiglione il Cortegiano (Venet. Aldo, 1545), having at the end a Sonnet, by Tasso, in his own handwriting, and at the beginning the most curious single printed leaf in existence, being the printed challenge which was circulated and stuck on the Church-door in Venice, by the admirable Crichton, in the year 1560. It is printed in the large Italic type, used by Paul Manutius, and, most probably, by him, as his friendship for Crichton is well known, sold on Wednesday in Mr. Hibbert's sale for one hundred and five guineas. This extraordinary volume was once in the sale Catalogue of Fenn and Whitmore, at Charing Cross, for ten shillings and six pence, where it was purchased by Mr. Singer, in the sale of whose books, some years back, it was bought by Mr. Hibbert, for thirty guineas. A translation of the challenge, which is unique, was published by Mr. Hibbert in *Constable's Magazine*.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Rev. E. G. Marsh's *Seventeen Sermons*, 8vo., 9s.
Natural History of *Enthusiasm*, 8vo., 6s.
An Explanatory View of the Doctrine of the Trinity, &c., by the Rev. T. G. Tolley, 8vo., second edition, 6s.
Wright on Friendly Societies, 8s.
Short Sermons on Important Subjects, by the Rev. J. Edmondson, vol. 2, 8vo., 8s.
Apostolic Morals; or, Tales of the Table, Kitchen, and Larder, 8vo., 8s.
Chapters on the Physical Sciences, 12mo., 6s.
Macnish's *Anatomy of Drunkenness*, third edition, 12mo., 6s.
Baxter's Reformed Pastor, with Essay by the Rev. D. Wilson, 12mo., 4s.
Leigh's Road Books of England, Scotland, and Ireland, in box, 18mo., 39s.
Leigh's New Pocket Road Book of Scotland, 18mo., 8s.
Sherwood's *Fairchild Family*, tenth edition, 12mo., 5s.
Marriott's (Harvey) *Sermons*, fourth course, 8vo., 12s. 6d.
The London Dissector, eighth edition, enlarged, 7s. 6d.
Practical Observations on Ventilating and Warming, second edition, with plates, 8vo., 15s.
Baxter's *Saint's Rest*, with Essay by Thos. Erskine, 12mo., 3s. 6d.
Illustrations of the Lepidopterous Insects of all Countries, by Captain Thomas Brown, F.R.S.E., &c., &c., No. 1, 8s.
The First Half Volume, price 2s., of the Library of Entertaining Knowledge:—The Menageries; Quadrupeds, described and drawn from living subjects.
Bell's System of Geography, with Maps and other Engravings, parts 1 and 2, 7s. 6d. each.

WEEKLY METEOROLOGICAL JOURNAL.

Temperature registered at 9 A.M. and 5 P.M.	April.	Therm. A.M. P.M.	Darwin at Noon.	Winds.	Weather.	Prevailing Clouds.
Mon. 30	44	42	28. 91	N.E.	Moist.	Cirrostratus Cumulus.

Sun. 5	52	45	29. 92	Drizzle.	Showers.	—

Nights and mornings generally fair.

Highest temperature at noon, 55°.

Astronomical Observations.

The Sun in mean distance on the 30th.

Jupiter stationary on the 31st.

The Moon in Perigee on the 3d.

Venus's geocentric longitude on Sunday, 3° 34' in Aries.

Jupiter's ditto ditto 15° 14' in Jupiter.

Saturn's ditto ditto 27° 36' in Cancer.

Sun's ditto ditto 16° 36' in Aries.

Length of day on Sunday, 15 h. 10 min. Increased 5 h. 36 m.

Sun's hor. motion on Sunday, 2° 27' plus. Logarithmic

um. of distance, 9.00107.

Just published, No. II., of
THE CAMBRIAN QUARTERLY MAGAZINE, by H. Hughes, 14, St. Martin's-le-Grand, London, price 2s.

This day is published, in 1 vol. 8vo., 10s. 6d. bds.,
HISTORY OF RUSSIA, and of PETER THE GREAT. By GENERAL COUNT PHILIP DE SÉGUR.
 By Treuttel and Wurtz, Treuttel, Jun., and Richter, 30, Soho-square, London.

Of whom may be had, lately published, the 6th ed. in 2 vols., price 10s., or in 1 vol., demy 8vo., price one guinea, in boards, of **COUNT SÉGUR'S HISTORY OF NAPOLEON'S EXPEDITION TO RUSSIA IN 1812**.

This day is published, price 2s. 6d.,
A VINDICATION OF NIEBHUR'S HISTORY OF ROME from the CHARGES of 'THE QUARTERLY REVIEW.' By JULIUS CHARLES HARE, M.A., Fellow of Trinity College, Cambridge.

Printed for John Taylor, Bookseller and Publisher to the University of London, 30, Upper Gower-street; and sold by Duncan, Paternoster-row; Hessey, Fleet-street; Hatchard and Son, Piccadilly; and all Booksellers.

This day is published, in 8vo., price 2s.,
AN ESSAY ON THE EFFECT OF THE REFORMATION ON CIVIL SOCIETY IN EUROPE. By WILLIAM MACRAE, Minister of the Gospel, Stirling.
 'Tis the cause of man.'—*Copper's Task*.
 Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

••• The Professors of Marischal College, Aberdeen, along with the other trustees of the late Mrs. Blackwell, prescribed in 1836, as the subject of her Biennial Prize Essay, 'What has been the Effect of the Reformation on the State of Civil Society in Europe?' and an outline of the above Essay obtained the prize. The author, from the peculiar aspect of the times, has now been induced to publish it, and in preparing it for the press he has made so many additions, as to render it almost a new work.

NEW WORKS.
 Just published by Edward Bull, New Public Subscription Library, 36, Holles-street, Cavendish-square.
CONVERSATIONS ON INTELLECTUAL PHILOSOPHY, or a Familiar Explanation of the Nature and Operations of the Human Mind, 3 vols. price 10s.

'They contain much excellent matter for every age; to the young they are invaluable.'—*Literary Gazette*.

In compliance with the foregoing Regulation, I hereby convene a PUBLIC MEETING of the Inhabitants of this City and its Vicinity, to be held at the Guildhall, on Wednesday the 15th day of April next, at twelve o'clock at noon precisely, for the purpose of such Requisition expressed.

Bristol, March 27, 1839. JOHN CAVE, Mayor.

GREEN'S NUMISMATIC ATLAS OF ANCIENT HISTORY.
 Dedicated, by Permission, to the Earl of ARBUTHNOT.

Just published, in a series of 21 Plates, price 2l. 7s.
NUMISMATIC ATLAS OF ANCIENT HISTORY, comprising a Series of 266 Grecian Coins, arranged in the form of an Historical Chart, designed and executed on Stone, by BENJAMIN RICHARD GREEN. The Work is accompanied by a descriptive letter-press, and may be had mounted to fold up in a case, 2l. 15s.; and on a roller, varnished, 3l. 2s.

Published by Longman, Rees, Orme, Brown, and Green; of whom also may be had.

A LECTURE on the STUDY of ANCIENT COINS, as connected with History; illustrated with Plates, price 2s. 6d.

THE THAMES TUNNEL, NEAR ROTHERHITH CHURCH, AND OPPOSITE TO WAPPING DOCK STAIRS.

NOTICE is hereby given, That the Public may view the Tunnel every day (Sundays excepted) from Nine in the Morning until Six in the Evening, upon payment of One Shilling for each person. The Tunnel is lighted with gas, is dry and warm, and the descent is by a safe and easy stair-case.—By order,

CHARLES BUTLER, Clerk to the Company.
 N.B. 74,500 Persons have visited these Works since they have been open to public inspection.
 Walbrook Buildings, 7th April, 1839.

ABROAD.—A YOUNG MAN, aged 21, wishes for a PERMANENT SITUATION ABROAD, has no objection to any Country or Climate, knows French perfectly, both speaking and writing, having lived two years in France. Book-keeping by double or single entry, and is well acquainted with business in general.—For testimonials of character, good conduct, and the strictest attention to business, he will refer to a commercial house of the first respectability, who have always placed the greatest confidence in him, and where he has lived the last four years.—A letter addressed to B. A. N., 15, Great Russell-street, Bloomsbury, will meet with immediate attention.

FREEMASONS' HALL.—Mr. BUCKINGHAM has the honour to announce, that he will deliver his COURSE of LECTURES on the PAST and PRESENT STATE of the EASTERN WORLD, at the FREEMASONS' TAVERN, Great Queen-street, Lincoln's Inn Fields, commencing on MONDAY the 18th of APRIL, at Half-past Seven o'clock in the Evening precisely, and continuing the same throughout the remainder of the Week, from Half-past Seven to Half-past Nine o'clock of each Evening.

The following will be the order of the Countries described:
 Monday—Egypt, and its splendid Antiquities.
 Tuesday—Arabia, and its singular Manners.
 Wednesday—Mesopotamia, Babylonia, Persia, & their Remains.
 Thursday—India, its Inhabitants and Institutions.
 Friday—The Holy Land, and its Scriptural Illustrations.
 Saturday—Commercial Resources of the Eastern World.

It should be observed, that these Lectures are not readings of any Manuscript Papers, or even Notes, but are rather EXTENSIVE SKETCHES, descriptive of the various countries named, classified in such a manner as to be perfectly intelligible to those who have never before given their attention to the subject. They have been found, therefore, wherever they have yet been delivered, to be as agreeable to ladies and their families as to gentlemen; and audiences of great numbers, and of the highest rank of society, have attended them, and expressed their most unequivocal and unanimous approbation.

Admission to any Single Lecture, Five Shillings.—Tickets for the whole Course of Six Lectures, a Guinea; to be had at the Freemasons' Tavern, Great Queen-street, Lincoln's Inn Fields; at Mr. Edingham Wilson's, Royal Exchange, City; at Messrs. Sharpey's, 33, Old Bond-street; at Mr. W. H. Smith's, (next door to the Crown and Anchor Tavern), 152, Strand; and at the office of 'The Oriental Herald,' 4, Wellington-street, Waterloo Bridge.—Books, containing the Heads of all the Lectures, with a Sketch of Mr. Buckingham's Life, Travels, and Writings, to be had of all Booksellers, price One Shilling. It is strongly recommended that this Sketch should be perused before the Lectures are commenced.

THE most efficacious discovery for preventing the Hair falling off, or changing colour, and producing a luxuriant growth, is ROWLAND'S MACASSAR OIL, the Original and Genuine. This Oil is pre-eminently successful in nourishing, strengthening, and preserving the Hair, in all climates and seasons, rendering it curly and glossy! In short, adding an exquisite beauty to the Hair of Ladies, Gentlemen, and Children. To detail its manifold virtues, and enumerate the testimonials of its proved superiority over other preparations professing similar results, would fill the pages of a volume.

Mr. Smyth, Perfumer to the Royal Family, 117, New Bond-st.; R. Hendrie, Perfumer to His Majesty, Theobalds-st.; Sanger, 146, Oxford-st.; Gattie and Pierce, 57, D. Riego St. Belcol, 158, Atkinson, 39, New Bond-st.; Bayley and New, Cockspur-st.; Berry and Co., 18, Gresham-st.; Law, 308, Foul, 226, Strand; Butler, 4, Cheapside; Atkinson, Cannon-st.; Sutton, Bow Church-yard; Newbury and Sons, 44, Edwinstown, 67, St. Paul's Church-yard; Barclay and Sons, 33, Fleet-market; J. & T. Rigge, 65, Cheapside; Paddy & Co., 37, Lombard-st.; Talte, 41, and Johnson, 68, Cornhill.

CAUTION.—Each Genuine Bottle is enclosed with a Photograph in a Wrapper, with the words 'ROWLAND'S MACASSAR OIL,' and the name and Address in Red.
 'A ROWLAND & SON, 25, HATTON GARDEN,' and counter-signed ALEX. ROWLAND.

Price 2s. 6d.—7s.—10s. 6d. and 21s. per Bottle.

London: Printed and Published every Wednesday Morning, by WILLIAM LEWIS, at the Office, No. 4, Wellington-street, Strand.

AUTOGRAPHS.

We have no intention to usurp the functions of Mr. Caretairs, or to lecture our readers on the improvement of their penmanship. Our typographer laughs bitterly at the notion while he prints the words! We make as little pretension in theory as in practice to any especial calligraphy; and this not from Hamlet's notion,—who

'Once did hold it, as our statists do,
A baseness to write fair;—'

but from a slight flaw either of nature or instruction,—which one spot is a happy foil to our otherwise immaculate perfection. With questions as to the clerly beauty of handwriting, we have now nothing to do; and marry, there are reasons for all things. We wish rather to discourse on the transcendent, and, as it were, Sibylline art of judging the character by the penmanship. We remember that in our days of youthful and enterprising 'vanity,' we studied the art of palmistry, partly, indeed, from some lurking impulse of credulity, but chiefly moved by the consideration of the soft white little palms which would in consequence of our skill be unresistingly yielded to a deliberate scrutiny. Forty years have since elapsed, and we fear that we should be no more excited than a first-rate physician, by feeling the most delicate fingers in the world tremble in our grasp, and seeing through our spectacles the thin blue veins quiver, while our eyes should read the history of the heart that shook them. Alas! we travel between youth and age,—a road which has seldom been understood by means of maps or guide-books; and they, perhaps, are most enviable who are not doomed to learn its windings by experience.

Chiromancy, however, and the other fantasies of exuberant boyhood, have long been laid aside for graver and more appropriate studies. Among these is the art of discovering the character from the handwriting.

How often in dreams do we fancy that waking existence is a dream! None are so prone to accuse others of being visionary as those who never do any thing but see visions. A touch of genuine and consistent thought is at variance with their own state of mind; and the madmen asseverate that their keepers and physicians are insane. The sooty-faced Narcissus exclaims, that the fountain is black, because its pure brightness faithfully reflects the sable of his own features. And thus it is, that if we apply any principle, however generally admitted, to a case which it is not commonly seen to influence, we are accused of fancy, and folly, and paradox. Every one either openly asserts, or unconsciously takes for granted, that nothing exists without a cause; and we are generally informed that it is the business of investigation to discover causes and their modes of action. There are, however, a dozen of examples at hand of matters which, if we attempt to study in this way, we are at once warned off by the conservators of common-sense, and denounced by the oracles of society. Among these subjects, the one with which we have at present to deal is that of *handwriting*.

It is absurd, as it seems to us, to imagine that any exertion of intelligence can want the impress of the mind from which it proceeds. Writing is one of the very commonest of our actions, and it connects itself immediately with all our thoughts and feelings; and if chance be, as is most certain,

'the unaccountable name of nothing,' above all, must it seem absurd that the most habitual operation of the civilised mind should be subjected to no law, and empty of all meaning. There are accordingly persons who have endeavoured to trace out and describe the relation between the written and the living characters; and though we shall not borrow very much from their writings, we trust that their example will be held as some justification of our attempt.

We have before us a considerable number of autographs, and on a few of these we propose to make some brief observations.

Here is a long letter of VOLTAIRE. How regular, how clear, how careful, with how few marks of individuality of character! Here is scarcely a trace of imagination or of feeling; no hurrying earnestness, scarcely a single letter completely and roundly formed, and a sort of contemptuous dash or pig-tail at the end of many of his words, full of scorn and impertinence.

HEYNE is in his writing exactly what he was in reality: firm, upright, formal, with some angularity, and a good deal of eccentricity. Every word looks as if, in inditing it, he had overcome no less difficulties than those which beset his life.

The next letter is MADAME DE STAEL'S. The writing is hasty and irregular; and its imperfection seem as if it proceeded from eagerness and carelessness, rather than from inability to exhibit her mind, or the want of any to exhibit. There is throughout the penmanship a singular mixture of weakness and strength; and he must be a novice in *billet-doux* who does not perceive, at a glance, the warmth, boldness, and decision of her mind.

Then we find a letter of FRANKLIN to M. Nogaret, which we will transcribe:

'Passy, April 9, 1781.

'SIR,—I received duly the elegant present of your poetical works. I thank you much for the pleasure I have had in perusing them. I should have made this acknowledgment sooner, but intending to request your acceptance of my *Opuscula* in return, I have been retarded by the bookbinder, who has not yet dressed them decently enough to appear at Court. With great regard, I have the honour to be, Sir, your most obedient and most humble servant,

'B. FRANKLIN.'

This was written by Franklin in his 75th year. The hand is of a mercantile character, and as flowing, clerk-like, and complete as possible. All is regular and formal; and there are in his dashes, flourishes, and spaces, abundant tokens of that personal vanity wherein Franklin was by no means deficient.

A long letter of CHRISTINA of SWEDEN exhibits a very characteristic penmanship. The lines are crooked and irregular, and full of the marks of haste; the letters large, dashing, angular, imperfect, and ill-connected. The writing must strike every one as indicative of pretension, vanity, carelessness, and passion, and very meagre in feeling.

Here are a few lines from the pen of the YOUNG PRETENDER, as weak and full of failure as his life.

Next, we have a letter of ROBESPIERRE, fellow townsman of Vidocq, (both were born at Arras,) and a more celebrated rascal than he. In this writing we see but little attention to details, and yet no openness or grandeur in the forms. Yet the execution is freer and better than the conception. There is no elegance any where, nothing like a flourish except at his own name. It would seem that he had no pleasure in beauty

or ornament not connected directly with his own importance. Nothing can be conceived more opposite to boldness and exuberance of mind; and though the letter is very short, and not a public one, it contains several corrections of words, which indicate a certain study of effect. One fancies the writing to be full of cunning and meanness.

The next is a note of MARMONTEL'S, written when he was sixty-eight. It shows great attention to detail, and extreme clearness. There is a good deal of feebleness in the elemental forms of the penmanship. But the aspect of the whole is agreeable, even, and gentlemanly.

A few lines by CALVIN are as bold, energetic, and decided as possible. Many of the letters are ill-conceived, but they are executed (like Servetus) with the utmost determination and vigour. It seems as if he had thought of nothing but going right on to the end of his design, and stamping his name on it when completed; and the effect, though abundantly strong, is rough and hurried. There is no ornament whatever.

The following letter of CARNOT'S is curious, and little known in England, and we, therefore, transcribe it. Of the handwriting we have nothing to say. The letter was addressed to Napoleon in January, 1814.

'SIR,—Aussi long-temps que le succès a couronné vos entreprises, je me suis abstenu d'offrir à votre Majesté des services que je n'ai pas cru lui être agréable. Aujourd'hui, Sire, que la mauvaise fortune met votre constance à une grande épreuve, je ne balance plus à vous faire l'offre des faibles moyens qui me restent. C'est peu de chose sans doute, que l'effort d'un vrai sexagénaire, mais j'ai pensé que l'exemple d'un ancien soldat, dont les sentimens patriotiques sont connus, pourroit rallier à vos aigles beaucoup de gens incertains sur le parti qu'ils doivent prendre, qui pourroient se laisser persuader que ce serait servir leur pays que de les abandonner.

'Il est encore temps pour vous, Sire, de conquérir une paix glorieuse, et de faire que l'amour d'un grand peuple vous soit rendu.

'CARNOT.'

We have before us a few lines by RAPHAEL, which are as peculiar and as beautiful in point of penmanship as could be expected from him. It is round, bold, clear, and graceful; and a feeling of the beautiful seems to have been present to him in the formation of every letter.

Next is a letter of SIR WALTER SCOTT, of which the handwriting is chiefly remarkable for its manly and unpretending character. It bears the impress in every letter of a strong and well-developed character.

A long letter from QUEEN ELIZABETH to Henry IV. of France, is as flighty and complex in penmanship as she was in mind. It displays considerable energy and great eagerness of character; but much also of uncertainty, confusion, inconsistency, and ostentation.

We then find a MS. of FENELON,—the first page of 'Telemaque.' Most of our readers must recollect with horror those weary words, 'Calypso ne pouvoit se consoler du depart d'Ulysse.' How often have they put us in need of consolation! How often have we thumbed them; how often, alas! drenched them with our sorrows! We can scarcely see them even in the handwriting of Fenelon without a feeling of detestation. The writing, however, is fair and pleasant. Rather feeble, indeed, and meagre, but clear, regular, and elegant.

SIR PHILIP SIDNEY.

The Miscellaneous Works of Sir Philip Sidney, Knt., with a Life of the Author, and Illustrative Notes. By William Gray, Esq., of Magdalen College and the Inner Temple. 8vo., pp. 329. Talboys. Oxford, 1829. [Unpublished.]

SIR PHILIP SIDNEY is one of those delightful writers of the olden time, who, as Lord Bacon beautifully remarks, 'are as the stars which give little light because they are so high.' Few, indeed, read, and still fewer study, the works which it has lately become the fashion to laud with praises no less indiscriminate than the neglect and contempt with which they were visited by the smooth, pithless sentence-mongers of the last century. No body who pretends to literature is unacquainted with the name of Sir Philip Sidney, a name which sounds of chivalry and all that is noble, elegant, and romantically pastoral; but how many of those who pretend to talk about this splendid mirror of English knighthood, this youthful hero of lofty bearing—accomplished as a gentleman, erudite as a scholar, endowed with the glowing spirit of poetic genius, and all under the control of high-toned principle and pure morality; how many, we ask, of those flimsy pretenders, those mere butterflies of modern literature, have ever read a line of the 'Defense of Poesie,' or 'The Arcadia'? Every schoolboy can relate the anecdote of Sidney's almost unparalleled self-denial, upon being mortally wounded in the battle of Zutphen, when he gave away, untasted, to a poor soldier who was dying beside him, all the wine which his attendants had procured for him with great difficulty. But the literary works of this flower of English chivalry are seldom to be met with, except in the study of some kindred spirit, or on the shelves of some antiquated library. It was a shrewd remark of Voltaire, that the fame of Dante was increasing, and would increase, in proportion as his works were less read; and so it has been, there can be little question, with the works of such authors as Sir Philip Sidney. But we are not disposed, in this particular instance, to impute the neglect so much to the actual character of the works themselves, as to the form in which only they could hitherto be procured. The latest edition of the 'Defense of Poesie' was published by White, in quarto, and 'The Arcadia' has always been printed in folio or quarto. Now, though certain species of new works, such as Parry's *Polar Voyages*, or a Poem of Robert Montgomery's, may appear, by means of broad leadings, and broader margins, sufficiently light to be exhibited upon a fashionable drawing-room table, or to set off the cases of a fashionable library, 'The Arcadia,' or the 'Defense of Poesie,' in quarto, space them out with leadings and margins as you will, can never be brought within the flickering atmosphere of what is denominated light reading. The air of antiquity in the very titles, speaks so unequivocally of sound sense or quaint sentiment, profound remark or fairy pastoralizings, that the skimmer of a fashionable poem, or the devourer of the last new novel, will be repelled, rather than attracted, by the very excellencies which, in the simplicity of our hearts, we might probably imagine would command the unqualified admiration of all.

Such being the state of literary feeling, at least in the more numerous circles of society, we confess that we owe not a little, as admirers of Sir Philip Sidney, to the editor of the pretty volume now before us, which, in form, is as light and fashionable as could be wished; while it contains (besides a well-written memoir of Sidney by Mr. Gray) the chief of his best works, and a considerable number of his hitherto unpublished letters. Of these we shall now proceed to give a brief account.

The life of a man so public as Sir Philip Sidney was in his day, and whose memory is interwoven so imperishably with our history, does not require

us to gather from the memoir before us a dry abstract of dates, a mere chronicle of year by year. Presuming that our readers are, or ought to be, acquainted with the outlines of the life of one of the most remarkable men of which our country can boast, we shall merely advert to a few of the incidents which Mr. Gray has treated with novelty, and, we may add, with taste, learning, and ingenuity.

Sir Philip Sidney was married to the daughter of Sir Francis Walsingham, who, besides other lady-like accomplishments, was distinguished for 'extraordinary handsomenesse;' yet Mr. Gray is of opinion that she never acquired more than the respect of her husband, whose affections had been pre-engaged by Lady Penelope Devereux; but the match had been broken off by some family disagreement. She was afterwards married to Robert Lord Rich, but Sir Philip Sidney commemorated his love for her under the feigned names,—Philo-clea in 'The Arcadia,' and Stella in the poems of Atrophel.

For the mode, says Mr. Gray, 'in which he has acquitted himself of his task in this latter instance, as far as moral feeling and propriety are concerned, Sidney has incurred the indignation and severe censure of Mr. Godwin, who, while he maintains that the series of songs and sonnets embodies "some of the finest examples in this species of composition that the world can produce," cannot tolerate the "making a public exhibition of such addresses to a married female, speaking contemptuously of the husband, and employing all the arts of poetical seduction to contaminate the mind of the woman he adores." Mr. Godwin refers particularly to the fifty-second sonnet, and to the second and tenth songs, for the most flagrant specimens of the "grossness and carnality which he considers himself bound to reprehend." These stanzas we have read over again and again; and, though we imagine we may arrogate to ourselves as acute moral perceptions as belong to the apologist of Mary Wolstonecraft, we cannot perceive any of that shocking sensuality against which his virtuous fervour has been aroused and directed. No criminal intercourse was ever imputed to the parties, neither did their conduct or flirtations excite any sentiments of reproof in the age when they occurred. Nay, Sir Philip himself declares, that he "cannot brag of word, much less of deed," by which his charmer could be construed to have encouraged his flame; and the unhappy course of their loves, and the notoriously brutal character of Lord Rich, may be received as some excuse, if not as a perfect justification, of the passionate, yet rarely indecorous, regard which Sidney continued to express in his verses for the object of his earliest and most vehement attachment.'

But, though we cannot admit, for a moment, that the poetry of Sidney is debased by the vile alloy of licentiousness and pruriency, we are not blind to many other vices with which it may most justly be charged. Our author was styled by Raleigh the English Petrarch; and, without doubt, he derived many of his faults, as well as excellencies, from the bard of Arezzo, whom he frequently imitated, both in his manner and in the exaggerated turn of expression. It was from this foreign prototype that he was probably smitten with the love of antithesis and conceit, and the other absurdities in which our best writers of sonnets then abounded.—P. 43.

Could we have spared room, we should have inserted all the pieces objected to by Godwin, to show the justice of Mr. Gray's defensive remarks; but we must rest contented with one which we give entire.

'The Second Song.'

'Have I caught my heavenly jewel
Teaching sleep most fair to be?
Now will I teach her, that she,
When she wakes, is too too cruel.

'Since sweet sleep her eyes hath charmed,
The two only darts of love,
Now will I, with that boy, prove
Some play, while he is disarmed.

'Her tongue, waking, still refuseth
Giving frankly, niggard no.
Now will I attempt to know,
What no her tongue, sleeping, useth.

'See the hand which, waking, guardeth,
Sleeping, grants a free resort.
Now will I invade the fort,
Towards Love with loss rewardeth!

'But, O fool! think of the danger
Of her just and high disdain;
Now will I, alas! refrain:
Love fears nothing else but anger.

'Yet those lips, so sweetly swelling,
Do invite a stealing kiss,—
Now will I but venture this,—
Who will read, must first learn spelling.

'Oh! sweet kiss! but ah! she's waking;
Low'ring beauty chastens me:
Now will I away hence flee:
Fool! more fool! for no more taking.'

In a quarrel with the Earl of Oxford, which attracted the deepest attention, not only over England, but in every court in Europe, Sir Philip Sidney exhibited, in the most spirited manner, his sense of his own dignity, and vindicated the rights and independence of an English commoner. As the story is remarkable, on more accounts than one, we shall give it as it has been taken by Mr. Gray from the scarce and curious volume of Lord Brooke:

'Sidney being one day at tennis, a peer of this realm, born great, greater by alliance, and superlative in the prince's favour, abruptly came into the tennis-court, and, speaking out of these three paramount authorities, he forgot to treat that which he could not legally command. When, by the encounter of a steady object, finding unrespectiveness in himself, (though a great lord) not respected by this princely spirit, he grew to expostulate more roughly. The returns of which style coming still from an understanding heart, that knew what was to be due to itself and what it owed others, seemed (through the mist of what lord's passions, swollen with the wind of his faction, then reigning) to provoke in yielding. Whereby the less amazement or confusion of thoughts he stirred up in Sir Philip, the mere shadows this great lord's own mind was possessed with; till at last with rage (which is ever ill-disciplined) he commands them to depart the court. To this, Sir Philip temperately answers, that if his lordship had been pleased to express desire in milder characters, perchance he might have led out those that he should now find that would not be driven out with any scourge of fury. This answer (like a bellows) blowing up the sparks of excess already kindled, made my lord scornfully call Sir Philip by the name of puppy. In which progress of heat, as the tempest grew more vehement within, so did their hearts breathe out their perturbations in more loud and shrill accent. The French Commissioners, unfortunately, had that day audience in those private galleries, whose windows looked into the tennis-court. They instantly drew all to this tumult; every sort of quarrels sorting well with their humours, especially this; which Sir Philip perceiving, and rising with inward strength, by the prospect of a mighty faction against him, asked my lord with a loud voice, that which he heard clearly enough before; who (like an echo that still multiplies by reflections) repeated this epithet of puppy the second time. Sir Philip resolving in one answer to conclude both the attentive hearers and passionate actor, gave my lord a lie impossible (as he averred) to be retorted; in respect all the world knows puppies are gotten by dogs, and children by men. Hereupon those glorious inequalities of fortune in his lordship were put to a kind of pause by a precious inequality of nature in this gentleman; so that they both stood silent awhile, like a dumb show in tragedy, till Sir Philip, sensible of his own wrong, the foreign and factious spirits that attended, and yet, even in this question between him and his superior, tender to his country's honour, with some words of sharp accent, led the way abruptly out of the tennis-court, as if so unexpected an accident were not fit to be decided any further in that place. Whereof the great lord, making another sense, continues his play, without any advantage of reputation, as by the standard of humours in those times it was conceived. A day Sir Philip remains in suspense, when hearing nothing of, or from the lord, he sends a gentleman of worth to awake him out of his trance; wherein the French would assuredly think any pause, if not death, yet a lethargy of true honour in both. This stirred a resolution in his lordship to send Sir Philip a challenge. Notwithstanding, these thoughts in the great lord wandered so long between glory, anger, and inequality of state, that the lords of her Majesty's Council took notice of the differences, commanded peace, and laboured a reconciliation between them. But needlessly in one respect, and bootlessly in another. The great lord being (as it should seem) either not hasty to adventure

many inequalities [against one, or inwardly satisfied with the progress of his own acts; Sir Philip, on the other side, confident he neither had nor would lose or let fall any thing of his right. Which her Majesty's Council quickly perceiving, recommended this work to herself. The Queen, who saw that by the loss or disgrace of either she could gain nothing, presently undertakes Sir Philip; and, like an excellent monarch, lays before him the difference in degree between earls and gentlemen; and the respect inferiors owed to their superiors; and the necessity in princes to maintain their own creations, as the degrees descending between the people's licentiousness and the anointed sovereignty of crowns; how the gentleman's neglect of the nobility taught the peasant to insult both. Whereunto Sir Philip, with such reverence as became him, replied, first, that place was never intended for privilege to wrong: witness herself, who, how sovereign soever she were by throne, birth, education, and nature, yet was she content to cast her own affections into the same moulds her subjects did, and govern all her rights by their laws. Again, he besought her majesty to consider, that although he (Oxford) were a great lord by birth, alliance, and grace, yet he was no lord over him, (Sir Philip,) and, therefore, the difference of degrees between free men could not challenge any other homage than precedence. And by her father's act (to make a princely wisdom become the more familiar,) he did instance the Government of King Henry VIII., who gave the gentry free and unreserved appeal to his feet, against the oppression of the grandes; and found it wisdom, by the stronger corporation in number, to keep down the greater in power: inferring else, that if they should unite, the overgrown might be tempted, by still coveting more, to fall, as the angels did, by affecting equality with their Maker.—P. 20.

So bold, just, and spirited an expostulation as this with so proud and unforgiving a princess as Queen Elizabeth, shows more of the sterling uprightness and conscious dignity of Sir Philip than, perhaps, any other incident in his life, or passage in his writings. From this we can fully appreciate and believe as unexaggerated, what Lord Brooke says of him in another place, namely, that though he had lived with Sir Philip and knew him from a child, yet he never knew him other than a man: 'with such staidness of mind, lovely and familiar gravity, as carried grace and reverence above greater years. His talk ever of knowledge, and his every play tending to enrich his mind; so as even his teachers found something in him to observe, and learn above that which they had usually read or thought. Which eminence by nature and industry, made his worthy father style Sir Philip in his hearing (though I unseen) "lumen familiæ sue." This, we may remark, is one of those very rare instances in which paternal partiality was not in the smallest degree deceived, for Sydney was all, if possible more than all, that a fond father could have wished him.

As the old antiquarian Aubrey says, 'Sir Philip Sidney possessed not only an excellent wit, but was extremely beautiful in person, his hair not being red but of a dark amber colour; and, though he was of undoubted courage, he scarcely seemed masculine enough for a knight.' 'He was much at Wilton,' continues Aubrey, 'with his sister, and at Ivy Church, (anciently a pleasant monastery, which adjoins to the park pale of Clarendon Park,) situated on a hill that overlooks all the country westward and north, over Sarum and the plains, and into that delicious park (which was accounted the best in England) eastwards. It was heretofore a monastery; the cloisters remain still; it was called "Cænopium Edrosium." My great uncle, Mr. T. Browne, remembered him; and said that he was wont to take his table-book out of his pockets, and write down his notions as they came into his head, when he was writing his "Arcadia," (which was never finished by him,) as he was hunting on our pleasant plains. He was the reviver of poetry in those dark times, which was then at a very low ebb, *exempli gratia* the pleasant comedie of "Jacob and Esau," acted before King Henry the Eighth's grace, where, I remember, this expression, "that the pottage was so good, that God Almighty might have put his fingers in't; Gammer Gurton's Needle," &c.;

and in these plays there are not three lines but there is "by God," or "by God's wounds." He was of a very munificent spirit, and liberal to all lovers of learning, and to those that pretended to any acquaintance with Parnassus; insomuch that he was cloyed and surfeited with the poetasters of those days.' In the first rank of his poetical friends, we may name Spenser, though Mr. Gray remarks, that the common story of their acquaintance having commenced on the publication of 'The Faerie Queene,' is utterly untrue. No less apocryphal is the anecdote which describes Sir Philip as being so much enraptured with reading Spenser's delineation of "the cave of despair," as to order him, after perusing a few stanzas, a payment of 50*l.*, and that, continuing to read, he extended the bounty to 200*l.*, which he directed his steward to pay the poet immediately, lest he should bestow the whole of his estate on so charming a poet. But Mr. Gray thinks there may be a better foundation for the literary traditions, that the death of Sir Philip prevented Spenser from completing his splendid poem, by depriving the author of both the means and the spirit to complete his design. It is almost universally supposed and admitted, that Spenser intended to represent his friend, Sir Philip, under the character of Prince Arthur.

We cannot spare room to go into the consideration of the works here judiciously collected by Mr. Gray,—a task the less necessary as they must be familiar to all true lovers of our olden literature; and to others we cannot too warmly recommend the perusal of the volume itself. Among the hitherto unpublished materials, we find several original letters of considerable interest, of which we shall extract the first, as copied from the Cottonian MSS.

'To the Right Honourable and my singular Favourite, the Earle of [Leicester].'

'Righte Honourable and my singular good Lorde and Favourite,

*'Although I have at this present little matter worthy the writing vnto your Lordshippe, yet beinge newlie returned from my poll[ish] iournei, I woulde not omit anie occasion of humbly performinge this dutie. Wherefore, I hum[bly] beseeche your L. to take these few lines in good parte, which I wryte rather to continew this [duty]. I ow vnto you, then for any other thing they may containe in them. The Emperour, [Maximilian II., of Hungary,] as I wrate laste vnto your L., hathe these two yeares continuallie pretended a iourney to Prage, wh[ic]h it is thoughte shall, in deede, be performed, to the greate contentation of that kingdome, wh[ic]h otherwise seemed to bende to disobedience. There it is thoughte his son shall very shortlie be [elected] kinge, whom likewise the Emperour seekes by all means possible to advance to the kingd[om] of the Romaines, and for that purpose desynes to call an Imperiall Diet in Francfort, the [place] appointed for the elections; but it is thoughte the electours will rather choose an other for this nexte ensuinge Diet, which is saide shall be sommer followinge at the fur[thest], and then there is no hope of election. Not beinge at Francfort, it is likely it shal [be held] at Regenspurg, where I believe the Emperour will demaunde far greater summes of mo[n]ey then will be grawnted unto him. Though the peace betwixt the Turke and him [is not] as yet, as far as it is knowne, perfittle concluded; yet it is thoughte the Turke will rath[er] proceede by sea then this waie, and as the Frenche Ambassadour hathe writtne, means * * * insite the Pope's territorie, perchaunce his conscience moueth him to seeke the benefitt of * * * jubilee. I hope as the Spaniards alreddy begin to speake lower, so the Pope's holiness will have leese leisure to ministere suche wicked and detestable counceills to the Chris[tian] princes as hitherto he dothe. Owt of Frawnce yowr L. hathe the aduertisements fu * * The Prince of Condé is retired to Basill, where he liueth in companie with the Ad * children, beinge frustrate of a greate hope he had conceaued of suckowr owt of Jerma[n], wherein many and wise men do impute greate faulte to the Prince Casimire, the Cow[n] Palatine's seconde son, in so muche that to write to yowr L. plainely, he is beaullie sus[pected] to be corrupted by the Frenche. His father certainly is as virtuous a prince as liueth, [but] he suffereth himselfe too much to be gouerned by that son. This I thoughte my dut[ie] to write as haneing heard it in a very good place, and muche affect-*

tioned to the tr[ew] cause. The Polanes heartily repente their so far fetcht election, beinge now in suche case [that] neither they have the kinge nor any thinge the kinge wille so many others had promised * * * besides that their is lately stirred up a very dangerous sedition, for the same ca[use] that hath bredde suche lamentable crimes in France and Flandres. Now the [sedition] is reasonably wel appeased, but it is thought 'twill remaine so but a while. I have no other thinge worthy the writing at this presente to your L., wherefore I humbly cease with my dailie and moste bounden praier, that it please the Eternal to continew and encrease yow in all prosperitie. Frome Vienne, this 27th of Nouembre, 1574.—Your L. moste obedi * * *

'PHILIPPE SIDNEY.'
(P. 294.)

CONSTABLE'S MISCELLANY.

Constable's Miscellany, Vol. 38. A Personal Narrative of a Journey through Norway, part of Sweden, and the Islands and States of Denmark. By Derwent Conway, Author of 'Solitary Walks through many Lands.' Constable and Co. Edinburgh, 1829.

As we have been compelled, very much against our inclination, to speak hardly of the historical pictures of 'Constable's Miscellany,' we hasten, with great pleasure, to do justice to the little volume before us, which is as good-tempered and pleasing as the works to which we have alluded were false, frivolous, and ferocious. This journey through Norway and Sweden is the production of our friend Derwent Conway, whom we accompanied some months ago, with great satisfaction, (for it is given to critics to achieve impossibilities,) in his 'Solitary Walks through Many Lands.' As the object of that work made it clearly impossible for him to be very particular respecting any one of the 'many lands,' his journal was, of course, not exhausted by his former production; and, out of what remained untouched of it, he has manufactured the very pleasing narrative of his excursion through those much-containing, little-visited regions, Norway, Sweden, and Lapland. That a traveller in countries which are almost as little known to the general as some of the most beautiful spots in our own country, should be content to publish his lucubrations in duodecimo, and a cheap miscellany for the use of the humble classes, is evidence of a modesty as praiseworthy as it is rare; and we are very glad to have the opportunity of proving to our readers, a man may see strange sights, and meet with amusing adventures, and yet not write a quarto. We cull our extracts at random.

The Woods.—A Farm House.

'Those who have never been in any other than woods of small extent, and adjacent perhaps to the abodes of men, have no conception of the silence and solitude which pervade the greater forests. The former are full of little birds, in whose very aspect there is gladness, and in whose chirpings and clear notes there is no touch of melancholy; and being associated, too, with gardens and lawns, and with our very parlour windows, mirthful rather than gloomy images are awakened by their presence: but no images like these, nor any such associations, belong to the forests of the North. There no little birds hop from spray to spray,—no gay melody is in the air,—the rustling among the bushes does not denote the presence of the tuneful thrush, but of some wild and solitary animal, with which man has no associations. An eagle or a heron rising from a dell, or soaring above a lake, augment rather than detract from the feeling of solitude, because they are birds of solitude, and never visit the habitations of men.

'In the outskirts of the forest I saw a few squirrels, but, as I got farther into the interior, I lost them. I observed none of the deer tribe, nor indeed have I ever chanced to see any species of deer in the Norwegian forests. In one part of my route, there were evident marks of an extraordinary tempest, though not of very recent occurrence. Many trees lay prostrate, broken about ten or twelve feet from the ground, and large branches were strewn to a considerable distance. The trees had all fallen one way,—and from this circumstance, as well as from there being no marks of fire, I concluded that a hurricane had been the cause of destruction.

'My journey was in one sense fatiguing; for although I was seldom obliged to swerve from a direct

path, it was frequently necessary to climb very steep and rocky acclivities, and then to descend into deep dells; indeed the whole of the forest was a succession of hill and valley, which, in obedience to my compass, I traversed almost in a straight line. I noticed some gigantic trees, not less I am sure than 120 feet high, and of extraordinary dimensions in other respects. No stream of any magnitude intersecting this forest, the worth of the timber is probably not equal to the expense of carrying it to market; and from this cause, I found the trees of greater dimensions than in most of the forests which I afterwards passed through.

I had walked, as nearly as I could guess, about twelve miles, during the last four of which I had been constantly ascending, when I emerged from the forest, and found myself in a range of hills, the lower part of which I had been traversing, and which rose on either side to a considerable elevation. It was not necessary, however, in obeying my compass, to ascend higher, as the pass in which I found myself ran north-east. It was now past seven, and as I had walked upwards of thirty miles, through a rugged country, I determined, in another hour, to stop for the night, if before that time I did not reach any habitation. The valley soon began to descend, and at the first open point I saw a river beneath, about two miles distant, with a road along the bank. Every traveller, be his zeal what it may, prefers a bed within doors, to the softest moss that ever carpeted a hill-side; and thinking it not unlikely that some house might be at no great distance, if what seemed a road should prove to be one, I mended my pace, and soon reached a rapid and tolerably large stream, skirted by a road on the opposite side. Here I deviated from my compass, proceeding up the bank of the river, and, after another hour's walk, I was rewarded by the sight of a few houses upon the opposite side, to which I soon made my way, by wading across the river, which was scarcely knee-deep. It was then not quite nine o'clock, so that the inhabitants had not retired to rest, and they were soon made aware of the approach of a stranger, by the loud barking of several dogs, one of which I had some difficulty in coaxing into forbearance, until his master's authoritative voice restrained his zeal. An old pleasant-looking man welcomed me, addressing me first in High Norse, and then in Danish, which I knew sufficiently to convey in it the simple information whence I came; and where I was going, and that I was an Englishman, with a few lesser et-ceteras. I was conducted to a comfortable chamber on the ground-floor, in which a very old woman was seated in a high-backed chair, apparently in a lethargy. I soon discovered that she was blind; but when the old man informed her that a stranger had arrived, she held out her hand to me, and called to Wilhelmina, whom I afterwards found to be her granddaughter, to get something for me to eat. A tall fair girl immediately entered, who, having received direction from the old woman, left the room, and soon returned with a plucked fowl, which was instantly popped into a kettle; a table was then laid, and the fowl, when ready, was placed before me. I presume every one knows that a fowl is as tender, if boiled the moment it is killed, as if it be kept the regular time laid down in the culinary authorities. My entertainer was the substantial Tellemarken proprietor; he and his aged wife, and this granddaughter, resided in one house; and his son and daughter-in-law, with their children, excepting Wilhelmina, resided in another house close by. The natives of Tellemarken are considered to be the least polished of the Norwegians, and are said to have preserved, along with their ancient costume, much of their ancient manners. Their dress is, indeed, sufficiently grotesque; but I saw nothing in their manner different from that of any other people who have mixed little with the world, and who, upon that very account, exercise the virtue of hospitality more freely, because with less suspicion. The road into which my journey had led me, was a cross road from the southern coast to Bergen. The Mios Vand, I was informed, lay not more than twenty-four miles from this spot; but if I wished to double the north point, or head of the lake, the distance would be considerably more, and there was no house of any kind in that direction, the country being entirely uncultivated, the head of the Mios Vand running into the mountains which separate Tellemarken from Bergenhuus. I had a great desire to penetrate still farther into this range, both because of a tradition (at present I believe it can be called nothing better) of a waterfall 900 feet high somewhere in the Hardanger Field, and because the range, comprising the Fille Field, the Sogne Field, and the Lang Field, I had always understood to be more characterised by sublime scenery, than the better known and more travelled Dovne Field. But my entertainer told me, I had no

occasion to go farther than the head of the Mios Vand, which would sufficiently satisfy my curiosity. Of the waterfall he had never heard. It may easily be believed, that, after the fatigues of the day, it was a welcome proposal to retire to rest;—and it was not long before I was, in fancy, among the gorges of the Hardanger Field.—Pp. 90—94.

Marriage Party.

'Next morning, after a refreshing sleep, I was ready to set out by six o'clock. My host mounted me upon one of his best horses, and his son mounted another, to conduct me across the Nid ford, and as far as a lake, which he mentioned as about a Norwegian mile, long (seven miles English,) and lying about two miles farther than the river, and parallel with it. After a few minutes ride, we reached the bank of the river, which, even at this distance from the sea—certainly not nearer than 130 miles—I found deep and rapid. Without the kind attention of my Tellemarken friend, I should have found some difficulty in crossing it,—an attempt which, even at the ford, and on horseback, required some nerve. It could not properly be called a ford, because, in the middle of the river, it was necessary to swim. We passed, however, in safety, and continued our ride due east to the lake I have spoken of, which we came in sight of in about half an hour. Before coming in sight of the lake, we had heard the report of one or two guns, and something like the distant roll of a drum; and, upon arriving at the height which overtopped the lake, we discovered the cause of these sounds. Two rowing boats were gliding over the water, not far from the bank where we stood, full of gaily dressed country people. My companion immediately knew it to be a wedding party; and a loud halloo turned the boats' heads towards shore, while we trotted down the bank to meet them. The party was going to a church higher up the lake, and on the opposite side; and, as I was told I should save two hours' walk by taking a seat in the boat, I willingly accepted the proposal, more from a desire of seeing how these things were conducted in Norway, than from a wish to shorten my journey. The first thing that struck me was, the gilded coronal upon the head of one of the women. She was the bride; and in almost every part of Norway, if the marriage be among the country people, the bride invariably wears a gilded crown, made of some kind of stiff paper. This is, as far as I could learn, meant as a symbol of chastity; and I have since heard of instances, in which the crown has been torn from the head of a bride, who was known to have no just title to wear it. The boat in which I was seated took the lead;—in it were the crowned bride, the bridegroom, and six persons, four women and two men, whom I understood to be the nearest of kin; three fiddlers, a drummer, and a person with a kind of pan-pipe, were seated at the prow. In the other boat were eight persons, also relatives, and another drummer. One person also in each boat had a gun. The stillness of the morning, and the quiet repose of the water and the surrounding scenery, was in strange contrast with the noisiness of the bridal party. The orchestra played, and the party sung alternately; and sometimes both exercised their powers at once. The drum kept up its never-failing accompaniment; and every two or three minutes, a *feu-de-joye*, and then a loud shout, drowned for a moment the other testimonies of rejoicing. All the men were dressed in the Tellemarken jacket, girdle, and breeches, and, with their short knives stuck in their girdles, looked rather like a party of pirates, than of "wedding guests." The crown was the only distinction of the bride. All the women were dressed neatly and cleanly; and it was evident, that the whole party was less or more under the influence of corn-brandy. I must, however, do the bride the justice to admit, that she was almost, if not altogether, an exception; the bridegroom, on the contrary, seemed to be the most intoxicated of the party. In Norway, a perfectly sober bridal among the country people was never known. Their marriages invariably take place on Sunday. The party assemblies on the Saturday, and the whole night is spent in feasting and dancing, until the time arrive for setting off to church; nor does the feasting end with the marriage ceremony, but is continued one, two, or three days afterwards, according to the circumstances of the parties. As many of the guests sleep in the bridegroom's house as can be accommodated, and the rest are distributed among the neighbours, to be in readiness for a renewal of the feast. Every bridal guest in Norway brings the bride a present; in many parts of Norway, a keg of butter is the usual present; and if the marriage takes place in the winter season, salted or frozen meat is also considered an acceptable gift.]

'We had not farther than three miles to row, so that we were not an hour in accomplishing the voyage. I was, of course, obliged to return the civility shown to me, by joining in the festivities as far as I was able, now and then tasting the corn-brandy, and joining in the songs, which, by the way, were a strange medley, some of them being drinking songs, and others hymns and psalms. How simple and beautiful a scene would this have been—a happy bridal party gliding over the calm Norwegian lake on a summer's evening—had not inebriation disfigured the picture!—Pp. 104—107.

Scene among the Mountains.

'It was scarcely noon when I took leave of the pastor. From the nearest point of the Mios Vand, he informed me I was scarcely ten miles, but from the head of the lake I was at least twenty. There was only one route from this place by which it was possible for me to reach the Mios Vand; and to find this route, I had to rely upon my own ingenuity and my compass. It was described to me as a series of mountain-passes, branching in various directions, but for the most part inclining east and west. It was possible to reach Kongsterg (from which there are direct conveyances to Christiania) by the foot, as well as by the head of the Mios Vand, and this without any formidable obstacles from either mountain or river; but when I fix my mind upon a plan of a journey, I never deviate from it, because it may be attended with some inconveniences; and besides, I was now in Bradsberg, the district in which the great waterfall is reported to be. Immediately upon leaving this place, I was enclosed among the mountains, which rose around me to the height of at least 4000 feet; and several whose summits I saw before me, must have been from one to two thousand feet higher.

'I here saw for the first time, growing in a wild state, that most lovely of flowers, the Lily of the Valley. It stood every where around, scenting the air, and in such profusion, that it was scarcely possible to step, without bruising its tender stalks and beautiful blossoms. I have not seen this flower mentioned in any enumeration of Norwegian plants; but it grows in all the western parts of Norway in latitude 59 and 60, wherever the ground is free from forest, in greater abundance than any other wild flower. In this day's walk, I could not avoid again remarking the exuberance of vegetation which summer calls forth in the 60th degree of latitude. Flowers of every description enamelled the earth, the wild fruits, strawberries, raspberries, and many other species of berries of which I know nothing, clustered the bushes, and were fast advancing to maturity. Trees, too, and various shrubs, hang in every crevice of the rocks; and upon examining the spot, it was impossible to discover whence they derived their nourishment. Had it not been for the extreme heat, my walk would have been full of enjoyment. The views were sometimes magnificent, always picturesque and ever changing. Little mountain tarns occasionally gleaned through the openings. At times, the noise of a distant cataract coming and dying away, filled the silent valley: then all was hushed again. Now and then, a sparkling, tuneful spring, welled, bubbling in your path. Sometimes a wandering cloud, sailing in the deep azure above, threw a momentary shadow on the sunny acclivities. Once an eagle, seeming a speck in the heavens, soared unutterably high, and then, with majestic swoop, sunk below a towering pinnacle; while at short intervals were heard, far upwards, the tinkling bells of the flocks, which were now enjoying their summer grazing among the mountains.—Pp. 109—111.

'In England, we are apt to form very exaggerated notions of the degree of cold which is experienced in the Northern countries. When there is little or no wind, intense cold is scarcely felt to be an inconvenience, provided one be suitably clothed; and during by far the greater part of winter, the weather is calm, so that even when the thermometer stands considerably below zero, one is able to move about comfortably, and even to enjoy the fine weather which so generally attends intense frost. Many an Englishman who walks abroad on a raw winter's day, dressed nearly in the same manner as in summer, suffers infinitely more from cold than he would in Norway, attired in his fur-cloak and eared-cap, and warm foot-gear. For my own part, I can safely aver this of myself. I have suffered ten times the degree of cold travelling on a stage-coach in England, in the face of a north-east wind, than I ever suffered in a sledge in Norway, when the thermometer has been forty-seven degrees below the freezing point, or fifteen degrees below zero. Sometimes, indeed, the frost is accompanied by wind, and then it is scarcely possible to stir out of doors; but in the southern parts of Norway, the combination

of a very intense frost, and a scarifying wind, is scarcely ever felt. It is true also, that in the depth of winter, the shortness of the days does not allow many hours of clear bright sunshine; but then the houses are not built like summer-houses, as many are in England; and stoves in the towns, and great wood fires in the country, and sometimes both, effectually oppose the power of the elements. There is not, in fact, a more comfortable abode than that of a substantial landholder, or a thriving merchant, on a winter's day in Norway. There are no cross airs blowing through the house, as in many of the unsubstantial dwellings in England; nor does one know what it is to have one part of the body scorched by the fire, while the other is suffering under the influence of cold; and I scarcely know any thing which can be compared with the luxury of sleeping between two eider-down beds.—P. 133—135.

Occupation of the Females.

'Eating and drinking is the great business of the Norwegians, the sole occupation of many, and the chief luxury of all; and it is owing to this that the condition of the Norwegian females is so much lower than it is in any other of the European countries. I have heard an English lady, married and settled in Norway, say, (not from her own experience, but from what she saw around her), that she would rather be a maid-servant in England than a *Frou* in Norway. And let me here mention a distinction between *Frou* and *Madame*, which is peculiar to Norway. In all parts of Scandinavia, excepting Norway and Denmark, every married woman may be called *Frou*, *Madame* being a more honourable appellation; but in Norway and Denmark it is otherwise. There, every shipper's or tradesman's wife receives the title of *Madame*, whereas that of *Frou* is the distinctive honour. Formerly, it was only the wives of noblemen, or superior officers in the army, who were entitled to be called *Frou*; but, by a late regulation, the wives of dignified clergymen, of doctors in medicine, and of persons holding certain offices under Government, are entitled to be so distinguished; and so much is this distinction prized, that I heard of an instance in which a gentleman purchased an office in Copenhagen, that his wife might be entitled to be addressed *Frou*. There is, perhaps, no occasion to apologize for this digression, as it contains some information, the want of which might lead the traveller into an error in etiquette, that might be prejudicial to him. But to return;—well might the English lady express herself as she did. Women even of the highest rank in Norway are slaves; the greater, indeed, the establishment, the greater the slavery, which is precisely the reverse of the condition of the females in England. Whatever the number of servants may be in the different departments of a Norwegian establishment, they are not entirely trusted to in any thing; the mistress of the house is still principal house-keeper, chief laundry-maid, and head cook. The cook-maid in Norway is not intrusted with any of the great operations in the art;—her duties are precisely those of the menial, who, in England, is designated a scullion. If a *Frou* be so fortunate as to have grown-up daughters, her duties are in some degree lessened. In a family with which I had constant intercourse, the two young ladies, *Froken*s, as young ladies of quality are called in Norway, had their alternate weeks in the cooking department; at least half of every day was spent in the kitchen; and she whose turn it was to do this duty, did not take her seat at the dinner-table with the rest of the company, but appeared when dinner was nearly concluded; and then with cheeks that would have made rouge be superfluous. I have mentioned elsewhere, that the duties of the ladies do not end with the cooking of dinner; the young ladies (if there be any) carry in the dishes, and if there be none, the mistress of the house. They also change the plates, wipe the knives, and perform every other office that is performed elsewhere by servants; but, in Norway, a servant is seldom or ever seen in the dining-room. The Norwegians would, indeed, consider it a disrespectful treatment, were they to employ servants to wait upon their guests. In one house where we occasionally visited, and in which there were no young ladies, two farmer's daughters, neatly dressed, always assisted the lady of the mansion to wait upon the company. A Norwegian lady might, indeed, be cited as a pattern to any English servant in the waiting department. She is constantly walking round the table, observing the wants of the guests, and supplying them. Nor does she, in general, partake of dinner with the party, but dines either before dinner is served, or after it is taken away. There is little of the comfort of an

English dinner-table in this; but daily custom at length reconciles one to it.

'But the duties of a Norwegian lady are not confined to preparing the dinner, and serving the guests. They have other domestic duties of a still more unfeminine character. When in Norway upon a subsequent occasion, I heard a young lady decline an invitation to pass a week with a friend, because it was slaughter-time. What should we think in England of a young lady who should make such an apology? But the apology requires explanation. Late in the autumn, just before winter is expected to set in, the establishment of a Norwegian family (especially if distant from any great market) is a scene of extraordinary activity and preparation; for it is at this time that the winter stores are provided; and this implies, in the first place, the slaughter of a great many animals. Then follow the various culinary operations; the salting of meat, the making of different kinds of sausages, and meat-balls for soup, and black puddings and white puddings, &c. &c.; and for all the various sausages and puddings, the meat is grated, and beaten, and seasoned—operations that require no inconsiderable time and labour. In all these matters the young ladies are the chief actors; so that it can scarcely be wondered at that the *Froken* refused an invitation because it was slaughter-time. But these duties are not only performed by ladies of all ranks in Norway, but are considered by them to be agreeable; and this season of slaughter and preparation is looked forward to as a time of more than common amusement. It can scarcely be supposed, that these habits should not influence the tastes and feelings of the female sex. Every young lady, and consequently every woman in Norway, is a *connoisseure* in gastronomy. There is no subject upon which a stranger will find a Norwegian lady so much *au fait* as in this. Indeed, I do not know any subject upon which a *Frou* or her daughters will descant with so much interest, or to which they will lend a more willing ear, than to the secrets of cookery, or the merits of a particular dish'.—P. 171—175.

TALES OF MILITARY LIFE.

Tales of Military Life, by the Author of 'The Military Sketch Book,' 3 vols. Colburn. London, 1829.

We have often spoken in no sparing language of the various corruptions which have been introduced into our literature by the race of fashionable novels. But they have engendered one great mischief which we take shame to ourselves for not having denounced with much greater earnestness and severity. The taste and feelings of the English public will revive, we trust, after a short time from the exhaustion which such sickly diet must infallibly occasion; but, will the *English language* as speedily shake off the villainous diseases with which they have infected it? More paltry affectations of phrase, more vulgar words imported from the club-house, or the kennel—more flagrant outrages upon the laws of universal grammar and of English grammar, we will venture to say, are to be found in these works than in all the volumes of all the Euphuists who have preceded them. It may, no doubt, be urged, as it has been urged, that it requires genius to corrupt a language as well as to reform them; and, if this were the case, it would be the extreme of nervousness to anticipate any permanent mischief from these violations of our tongue's chastity. But the proposition is far too universal. It is true of poetical and philosophical language—men of any less talent than Pope and Bolingbroke would scarcely have sufficed to corrupt the styles of writing on these subjects as they did. With our spoken language—the language of the drawing-room—the language of women—it is far otherwise. Men the most incomparably imbecile, the most supremely contemptible, may pour defilements into the well of pure English conversation, which a thousand filtrations will not extirpate. And it is precisely in this quarter that we tremble for the consequences that may result from the great circulation of these novels, especially among our countrywomen. The vicious diction which they propagate has no redeeming qualities. It does not sin against the preciseness of grammatical rules, in order that it may conform

more closely to the *lex non scripta* of idiom; it is vulgar, but not vernacular; it disregards, with foolish fastidiousness, the scrapings of our English soil, and diligently picks the garbage from every foreign dung-heap.

The most guilty of all these, in this respect, is Mr. Bulwer's 'Disowned,' and considering the large pretensions which the author of that novel makes to reading and philosophy, the crime is in him perfectly inexcusable. In the case of the author of the work before us, there is not this aggravation. He does not pretend to know much of literature or any thing of philosophy. But if he is a plain soldier, he was the more bound to write plain language; he should have written as the Duke of Wellington speaks; he should have avoided all affectation, and pay to his civil hearers the compliment of supposing that they can understand the phrases of the camp, without needing them to be translated into a miserable jargon, which he mistakes for the language of the city.

This is the chief complaint we have to make against the author of 'The Tales of Military Life.' In other respects, his tales are at least equal to the average of works of the kind. They contain some lively descriptions, and the stories are not wanting in interest. We extract from the first (which is perhaps not the best) story two or three of the most striking passages. The first extract will explain itself. The scene is laid at the time of Emmet's rebellion:

'At the conclusion of this communication the turnkey, with a knowing wink and nod of the head departed; so Mr. Ostin instantly availed himself of the hint which the fellow unconsciously had given: and, as he knew that, although his brother was in the king's uniform, and he himself a clergyman of the established church, both would be denied admission to see any person who was undergoing inquisitorial discipline, he determined to dissemble a little, in order to gain his point.

'Followed by Redmond and his brother, he approached the major, who, without moving from his seat, scanned them all over with a vulture's glance.

"I believe, Sir, you have got a prisoner in your custody, to whom a coat belongs which is now upon the back of one of your turnkeys," observed Mr. Ostin.

"Well, Sir; what of that?"

"It is rather singular; but the man to whom that coat belongs was engaged on the night of the 23d (as I am informed) with my brother, this young officer, who was severely wounded by him in Frances-street: he recognised the coat on the turnkey, and would like to see the man who stabbed him."

'The major's countenance became suddenly softened; he arose from his seat, and, bowing, replied,

"O, my dear Sir, I am very sorry that your brother has received a wound from the rascally villains: ay—see here, poor lad—his arm is in a sling—I hope it is not dangerous."

"No, Sir; the surgeon was of opinion that the wound would have proved mortal, had he been left without immediate assistance when he received the stab."

"Well, Sir," continued the major, "I am happy that I have it in my power to gratify your feelings on this point."

'Then, opening a window, he thrust forth his head, and cried out,

"Here, you Potts—is that done?"

"Yes, your honour;" roared a voice without.

"Open the door then."

'The major now motioned the visitors to go along with him, through a narrow passage; at the same time addressing Mr. Ostin thus:

"Now, Sir, your brother shall have satisfaction of the rebel-scurdrel that wounded him."

'Then, stopping half way in the passage, he turned familiarly, and holding the lappet of Mr. Ostin's coat, affected to whisper—

"We must be severe, Sir, with these fellows, or we should never do. Law is too mild for them—we should be all murdered in our beds, Sir, but for the tight hand we keep over them."

'He now advanced to a door, which, yielding to the iron hand of the aforesaid Mr. Potts, permitted

major to enter a yard, followed by Mr. Ostin, Redmond, and the ensign.

"There he is, Sir, in the middle—and a damned strong able fellow he was," coolly observed the major; at the same time pointing to one of three bodies which were hanging by the neck from a beam. The unhappy victims had no covering on their faces; and although their countenances were distorted by the last struggles of life and death, Redmond easily recognised the features of Carrol Watts!

"The major rapidly continued to talk.

"You see, gentlemen, I have settled him for you," said he, with a sardonic smile. "I would have only pitch-capped or flogged him, but that an old and worthy friend of mine, to whom the rascal had the impudence to send for a character, assured me that he was the worst of the whole pack of the rebellion of ninety-eight: so I wasn't going to let him slip off by a jury; for the evidence was of too slight a nature to hang him—he wasn't taken with arms in his hands. If we had sent all to be tried by a jury in ninety-eight, we should have done little or nothing. But—what is the matter with you, gentlemen?"

"The three visitors were alike pale, trembling, and horror-struck. Redmond's senses wandered, and he had only power to groan and stagger back from the sight, through the passage, while Gerrard Ostin was relieved from the cramp of his feelings by a flood of tears, which he covered by his handkerchief. Mr. Ostin alone spoke; and he, with difficulty, addressed the infamous abuser of the laws.

"And have you, Sir, the power of life and death over the unhappy men who may have offended against the laws of their country?"

"Offended against the laws!—eh!—Damn'd rebels—cut-throats—dogs. Have I the power, indeed!—that is a pretty question."

"Monstrous! But I will have this brought before the Government—this horrid murder."

"Murder! Poo—o—o—h. Murder, indeed! You seem to forget who you are talking to," said the major, with a sneer: "I'm damn'd sorry I let you in to see the fellow at all; and only I thought you were staunch, and not one of our half-bred Protestants, I'd have seen your reverence damn'd first. Murder, Sir!—ay, go to the Government; they can injure me—they dare not. I have been the very prop and pillar of their power."

"I will, at all events, publish to the world your atrocity," replied Mr. Ostin, with indignation.

"Publish!" exclaimed the major; "I defy you. Let me see a newspaper that dare even mention it—I'll soon have their types in the street, and their writers in the black hole. What do I care for you, Sir? I am Major Bludd, and the life and soul of the glorious and immortal party that will stick by me to the last. So, the sooner you quit this prison, Sir, the better."

"I am aware of that; but, Sir, I will again tell you, before I go, that you have murdered that man: he had only put his foot on shore the day previous to the insurrection, and, therefore, could not be supposed to be one of Emmet's gang."

"What! do you think, I will doubt the word of my old and respected friend?—a magistrate too,—who gave me his history! The very gentleman that he wrote to himself after he was taken! Poo!—There he hangs, and I wish all milk-and-water loyalists were there along with him!"

"Horrible! Horrible!" exclaimed Mr. Ostin, as he hurried out of the yard, to follow the youths who had left the dreadful scene of death, and fled to the barrack room.—Vol. i. pp. 129—135.

The following sketch of a remarkable man, whose portrait has been drawn so elaborately by Colonel Napier, will interest our readers:

"The apartment into which Allan was led by his commanding officer, for the purpose of being introduced to Sir John Moore, was on the ground floor of a miller's house, spacious, but encumbered with the utensils of the owner's trade, and miserably furnished. A particularly mild-looking and handsome man, apparently of about thirty-five years of age, was seated alone at a crazy oak table, gazing on a map which was spread before him. This was the commander of the forces. He was in his marching uniform—a plain blue frock coat over all—and bespattered with mud from head to foot; for the roads of that day's march which the army had gone, were very heavy, owing to the incessant rain that had fallen for the two preceding days. He was deeply intent upon the subject before him: his brow seemed oppressed, and his face pale with the fatigue of thinking. Although he had directed his aid-

de-camp to show in the colonel and Redmond Allan, he continued to gaze on the map; and, when they entered, replied to the former's complimentary inquiries, without raising his eyes, adding,

"Sit down, sit down Howard. I shall be ready to speak to you directly."

"However, a few moments only elapsed, when the General arose, and in the most cordial manner shook his friend the colonel by the hand.

"Permit me to introduce to you, general, one of my young officers, Mr. Allan."

"Redmond bowed, and felt some what agitated; but the affability and sincerity of heart which the manners of the chief displayed, at once restored him to his self-possession.

"I have heard of your talents, Mr. Allan, from my friend Colonel Howard," said the general; "and I hope they will prove as serviceable to yourself as to your country."

"My greatest ambition, general, is that they may be devoted to the service of my country and to your's," replied the young officer.

"Sir John Moore then requested both to be seated, and proceeded to open a portfolio, from which he took several drawings and plans; these he placed before Redmond Allan and the colonel, and having then sat down, commenced to expatiate on their merits and defects: discussion followed, and the result was, that Sir John was highly pleased with the promise given by the abilities of the young subaltern, while Colonel Howard felt all the satisfaction which could attend desired success.

"Young Allan was already a favourite with the general; he received his promise to appoint him to the quarter-master-general's department forthwith; and as the colonel and he took their leave, Sir John requested that both would dine with him, after the following day's march, on soldier's fare, when he would give full instructions to Redmond what particular duty he wished him to perform.

"Next day Redmond's name was in orders as acting deputy assistant quarter-master-general, and the young officer, having dined according to appointment with the commander of the forces, received his instructions to proceed to the river Carrion, in front of Sahagun, accompanied by an engineer officer, and attended by two dragoons and a Spanish guide, there to take certain drawings and plans. He was furnished with one of Sir John's best horses, and ordered to start at two hours before day-break the following day.

"With a caution from Captain Ostin not to go too close to the French lines, and a hearty shake of the hand, Redmond mounted, and set out on his new duty, through roads as dark and dreary as any December night could render them: the only means of keeping the road correctly was the tingling of the guide's little bridle bells which ornamented the head of his mule.

"At the end of the day's march, which was prolonged until four o'clock in the afternoon, they found themselves in the centre of the advanced cavalry, which was under the command of Lord Paget, and two days more brought them to a village, which they entered under cover of the dusk of the evening, and which was close to the banks of the river. On the opposite side of this river were posted the advanced sentinels of the French, but covered by small hills and wood from the view of the enemy.

"This village was deserted by the inhabitants—every house was tenantless. It was situated on a little hill, and could command a tolerably extensive view. From a dilapidated house, into which Redmond and the officer whom he accompanied cautiously crept to take up their quarters for the night, they could see the fires of the French camp, at the distance of a mile, on a range of heights to the left; and by the help of the telescope perceived the soldiers standing between them and the blaze, but nothing more—all else was darkness.

"The horses were all put up, and the dragoons, as well as the guide, enjoyed themselves at a blazing fire made by planks of wood procured in no very ceremonious manner by the latter, who, being acquainted with every spot in the village, knew where to put his hand upon whatever could be of use to himself or his comrades. In an inner room sat the two officers, regaling themselves with a canteen of wine before a bright and cheering fire, and arranging their plan of proceeding for the following day. Sufficient care was taken to obviate the chance of being discovered by the French sentinels from the light of their hearths, and having sat in conversation till midnight, they posted one dragoon outside the house to prevent alarm, ordering the

other to relieve him every hour; and wrapping their cloaks around them, lay down on some clean straw, procured after great labour by the guide, opposite the embers at which they had sat. Having listened to the occasional challenge of the French sentinels, which the stillness of night permitted them to hear, and thought of those scenes that usually brighten on the soldier's pillow when he shuts his eyes for rest, they fell into a sound sleep, which they enjoyed until an hour before day-break, when they were suddenly aroused by the call of the dragoons. They started up, and were already half informed of the cause of the intrusion by the countenances and manner of the soldiers, for the embers still burned brightly and lent sufficient light to the apartment. A few words acquainted them fully with the cause of alarm—several horse soldiers were at that moment in the village.

"Redmond ran to the window, and looking out, saw, by the light of the moon, which had dimly arisen, six mounted troopers, riding at a deliberate walk towards the cottage in which they stood. Whether the troopers saw Redmond, or took a fancy to the quarter which he occupied, is not certain; but scarcely had he withdrawn his head from the window and seized his pistols, when they rode up to the door and halted. The clattering of the horses' hoofs, the accoutrements and the arms, mingled with the voices of the men at the door, now convinced Redmond and his friend that a French patrol had surprised them, and all in the cottage determined to make the most of their situation, and defend themselves to the last before they would submit to be made prisoners. All the fire-arms were immediately loaded, and the two dragoons posted at one window, while Redmond and the other officer took up their position at another, the guide assisting generally as well as he was able. Two carbines and two pistols were about to cover their men—another instant would have killed or disabled four of the troopers outside, when one of them fortunately cried out—

"Abra el porto Pyzano."

"Stop! stop!" exclaimed the guide, "they are Spaniards—they are Guerillas—don't fire."

"This information was a relief to all parties. The guide thrust his head out of the window, and accosted the mounted men in Spanish; informing them that two English officers on duty, occupied the house. To this, however, the Guerillas replied, that if so, they had only to appear, and no further trouble should be given. The officers now directed the door to be opened, fuel was thrown on the fire in order to produce a thorough light, and the Guerillas dismounted to inspect the interior of the house.

"To Redmond's eye the appearance of the strangers seemed the personification of all that he had read in romance about Spanish and Italian banditti. Their dresses consisted of brown cloth, or olive velvet jackets, cut in the Moorish fashion, very short behind, and ornamented with a profusion of small convex white metal buttons; the sleeves tight, and united at the shoulders by red laces; the front open, displaying a closely-fitted cloth, or camelot, or leathern waistcoat. About their waists were thickly folded red worsted sashes, and broad leathern belts; their breeches were of brown cloth, short, tight, and laced at the knees with red tape. Some wore boots, broad and wrinkled at the top; others brown stockings, with drab leathern sandals, secured by broad red tape, which was crossed handsomely and highly upon the leg. Their heads were enveloped in red cotton kerchiefs, the ends of which hung down behind; and over the kerchief some wore a helmet, formerly French, but now the prize of the wearer—others the high, taper, black Spanish hat, ornamented by several circles of red tape, and the longest feathers of the cock-pheasant's wing; over their shoulders, scarf-like, hung the striped Moorish blanket; each man's hair was plaited into a long tail; their faces were half covered by dark thick mustachios and whiskers; their necks were bare; and they were well provided with arms, which, however, were more remarkable for ability and temper than for elegance or uniformity.

"As soon as the Guerillas saw the British uniforms of the officers and dragoons, they all placed their left hands to their brows in respectful salute, (their right hands held their naked sabres,) and apologised for their intrusion. Redmond and his companion received them with good humour; and, having ordered wine for their refreshment, entered into conversation with their chief in the French language, which was mutually understood.—Vol. ii. pp. 52—61.

Our last passage is, perhaps, the most powerful in the book. It describes an attempt to mur-

der our young hero, by the unlawful possessor of the Vandeleur property:

Carrol Watts now withdrew, and left Raven, who, flinging himself into a chair, groaned, folded his arms firmly, clenched his teeth, and began to chew the burning cud of reflection. He felt irresistibly borne onward to crime, in order to save himself and his former delinquency. Murder was somewhat abhorrent to him; but discovery was worse. No choice remained, and his fears urged him on with a rapidity that blinded every feeling but one. He turned it in his thoughts over and over, yet found only strength in his wicked project. At length the bitter hour was passed, and Watts returned.

"Come, Carrol," said he, as the latter entered, "I see by your countenance that you have become reasonable. You are a hot-headed fellow, Watts, but I do not like you the worse for that; soon excited, and soon appeased. Sit down, and taste old Heldershaw's brandy."

"No, I will not drink—let us to business," replied Carrol Watts, seating himself.

"Then I will drink, and to your health, Watts," said Raven. He then swallowed a full glass of the liquor, the effect of which was to improve his resolution.

"Now what am I to do, admitting that I agree to join you in this business?" demanded Carrol Watts.

"You know as well as I do," replied Raven, "that as the affair has come to his ears, the first step must be to remove him."

"Nothing can be done without it," observed Watts.

"Nothing," echoed the colonel—widening his eyes, approaching and placing his hand on the other's knee, in token of reciprocation—"nothing, my dear friend. He must be removed, otherwise I should fail, and your five thousand pounds, as well as the annuity, be lost."

"But how is it to be done?"

"Done! why—pooh! man, if you choose, that won't trouble us much."

Both paused and gazed at each other a few moments; Raven, searching, as it were, the countenance of Watts for a look which he might interpret to his purpose. He then continued—

"You know, Carrol, if you do that, there will be a bond between us stronger than human power can make—there will be a guarantee to you that will supersede the necessity of all deeds and lawyers."

"I understand you. In fact, you think he could be put quietly aside."

"Exactly so."

"And that my knowledge of your share in this deed would be my bond."

"Precisely; don't you see it? My dear fellow, it may be done."

"Yes; but I cannot do it."

"O, as for the doing—that is no matter; will you join and be secret? that's the great service which you may do."

"Then who is to do it?"

"Why, Watts, that question is easily answered; there are but two of us."

"Then you will do it?"

"I will: I only wish for your assistance and secrecy. Do you agree? Say the word—I have the plan prepared, and a check for five thousand pounds shall be your's to-morrow morning."

"Give me the check now," said Watts. "I do not doubt your sincerity; but that would clench the matter."

"I'll tell you what, Carrol," said Raven, after a short pause, "I can have no objection to give you the money now, only that you—*might* change your mind."

"No, no," returned Watts, "you need not fear: I am fixed. I am a man that may be depended on: but I am determined not to move a step in the business without a proof of your good intentions."

"Then—no matter—I'll make it a point of honour between us—you shall have the check."

Raven then drew from his pocket a blank check, took a pen, and having written out an order for the five thousand pounds, handed it to Watts, with an air of honourable confidence. Watts then took the paper, tore it carefully into two parts, and returned one part to Raven, saying—

"I will not have the money; I only want a show of security—something by way of written promise; I will keep the one half of the check, you shall keep the

other, and give me a memorandum on a slip of paper, that you will present me with the half which you hold on the day after to-morrow, provided a certain affair should occur—write it so; that will put an end to all doubts between us."

"To that I have no objection," said Raven, as he proceeded to write the memorandum. "I see you mean well, Watts. Believe me it will make us both happy for life; five thousand pounds is not a sum to be gained every day."

"You know, Carrol," said the 'worshipful' magistrate, "that unless evidence be forthcoming in any case of suspected crime, the law can take no hold of the person or persons so suspected. Well, there are only three people in existence that know any thing of the secret we wish to keep; these three are you, Heldershaw, and myself. Confidence begets confidence; I have confided in you, you have confided in me. In my plan I fear we cannot well do without Heldershaw's assistance; and I think we might trust her. In the first place, she may be unguarded if we do not; and, in the second, I shall be obliged to give her as much money to shut up her suspicious prate as to command her secrecy. Look you! the young man sleeps here to-night, and will also sleep here to-morrow night. Might he not commit suicide? there is nothing more probable than that an officer, having quarrelled with his colonel, and resigned his commission, might commit suicide. Do you understand?"

"I do; go on."

"Well, if Heldershaw be admitted into the business, she will take care that he shall sleep soundly during the night; she will infuse into his drink at night a sufficient portion of laudanum to seal up his senses, at least in sleep. You and I shall then go to his room, place one of his own razors beside him, or in his hand—as soon as it has—you know the rest!—then, Watts, we shall both enjoy security, affluence, and happiness."

"But—the razor—why use the razor? would not the laudanum be sufficient?" inquired Watts.

"No, by no means; it is doubtful—assistance might come—he might recover—it is not sure—nothing is more dangerous for us," replied his cautious 'worshipful'; "and," continued he, "to give the affair a still greater degree of probability, the empty vial in which the laudanum shall have been contained, must be placed on his table; then, you know, even if the stomach should be examined by the surgeons, no further light can be thrown on the matter; Burn's Justice supposes the very case. The inference will be that he took the poison himself—Don't you see, my dear fellow?"

"I do—I understand—but who shall use the—?"

"I perceive—you would not, of course, as you said, do the business—leave that to me. Now, Watts, this all appears very bold and desperate, I may say criminal, on my part; but when you consider that it is in self preservation—the first law of nature—that it is done, you will not think so. Here is not only the ruin of myself, but of Sir Edward, depending on it—and what is a life after all? Had he met a bullet at Corunna, he would have only died; and in this case, what more is it? I would not do it—by Heaven I would not do it, no more than I would kill myself, only that to leave it undone must destroy a fine property, ruin my high name, and the hopes of my son, Sir Edward. Do you think Heldershaw should be admitted to the affair?"

"I do—I think it would render the matter more certain."

"Then I will break it to her; and to-morrow evening will you come here to talk over the business further?"

"I will," replied Watts, as he arose to depart—"at seven o'clock I'll meet you."

Raven received him somewhat agitated at the approaching occurrence, which now he felt to be inevitable—to be beyond doubt, seeing that Watts was true to his appointment. Both sat down in the little apartment where they had communed the night before. After a short time, Mother Heldershaw appeared with a strong howl of punch, and with the exception that she spoke in whispers, her manner was as unaltered as if nothing extraordinary were the cause of the meeting. Her compliments to Watts, her praises of her punch, and her occasional allusions to the dreadful affair of the hour, were indiscriminately and unaffectedly mingled.

"I will not drink," said Watts; "it would unfit me for my work."

"Well, do as you like, Carrol," returned Raven, "but, for my part, I should be totally unfit for mine

if I did not drink; so, I say, "To our success," in a bumper."

"Ay, "To our success," in a bumper, I say too," cried Mother Heldershaw, as she swallowed the contents of her glass.

"You say he drank the coffee containing the laudanum," observed Raven to the hostess.

"Yes," she replied, "I took him a strong cup of coffee at nine o'clock, in which I put, you know, the drops: after a short time he called for another cup, and I gave him one of pure coffee. He then said he wanted to sit up for the purpose of writing letters; but rang his bell at ten o'clock, and said that as he felt very heavy, he would go to bed. I prepared every thing necessary, and took away his candles at half-past ten. He was then fast asleep."

"You are sure that the door is not fastened on the inside?" said Raven.

"It cannot be either bolted or locked."

"Then go again," hastily cried he, "on some pretence, to the room, and look closely to see if he be asleep now."

"I am sure he is asleep," returned the hostess, "but one cannot be too cautious: I'll go again."

So saying, she quitted the room, and returned in about five minutes.

"He is just as I left him before—as sound as a rock," said she, with a smile that would have honoured a fiend in its most diabolical work.

"Martha, you have not lost your determined spirit by campaigning in India," observed Watts.

"Not I: what business has a soldier's wife with being squeamish; if I had been so when I served with Sir Arthur Wellesley in the Mahratta war, I should have made a poor hand amongst the dead and wounded. What's one life?—why, the women of our regiment, who were worth speaking about, thought nothing of settling a hundred of the wounded Indians: ay, or a few of our own lads, if their watches or purses were good."

"Hark!" whispered Raven, "is there any body stirring in the house besides ourselves?"

"No, not a soul. I gave both the boy and girl a sufficient dose of egg-flip to send them a-snooring: it is the wind and the rain beating against the tiles and the windows that you hear."

"What o'clock is it?" demanded Raven.

"About half-past twelve," replied Watts.

"It is a dreadful night," returned the colonel, who was now evidently becoming fearful of his task. "This punch is not strong enough: give me a little brandy, Martha—Carrol, how do you feel?"

"Feel!" echoed Watts, "never more confident in my life; I seldom meet with disappointment in any enterprise I undertake."

An awful half-hour now slowly passed away. The conversation was whispered in broken passages, and long pauses took place between each observation; the storm increased without, and the blaze of the coal-fire, on which all silently gazed, purred loudly—no other noise disturbed the night. Raven now arose, and having swallowed a bumper of strong brandy, whispered a question in Mother Heldershaw's ear, to which she replied.

"Yes; I took it out of his dressing-case; and here it is."

At the same time handing him something under the table, which she had taken from her bosom. Raven could not hide the effect which this had upon him; he shuddered, and looked at Watts with an attempted smile, that appeared like moonlight on a grave; and walking towards the window, he looked out, observing with a shudder that the night was not only rainy, but very cold.

The moments slowly passed, until the clock in the lobby struck "one." A silence reigned for a few seconds; yet there was much language in the looks of all the parties.

"Carrol, that is the hour," whispered Raven;

"what say you now?"

"What say you, colonel?" returned Watts.

"Me! Can you doubt me? Think you I can let slip this opportunity, and meet my total destruction to-morrow? Oh! no.—Another glass of brandy, and then to save all.—Martha, go first; your shoes are off; that is right—and your's—so are mine. Come, Watts, be near me—close to me; but you need not be in the room, unless I should be opposed."

As they were leaving the apartment, he seized the arm of Watts, pressed it with an iron grasp, stopped short, and, with an impressive whisper, said,

"I will make it six thousand, instead of five, if the work be but well done."

Watts bowed, and they followed cautiously the steps of Mother Heldershaw, through the lobby, up three steps of a side stairs, and along another lobby; at the end of which was the room of the young officer.

The rain was dripping in big drops on the floor of the passage, and made a melancholy noise as it splashed; but this noise served to cover the accidental cracking sounds which their steps made on the old boards of the floor: the raging wind without, too, aided them much in this, for it whistled loudly as it passed, and shook the leafless trees behind the house into hoarse murmuring—it was a frightful night.

The woman was at the door; she stopped, placing her finger to her lip, and looking back towards her followers. Watts could perceive, by the light of the candle, which she held near her face, that, fiend as she was, the terrors of the moment were pressing on her; her eyes were glassy, her cheek pale, and her lips parched and withered. All stopped while she listened. She seizes the button of the door—the door slowly opens.

"Are you asleep, Sir?" said she, in a low voice.

No answer was heard. Twice she repeated the question, with the same effect. She then walked softly into the room some paces, and returning, left the door open. All paused again for a few moments, and held in their breath; they could distinctly hear the strong breathing of the intended victim.

"Let me go before you," whispered Watts. "I'll remain at the foot of the bed, to be ready, lest he should awake and overpower you."

A nod of the head and a squeeze of the arm were the tokens of assent. The woman gave the candle to Raven, and hastily, but softly, went back to the lower lobby. Watts looked at the colonel's face, and saw it pallid and perspiring, but still resolute. He then softly entered—Raven's foot cautiously followed. His worship placed the candle on the chair beside the bed—stood quiet a moment—Watts, also mute, at the foot of the bed. The sleeper's breathing was loud, and promised security. The magistrate looked around, placed the poison-vial beside the candlestick on the chair, and then coolly opened the blade, and tied a piece of tape upon its juncture with the handle, to prevent its yielding in the wrong direction from its intended work. A hurried blast of wind, and a pattering of the heavy rain, caused another pause—all was still again. The instrument was now grasped in the villain's right hand—his left on the curtain of the bed, which slowly drew aside—he fixed his eyes on his intended victim—he raised the blade, but looked back in caution—another moment—his arm is ready; but a voice of thunder roars out:—

"Vandeleur, arise!"

It was the voice of Watts. The trembling assassin started with a groan into the centre of the room; the door of a closet at the instant opened, and Captain Ostin, Corporal Magoverin, and two officers of police, ran out, lighted by two lanterns, while the rescued officer jumped from the bed.—Vol. iii. pp. 26—33.

SEPARATE EXISTENCE OF THE SOUL.

Testimonies in proof of the separate existence of the Soul in a state of self-consciousness between Death and the Resurrection. By the Rev. Thomas Huntingford, M. A., Vicar of Kempford, Gloucestershire. Accedit Johannis Calvinii. ψυχῆς ἀνεξαρτησία. 8vo. pp. 500. Rivington. London, 1829.

We have here brought into one view, and in a small compass, the opinions of a considerable number of eminent men, both Heathen and Christian, respecting the curious subject,—the state of the soul immediately after death—a subject, however, of which nobody can know any thing, and of course, all that has been written on the subject must be mere conjecture; ingenious, it may be and plausible, but still nothing more than conjecture. We agree with the learned Sir Matthew Hale, that 'the state of a Christian after death, and the privilege that with and by Christ, he shall then receive,' these are secrets that never lay within the reach or discovery of the light of nature. No more is discovered or discoverable unto us, than what it hath pleased the God of nature, in the Scriptures, to reveal and discover to us. So far we may go; farther than that we may not, cannot see. This is a learning that no other means can teach us than divine revelation; a continent that no other man can describe, nor any other light discover to us, but the Word of God himself. If we guide not ourselves by this thread, we lose ourselves in the discourse, or contemplation of it.

As to future existence, we have the testimony of the Scriptures, that we shall exist hereafter; though we are told very little of the *what* or the *how*; and apparently for this very reason, that we could not understand it if we were told. It is to be expected, therefore, that those who inquire into this *what* and this *how* must laud themselves in fancies unintelligible to themselves and to others. We accordingly find in some of the opinions here collected by Mr. Huntingford, several conjectures which are objectionable, in that their authors have endeavoured to be 'wise above what is written.'

Passing over what he has given from the ancient writers, as much too brief and imperfect, and indeed the worst part of the volume; the more modern authors whose opinions he has stated chiefly in their own words, are,—Sherlock, Addison, Calvin, Grotius, Jeremy Taylor, Barrow, Sir Matthew Hale, Pearson, Beveridge, Jortin, Secker, Butler, Bull, and Watts. We were certainly much surprised at not finding in this list the names of Bishop Warburton, Dr. Cudworth, and several other English writers of celebrity, while the author's knowledge of foreign works on the subject seems exceedingly limited. He does not even allude to Witsius, Buddeus, Windet, Thomasius, Cardan, Jablonski, &c., not to mention the ancient Fathers.

NEW MUSIC.

The favourite Airs in Pacini's Opera, 'L'Ultimo Giorno di Pompei,' arranged for two Performers on the Piano-Forte, by A. Diabelli, Book III. Boosey and Co.

This third book completes the work as Duets, and presents more variety than the former two; the first piece introduced is 'Squarciami il core, O Barbaro,' Duetto, an allegro moderato in F, common time, followed by a very delightful andante in A flat, 9-8 time. 'Su questa mon coacodi,' a pleasing aria andantino in D, 2-4 time; 'Fermati, Ottavia,' duetto, an allegro in C, with several episodical and clever movements; and, as finale, a striking presto in C minor, 'La Distruzione,' which, as it is to express that dreadful calamity which gives title to the work, seems well adapted to the purpose, and therefore bear a strong resemblance to Haydn's fine 'terre moto' in his 'Passion of our Saviour.'

A Fantasia for the Flute, with an Accompaniment for the Piano-Forte, in which is introduced the popular Airs, 'The Light Guitar' and 'Festive Scene,' composed and respectfully dedicated to Henry Hamilton, Esq., by Bernard Lee. Mayhew and Co.

A very pleasing and flowing conversational piece, admirably adapted to the instrument, the flute especially. It is devoid of difficulty, and yet not so trifling as to be uninteresting. Barnett's two very favourite Boleros are ingeniously adapted; and to teachers of the flute, we presume the work will be singularly useful—to their pupils, very amusing.

'A Wanderer I,' sung by Mr. Sinclair, in the Opera of 'The Earthquake, or Phantom of the Nile,' the Melody selected and partly composed by John Sinclair. Dale.

With the exception of a single note, this very simple melody is written within the very limited compass of the two treble E's, a circumstance the more noticeable when we reflect upon the scope of Sinclair's voice. He therefore has, most probably, confined the air within these limits, in order to render it more generally available. It is a very easy and trifling allegretto pastorale in A, 6-8 time, and appears like a French air, selected from some vaudeville.

'Les Bagatelles,' No. I., containing a French Air, selected and arranged for the Piano-Forte, by J. B. Cramer. Cramer and Co.

This is a mere trifle (as the title imports) of two pages for 1s., intended for school teaching; and we should not have deemed it worth notice, had not Cramer considered it worth adapting. He has inserted the leading fingering; and in its general arrangement, it resembles the most popular, and, at the same time, most insignificant piece perhaps ever published in a detached form, namely, 'Butler's Egyptian Air.' If Cramer's 'Bagatelle' meet with a similar circulation, it would be worth while to publish scarcely any thing else.

Mozart's Operas, arranged with Embellishments for the Flute, by Charles Sauts, No. II. Cocks and Co.

This is published in continuation of the work noticed by us in 'The Athenæum,' which commenced the present year (No. 63, page 8), and all the deserved

commendations there offered, may be justly applied to this the second Number. Twelve of the most admired pieces of Mozart's beautiful opera, 'Così fan tutte,' are well arranged, and well brought out; and although the greater part of the opera is condensed in this one book, the price is but 3s.

'My Father Land,' the admired Tyrolienne, sung by Mrs. H. Hughes, at the Adelphi Theatre, in the Popular Drama 'Monsieur Mallet, or my Daughter's Letter,' written by W. T. Moncrief, composed by John Barnett. Published by the Authors.

This is evidently a parody upon the composer's most successful ballad, 'The Light Guitar,' and being written within the very confined scale of eight notes (the same noticed above in Sinclair's song) must be very easy of performance by any one who sings at all. It exhibits the same pleasing cheerfulness observable in all Barnett's familiar ballads, and will, no doubt, meet with an extensive and deserved circulation. Mrs. Hughes exhibits a very pleasing tone of voice in her performance of it, at the Adelphi Theatre.

Hart's Thirteenth Set of Quadrilles, selected from Matthew Locke's Original Music in Macbeth, including the favourite Isabel Waltz, arranged as Duets for Two Performers on the Piano-forte, with an accompaniment for the Harp (ad lib.), by N. B. Challoner. Mayhew and Co.

This arrangement of Hart's popular Quadrilles must be singularly useful and acceptable;—for in large evening parties, where more ladies are assembled than can be formed into sets for dancing, and as all our accomplished countrywomen can play upon the harp or piano-forte, (or both,) all may be employed to the advantage of all, a convenience and pleasure we have satisfactorily experienced. The arrangement is unusually well made for the respective instruments (particularly the harp); and we hope this work will be followed up by an extensive continuation.

New Arctic Expedition.—It is understood that Captain Ross expects to be able to start on this new Expedition in the course of the present month. It is undertaken solely at the expense of Captain Ross and his friends; and the great novelty attending it is that steam is to be employed in it for the first time. Captain Ross goes out in the *Victory*, a steam-vessel of 200 tons burden, accompanied by the *John* of 320 tons, laden with fuel and stores for three years. The powerful steam-engine of the *Victory* is of the high-pressure kind, and will consume fuel of every sort, whether the wood to be found in many places on the coast, or the oil to be procured from the tenants of the deep; and the vessel is so constructed as to be incapable of destruction by the pressure of icebergs, the effect of which will be to raise up instead of to crush. The paddles, worked by steam, can also be taken off if necessary, and as once she can be rigged as a sailing vessel.

A Great Writer.—I require in him whom I am to acknowledge so, accuracy of perception, variety of mood, of manner, and of cadence, imagination, reflection, force, sweetness, copiousness, depth, perspicuity. I require in him a princely negligence of little things, and the proof that although he hath seized much, he hath also left much unappropriated. Let me see nothing too trim, nothing quite incondite. Equal solicitude is not to be excited upon all ideas alike; some are brought into the fulness of light, some are adumbrated. So on the beautiful plant of our conservatories, a part is in fruit, a part in blossom; not a branch is leafless, not a spray is naked. Then come those graces and allurements for which we have few and homely names, but which among the ancients had many, and expressive of delight and of divinity, *illicebra Venere*: these, like the figures that hold the lamps on stair-cases, both invite us and show us the way up: for, write as wisely as we may, we cannot fix the minds of men upon our writings, unless we take them gently by the ear. When our servants or trades people speak to us, it is quite enough that we understand them; but in a great writer we require exactness and propriety. Unless we have them from him, we are dissatisfied in the same manner as if the man who refused to pay us a debt were to offer us a present.

HERBERT.

A TALE.

PART I.

THE lowliest heart is ever nearest unto God; and so was it with the young Lord Bellincourt. His boyish years were full of confused and stormy thoughts; but, as he grew to manhood, his mind became serene and strong, and he was no longer vexed by those self-begotten miseries which are often the mist of a summer morning, that indicate the glory to come, but which sometimes also deepen and burst into tempest. He found much gladness among books, and much study in the fields. The more he understood of men, the less he shunned them; and the more clear became his consciousness of his own nature, the more he learned to revere the ideal of humanity. The rich thought him strange, but the poor knew him to be kindly; and, while some conceived of his mind as of a quaint museum filled with rare fancies, and embalmed antiquities, and trivial knowledge won from our common earth, there were many who felt it to be a treasure-house filled with living symbols of joy and heaven-minded meditations, and overflowing with wealth on all the world.

He was the eldest son of the Earl of Marlow, who, when his heir had attained the age of twenty, lost his wife. The Countess left but one other child, a dumb boy, five years old, named Arthur. The Earl was now an old man, and was anxious that his son should marry. Sir William Clifford, who had wedded a cousin of the deceased Lady Marlow, lived in a distant part of the kingdom; and to him Lord Bellincourt went on a visit. His daughter, Louisa, was then about the young man's age, and a creature of the most intense beauty. Her dark eyes were fierce with splendour; and, when she wreathed her long black locks with flowers and with leaves of the elegant plant which bears her name,* and clothed herself in the airy garments which beseeemed a fancied wood-nymph, the power of her glance, and the haughty bearing of her imperial form, belied the humble gracefulness of her vesture and ornaments. She sought to dazzle and command the heart of Herbert; (for such was the name of Lord Bellincourt. And, in truth, he was too young and too sensitive to beauty, not to feel admiration and delight in the presence of such a being. But he did not love her. His visions were all of a happiness which can be enjoyed in the narrow cell, or under the green-wood tree,—which belongs to ourselves, and is a part of our nature; and the only pageantries which it gave him joy to fancy, were the good man's natural garbures, the bounties of the world to all, its skies, and woods, and rivers, and the symbols and triumphs of serene affections. She dreamed of the highest seats in the halls of princes, of power, and magnificence, and successful vanity; and between them there could be little sympathy. When he left the house of Sir William Clifford, the look of scorn and detestation bent on him by Louisa, gave to her exquisite features the expression of a sorceress, baffled by the spirit whom she had hoped to make her slave.

The Earl of Marlow received his son with the utmost indignation. He told Herbert that he was resolved the marriage between him and Louisa Clifford should take place, and added that he would permit no more delay than three months. Lord Bellincourt replied, that he too was resolved, and that nothing could ever induce him to wed her. His father commanded him to leave the house, and not to return until he could consent to yield obedience where it was due.

Herbert departed from his home a solitary wanderer. The pittance of which his father could not deprive him, amounted to no more than the income of a day-labourer; and like a labourer he determined to live. He betook himself to an obscure valley, hired a small cottage with a patch of garden, put on the dress of a peasant, and

began to try the strength of his philosophy in a mode of existence destitute of all the appliances which had adorned and enriched his former state. And his was a mind too well self-sustained to fail in the enterprise. Regular bodily labour in his garden improved his health. He studied the few old books which he now possessed more minutely and profitably than when he was surrounded by the myriad volumes of Lord Marlow's library. The earth appeared to him more various and living when he was compelled to make it his friend, than when he strolled along it with the consciousness of one of its masters; and, being driven to seek within himself for enjoyments to fill the place of those he had lost, he discovered in his own breast an ample store-house of brighter blessings than the palace in which he had lived, or the cities he had visited, could furnish. Herbert Winter,—for he laid aside his title with his condition,—was well known to the two or three yeomen, and the farmers, who with their families inhabited the valley. They had no suspicion of his rank; but they felt that he was of a different class and education from themselves, and they were gratified by the kindness and gentleness of his manner. He was eagerly sought for as a guest at their fire-sides; for he opened to them and their children a world of amusing and unpretending information, and the tales which he remembered or invented, and told in their cottages, brought wonder and delight to young and old.

So, for several years, he dwelt in the valley a happier man than Seged of Ethiopia. At a few intervals, in the earliest summer dawn, or in the clear night, he walked to the neighbourhood of his father's mansion, and wandered among those familiar paths of his childhood, and beneath those ancient trees planted by his ancestors. His recollection of the pleasant places of his youth, of the father who for so many years had fondly loved him, and of his buried mother, and of Arthur the helpless boy, breathed natural sorrow to his heart. But, when he thought of that despotism and untempered loveliness with which he had been required to wed, he blessed God that he was not Lord Bellincourt, nor the husband of Louisa Clifford. Her headstrong and selfish loveliness sometimes haunted his dreams, and looked at him through the foliage with tyrannous eyes; or, intently gazing at him, glided, he knew not how, amidst the mists of the morning along some forest glade. And he thought that he would rather be wedded to the humblest and least cultivated maiden of the valley in which he lived, than to that high-born and resplendent lady.

On one occasion, about three years after he had first become an exile from the halls of his ancestors, he lingered in the woods longer than he had ever stayed before, and taking a last look of the house, he saw his father on the lawn with Arthur by his side. The old man walked feebly, and laid his hand on the shoulder of the boy; and Herbert could distinguish his white locks glittering in the sun. Three years more passed away; and again he saw him seated in a chair on the terrace with a young woman standing beside him, and his son lurking, as if in fear, behind him. The young lord could perceive that the female was of a tall and striking figure, and richly dressed; but he could perceive nothing more. He abhorred the thought of being a spy upon his father, and turned to leave the woods. His last glance showed him the lady pressing the old man's hand to her bosom and then to her lips. Herbert saw no more; but in this there was abundant subject for reflection, and, to one less calm and self-relying than Herbert, for sorrow and alarm. He returned, however, to his narrow home, and the serene activity of his habitual occupations; and sometimes forgot, during many days, that he had once been called Lord Bellincourt, and that he was heir to wide domains and an ancient earldom. Wherefore should he think of these things, who was actual owner of the rich inheritance of earth, and the

beauty of heaven, and the unbounded and undistracted kingdom of a free, contented, and fruitful mind?

PART II.

FROM the time of his son's departure, the Earl of Marlow became more and more fretful and moody. He shunned the society of his equals, and was surrounded only by servants; for his son Arthur was in a great degree disabled by his misfortune from affording his father those pleasures of society which he refused to seek from without. The old man brooded in secret over the absence of Herbert; but his pride forbade him to recall the outcast: the enjoyment which he had been accustomed to derive from his intercourse with his neighbours was now replaced by the vulgar and servile flattery of menials; and the strong and highly-cultivated mind of the Earl rapidly decayed under their degrading influences. The affection and good temper of Arthur never diminished; but the impatience of his parent and the unhappy condition of the boy made communication between them difficult; and the presence of the dumb youth often served only to irritate Lord Marlow, by recalling to him the misfortune of his family.

After some years, the Earl shut himself up almost entirely in his chamber, and would scarcely ever consent to see his son. No one, except two or three favourite servants, could approach him without encountering an explosion of rage and disgust; and, while he was indignant at the cessation of any attentions which he had before received, the most flattering civilities were repaid with anger and contempt.

He was seated one day in his cabinet, when an attendant informed him that a lady desired to see him. 'I am too ill too see any one. I have nothing to do with ladies—tell her so, Martin; and let me hear no more of her.' The servant returned in half an hour looking confused and half frightened. 'What is the matter now? Are you determined to kill me?' 'My Lord, I am sorry to say that she will not go. She is a young lady, and looks like a person of distinction.' 'A person of distinction! Martin, you're a fool. Tell her I would not see her if she were Queen of England.' 'Yes, my Lord; but—but—but, my Lord—but—' 'But what, you idiot? Am I to be persecuted in my own house by adventuring mantua-makers? What is the matter, I say? Tell me at once, or you and she shall leave the house together.' 'She gave me a look, my Lord, that I would not stand again for any thing. I am sure she is a person of high rank, and she is the most beautiful creature I ever saw; and she sits in the library as if she were at home, and told me to desire your Lordship to go down to her.' The Earl was now nearly choking with rage. 'She—she—she—she thinks herself at home, does she? And I am to go to her? Martin, we will see if I am master in my own house. Let me say three words to her; and then she may force herself on me again if she pleases. Wheel my chair opposite to the door; and show her up.' 'Yes, my Lord;' and the valet departed on his errand, while the Earl wrapped his dressing-gown about him, pulled down his velvet cap till it shaded his eyes, and compressed his exuberant fury till he had made his trembling features a 'loft of stored thunder.'

In a few moments, Martin opened the door of the cabinet, while the lady advanced up the long gallery, and the Earl broke out at the top of his voice, 'Martin, call the footman. We will see. So this is the strumpet.' The lady moved forward with the utmost composure, and interrupted him by saying, while she threw aside her veil, 'My lord, I wished to save you the trouble of coming down to me; and, as you are an old friend, I have taken the liberty of waiting on you in your retirement. But you have not seen me since I was a child, and, perhaps, you do not remember me.' Such was the lady's introduction of herself to the Earl of Marlow. Her splendid

* In Spanish the verbena is called *La Luisa*.

beauty and exquisite manners delighted the old man; and the intelligent and brilliant conversation from which he had debarred himself for several years, now visited him with tenfold grace from the lips of so accomplished a woman. She remained his guest, and she was the person Herbert had seen beside his father. Ere many months, she became the Countess of Marlow. The Earl daily declined in health, and was soon entirely confined to his chamber. The Countess was constantly by his side, and, as much as possible, excluded Arthur from attending his father. This continued long; and, at last, it was supposed that the Earl was near his end. Nothing was known of Lord Bellincourt, and he was commonly reported to be dead, and the dumb boy could be but little obstacle to any designs of the Count. But a rumour of his father's approaching decease reached Herbert in his retirement, and he revisited the park that surrounded his former home. He was wandering through the forest-paths, in hope of meeting some one from whom he might obtain more accurate information, when he perceived a stripling lying at the root of a large elm, which covered him with its shade. He recognised his brother, and approached him. The boy had loved him much; but he thought it unlikely that he would discover the young nobleman in the simple peasant. He asked Arthur if he could tell him what was the state of Lord Marlow's health. The youth started at his voice, and, having looked at him keenly, turned away his eyes. He proceeded to act the feeble step and tremulous gestures of age, and then laid down his head as if on the pillow, closed his eyes, and groaned. He next mimicked the appearance and air of command of the Countess, and indicated how despotically she ruled the household, and how carefully she had kept him away from his father. But, as he explained by similar signs, he had, on the previous night, deceived her vigilance, and reached the bed-side of the patient. He then reverted to his representation of the Earl, and exhibited rapidly the interview between them; the affection of the old man for himself, his dread of his wife, and his fear of her intentions with regard to his helpless child. After this, the boy gave another anxious and searching look at the face of Herbert, and drew from his bosom a small miniature of him which Lord Bellincourt well remembered. With the aid of this, Arthur displayed his father's confession of penitence for his conduct towards his elder son, his earnest and almost desperate longing to see him once more before he should die, and his resolution to reinstate him, if possible, in his rights, and to secure them both from the machinations of the Countess, by giving into the hands of Herbert the papers, in the destruction of which consisted her only chance of success.

The elder brother took off the hat which concealed his brow, and pressed the dumb boy to his breast. He then, without waiting to change his dress, proceeded to the abode of his ancestors. The increasing danger of the Earl had thrown the house into confusion, and Lord Bellincourt, though in his peasant garb, made his way without difficulty by the assistance of his brother to the ante-chamber of the room in which his father lay. Here the servants attempted to withstand him; but, on telling them who he was, and his being recognised by an old female who had taken care of his childhood, they fell back, and he was close to the door when it was opened from within, and he was met by the Countess.

In the first moment of her surprise, she exclaimed, 'Lord Bellincourt!' and at the same instant he uttered the name 'Louisa Clifford.'

'The Countess of Marlow, Sir,' she answered, and would have opposed his advance; but the old man had heard the voice of his son, and she was startled by hearing the dying patient exclaim in loud and earnest tones, 'My son, my son! Thank God, you are returned at last!' Herbert rushed to his father, who wept and sobbed upon his

neck; and, when he had given him the key of the strong-box that held the most valuable of the family papers, he blessed him and his brother, and, without naming the Countess, fell back and expired.

THE QUERIST.

No. III.

Query 2. What are we to think of the grave dictum of Locke, 'that all the art of rhetoric, besides order and clearness, all the artificial and figurative application of words which eloquence hath invented, are for nothing else but to insinuate wrong ideas, move the passions, and thereby mislead the judgment, and so indeed are perfect cheats?'

A GREATER than Locke has laid down the characters which alone distinguish eloquence as an art, from mere empirical tricks and topics of persuasion. That the skill to recommend probabilities presupposes the knowledge and pursuit of truths—that the artful arrangement of resemblances is but a lower manifestation of the same unerring judgment which discerns the most minute shades of difference—that even the fraudulent use of moral ambiguities requires acute and scientific perception of the limits betwixt the regions of doubt and certainty, and that the mastery of art is unattainable, save by contemplating whatever is most sublime in the system of nature, by analysing whatever is most complex in man, and by adapting the forms and species of persuasive discourse to human tempers and capacities in their infinite variety—such are the axioms—such are the majestic endowments which it was Plato's to conceive and Burke's to realise.

It is asserted by the tribe of pseudo-logicians, who think themselves entitled to be offensive on this subject on the strength of such a name as that of Locke, that much unnecessary vagueness and diffuseness are inseparable from the use of all rhetorical ornament. Now, surely, it is painfully known to many, that of all the styles that owe their birth to the confusion of tongues, the most vague and diffuse is what is called the logical style. It must be vague; for it establishes no preference between one step in an argument and another: consequently, in the immense train of syllogisms involved in every argument, although it is impossible to write or speak them all, in the most mercilessly long discourse, yet a logician, out of the vanity or the conscience of his art, will introduce as many as possible; and his system gives him no rule for judging what link is more important than another. Hence result diffuseness and vagueness: for what prevents diffuseness and vagueness, except the fine instinct which enables a good writer or speaker to feel unerringly what points he must bring out in strong relief, and what he may leave quiet in the back-ground? Thus, in another less refined imitative art, light and shadow, well distributed, will save a world of outline; and that aerial perspective, for neglect of which no accuracy of outline can atone, will, if attended to, successfully devolve on the spectator's imagination the task of filling up those blanks which a bungling artist certainly would feel it his duty to cover over with his feeble, ineffective touches. What is called the logical style rejects, of course, this intellectual perspective and colouring. It substitutes for that effect, which it can never compensate, a hard, dry, and frigid verbosity; and, by endeavouring to comprehend the whole of a subject, ends commonly, like the boy with the figs, in accomplishing not even the least part of its intention.

It is evident that a style like this must be too diffuse; but an Aristotelian, possibly, may stare when he is told it must be too concise also. Such, however, is the case: for, as it already has been remarked, that not even the prolix propensities of a logician can bear him out in introducing all the syllogisms which are contained in any argument whatever, it is clear that some must be omitted. But, as he

will not learn that happiness of style which facilitates a reader or hearer's filling up for himself what the speaker or the writer may have left unfinished, it is plain that his omissions always must be perceptible as all the edification he can impart amounts to only what he brings out in explicit and direct statements. Unfortunate man! apparent inconsistencies unite for his deserved damnation. Even vices which it would really seem excluded each other, are yet combined in his chaotic intellect; and, worse than Colonel Charteris himself, whose insatiable avarice preserved him from prodigality, while exempted from hypocrisy by his matchless impudence, our logician is prolix without the praise of perspicuity, and elliptical without condensation.

'In aiming at a concise style,' says Dr. Whately,* 'care must of course be taken that it be not crowded; the frequent occurrence of considerable ellipses, even when obscurity does not result from them, will produce an appearance of affected and laborious compression, which is offensive. The author who is studious of energetic brevity, should aim at what may be called a "suggestive style;" such, that is, as without making a distinct, though brief mention of a multitude of particulars, shall put the hearer's mind into the same train of thought as the speaker's, and suggest to him more than is actually expressed. Aristotle's style, which is frequently so elliptical as to be dry and obscure, is yet often, at the very same time, unnecessarily diffuse, from his enumerating much that the reader would easily have supplied, if the rest had been fully and forcibly stated. He seems to have regarded his readers as capable of going along with him readily in the deepest discussions, but not of going beyond him in the most simple; i. e., of filling up his meaning, and inferring what he does not actually express; so that in many passages a free translator might convey his sense in a shorter compass, and yet in a less cramped and elliptical diction. A particular statement, example, or proverb, of which the general application is obvious, will often save a long abstract rule which needs much explanation and limitation, and will thus suggest much that is not actually said; thus answering the purpose of a mathematical diagram, which, though itself an individual, serves as the representative of a class. Slight hints, also, respecting the subordinate branches of any subject, and notices of the principles that will apply to them, &c., may often be substituted for digressive discussions, which, though laboriously compressed, would yet occupy a much greater space. Judicious divisions, likewise, and classifications, save much tedious enumeration; and, as has formerly been remarked, a well-chosen epithet may often suggest, and, therefore, supply the place of, an entire argument.'

The only argument of our pseudo-logicians which will at all bear the test of even the most hurried inspection, is, that bad and violent passions are excited in mankind by the employment of rhetorical artifices. Now, as such passions clearly must have previously existed in the breasts where they are worked on by the agency of rhetoric, the best method of extracting their virulence would be, not to abolish rhetoric, but amend education. Unless it can be shown that there are no good feelings to which the power of eloquence is applicable, it is idle, even if true, to assert that there are bad ones to which it has been oftener applied. Besides, is it true? Is it true that rhetoric has been often called in aid of evil passions? Is it not, on the other hand, unquestionably certain that logical artifices have been more frequently found available to the assistance of bad passions and their sinister ends. Is it not, in fact, by these latter that vile purposes are commonly maintained and justified?

One thing, at least, is undeniable: no rhetorical appeal can be made to any sentiments which an

audience is ashamed to acknowledge. Consequently, this excitement is most applicable to good, least applicable to evil emotions. Except in those cases where some popular prejudice, as appealed to by the rhetorician, (a case which calls for better education, in order that the prejudice itself may be eradicated,)—except in such a case, the evil passions will not endure the application of rhetoric. Suppose, now, an assembly actuated by selfish anti-social feelings, how would it sound for their ring-leader to talk to them after this fashion? 'A member opposite has dared to declaim on the distresses and complaints of the people. I will tell you of the more instant cravings of your own friends, families, and dependants. He has told you that the national prosperity, forsooth, would be advanced by the removal of expensive establishments, the abandonment of useless colonies. I will talk to you of nearer and of dearer interests. I will tell you of the scions from each noble stock who are nourished by this noble expenditure. I will tell you of the proud extent of patronage maintained from the forests of the Canadas to the gardens of the Cape. Are we threatened with plebeian discontent—resistance? Away with the base, ignoble apprehension! Will the heroes who have fought our glorious battles on the Continent refuse now to rally round their country's Constitution, and to shed the last drop of their true English blood, *pro aris et focis*, for church-rate and house-tax?' Would not such a speaker rather have recourse to logic, by a judicious use of the forms of which he might easily sooth his hearers with the semblance of a reason for their conduct, or, at all events, impose his sophisms on the ignorant many? Would he not demonstrate by a train of subtle reasoning

'Black not so black, nor white so very white;' and will a logical opponent follow over the ground, and assail, one by one, his positions? He might as well attempt to hold an eel by the tail. Every one topic, perhaps, of the enemy includes some little spot of falsehood or irrelevancy; if all these are to be followed and exposed in order, there will be no end or audience to the refutation. Besides, a dialectician can always wind himself out of scrapes by some cunning reservation, explanation, or equivocation, so long as his opponent is content to fight him with his own weapons, and on his own ground. But, as soon as one arises and gives voice to his sentiments with the eloquence inseparable from candour and sincerity, the whole train of adverse sophistry, ungrounded as it was in unperverted reason or feeling, is swept momentarily away, even from the minds of a partial and interested auditory, and the sophist sinks abashed beneath the true rhetorical spirit which he had not dared evoke in the defence of falsehood.

POETRY.

HIGH themes, dear friend, were ours, when last we spoke

Together, though the flashing waves that broke
Upon the sand beside us, with their light
By the fast sinking sun-beams made more bright,
Like living sparks shook by a lone priest's hand
Thro' the dark midnight, from a half-quench'd brand,
Made not a stranger contrast to the sighing
Of the sad woods and streams, than when defying
All auguries of present ill and pain,
Sorrow and suffering, thou didst say 'Again
Strong hope burns up within me, for mankind.
For though harsh tyrants have had power to bind
Freedom and truth in darkness, the quick hour
Speeds on with wings of lightning; and that power
Not based in love and wisdom, nor sustained
By unsubverted will which hath disdained
To aught submission, onward sweeps to ruin,
Building the growth up of its own undoing,
As doth that regal oak, which bears on high
Its sure destruction, twining treacherously,
Strong snaky folds, most bright and green to view,
But which, meantime, do gnaw its heart in two.
Yet they're scarce wise, having bound on the yoke,
To bind no firmer: were I yonder oak

I would throw off that ivy! Tho' I smiled
'Twas half in grief to think that one so mild
And good should share the world's inimicity;
For well I knew what thou hadst said would be
Sentence against thyself; that men would try
Tyrannous arts to crush thee; from the sky
Look thee in caves, cramp up thy blooming youth
In dungeons, for that thou didst worship Truth
With courage unabated: yet I smiled,
Joying to hear thee: for not me beguiled
Wise saws of fearful men, who coldly frown
On all that would be free; nor did I own
Their dull safe rule, more pleased to tread the ways
Of danger and contempt by thy high praise
And self-approval strengthened, than to drag
The chain which men call custom. Like a crag
O'er which salt breakers riot, in their rage
Drenching its lashed sides, and the wild winds wage
Keen warfare vainly, seeking to uprear
The deep foundations which the huge mass rear,
I in the midst had stood; sorrowing I strove
With those whom most on earth men use to love,
Parents, and friends, and kinsmen; they had cast
Me forth from their communion as the blast
Tosses abroad some withered branch, which, cleft
From its paternal stem, of life bereft
And verdure, wanders o'er the autumnal sky,
No joyful sight, but of mortality
And perished hopes sad emblem. Then I said,
'Thou hast given utterance to the thought which fed
My fainting soul in the waste wilderness.
Dear friend, it burned within me: to express
That feeling which, a lamp seen from afar
By wanderers in the desert, a new star
Rising in the East, upheld my fainting feet,
Was given to thee; and, therefore, 'tis most meet
That I should thank thee. For no vulgar words,
No soulless voice, fashion or use affords,
Were these, but earnest of a nobler faith,
Courage, and love, and hope, unquenched in death,
And strong determination which not ill
Nor good, failure nor triumph e'er shall quell!
Yes, in thy word is full assurance given
Of victory: and we that on have striven
Upheld by our own light, know that the rack
And storm, as by some magic evoked, will track
And blot their sun out, if but one man know
None but himself can crush himself: and so
Our firm faith in mankind hath power to light
A sign which shall endure, which thro' the night,
Like shepherd's watch-fire on a hill afar
Seeming to wanderers a new-kindled star,
Shall guide to life and safety!'

'We will hold
The cheering faith, thou saidst, 'which men of old,
Less graced perchance than we are, but more wise
Onward to press towards wisdom where it lies
Stored in the wealthiest caverns of our thought,
Gold-paven, diamond-columned where have wrought
High gods to raise the wondrous fabric, bright
With their art and its exceeding light;
This faith and hope will we hold fast, which they
Threw round them, not as scorning to obey
The anarchs of the crowd, for well they knew
That scorn and pride they needed to subdue,
But with high aims still struggling, little check'd
By pain or suffering or the world's neglect,
Till they laid hold on virtue, and were free
Despite the world?'—I said.

'These things may be
Alone thro' will confirmed; such as did feign
The old poets teaching how with toil and pain
And hope of respite the strong Titan strove
E'en thro' despair warring with furious Jove,
Till at the last he conquered. We must fight
The battle thus with suffering, and the might
Of patient yet firm purpose, not repenting,
Fearing, or changing aught, nor aught relenting!
And that we have the power ourselves to do
Freely our own great work, and onward go
In the rough path of freedom, still must I
Believe, not for the whole world's empery
Would I let go that sacred faith, or, aught
Overcome by terror, yield the cheering thought
That man can make his own great world, and reign
E'en in a dungeon o'er his own domain,
The master of his master and his chain.
Man by himself is man; if wealth or pride,
Poverty, the world's scorn, or aught allied
To outward being, induce his act, albe
Noble and just, and generous 'tis not free:
Man must be man trampling all outward things
Like steps to his own glory; as upspringing

Trampling the Eastern mountains the bold sun,
And builds his throne on them, till he hath won
The fight with darkness; then upspringing higher
Sits in the noon-day like a world of fire
Filling the earth with sunlight. So must we
Wage war with darkness if we would be free!
And most that darkness, which ourselves supply.
Yea. Be assured the perilous anarchy
Is all within us. Man is man's worst foe,
Letting himself most. What the world can do
Of good or ill we know, nor do we find
Its chains so powerful as our own to bind.
And therefore is it meet we should most strive
With our own hearts, certain that will can thrive
Only by constant warfare, gaining power
Like the old Athletes who did win the dower
Of more than mortal strength by greater toil,
Almost than man can bear: if we would spoil
Our tyrants of their ill-producing sway,
Building a better hope up, and a stay
For good men to uphold themselves, and thence
Truth's lessons thro' the waste of thought dispense,
We must subdue all that is not within,
By inward strength, teaching the man to win
Conquest from all that is not man, from fear,
From hope, and joy, and suffering; till he bear
Nought but the lamp which lights him to the good
He strives for, and the power, thus like a flood
By the sun's rays turned into surging gold,
Moving still on, by rough paths made more bold,
To leap and struggle, by no bound restrained!
'My thought keeps pace with thine,' thou said'st,
'well trained.

In that wise lore, which from one source we drew,
One fountain of pure waters, whose sweet dew
Gave life and freshness which might never fail
In frost or burning drought, but did prevail
O'er every form of ill.'

'And I must sorrow
To see mankind so much from darkness borrow
Wilfully, when the day-spring cleaves the night
With such exceeding splendour: in the blight,
Therefore, of their own thought they still must move,
Wanting no less the will to do, than love
Which must the will inform!'

'Thus,' said I, 'they
Their narrow base have ever striven to lay
For nature's wide foundations: in vain hope
To prison and confine the unbounded scope
Of her wise scheme, perchance untaught, that she
Knoweth no bound to the immensity
Of love whereon she buildeth. Therefore we
Have still a task most sacred, to defend
Like vestals in a temple to the end,
The fire which, burning on at length must spring
Into great heat and splendour, till it fling
Light thro' the darkness, as in ocean caves
Flames up the burning naphtha 'neath the waves,
Or in some tall cathedral the live spark
Leaps from the altar, kindling in the dark
And hidden corners, which in gloom did lie,
A brightness like the sun in summer sky:
Till starting the dull nations, it shall be
A seed of new-born strength and liberty!
This few now keep with love and gentle care,
In expectation of the hours which bear
To man a better being: yet most blest,
Enjoying now that light, which to the rest
Is yet to teach a higher aim of life,
Than now they deem it made for, lost in strife
And clash of worldly things, the mad turmoil,
Which those who riot on their brothers' spoil,
Still cherish: knowing not the hope of that
When interfused, breathes life into the flat,
Dull, profitless employments we pursue.
Oh happy are the men to whom the hue
Of that which doth surround them, tho' it change
From beautiful to hideous, seems not strange,
And e'en the foulest, but another dress
Which beauty wears: to whom a wilderness,
Where rank weeds grow, by their own inborn power
Made odorous, can appear a sunny bower
By rose, and eglantine, and lilies pale,
Curtained within a cool brook-wander'd vale,
Where the sweet forest minstrels their soft tale
Pour in the ear of evening.'

'Blest indeed,
In this life's waste, so overrun with weed!
Thou saidst and movedst on; for, while our speech
Insensibly had lengthen'd, the wide beach,
Grown indistinct in twilight, scarce did mark
The line 'twixt land and wave; and, low and dark,

The clouds hung o'er the ocean. 'Let us haste Ere our frail path be by the tide effaced, Which will our foot-marks hardly stop to spare More than the world our thoughts. And see how fair, Low hanging in the cradle of the sky, The Eastern Empress, lull'd by melody Of winds and waves, reposes. But slow clouds Move towards her like misfortune, and dense crowds Of ominous dark forms, upsprung behind, Cumber the pinions of the toiling wind, Blotting the stars, her handmaids.'

'Let them glide E'en as thou wilt, like sorrow,' I replied, 'Over a good man's hours; for well I deem That soon, more radiant than in fairy dream, Fill'd with her silver light those clouds shall seem, Making herself more beautiful,—as distress Borrowed from goodness its own loveliness, But deeper night from guilt; and it doth please Me well to mark the gentle sympathies Which man and nature share,—thinking the sky Heaven's star-sown pavement, with its harmony Of world with world rejoicing, the live ball Of earth, the unfathom'd ocean streams, and all That own thy love great nature, are to man A symbol and a sign, which they who can May read to their abundant cheer; there seeing The mystery of all their moral being In clearer lines to the mind's eager eye Fashion'd, than sorts with mere mortality. Oh! never will I praise their timid faith, Who deem that all these realms of life and death Are merely as they seem. Dull sense halts slowly, Following the spirit's track, which, pure and holy, Looks through the forms of nature, converse holds With genii of the universe, whose folds The angels that do love the wise uplift, Pouring deep knowledge down through many a rift In the pure spheres they rule. Oh! not in vain Rush forth the lightnings over Heaven's black plain, Nor cataracts dart from many a riven rock, Shaking the firm stone with the noisy shock Of their fierce onset. Let the man that will Unbuild their life, and, with unenvied skill, Call forth the spirit within them. Not to him, In sickness or in sorrow, shall the trim Of universal nature, putting on Fresh robes of green, to wanton with the sun, Bring consolation; but, with empty heart, In its own ice exulting, be, apart, Shall wend through all things, and find all things still Barren. Preserve me, nature, from such ill As heretofore winning sweet worship, done, In innocence and tenderness, by one Who hath sought and found. Still, therefore, will I love To track the wood-nymphs over hill and grove: The modest snow-drop which its head doth rear, Mild comrade of the crocus, when the year Smiles to the jocund spring, shall be a dome Where some sweet spirit of love still makes its home; And, on the mountains wandering, I will hear Spirits of the whirlwind, in their hot career, Whoop to the spirits of the floods, that leap, Shouting in joyful answer, from the steep,— Making one universal harmony Of earth and air, the waters and the sky! For this I love the forest, both when storms From the tall trees shake down the lifeless forms That once were leaves, and, when its woven shades, Tenderly intertwined, like two young maids Whispering soft pleasure on a summer-day, Soothe me to sleep-like rest. Well knowing that, they, And all created things, with me partake In joy, and life, and happiness, which make A brotherhood between us, so compact Of love and amity, that sensual act, Cold reckonings, hopes, or gains of selfish men, Fail ever our close bond to unweave again.'

SECEDERS FROM THE KING'S COLLEGE.

WITHIN the last two weeks, three persons—and one of them of some celebrity—have signified to the secretary of King's College their intention of withdrawing their patronage from that body. It was with great regret, and not without considerable surprise, that we heard fears expressed by persons of credit and respectability, that these pompous secessions may tend to defeat

the object which the projectors of this excellent institution have at heart. Our own notion of the effect which they would be likely to produce was very different: we believed, and we still believe, that the letters of Lord Winchelsea and Mr. Quintin Dick will tend more than any other event which could have befallen the infant institution, to promote its prosperity,—that they will confirm those who, like ourselves, have from the first expected immense good from its success, and will teach those who were doubtful, that their fears, however plausible, were groundless.

It may possibly be in the recollection of some of our readers, that, about six months ago, we divided the supporters of King's College into three classes,—the first consisting of those who had been stirred up to the undertaking merely by dislike of the London University and its authors; the second, of those who had adopted the mistaken notion that the separation of religion and theology implied an indifference to the former; and the last, of those who, rightly perceiving the real wants of such an institution, from the inadequacy of the London University, from its principle of excluding one branch of knowledge, to communicate all the teaching which it was desirable should be communicated to the inhabitants of the metropolis,—were qualified to lay down the PRINCIPLE of the new college, and to bring it to perfection. We did not deny—we could not deny that, along with much pure benevolence and sound wisdom, there was, in the motives in which King's College was originated, a leaven of weakness, and, what was worse, a leaven of uncharitableness, which might tend to corrupt and deprave the education communicated there. But we contended, that these bad elements existed but did not predominate,—that there was a strength and solidity in the other parts of the mass which must in time give them the ascendancy, and that, even if this were not the case, there is so little sympathy between these principles of spite and dissension and the principle of education, that, the moment the last was brought into play, they would disappear. Our prediction has been fulfilled sooner than we expected.

It is avowed in Lord Winchelsea's letter, with the straightforward honesty which distinguishes all that nobleman's declarations, that he connected himself with King's College simply because he believed its principle to be in opposition with that of the London University. This statement is made in the broadest manner: his Lordship does not affect to conceal that from the very first there was nothing particularly pleasing to him in the principle of King's College—he had always doubts about the advantages that would result from it; but it was not the principle of the London University—he imagined, though he could not exactly tell why, that their principles were in opposition: he hated the one, and therefore he embraced the other. He has now discovered that there are one or two points upon which the supporters of King's College are *not* at issue with the supporters of the University. He is hence led to suspect that the principles at work in the two institutions may not be exactly the reverse one of the other; and therefore he deserts King's College. Now, in all this we think his Lordship is perfectly logical. If we grant him his premises—if we admit that the business of the founders of King's College was, as many of them at the commencement of the undertaking both asserted and believed, to rear their institution upon the *non-adoption* of the *admitting* principle of the other University;—then, undoubtedly, every approximation, in point of feeling, between the members of the two bodies, upon any subjects, but above all upon any subject even remotely bearing upon religious toleration, does expose the new institution to eminent risk. In that case, its security would consist in its supporters being totally separated in feelings, in interests, and in pursuits, from those of the rival body; nay, there must be an utter suspension of all personal intercourse between them,—other-

wise there would be always a danger of some explanations taking place which would bridge over the chasm. We do not at all wonder that Lord Winchelsea, believing all this to be necessary, and yet knowing how utterly hopeless it must be to expect such a state of things in a metropolis where commerce, politics, or pleasure, are constantly drawing together men of the most opposite opinions, should not have been so sanguine about the results as were some of the other projectors of the institution.

If his Lordship of Winchelsea be right—if King's College rest upon a negative foundation—upon the mere fact of its being unlike the London University;—then we say most decidedly, his Lordship's letter is a deathblow to the project. The institution, having no self-sustaining principle—having nothing for which it is in itself valuable, must depend simply upon the support of opinion—of opinion at all times transitory and accidental, but then most, and most deservedly, so, when it is an opinion that is held together only by spite and rivalry. A system of credit so sustained would be shaken—would be overset by the smallest breath of rumour. An apple-woman fainting away at the corner of the street, produced a run upon a rotten bank ending in its failure; and the announcement that Mr. Quintin Dick, (we beg the apple-woman's pardon for the comparison,) means to withdraw from an institution built upon such a principle, might be more than enough to overturn it. Our faith is, that it has another principle—that it has a positive foundation to stand upon, and that these attacks against it by its supporters, by sweeping away the imaginary foundation, by showing the real foundation, and by thus compelling the builders to rear their edifice upon it, will mightily strengthen that which they are meant to destroy.

It is not our purpose to explain at length what is the ground whereon we believe this institution really stands, and in virtue of which it is entitled to public support. We have no occasion to recapitulate what we have said so often in former articles, that the condition of including in their system of education all branches of science was that which the new institution would be required to fulfil, just as the principle of including all classes within the scope of their system was the condition which the London University would be required to fulfil. Nor is it necessary for us to show, that neither Lord Winchelsea nor that 'brace of brothers bold,' the two Messrs. Dick, have even affected to accuse the founders of King's College of departing from this principle,—or that there is the slightest more reason to suppose that any one of these sciences will be taught inadequately than there was six months ago,—or that the one science of theology which will particularly distinguish King's College from the sister University, will not be taught according to the doctrines of the Church of England. What we are anxious, therefore, to impress upon the minds of our readers, is, that King's College, having had at its origin one valid claim to public support, and not having forfeited that claim by any event which has happened since, has a still further title to the support of Christians and of Churchmen, from the circumstance of its being deserted by those who supported it upon a false ground, and who, if they had continued in alliance with it, might have twisted the College into conformity with their dangerous views.

There is in this country a certain class of men whose sect we can indicate in no way so well as by calling them the ANTI-ISTS. These men hold no opinion except so far as it is in opposition to some other opinion. The only touchstone by which they can judge whether an article of faith belongs to them or not, is by seeing whether it is the reverse of an article held by their opponents. Reversing the philosophy of Touchstone, the country is to them good merely because it is not the Court—a town life desirable merely because it is not a shepherd's life. They are not Churchmen,

but anti-Dissenters,—not Protestants, but anti-Catholics,—not Christians, but anti-Infidels. To such persons, who can sustain the whole edifice of their own faith upon a denial of another's faith, who can found their morality upon a hatred of other men's vices,—to such men, we say, it may appear very natural and very desirable that institutions likewise should be built upon the mere contradiction of a principle recognized by another body: but to ordinary Churchmen, to way-faring Christians, who believe that they must have some belief of their own to live by—what would seem the obvious conclusion? What name would they give to this principle? Would not the first words that rose to their lips be,—‘It is a SECTARIAN principle which we, as good Churchmen, cannot countenance? For why,’ they would say, ‘have we been so long complaining of the conduct of our Dissenting brethren? Is not their offence this, that they set themselves as a body in contradiction to the Establishment,—that they do not put forward a set of opinions which belong to them *quâ* Dissenters, but that their discipline is merely a secession from the discipline used by us? Is not this the sectarian spirit—the schismatic spirit against which we have so long lifted our voices? But is this all?’ such a person would add. ‘As a Churchman, I object to the principle of building our faith and our institutions upon that which they exclude, and not that which they include, because it is sectarian. But, if I speak of it as a Christian, I must use a much harsher term—I must call it an INFIDEL spirit. For what is the spirit of infidelity but the spirit of denial—the spirit of saying, “This is NOT,” instead of, “This is?” And what though that which we deny is wrong—is false; still, if we attack it otherwise than by asserting the truth, we are using the weapons—we are acting on the principle—of that which we attack.’

To those, then, who look upon King's College as valuable for the protection which it will afford to Christianity and Churchmanship, we say, that the circumstances to which we have alluded must cause unmixed satisfaction. Henceforth it will rest upon its own merits, not on the demerits of its opponents. Those who joined it from motives of strife and opposition, are deserting it: those who value it as a place for communicating sound knowledge and religious instruction, will press to its support. The honestest and the wisest men in England will now look with affectionate interest on its progress; and this, we hope, will prove some compensation for the loss of the patronage of Mr. Quintin Dick.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

[Concluded from page 225.]

THE portraits—if deservedly, is another question—hold the most conspicuous, although not the best, situations in this exhibition. The first which attracts attention on entering the Great Room is that of ‘His Royal Highness the Duke of Clarence,’ No. 131, H. E. Dawe, a picture which must claim the praise of those who look for high finish in a work of art. When we mention finish, we would, of course, be understood to mean polish, since we have not yet forgotten the admirable lecture read to us by Mr. Haydon, on the subject of finish in a picture, on the opening of his exhibition in the Western Exchange. That lecture, as found at length in the descriptive catalogue of the present display of Mr. Haydon's pictures, we recommend to the perusal of all amateurs; advising them, moreover, should they desire an illustrated explanation of the two different significations in which the term finish may be applied to painting, to view, as nearly as possible one after the other, and to compare ‘The Chairing of the Members’ with ‘The portrait of his Royal Highness the Duke of Clarence.’ This latter picture is treated in a truly court-like manner,—smooth, and clean, and perfectly nice.

Glory to the valet who had the honour of arranging, for the lofty occasion, the person and habiliments of the royal sitter! Glory no less to the artist who has so happily caught the tonsorial spirit, and given such effect to the hair so neatly clipped and frizzled, and so well and so freshly powdered; to the clean fair complexion, so characteristic of the English gentleman; to the cheeks so blooming—blushing, we had well nigh said—that, but for the known disposition and profession of the princely personage, their tints might be mistaken for rouge; to the coat of beautiful purple, so soft, so glossy, that the mind is left in doubt whether it be of cloth or velvet; to the well turned leg, the most noble garter, the crimson chair, and the richly decorated volumes. Observe all this, O Haydon, and then repeat, if thou darest, that ‘The Chairing’ is a finished picture!

Strong contrast, when not inharmonious, is ever delightful. Turn we, therefore, from prince to plebeian, from the picture of Mr. Dawe to that of Mr. Hawkins, No. 40, ‘Portrait of Henry Williams, Esq.’ Not the Grand Monarque, that prince of fops himself, could desire a happier illustration of the distinction between court and *bourgeoisie* than is presented by this pair of portraits, viz. the one we have just dismissed, and that which now more particularly occupies our attention. Ye gods, we beseech ye, multiply to our artists such patrons as Mr. Williams, who sits for his comely likeness, satisfied and cheerful, with flattened locks, smoothed to a peak on the forehead, and with crossed arms! And when it becomes our lot to be honoured by having our resemblance taken for some high occasion,—when it shall be called for by our numerous readers to decorate the wrappers of our monthly parts, as a substitute for the elegant vignette of the Attic Acropolis which now holds that distinguished place,—grant, O Jove supreme, that we may find the artist who, either from taste or submission to the will of his employer, will consent to compose his subject with the appropriate fidelity displayed in the portrait which we now are contemplating!

‘The Portrait of R. Mott, Esq.,’ No. 54, J. Lonsdale, is an exception to the generality of likenesses here exhibited: it is a spirited picture. ‘The Portrait of the Hon. C. A. Murry,’ No. 85, by the same artist, is not by any means so successful a performance.

The portraits of ‘James Montgomery, Esq.,’ Author of ‘The World before the Flood,’ &c, W. Poole, No. 8, of ‘William Jerdan, Esq.,’ No. 238, J. Moore, and of ‘H. Bell, Esq., the first who brought the steam-boat into practice,’ No. 231, may be noticed, as forming a curious and somewhat ludicrous combination, when comprehended in one view by the visitor, placed near the fire-place, with his back to it, at an angle of forty-five degrees, or thereabouts. The pictures, as far as far as we have the means of judging, are good resemblances.

The friends of Mrs. Mitchel, and the admirers of Miss Phillips, of the Theatre Royal, Drury Lane, will be as gratified with the portraits of those ladies, Nos. 473 and 479, both painted by T. Meyer, as the fair subjects themselves must have been with their flattering likenesses.

The portrait of ‘John Adolphus, Esq.,’ No. 190, G. O. Nash, is a picture which would have graced better company than that which surrounds it. ‘Emmeline,’ No. 29, F. Howard, may, or may not, be a portrait. The artist has wisely removed it from that class of productions, by making it an illustration of the following lines:

‘There was a pensive softness in her eye,
That spoke of purity, and truth, and love;
And yet there was a playful archness too,
Brilliant, but mild, as stars amid the twilight.’

The Sisters, a Sketch. W. H. Bellamy, Esq.

It would be too much, perhaps, to say, that the picture succeeds in conveying the idea of all these heavenly qualities, yet it cannot be denied, that the head has much, and a very lively and agreeable

expression. With this we shall close our notice of the portraits. It will be a more welcome task to cull a few spirited landscapes, and pieces of character, left unnoticed in our last number.

First of these, ‘Scene near Etrata, Normandy,’ No. 125, J. Wilson, well merits attention. It is not in the least degree inferior to either of the productions by the same artist, which we pointed out last week: it is quite equal to the very best of them; and, both in composition and colouring, has a very delightful effect.

‘Landscape, with a stormy sky,’ No. 101, F. A. Lee, is very clever and masterly. ‘The Profligate's Return from the Alehouse,’ No. 89, E. Prentis, is, in many respects, skilfully conceived; the story is well told by the two principal figures: they have both very appropriate character and expression; and the feeling displayed in the treatment of the female is truly touching; the taste shown in the other parts of the picture is not so good, and savours much of vulgarity.

Mr. Poole's ‘Far from Home,’ No. 20, and No. 166, ‘Studies from a Mulatto Girl,’ Nos. 124 and 137, are delightful examples of sentiment, and fidelity to nature.

‘A Scene in the Campagna di Roma,’ No. 166, J. Hollins, is a brilliant little landscape, glowing with all the warm sunny effect of the inspiring climate of Italy. ‘A Venetian Girl,’ and ‘Girls Spinning,’ are two other very pretty cabinet pictures in a similar style, by the same artist.

‘An Eastern Girl feeding Kids,’ No. 187, J. Y. Hurlstone.—A certain grace in this picture pleased us much at first; we fear, however, that the effect is more owing to an agreeable association connected with the arrangement of the hair and head-dress *à la Sibylle*, than to any original merit.

‘A girl Peeling Turnips,’ No. 204, A. Fraser, is quite a misnomer, since it happens that the maiden is *not* peeling turnips. That occupation, it is true, she would be engaged in, were it not that through the widely opened window, by the side of which she sits, she feels the soft influence of the balmy air of spring, and of the bright sunny aspect of nature, is affected herself with a congenial sentiment, seems conscious of the *besoin d'aimer*, and thus has her thoughts distracted from her turnips. Who has not felt the unsettling yet delicious effects of such a day? Who will not be reminded of the feeling on viewing Mr. Fraser's picture, which is truly a delightful little production?

The Water-Colour Miniature and Print Room has never been the least interesting part of the Exhibition of the Society of British Artists. On this, as on former occasions, it abounds in clever and spirited productions in that branch of painting, followed with so much success and superiority by our English artists. In our former article, we mentioned the clever drawings of Mr. Stanfield and Mr. Roberts; besides these, Mr. Boys has several pieces which well deserve to be mentioned with applause. Among them are ‘Hindoo Temples at Bernares,’ No. 509; ‘Abbey St. Armand, Rouen,’ 520; and ‘Scene on the Beach at Trewville, Normandy,’ No. 526. Mr. C. F. Tomkins treads close on the heels of Mr. Boys. His productions have, perhaps, less vigour and freedom than those of the last mentioned artist, but they are very effective and brilliant. The principal are ‘Two Views on the French Coast,’ No. 535, and ‘Charenton, near Paris,’ No. 766, a drawing full of effect.

Mr. G. Cooper shines in another style, and in the treatment of different subjects, generally architectural views—some of them are of Italian origin, others are drawn from English sources. We may mention as most attractive, ‘The Pantheon,’ No. 527. ‘Malmesbury Cross,’ No. 553. ‘View on the Arno, near Florence,’ No. 630, very rich. ‘The Arch of Titus,’ No. 724, and ‘The Descent from the Capitol,’ No. 766, both

views in Rome. All are well finished and accurate drawings, with a very agreeable effect of colour.

Mr. Ince shines in his views of 'The Royal Palace at Stockholm,' Nos. 715 and 754. 'The Margate Jetty,' No. 541, and 'The French Postillion,' No. 600, are clever productions of J. Atkinson. Mr. Rochard's sketches have great boldness and freedom, although his females, as to costume, are perfect caricatures;—the fault of the mode, perhaps, rather than of the artist.

Of the prints, many of them, such as Mr. Turner's 'Temple of Jupiter,' by Pye, and the painting, by Sir Thomas Lawrence, of his Majesty, engraved by Finden, and so much in request,—are well known, and have already been noticed in our Journal. In the Wreckers, No. 805, from the picture by Stanfield, engraved by Quelley, we have a mezzo-tinto worthy of the original. Cologne, 1775. J. Kernott is also splendid. A small Landscape, after Bonnington, by N. J. Cooke, is a delightful composition, treated with great effect and clearness.

The Sculpture Room presents little that is attractive. The Batter and the Bowler statues in marble, Nos. 830, and 832, are subjects too humble for this elevated art. The Bust of Sir Humphry Davy will not fail to be regarded with interest. It is sculptured in marble, by Mason, after a bust in terra cotta, by Mrs. Dame. The head is fine, and far from being devoid of general character of a high and pleasing cast. The particular execution, however, is very indifferent.

PHILHARMONIC SOCIETY.

MESSRS. Weichsel and Attwood, two of the most talented and respected members of the musical profession, were the leader and conductor of the fourth Philharmonic Concert, which took place on Monday, April 6. It commenced with Beethoven's eccentric and difficult *sinfonia* in A, (7th op. 2, which was performed at the sixth concert last season, see 'Athenæum,' No. 30, page 475.) It certainly was not in one of Beethoven's lucid intervals that he composed this unmeasured, noisy, and unaccountable piece, the whole of which is certainly not worth the immense trouble and fatigue of performance, excepting only the *middle* movement, the *allegretto*. This, too, is tinged with whimsicality, but being rather striking, original, and effective, (and always well played at the Philharmonic,) generally deserves and obtains an encore. (The erudite and clever Dr. Crotch has adapted this movement as a duet for two performers upon the piano-forte, the publication of which was noticed in 'The Athenæum' last year, No. 31, page 492.)

The last movement was surely written for the sole purpose of fatiguing the orchestra. One performer says 'sauve qui peut'; a second talks of Sisyphus and his ever-returning stone; and a third, of the fabled boys and frogs. In the whole *sinfonia* the sublime approximates the ridiculous so closely, that we can only wonder it is so frequently chosen for performance.

No. 2. Duetto 'All' idea di quel metallo,' Signor Donzelli and Signor De Begnis, from Rossini's charming 'Il Barbiere di Siviglia.' This was the gayest, merriest, and most brilliant vocal effusion ever witnessed at a Philharmonic concert. Donzelli exhibits best in dramatic pieces; he is not the legitimate good singer or musician we could wish him, or that, with his excellent capabilities, he deserves to be; but in this duet, and other such compositions, he shines (as well as De Begnis) to the greatest possible advantage.

No. 3. Concerto Corno, Signor Puzzi, composed by Belloli. As might be expected, this was an exhibition of extraordinary merit; Puzzi being, undoubtedly, the finest performer upon the horn that has ever yet been heard. Although a very little man, he has the spirit of a giant! he always displays a cool and enviable confidence, which carries him through difficulties that others would scramble over, or flounder in the midst of. Puzzi is still decidedly unrivalled.

No. 4. Scena Mademoiselle Blasis, 'Salvo al fin,' by Pacini, who was a pupil of Rossini's, and who, as a true disciple, professes to imitate his preceptor. 'Salvo al fin' so nearly resembles Pacini's very favourite and pleasing 'I tuoi frequenti palpiti,' that it would be impossible not to recognise its author after the first half dozen bars. Mademoiselle Blasis made her first appearance before a Philharmonic audience, and was well

received; her general capabilities and manner more nearly resemble Caradori than any other singer; her voice a little more round and powerful; but her style not so finished and perfect. She reached up to the highest E flat exceedingly well; which effort, when successful, always commands applause.

No. 5. Spohr's very clever and interesting overture to 'Pietro von Abano,' was exhibited for the first time as a public performance, and received deserved applause. This we predicted upon its being rehearsed at the trial night, last January; and that it will become a *stock* piece, and be very frequently performed, there can be no doubt. It went beautifully, and long dwelt upon the minds of all auditors of good taste—a decided proof of its being good music in every sense of the word; it finished the act with eclat.

No. 6. Mozart's perfect, delightful, and grand Jupiter's *sinfonia* in C, went as well as usual, and it would be as impertinent and ridiculous to attempt a criticism of the composition and performance, as to offer an analysis of Hamlet's soliloquy, or 'Thomson's Seasons.' The last movement was played a little too fast, the leader's warmth and enthusiasm leading him into rather too hasty a conclusion.

No. 7. Aria, Signor Donzelli, 'Il mio tesoro,' from Mozart's 'Don Giovanni.' This song has been so eternally hacknied by all the tenor singers, Curioni, Begnis, Garcia, Torri, Sapio, Braham, &c. &c., that it was one of the last that our new singer should have chosen, or that the directors of the philharmonic concerts should have submitted to. As Donzelli by this means placed himself in prominent and palpable comparison with all the above contemporary vocalists (and many others,) we must add, that his credit is not increased by the attempt; his fine, and undoubtedly, superior voice, to the whole of these, attracted attention; but his performance was by no means so chaste and perfect as to place him above his compeers in other respects.

No. 8.—Quartetto, two violins, viola, and violoncello, Messrs. Spagnoletti, Watts, Moralt, and Lindley. Beethoven's very beautiful quartett in F, (his first of Op. 18,) was extremely well performed, but rather too long for a concert-room. It is highly creditable to the regulations of the Philharmonic Society, to introduce a violin quartett at every performance; but it certainly is a species of composition more particularly fitted for a small room and limited audience; when well exhibited, it presents a specimen of the most beautiful and perfect instrumental writing. Haydn, when solicited to write a quintetto, refused, replying that he 'could not find a 5th part.'

No. 9.—Terzetto, 'Quel sembiante,' Mademoiselle Blasis, Signor Donzelli, and Signor De Begnis, from Rossini's 'L'inganno Felice.' These singers well assimilated together, and created a pleasing, lively, and bright performance; it is too much the custom for some musical composers, some grave doctors, some caustic reviewers, (all would be great men of the old school,) to affect to despise the playfulness of Rossini, and call it nonsense; but let any of them try to deserve and obtain his popularity.

The concert concluded with Cherubini's romantic and favourite overture to Lodoiaiki; and, perhaps, it may be well to hint to some of our unlearned readers that this overture to Lodoiaiki is quite a different thing from the old hacknied favourite of Kreutzer's, performed in this country to the dramatic piece of that name.

The veteran, evergreen, and ever-respected Weichsel, still retains all his excellencies as a professor and a gentleman; and, in fact, evinced upon this occasion more animation, more enthusiasm, than we ever remember; and we have been present at most of the performances, for a period of nearly thirty years, excepting only when he exiled himself from us.

Half of the number of philharmonic concerts for the present season are now over; and, in consequence of the intervention of Passion and Easter weeks, the fifth performance will not take place till Monday, the 27th of April.

GUILDHALL CONCERT.

To the Editor of the Athenæum.

SIR,—Fielding has some where or other set about proving that a man would write the better on any subject by knowing something about it. Some persons there are who think this a self-evident proposition, and who read Fielding's demonstration of it merely for the sake of the dry and delightful humour with which he proceeds to the point proposed. But allow me to observe, that if it be an axiom so clear that no argu-

ments are needful to enforce it, it is a principle very frequently forgotten, and I wish particularly to recal it to the attention of a critic who furnished the observations on the Guildhall Concert in the last number of The Athenæum. At this distance of time and on this subject, it is not worth while to indulge in any long analysis of his extraordinary 'brief sketch.' I will therefore only notice one or two mistakes of this very learned gentleman.

No. 23.—Duetto, Madame Caradori and Madame Pisaroni, 'Lasciami! non l'ascolto,' from 'Tancredi.' This, says the critic, did not go well: the piece would have been better, if performed by male and female voices, instead of two so similar. The great similarity that exists between the voices of Pisaroni and Caradori, must have struck every body who has ever heard the two; and every body who has witnessed the performance of 'Tancredi,' whether in England, France, Italy, or Germany, must be sensible of the egregious blunder which [for want of this gentleman's advice] has up to this moment been committed in not assigning the part taken by Pisaroni to a bass or tenor voice.

Now to another point,—No. 21.—Terzetto, Madame Vigo, Miss Wilkinson, and Signor Donzelli, says the writer, and so said the programme; but every one present, save this experienced critic, observed that 'Cruda sorte' was really sung by Madame de Vigo, Madame Pisaroni, and Donzelli. The critic looked only at the programme, and his observations on the performance are sadly out of place. Pisaroni and Donzelli must understand one another pretty well by this time, seeing they have been singing together for some time past at the Opera in Paris, and have not gone very ill together 'in harness' even in London. But the *animadversion* was probably intended for the lady who was absent. And here I cannot but allude to the remarks on the song 'Lord to thee,' which I read with some surprise in the columns of 'The Athenæum.' The criticism was apparently copied from another journal, which has signalized itself for some time past by its clumsy and illiberal attacks on Miss Wilkinson—a young person not less deserving of admiration for her professional talents, than for a degree of modesty and simplicity of manner which, even though united to very inferior ability, I should have thought calculated to disarm the rage of criticism.

I remain, Sir, your obedient servant,

W.

[The article to which this letter refers was received from a gentleman on whose professional ability we place considerable reliance, and who, we are convinced, can only have been betrayed by carelessness into the fault with which our correspondent reproaches him. In spite, however, of this conviction, and of other reasons, which, if we choose to allege them, would extenuate our fault in the opinion of all who are acquainted with the management of weekly papers, we are anxious to make the most full and unreserved apology to Miss Wilkinson for the erroneous criticism upon her performances at the Guildhall. We can hope that the extremely high, because the just, language in which 'The Athenæum' has always spoken of her talents will be an excuse for this oversight; and we are rejoiced to think that her fame is too well established to suffer from any (even just) remarks upon an isolated performance.—Ed.]

THE DRAMA.

King's Theatre.

THE pretty opera, 'La Gazza Ladra,' which we have heard supported by the powers of the finest singers in the world, was produced on Thursday night, with a very fair and creditable effect, and introduced to an English audience Signor Bordogni as *primo tenore* of the piece. To this gentleman's qualifications our many readers who have visited Paris will be no strangers; he has frequently and long been attached to the operatic list of that city, and has obtained there a certain degree of popularity, in spite of some vocal infirmities, which would appear to strike at the root of all scenic renown. His voice is a high tenor, of a fine and gentle intonation, but so soft and weak as to extend with difficulty over the vast space which it is expected to fill. He is a good musician; but the delicacy of his singing is not obstructed by any gratuitous show of science,—a great praise in these latter days, when music is dressed up in millinery, and its whole form buried beneath puffing and trimming. The effects of a slight indisposition which had prevented him from attending the rehearsal on the day before, were still strong enough to check much of his energy; but those who heard him will allow, that want of spirit or expression is not amongst the sins of Signor Bordogni. Signor Zuchelli sustained the part of Ninetta's father, a part rendered famous by the performance of Filippo Galli; and Pellegrini threw a great deal of comic force into the doltish and amorous magistrate. To complete the catalogue of *débütants*,

we should not forget, however reluctant we may be to remember, the experiment of Miss Josephine Bartolozzi, as a representative of Pippo. Her paternal name, and consanguinity with some of our most established favourites, added to the theatrical advantages of a striking face and figure, were promises in her favour, which, we are sorry to add, have been realised by no commensurate performance. Would not Madame Schutz have consented to appear once again in a character, which, though subordinate, served, nevertheless, to add a fresh laurel to her well-acquired wreath? As a recruiting party had evidently gone out on a metropolitan excursion, and enlisted some of the idlers whom we regret to find in that character, why should they not have made their number complete, and so remove the only blemish of this entire performance?

Lastly, with regard to Mademoiselle Blais, her acting was admirable throughout, and towards the catastrophe, most impassioned and picturesque. Our judgment of her vocal powers has already been pronounced; she combined on this occasion the two great accomplishments of a theatrical singer, and produced, on the whole, an effect which we have not seen equalled in the part of Ninetta. At the end of the opera, she was rapturously called for, and made her obeisance to the audience amidst thunders of applause.

Looking generally at the performance, we cannot avoid being struck with the great animation and correctness of the dramatic department. Each of the *dramatis personæ* seemed to forget the inveterate maxim, that operatic singers are automata in all respects but with regard to their throats; on the contrary, arms, legs, gesture, attitudes, expression, feeling, passion, were employed as though probability were considered of some weight, and scenic illusion a matter not too low even for the *artistes* of the King's Theatre. 'Massaniello,' in all its glory, sent us home, dreaming of the adage, 'Vedi Napoli e poi mori.'

Drury Lane.

Miss PHILLIPS, who still persists in repeating her representations of Lady Townley, because the Manager requires it, finding, we suppose, that it 'draws,'—appeared on Monday week in a character in which she has been long desired by the elder votaries of the stage, principally to assist them in forming an estimate of her acting talents, by comparison with their recollections of her two distinguished predecessors in the same character—Belvidera. For our parts,—and we say it without any disparagement to the by-gone heroines,—we think this an unfair and inapplicable test; and one that will only be resorted to by those who have no conception in their own minds of any character but what is reflected from representations they have already witnessed. If theatrical excellence is a mere thing of tradition, an art of imitation,—and a Lady Macbeth is to be praised for being Siddonian, rather than Shakespearean,—if any variation from established emphasis, or difference in look or gesture, is to be condemned because it is an innovation on established usage, without any inquiry about its agreement with nature, we see no reason why any young woman of six feet high, good form, striking features, and commanding voice, may not, by the teaching of those who are admitted to have the most accurate recollections of the precise manner in which the Siddonses and the O'Neils were wont to receive and give rebukes, to supplicate and answer suppliants, to kill and be killed, be made the most perfect of actresses, and give entire satisfaction to the most reverend bencher of Lincoln's Inn. But, though we have no inclination unduly to depreciate the stage-business, or to dogmatise on technicalities which we do not understand, we do think that, as something more is necessary to enable a man to write a tragedy than Schpltee's 'Flowers of Fancy,' so the elocutionist, the attitudiniser, and the stage-manager, are not sufficient to make a Juliet or a Desdemona; and we further think, that, as a man intended by nature to be a dramatist would require no ready-made similes to help him out, so a woman, designed by the same controller of the 'cast' of life to embody his conceptions, would require no other aid than her own unassisted powers. What we have most anxiously desired for Miss Phillips, ever since the opening of her career, is, that she might escape the fate of being *made* an actress; and that she can afford to do this, the satisfactory manner in which she conceived and executed a part entirely new, and consequently untrammelled by traditional gestures and readings, and the rapidity with which she has run through many of the list of tragic heroines—a rapidity equalled by its excellence, and which would not have been possible had she depended on her instructress—have yielded substantial proof. Her Bel-

videra—one of those parts in which the actress, to be natural, has often to struggle against the extravagance and want of keeping of the poet—was not inferior to her other performances: the tender scenes with her husband were given with deep feeling and distressing truth, and in the mad scene, where feeling is out of the question, she displayed a good judgment; and, if the phrase be applicable to the case, did not 'outrstep the modesty of nature;' but, though satisfied with her performance, we could not help wishing the tenderness had been that of Desdemona, or the madness, that of Ophelia. Do, Mr. Price, give us Othello and Hamlet—but Ophelia sings. Can Miss Phillips sing?

FOREIGN VARIETIES.

STATE OF CRIME IN FRANCE, &c.—Though it might lead to melancholy reflections, it would inevitably ensure useful results, if our Secretary of the Home Department were to follow the example of the French Secretary for the Department of Justice, and annually publish a detailed 'Report of the Administration of Criminal Justice.' It is not long since such a report, as regards France during the year 1827, was submitted to the attention of the French public; nor is it because we deem it unworthy that of our own countrymen, but from the limited space to which we are restricted, that our notice of it will be found so summary.

It would appear that the proportion which the number of persons committed for trial bore to the whole population of France, was, in 1826, 1 in 4,557; and, in 1827, 1 in 4,593.

Of one hundred individuals accused of crime, the proportion was twenty-eight prosecuted for offences against the person, and seventy-two for offences against property.

The comparative numbers of persons brought to trial, condemned or acquitted, for the two countries, during the year 1827, were, so far as official returns are before us, as follows:—

	Tried.	Convicted.	Acquitted.
England and Wales, London and Mid- dlesex	18,973	14,864	4,109
France.—(Criminal Courts)	6,939	4,236	2,693
Ibid.—(Correctional Police)	171,146	145,166	25,980
	178,075	149,402	28,673*

Whilst looking at the return for our own country, it should be remembered, that every branch of criminal jurisprudence in France being subordinate to the Department of Justice, that return is deficient in an account of the number of criminals convicted of minor offences under the sentences of our magistracy, without which, indeed, no perfect comparison can be instituted.

The dispatch of criminal causes during the year, required, throughout France, the holding of 377 sessions of assize, which lasted altogether 3,958 days, averaging ten days and a half to each session; and the number of witnesses examined was 47,933.

The individuals confined in the larger prisons, and the central houses of detention, amounted to 18,890; of whom 13,388 were men, and 5,502 were women. Of the total number, 6,172 only were able to read and write; two-thirds of them, therefore, had never received any sort of education. A melancholy proof that ignorance, like idleness, is the parent of vice!

ASCENT OF THE JUNGFRAU AND GRIMSEL.—In the beginning of August last, a celebrated naturalist of Solothurn made an attempt to ascend the far-famed Mountain of the Jungfrau, or Virgin of Switzerland. In spite of every effort, he was not enabled to ascend higher than what is termed the Red Valley, the elevation of which is about eleven thousand feet. The peak of the Jungfrau itself soars 11,490 feet above the surface of the Lake of the four Cantons, (Vierwaldstätter See,) and 12,840 feet above the level of the sea. Though baffled in this attempt, the enterprising traveller, a few days afterwards, set out with some chamois hunters from Grindelwald, with the intention of crossing the intervening glaciers and icy-wildernesses, and ascending the Grimsel. So perilous an exploit as this had, probably, never been before adventured. His

* In England and Wales, &c., the convictions amount to rather more than 78 out of every hundred prosecutions; and, in France, to nearly 84 out of every hundred. The acquittals, on the other hand, amount to more than 21½ out of every hundred prosecutions in the English, and to somewhat more than 16 out of every hundred in the French Courts.

course led him through the desolate regions lying between the Eiger, Mettenberg, Finster-Aarhorn, and Schreckhorn.

CHINA—ITS NAME.—This empire has no specific appellation in the vernacular tongue, a circumstance which must be ascribed to its isolated position between the sea on the one side, and deserts on the other; for the Chinese, in the absence of all objects of analogy, consider their monarchy as an empire *per se*. As for Tonchin, Japan, and Hindoostan, they regard them as nothing better than countries tenanted by savages; nor are their ideas of Europe one iota more exalted. Each dynasty bestow their own cognomen on the Chinese dominions. Under the reigning family it is styled Ya-tsin-que, or 'kingdom of great purity'; whereas, under the preceding line, it was called Tay-ming-que, or 'the kingdom of high splendour.' The name by which it is known to Europeans would seem to be derived from the Chinese salutation, 'Tsin, tsin! implying, 'Whatever thou desirest!' an expression of good-will with which they greet one another when they meet. It is natural that strangers, who were ignorant of their language, should be thus induced to denominate them Chinese, or Sinese.

SCIENCE IN RUSSIA.—In one of the last sittings of the Academy of the Arts and Sciences of St. Petersburg it was resolved, that a sum of ten thousand roubles (nearly 500*l.*) should be appropriated to the purchase of the manuscripts, copper-plates, and herbarium of the late Marshal Von Biberstein. The Academy also approved of the application of a similar sum towards the first year's expense of an 'Archæographical Journey through the Russian dominions.' This important enterprise is intended to commence during the present spring, and is intrusted to the care of Counsellor Strojau. The same meeting gave its sanction to the acquisition of a collection of birds, in which the Zoological Museum was deficient, and which had been brought from Dorpat by M. Ménétries.

LITERARY INTELLIGENCE.

In the press, 'Memoirs of Lady Fanshawe,' wife of the Right Hon. Sir Richard Fanshawe, Bart., ambassador from Charles II. to the Court of Madrid. Written by herself, now first published from the original manuscript. To which are added, Extracts from the Correspondence of Sir Richard Fanshawe.

Nearly ready, 'Journal of an Embassy to the Court of Ava,' from the Governor-General of India, in the year 1827, by John Crawfurd, Esq., late Envoy, with a Geological Appendix, by Dr. Buckland and Mr. Clift, and a Botanical one by Dr. Wallich. The new edition of 'Burke's Improved Peerage and Baronetage for 1829,' compiled from the communications of the nobility addressed to the author, and including the baronetries of Scotland and Ireland, appertaining to more than two hundred ancient families, (whose lineage is given exclusively in this work,) with upwards of 1,500 plates of arms, will be ready for delivery in a few days.

Mr. Oliver has in the press, and nearly ready for publication, 'The History and Antiquities of Beverley.'

LIST OF BOOKS PUBLISHED DURING THE WEEK.

The Philosophy of History, 8vo., 12s.
Sermons preached in India by the late Bishop Heber, 8vo., 9s. 6d.
Father Butler, the Lough Deay Pilgrim, 18mo., 3s. 6d.

Nights and mornings generally rainy.
Highest temperature at noon, 57°.

Astronomical Observations.

The Moon and Mars in conj. on the 7th, at 1 h. 45 m. A.M.
The Moon and Saturn ditto, on the 11th, at 2 h. P.M.
Venus's geocentric longitude on Sunday, 15° 15' in Aries.
Jupiter's ditto ditto 15° 4' in Sagitt.
Saturn's ditto ditto 27° 34' in Cancer.
Sun's ditto ditto 25° 18' in Aries.
Length of day on Sunday, 13 h. 36 min. Increased 5 h. 53 m.
Sun's hor. motion on Sunday, 2' 26" plus. Logarithm num. of distance, .001396.

The Seventh Number of
THE FOREIGN QUARTERLY REVIEW
will be published on the 29th.
Soho-square, April 14.

The Second Volume of
THE AMERICAN ANNUAL REGISTER
is just imported by T. Ward, No. 84, High Holborn; one thick volume, medium 8vo., price 21s. in boards.
A store of immense advantage to generations of future writers.—*Athenæum*.
The first volume may also be had as above, price 18s. in bds.

This day is published, in post 8vo., price 8s. 6d.,
CLOUDS AND SUNSHINE.
London: printed for Samuel Maunders.—Also,
MONTGOMERY'S OMNIPRESENCE OF THE DEITY, Eighth Edition, 7s. 6d.
Mrs. GODWIN'S POEMS—'The Wanderer's Legacy,' &c., 8s. 6d.
CONVERSATIONS ON GEOLOGY, with Engravings, 7s. 6d.
CHRISTIANITY, PROTESTANTISM, and POPEERY COMPARED, 7s. 6d.
And, in the press, the third edition of
MONTGOMERY'S UNIVERSAL PRAYER, &c., 7s. 6d.

No. 8, New Burlington-street.
On Saturday, the 25th of April, Mr. Colburn will have the honour to publish the First Number of a new Weekly Paper, to be called

THE COURT JOURNAL. The leading and peculiar object of this Paper will be to supply what has long been felt as a desideratum in the Higher Circles of the British Metropolis. Its pages will furnish a mingled Record and Review of all matters and events, (political subjects alone excepted,) which are calculated to interest that class of readers who come within what is understood by 'The Court Circle.' Such will be the peculiar but by no means the sole object of 'The Court Journal.' It will, in fact, embrace every feature which favourably distinguishes the most approved Literary Journals of the day. The Conductors deem it unnecessary to put forth a formal Prospectus. Their work, when it appears, will speak for itself; and it will do so in a manner which will render it impossible for any one to mistake the nature of its resources; and the class of patronage under which it is ushered into the world; or to doubt that these are such as were never before possessed by a public Journal.

'The Court Journal' will appear every Saturday Morning, handsomely printed on a quarto sheet of 16 pages; containing 48 columns, price 9d., or stamped for circulation in the Country, free of postage, 1s.

Orders received by all Booksellers and Newsreaders, and by the Clerks of the Reads.
Communications for the Editor may be addressed to the care of Mr. Colburn.

No. 8, New Burlington-Street.
MR. COLBURN has just published the following INTERESTING NOVELS—*Mr. Greville's*
NEW WORK, entitled,
TRAITS OF TRAVEL, or Tales of Men and Cities, by the Author of 'High-ways and By-ways.' In 3 vols. post 8vo., 31s. 6d.

The **NAVAL OFFICER**; or Scenes and Adventures in the Life of Frank Mildmay. In 3 vols. post 8vo.

TALES OF MILITARY LIFE; containing *Vandaleur* and *Gentleman Gray*. By the author of the 'Military Sketch-Book.' In 3 vols. post 8vo.

CORRAMAHON and the NORTHERNS of 1798; a Series of Tales, by the Author of 'To-day in Ireland.' Dedicated to the Marquis of Lansdowne. In 3 vols., post 8vo., 11. 11s. 6d.

ECARTE; or the Salons of Paris, 3 vols., post 8vo.

THE CARBONARO; a Piedmontese Tale. By the Duke de Levis. In 3 vols., post 8vo., 18s.

THE PROTESTANT; a Tale of the Reign of Queen Mary. By the authoress of 'De Foix,' and 'the White Woods.' In 3 vols., post 8vo.

We earnestly recommend it to the perusal of all those who take an interest in the Catholic Question. The incidents of the tale follow one another in breathless rapidity, according to the hurried and fearful nature of the times which they illustrate.—*New Monthly Magazine*.

Also nearly ready,
THE SCHOOL OF FASHION. In 3 vols., post 8vo.
'Nothing exceeds in ridicule, no doubt.
A fool in fashion but a fool that's out.'

ROMANCES OF REAL LIFE. By the author of 'Hungarian Tales,' 3 vols.

The **DAVENELS**; or a Campaign of Fashion in Dublin. In 2 vols., post 8vo., 18s.

STRATTON HILL; a Tale of the Civil Wars. By the Author of 'Letters from the East,' 'Tales of the West of England,' &c. In 3 vols., post 8vo.

The **SECTARIAN**; or the Church and the Meeting-house. In 3 vols., post 8vo.

HIS MAJESTY THE EMPEROR OF BRAZIL having been graciously pleased to grant to Dr. George Such, a LICENSE to FORM a PUBLIC COMPANY for WORKING MINES in the province of MINAS GERAES, one of the conditions being, that native Brazilians should, if they wished it, be admitted to a participation of the advantages conceded under this license, and Dr. Such, in compliance with this condition, having, by advertisements in the public journals at Rio de Janeiro, required such Brazilians as might be desirous of possessing an interest in the Company to apply at the office of Messrs. Naylor, Brothers, and Co., in the said city, where books were kept open for the purpose of receiving applications during a period fully sufficient to fulfil the above condition; and the said Dr. Such having also given notice, that native Brazilians might, if they wished, apply for shares through their authorised agents in London; now, this is to make known to such agents as may be empowered to demand shares in the names of their Brazilian principals, that they are to apply at the office of Messrs. Longman and Son, at 25, Coleman-street, on or before the 25th of this month, on which day the books will be closed, and no subsequent applications for shares will be received.
London, April 11, 1839.

8, New Burlington-street.
MR. COLBURN has just published the following INTERESTING WORKS:
MEMOIRS OF THE EMPRESS JOSEPHINE. By MADAME MOISSEL DUCHESNE. In 2 vols. post 8vo., 31s. French, 16s. A curious and entertaining piece of domestic biography of a most extraordinary person, under circumstances almost unprecedented.—*New Monthly Magazine*.
'An extremely amusing book, full of anecdotes and traits of characters of kings, princes, nobles, generals, &c.'—*Morning Journal*.

SECOND VOLUME OF THE MEMOIRS OF THE WAR IN SPAIN. By MARSHAL SUCHET, DUC D'ALSUFERA. 8vo. 12s. French, 16s. 6d.

TWELVE YEARS' MILITARY ADVENTURE IN THREE QUARTERS OF THE WORLD, or Memoirs of an Officer. Among other distinguished persons who have a prominent place in this work, are, the Duke of Wellington—Lord Minto—Sir Thomas Picton—Sir Rowland Hill—Sir Samuel Auchmuty—Sir John Hope—Sir Lowry Cole—Sir Thomas Graham—Sir William Beresford, &c. &c. In 2 vols. 8vo., 24s.

The Fourth Number of the UNITED SERVICE JOURNAL and NAVAL and MILITARY MAGAZINE, for April.
The QUARTERLY JOURNAL OF SCIENCE, LITERATURE, and ART. No. 9, Edited at the Royal Institution, by W. T. BRANDE, Esq.

BUCKHARDT'S TRAVELS IN ARABIA; comprehending an account of those territories which the Mohammedans regard as Sacred. In one vol. 4to. 21. 12s. 6d., with Map and Plans. Published by Authority of the African Association.

SIR FRANCIS MACNAGHTEN'S VIEW OF THE CATHOLIC QUESTION as it relates to IRELAND. In 8vo. 3s. 6d. Dedicated to his Grace the Duke of Wellington.

THE MANUAL OF SCIENCE and LITERATURE, and WEEKLY REGISTER OF THE LONDON MECHANICS' INSTITUTION, Part I, price 2s., published this day, contains the following amongst other interesting articles: Dr. Birkbeck's Lectures on Fire Escapes, and on the Application of Animal Power—Mr. Dakin's Lectures on Galvanism—Mr. Hemming's Lecture on Pneumatics—Essays on the Study of Mechanical Philosophy—Progress of the Sciences, and possibility of their early communication to Youth—Magnetizing Power of the more Refrangible Rays—Relation between Colour and Conformation of Bodies—Electric Phenomena in vacuum—Expansion by Heat—Gravitation—Education in Spain, by Don P. Mendibil—Metropolitan Improvements: London Bridge—The British Institution—Society of British Artists—National Repository—Internal Wealth of Ireland, by J. Elmes, Esq.—Sensitive Plant—Reviews of: Miller on South America—Steam Vessels—Journal of a Naturalist—Double Refraction and Polarization of Light—The Menageries—Travels in Guatemala—Quarterly Meeting of the London Mechanics' Institution—City of London Literary and Scientific Institution—Southwark Literary and Scientific Institution—Instruction for Spanish Emigrants, interesting Facts, &c. &c. Published also in weekly Numbers, price Sixpence. C. Wood and Son, Poppin's Court, Fleet-street.

Part II. will appear on Saturday, May 5, embellished with a beautiful Copper-plate Engraving of the New London Bridge, from a Drawing by J. RENNIE, Esq.

This Publication is one of the signs of the times. The subjects of which it treats, and the respectable tone and manner which it assumes, render it fit and instructive reading for all ranks. If such works as this become popular, and form a substitute for the trash addressed to the working classes of society, by the weekly press in general, it will indeed afford a striking evidence of the improving moral state of the population.—*Athenæum*, April 9.

ALMACK'S ROOMS.—MR. BUCKINGHAM has the honour to announce, that he will deliver his COURSE OF LECTURES on the PAST and PRESENT STATE OF THE EASTERN WORLD, in the Great Room at ALMACK'S, King-street, St. James's-square, commencing on MONDAY the 30th of APRIL, at Two o'clock precisely, and continuing the same throughout the remainder of the week, at the same hour.

The following will be the order of the Countries described: Monday—Egypt, the Nile, and its splendid Antiquities. Tuesday—Arabia, its Desert Tribes, & their singular Manners. Wednesday—The Holy Land, and its Scriptural Illustrations. Thursday—Mesopotamia, Babylonia, Persia, & their Remains. Friday—India, its Inhabitants and Institutions. Saturday—Commercial Resources of the Eastern World.

It should be observed, that these Lectures are not mere readings of any Manuscript Papers, or even Notes, but are rather EXTENSIVE SPEECHES, descriptive of the several countries named, classified in such a manner as to be perfectly intelligible to those who have never before given their attention to the subject. They have been found, therefore, wherever they have yet been delivered, to be as agreeable to ladies and their families as to gentlemen; and audiences of great numbers, and of the highest rank of society, have attended them, and expressed their most unequivocal and unanimous approbation.

Admission to any Single Lecture, Five Shillings.—Tickets for the whole Course of Six Lectures, a Guinea; to be had at Almack's Rooms, King-street, St. James's; at Mr. Edgingham Wilson's, Royal Exchange, City; at Messrs. Sharpleys, 35, Old Bond Street; at Mr. W. H. Smith's, (next door to the Crown and Anchor Tavern), 102, Strand; and at the office of 'The Oriental Herald,' 4, Wellington Street, Waterloo Bridge.—Books, containing the Heads of all the Lectures, with a Sketch of Mr. Buckingham's Life, Travels, and Writings, to be had of all Booksellers, price One Shilling. It is strongly recommended that this Sketch should be perused before the Lectures are commenced.

ROWLAND'S KALYDOR.—Its soothing, cooling, and ameliorative properties immediately allay the smarting irritability of the skin—assuage inflammation—heel harsh and rough skin—remove cutaneous eruptions, and produce a beautiful complexion—affords soothing relief to ladies nursing their offspring; and to gentlemen after shaving, it allays smarting the pain, and renders the skin smooth and pleasant, 4s. 6d. and 8s. 6d. per bottle, duty included.—Each genuine bottle has the Name and Address engraved on the government stamp, which is pasted on the bottle.
A. Rowland and Son, 39, Hatton-Garden.

SPITALFIELDS DISTRESS.—GUILDHALL.
THE Right Honourable the Lord Mayor and Corporation of the City of London having granted the use of Guildhall, on Saturday morning, the 2d of May next, Handel's SACRED ORATORIO of the MESSIAH, with the additional Accompaniments by Mozart, will be performed for the benefit of the SPITALFIELDS WEAVERS. The Performance, under the direction of Sir George Smart, will be on the same grand scale as the last Concert at Guildhall.

The Doors to be opened at half-past Ten, and the Performances will commence at Twelve.
Single Tickets, 15s. each (or three Tickets taken at one time, 21s.) to be had at the Mansion-house; of the Secretary, Mr. R. Brutton, No. 27, New Broad-street, City; at Seguin's Library, No. 15, Regent-street; the principal Music Shops; and at the Hall-keeper's Office, Guildhall.

By Order of the Lord Mayor and Committee of Management.
ROBERT BRUTTON, Secretary.
No. 27, New Broad-street, City, April 11, 1839.

GENERAL MINING ASSOCIATION; formerly called General South American Mining Association.

Notice is hereby given, that the Deed of this Association, prepared and approved by the Directors agreeably to the stipulations of the Prospectus, is now ready, and lies for Signature, at the Office of the Association, No. 10, Ludgate Hill.

The Agents of absent Shareholders may obtain, by application, at the Office of the Association, printed forms of instruments according to the Deed, which will have to be sent to such absent Shareholders for their signature.

Notice is also hereby given, that before any parties can be admitted to sign the Deed, and register their Shares, the scrip receipts of which they are holders must be left by them at the Office of the Association for four days, for the purpose of their being examined. Each individual receipt so left, to bear the signature and address of its owner.

G. V. DUVAL, Secretary.
General Mining Association, 10, Ludgate Hill,
10th April, 1839.

EAST INDIA MONOPOLY.
WE the undersigned Bankers, Merchants, Manufacturers, and Wool-staplers of Leeds, in the West Riding of the County of York, agree to form a Committee to regulate into the Bearings of the Charter of the Honourable the East India Company upon their trade, and to act in conjunction with the Merchants of the other Manufacturing, Commercial, and Maritime districts of the kingdom, in endeavouring to obtain such alterations in the said Charter as the circumstances of the country may require, when the subject shall again be brought before Parliament.

CONDITIONALLY INTENDED VOYAGE.

To Parents and Guardians.—Captain T. LYNN, late of the Honourable East India Company's Service, and now holding the appointment of Joint-Astronomical Examiner of Junior Officers of that Service, having obtained permission of the Honourable Court of Directors, proposes to fit out and to command a suitable ship for the purpose of receiving on board a limited number of Young Gentlemen as Pupils, to be INSTRUCTED IN PRACTICAL NAVIGATION, NAUTICAL ASTRONOMY, and SEAMANSHIP.

The Voyage will occupy about six months, to sail as early in the month of May next as is practicable, and to return about the time of the coming ashore of the first of the regular ships in the service of the Honourable East India Company of the ensuing season. Officers of high respectability and known nautical skill will be selected to assist in the desired object. A Surgeon, who has been regularly educated as such, will form a part of the crew.

Terms. One Hundred Guinea for each Pupil, including mess expenses at the Captain's table. One-half of the money to be paid down upon making the agreement, the other half previously to the embarkation of the Pupil. In the event of not obtaining a sufficient number of Gentlemen to enable the Advertiser to prosecute the Voyage, the deposit-money will be duly returned on or before the 10th of June, 1839.

As the entire attention of the Commander and Officers will be devoted to the instruction of the Pupils, it is presumed that their improvement will be proportionate, and that the system will afford the Students an opportunity of acquiring more information in the course of six months than it is possible for them to acquire in triple the time in the capacity of a junior officer, or midshipman, since their time in those capacities is necessarily so fully occupied in other duties, as to preclude the more valuable ones for their future welfare, namely, Navigation and Nautical Astronomy.

N.B.—The most respectable references will be required as to the character of the Pupils, also their personal application, at the Office of the Advertiser, 149, Ludgate Hill, where further particulars may be learned; if by letter, post-paid. Early application is indispensable.

London: Printed and Published every Wednesday Morning, by WILLIAM LAWES, at the Office, No. 4, Wellington-street, Strand.

Price 8d.

THE MUSEUM OF THOUGHTS.

No. V.—FICHTER.

EVERY thing great and good, upon which the present state of society rests, out of which it has risen, and without which our age could never have been what it is, or have done what it is doing, has been brought about entirely and exclusively by the conduct of magnanimous and undaunted men, who have sacrificed all the enjoyments of life for the sake of an idea: and we ourselves, with all that belongs to us, are the result of the sacrifices made by every former generation of mankind, and more especially by the ablest members of each.

For who were the foremost in giving the countries of modern Europe a shape in which they were worthy to be the abode of civilised nations? History makes answer: they were heroic men, who, in the steadfast belief that it was the will of God that the wild fugitive in the woods should be brought to a life of order and to the blessed knowledge of a benevolent deity, left the lands of their birth, and all the sensual and spiritual gratifications they afforded, left their families, their friends and kindred, went forth into the dreary wilderness, encountered the severest wants and the hardest labours, and, what is more, the most obstinate trials of their patience, without allowing it to faint, in order to gain the confidence and goodwill of savage tribes that persecuted and robbed them; and at the close of a life beset with troubles they died the death of a martyr, by the hands of the very persons for the sake of whom, and of us, their remote posterity, they had lived and were dying, in the joyful hope that a worthier generation would spring up on the ground consecrated by the blood of their sacrifice. Assuredly these men gave up their personal life and its pleasures for the sake of an idea, and in this idea for the sake of mankind. And should any object to me, that they sacrificed their present life in the expectation of an infinitely higher beatitude in heaven, which they hoped to earn by their endurance and their toil, that is, that they sacrificed one pleasure to another, the less to the greater, so that they cannot justly be deemed to have acted in the spirit of self-sacrifice; I would entreat such an objector well to weigh the following considerations. Illustrated as may have been the phrases they made use of in speaking of this beatitude in another world, and sensual as may have been the images in which they clothed their descriptions of it, yet how did they attain to this firm faith in another world, a faith which they attested by their sacrifices? and what, in fact, is this faith, considered as an act of the soul? Does not the soul which assumes the undoubted existence of another world, and clings to it with an immovable faith, in this very act make a sacrifice of the present world? And is not this faith of itself the sacrifice completed and fulfilled once for all within the soul? which inward act of the spiritual life is afterward made manifest in a variety of outward actions. Granting that there is nothing at all marvellous in their sacrificing every thing, after they once believed in an everlasting life; granting that it is all perfectly intelligible, and that the objector himself would do the same in the same situation; the marvel however is, that they did so believe: and this the slave of self and sense, who is incapable of withdrawing his eyes from

the present world, will never be able to do; he will never be able to put himself into the same situation.

By whom, again, were the wild and vagrant savages united, and such as resisted constrained under the yoke of law and of peaceful life? By whom have they been kept and preserved under that yoke? By whom have states when once formed been protected from dissolution through inward disorder, and from destruction by outward force? Whatever their names may have been, they were heroes who had advanced far beyond the reach of their age, giants among their neighbours in strength of body and of mind. They subjected multitudes, by whom they were hated and dreaded for so doing, to their conception of that which ought to be: they spent their sleepless nights in anxious meditation for the welfare of these multitudes; they rushed without resting from battle-field to battle-field, abandoning all the pleasures which invited them, perpetually holding out their life as a prey to the enemy, often shedding their blood. And what were they seeking by this toil? and what was their recompense for it? A conception, a mere conception of a state of things which they were to bring about, and which was to be realised altogether for its own sake, without any further aim beyond it, was the object which inspired them; and the unspeakable satisfaction derived from contemplating it was their reward and their recompense for all they went through: this conception, this idea was the root and germ of their spiritual being, while at the same time it threw all the circumstances of their outward being into the shade, obscured them, and led to their being cast away as unworthy of regard: the power of this idea transformed him, who would else have been on a level with his neighbours, into a giant in body and mind, and to this idea his personal life was offered as a sacrifice, when the same idea had rendered it worthy of being so offered.

What drives the king, when he might repose in safety on his hereditary throne and might enjoy the marrow of the land; what drives, to attach my question to a well-known example, which has so often been misinterpreted by a race of sentimental pygmies—what drives the Macedonian hero out of his hereditary kingdom, though amply secured and richly stored with all the means of pleasure by his father, into a foreign quarter of the world, to fight battle after battle while he passes through it and conquers it? Is his purpose to feed his appetites, or to better his health? What binds victory to the soles of his feet, and makes his enemies, though enormously superior in number, cower and shrink before him? Is this mere chance? No; it is an idea, that gives birth to the expedition, and makes it successful. Effeminate semi-barbarians had had the audacity to despise the people which at that time surpassed all others beneath the sun in the powers of its mind, because it was inferior to them in number, and to entertain the thought of enslaving it: they had actually enslaved the tribes of its brethren that were settled in Asia, and had subjected the civilised and the free to the laws and the revolting punishments inflicted by the rude and the servile. This insolence could not be allowed to remain unchastised: moreover, the order was to be reversed, and the civilised were to rule, and the uncivilised to obey, if right was to be established. This idea had already been long cherished by the nobler spirits among the Greeks, until it burst forth in Alexan-

der into a living flame, by which his personal life was moulded and consumed. Tell me not of the thousands who fell on his expedition, tell me not of his own early death: what greater deed was now left for him, after he had realised his idea than to die.

Glory, it may perhaps be said, glory is the motive which inspires the hero: the dazzling image of his own renown among his contemporaries and posterity draws him onward through toil and through peril; and thus the sacrifice of his whole life is richly repaid in that coin on which he chooses to set the highest value. I answer: if it be so, what is this glory? By what means does the thought of the judgment pronounced by others upon us, and especially by future generations, the sound of whose praise or blame will roll unheard over our graves, acquire that tremendous power wherewith it is said to swallow up the hero's personal life. Is it not evident that the whole character of his mind must have been determined by the principle, that his life could be of no value to him, could not even be endurable, except so far as the voice of all mankind should unite in giving it a value. The hero acts, it is said, for the sake of obtaining renown among his contemporaries and posterity: of course, however, he has not gone about beforehand putting the question to his contemporaries and posterity, whether they will approve of the line of action he adopts; nor has he been able to derive any counsel with regard to it from experience; inasmuch as his line of action, as assuredly as it proceeds from and is directed by an idea, is a new line of action, one hitherto unheard of, and consequently one on which the judgment of mankind has never yet been pronounced. Nevertheless, he must reckon upon obtaining renown by this line of action with such confidence as to stake his life on the correctness of his calculation. How does he know that he has not miscalculated? At the time when he first engages in action, having already completed the sacrifice of his life once for all within his soul, he alone, and none besides himself, has passed judgment on his line of action and has approved of it: how does he know then that his contemporaries and posterity will approve of it, and will endow it with a deathless renown? and how does he venture thus boldly to attribute his own standard of glory to the whole race of mankind? He does it, however: and so this single observation proves, that in acting as he acts he is no way led by the hope of the applause, but that he achieves the act which bursts forth in all its purity within his own mind from the primal fountain of honour, and imposes on mankind the obligation of approving of it and honouring it; that is, provided he takes any thought about their judgment; utterly despising both them and their judgment, in case it is not the echo of that which he himself has pronounced for all eternity. Thus it is not the desire of honour that begets great deeds: but great deeds beget within the soul the belief in a world by which one would gladly be held in honour. In that form indeed in which it shows itself every day, honour is nothing more than the mere dread of shame; without impelling any one to act, it merely withholds him from such actions as are notoriously regarded with contempt; and its influence vanishes, so soon as he hopes that his conduct will escape notice.

Who, again, have been the inventors and enlargers of those sciences by which the powers of nature have been tamed and subjected to the will

of man, and by which his own spiritual being has been laid open to his view? Have they been able to effect this without labour and sacrifices? What has been their compensation for these sacrifices? While their neighbours around them were making merry and enjoying the passing day, they were lost in solitary meditation, in the hope of discovering some law, some principle of connexion, which had excited their astonishment, and with regard to which they entertained no other wish of any sort, except that of discovering it; for this they sacrificed pleasures and property, they neglected their worldly affairs, they squandered the very essence and spirit of their beings, and endured to be laughed at by the commonalty as fools and dreamers. True, their discoveries have been useful in many ways to mankind. But have they themselves reaped these fruits of their labours? Have they had them in view, or even entertained any suspicion of them? Have they not, on the contrary, when their spiritual flights were interrupted by any one who regarded their occupations in this light, lifted up their complaints in a tone of true sublimity, at such a desecration of what ought to be kept holy from the profane uses of common life? erring, I allow, in not perceiving that common life also ought to have a holiness of its own. It was not until their labours had so diffused their discoveries and made them so easy of comprehension as to be brought within the reach even of those heads which had less of the inspiration of science, that the latter, whom we are not to despise on this account, but who should acknowledge that their nature is less noble than that of the others, applied these discoveries to the wants of life, and thus armed the human race with the means of controlling the powers of nature. If, then, neither the spectacle nor the anticipation of the utility of their discoveries was their recompense, what was their compensation for the sacrifices they made? and what will at this day be the recompense of any one, were any one at this day making the same sacrifices, and without seeking any thing in return for them, and regardless of the pity or the scorn of the vulgar, to turn his eye toward the pure and ever-living fountain of Truth? Why this is their reward; they have gained an entrance into a new vital atmosphere of intellectual clearness and translucency, which makes them utterly incapable of enjoying a life in any other element of being. A higher world, a world first revealed and most vividly displayed to us by the light that dwells in it, has dawned upon their minds: this light has caught and filled their eyes with its goodly and refreshing radiance, so that they are incapable of turning toward any thing else than those lights which are the only illuminated spots in the midst of profound darkness; this light passing through their eyes has bound fast their whole being and holds it captive, so that all their other senses die away unnoticed. They need no compensation; they have gained an inestimable prize.

All these men, I say, have sacrificed their personal existence for an idea. What do I mean by an idea? The confusion of language occasioned by the attempts to give philosophy a popular air, makes it necessary to define the sense in which one uses such words. An idea is a self-existent living thought, with a power of giving life to matter.

In the first place it is a self-existent thought. The ground of all error lies in the attributing self-existence to dead matter, and then attaching to this matter the perfectly superfluous appendage of thought. Thought alone is truly self-existent, alone reposes upon itself; not, of course, that thought which requires a particular individual to think it, since it is plain this cannot be self-existent, but that one eternal thought, of which all individuals are nothing more than the objects. For death is not the root of the world, a death which by a gradual process of diminution contrives in the end to be refined into life; but, on the contrary, life is the radical principle of the

world, and that which seems to be dead, is only in a lower stage of life. That an idea must be a living thought, is self-evident: for thought is essentially living, and so is that which is self-existent. An idea has also the power of giving life to matter, and that in two ways. All life, as an attribute of matter, is the expression of an idea: for matter itself as existing is only the reflection of an idea hidden from our eyes. But when the idea bursts through its covering, manifesting itself as an idea, and developing its own self-originating life, then that lower degree of life which belongs to the latent idea, vanishes and is absorbed in the higher; and what has been portrayed in all the foregoing representations takes place; the personal undeveloped ideal life is sacrificed for the sake of living in and for an idea. The love which the lower life feels for itself, and its interest in itself, are destroyed. But all wants are only the offspring of this interest, and all pain results from some injury done to it: from all such things he that lives in an idea is for ever secured. For him there is no longer any self-denial, no longer any sacrifices: the self which is to be denied, the objects which are to be sacrificed, have been removed from his sphere of vision, and estranged from his affections. This denial, these sacrifices, can only excite wonder in those who continue to value the objects of them, and who have not yet given them up: when once they are given up, they vanish into nothing, and we find that we have lost nothing. For him who lives in an idea, the severe commands of the moral laws are superseded; inasmuch as they imply the existence of a desire that contravenes them, and their purpose is only to drive back this desire into the dark places of the heart, in order that the idea may find room to unfold itself therein. The only difficulty lies in the first step. When this has once been taken, all that which looks so severe and menacing under the form of duty, becomes our only pleasurable employment, the only thing for the sake of which we should be willing to live, our only joy, and love, and bliss. The voice of philosophy does not call upon us to mortify ourselves: O no; it calls upon us to cast away that which affords no enjoyment, that when we have done so that which is a seeming source of endless enjoyment, may come and take possession of our souls.

All ideas originally and essentially are one. It is only with reference to the objects upon which that one primary idea pours itself out, and in which it embodies itself, within the sphere of our feelings and consciousness, that it breaks itself into a variety of forms; which several forms may themselves now be termed several ideas.

The first emanation of the original principle, that which sprang forth the earliest among mankind, and is still the most widely diffused, is that which acts on the matter around us by means of our material faculties; and this is the modification of the primary idea which manifests itself in the fine arts: whether the bodily expression of a man rapt in an idea—for he alone, and only as such, is an object of art—is to be fixed in marble or on canvas; or whether the emotions of an inspired soul are to be represented in sounds; or the feelings and thoughts of the same soul are to be uttered in their naked purity in words. Assuredly the true artist, the artist who works under the dominion of an idea, must be in a trance of ecstatic enjoyment, while he is exercising his art; for his existence at the time is a state of free and pure self-originating activity. Nor is there any one against whom all the avenues are closed for sharing in the enjoyment of the work; and thus becoming in some manner and in a remote degree a partner in its production, and acquiring at least some kind of perception that there are pleasures which far surpass any pleasures afforded by the senses.

Another emanation of the original idea, the development of which has been confined to a smaller number of individuals, is that which acts

on the social relations of mankind; the source of all cosmopolitical ideas, the parent of heroism, the author of all law and of all order. The strength which such an idea imparts, has already been shown; the bliss with which it fills a soul devoted to it, may be imagined from what has been said; and whoever can form a conception of the world or of his country, and can serve them without a thought of self, will know it from his own experience.

A third emanation of the original idea is that which employs itself in the constructing and reproducing the whole universe, entirely out of itself, that is, by the processes of pure speculation: and this emanation is philosophy; for that, which I have just said, has always formed the essence of philosophy, whenever it has appeared among men, and will continue to form it to all eternity. The high enjoyments afforded by philosophy to such as are initiated in her mysteries, have been described above: it only remains to add that this enjoyment is more spiritual, and therefore more penetrative and higher, than any other which results from an idea; inasmuch as in philosophy the idea not only exists, but is felt and enjoyed as such, as a central thought flowing visibly out of itself; and this indubitably is the highest bliss which a mortal can attain to here below. Only in regard to its outward influence philosophy is worse off than art; since the latter by a secret magical sympathy which runs through the spiritual world, can elevate even such as are aliens from art for a few moments into some communion with it, and can give them a foretaste of her joys; whereas the mysteries of philosophy are altogether closed to those in whose souls the idea has not burst forth into life.

Finally, the most comprehensive all-embracing form of the idea, the form under which it ought to find entrance into every soul without exception, is that under which all action and all life flows back, with a consciousness of its motion and course, into the one primary source of all life, the deity: that is to say, religion. He to whom this idea becomes an object of immediate consciousness and unshakable certainty, so as to be the soul of all his other knowledge and thought and feeling, has entered into the possession of an imperturbable beatitude. Whatever befalls him is a manifestation of that primary source of life, which under every form is holy and good, and which under every form he cannot do otherwise than love: it is, if he expresses himself in other words, the will of God, which is always one with his own will. Whatever he has to do, painful as it may be, or trivial and ignoble as it may seem, is still a manifestation in and through him of that primary source of life, to be the channel of which constitutes his felicity; it is the will of God with regard to him, to be whose instrument is what makes him happy.

These are the most important among the forms into which the one primary idea breaks on passing through our consciousness; beyond that consciousness however they are all one and the same. And this unity is discoverable in its manifestations: every where it is the same life, flowing perpetually out of itself, and ceaselessly reproducing itself anew. Under the form of the fine arts it impresses on the material elements around us the outward stamp of ideal humanity; to the end that future generations, at their very awakening into life, may be environed by noble objects, such as by a certain sympathetic power will educate the outward senses, whereby the education of the inner man is greatly facilitated: so that under this form, the idea labours to further not only this particular modification of itself, but the growth and spread of everything ideal among mankind. Or again, when the same idea manifests itself under the form of religion, by which all the business and actions of this world are contemplated in their immediate connection with the one eternal, ever pure, ever good, ever blessed source of all life, what is its purpose? How could

any high-minded person, after having emancipated himself from the attractions of this earthly life, and thereby become fully convinced of its nothingness, prevail on himself to engage in its concerns, but for this connection between those concerns and the one permanent eternal principle, which religion lays open to him! Thus here, too, we find the one entire idea, which idea, under the form of religion, upholds and supplies a foundation for itself, and furnishes a complete solution for the otherwise irreconcilable contradiction between the feelings it inspires and the obligations it cannot help imposing. And it is the same with every other form of the idea mentioned above, and with every possible one.

Thus does the idea wind along the stream of time, always one and entire, incessantly reproducing itself under some new form, and whatever may be its form, perpetually striving to promote the development of itself in its perfect totality. Moreover, at every moment of time it is entire: at every moment it involves and comprehends itself as it exists in the whole of the never-ending stream. That which is produced by the idea at any one given moment, only comes forward as the consequence of all that has been, and as the means of all that is to be unto eternity. Nothing, in this system, is ever lost. Worlds bring forth worlds, and ages bring forth new ages: which latter stand above the former, contemplating them, and bringing the hidden concatenation of causes and effects in them to light. Then does the grave open—not that which consists of the hillocks of earth piled up by human hands, but that grave of impenetrable darkness which encompasses the beginning of our life—and out of it come forth all the mighty organs by which ideas have worked, and in the new light they behold the completion of that which they commenced, the entire manifestation of that which they discerned only in part: then comes forth every deed, however lowly in appearance, which has been performed in faith in the Eternal; and even every secret aspiration, which was shackled here and dragged down to the earth, puts forth wings and soars up into the new sky.

In a word, as when the breath of spring fills the air with life, the stiff ice, every particle of which but a while before was shutting itself up within itself, and sturdily keeping off every neighbouring particle, no longer holds out, but the waters rush together into one single mild stream, where all is motion and intercommunion and interpenetration; and as at the same season the powers of nature, which before were separated, and in their separation presented an image of nothing but death and decay, burst forth to meet each other, and embrace and blend in complete interfusion, and in this interfusion exhale a living balm for every sense; so is it in the spiritual world: not that there is any winter in that world, or that the spirits are ever cut off from each other, and frost-bound, by selfishness; but all are blended and fused everlastingly into one living whole by the breath of love. Nothing can exist insulated in and for itself; but everything exists in and for the whole; and this whole itself, pervaded by unutterable love, is ceaselessly dying for itself in order to spring forth anew. For this is the law of the spiritual world: whatever has attained to a consciousness of existence, must fall a sacrifice to the universe in its interminable progress from one stage of being to a higher: and this law cannot be arrested, but fulfils itself without waiting for any one's yea or nay. The only alternative is, whether we will let ourselves be led like men with a halter round the neck to the slaughterhouse, or freely and magnanimously, and in the full foretaste of the life which is to grow up out of our fall, will lay down our personal being as an offering on the altar of eternal life.

Such is the state of the case: under this holy legislature, willingly or unwillingly, whether we are aware of it or no, we all stand: and it is only a heavy

or feverish dream that buzzes about the brain of the egotist, when he fancies himself able to live for himself alone: the delusion no way changes his condition, and he himself is the only sufferer by his wrong. Happy are the slumberers in this cradle of eternal life, if a joyous vision of that life come now and then to refresh them in their dreams! happy, if from time to time, their ears are greeted with the tidings, that there is indeed a light and a day!

MILLER'S MEMOIRS.

Memoirs of General Miller, in the service of the Republic of Peru. By John Miller. Second Edition. Longman and Co. London, 1829.

THE extraordinary contest between Spain and her colonies has produced so many works in this country as well as elsewhere, that public curiosity is well nigh satiated. The 'Memoirs of General Miller' have obtained, however, a peculiar share of favour, which they seem likely to preserve; and this more, we are inclined to think, on account of the form in which they convey their information, than even of the ability and accuracy which distinguish them. The book does not pretend to be a history in the proper sense of the word, for the writing of which, indeed, the time is probably not yet come. All is here exhibited in connection with the fortunes and character of an individual, with whom every reader must feel an intimate sympathy, and whose prospects, exertions, and perils give a kind of personal value to the general narrative. The chances are, that if the author had attempted to write a history he would have failed (how few of any age have succeeded!) of placing himself at the outward point from which alone he could see all the events as exponents of political truth. If he had achieved this great triumph, (one which no living English writer has accomplished,) how few among ordinary readers would have understood his meaning, or in any degree appreciated his merits. The modest and unobtrusive temper of the writer has prevented him from engaging in the enterprise; and he has preferred to undertake a task in which his good information, good sense, and good feeling ensured to him the most complete success. He takes his stand on our universal human propensities and affections; and amid his tale of wars and revolutions, and his pageant of strange tribes and mighty countries, he traces out, not so much those dark causes and complicated results of which not one man in a century has insight, but the hopes, and fears, and powers, and exertions of a single vigorous mind. The record of General Miller's life has also, we doubt not, been far more popular than it would otherwise have been on account of his English name, birth, and education, which give us a peculiar interest in the character and fate of our fellow-countryman.

The second edition is considerably augmented, and furnishes us with a more complete notion both of the hero of this great historic play, and of the scene on which he appeared. It also contains a translation of part of a preface, added by General Torrijos to his Spanish version of the work. Of the excellent and distinguished person to whom we owe this essay, the following notice is given in the English edition; and, had the space permitted, there is ample ground for a far more extensive record of exertions, sacrifices, and virtues.

'The translator, General Don Jose Maria de Torrijos, was born at Madrid in the year 1791. When ten years old, he was made a page to King Charles the Fourth. At the age of thirteen, he received a captaincy in the Ultonia, a regiment of the Irish brigade. He prosecuted his military studies at the engineer academy of Alcala de Henares. In the course of the war he was appointed to the command of Doyle's regiment of light infantry, which, in 1812, formed part of the garrison of Badajoz, where the friendship between General Torrijos and the subject of these memoirs commenced. He commanded a Spanish brigade at the battle of Vittoria, and continued attached to Lord Hill's division

until the peace of 1814. The valour, talent, zeal, activity, and services of General Torrijos, during the Peninsular war, are too well known to require detail. The liberality of his political sentiments occasioned him to be thrown into the cells of the inquisition at Murcia, where he remained in solitary confinement from 1817 to 1820, when his prison-doors were thrown open by the re-establishment of the constitution. In 1823, General Torrijos commanded in Cartagena and Alicante, and maintained those fortresses in behalf of the constitutional Government long after the absolute king had re-entered the capital. When further opposition had become without an object, the general obtained the most favourable conditions for his army; but, unable himself to reconcile his mind to the idea of living under a despotic prince, he emigrated, and is now living in London, where he is respected and esteemed by all who have the pleasure of his acquaintance.'—P. vi. Note.

The preface which General Torrijos has added to the present translation, and part of which is translated in the work before us, contains an animated defence of the Spanish nation against the charge of tyranny towards its colonies. The writer maintains that the evils of the Spanish colonial system are attributable, not to the oppressive disposition of his countrymen, but to the vices of the Government, which weighed, and still weigh, with equal severity on the happiness of the mother kingdom. In the course of his observations, one or two arguments are brought forward, from the justice of which we are compelled to dissent; one of these is contained in the following sentence, found at p. xxviii:

'If, indeed, very few Americans have occupied the first place in the civil magistracy in America, and very few American officers have been commanders there, how many ministers of state, presidents of colleges, captains-general of the provinces and departments of marine, inspectors, viceroys, governors, &c., have there, not been in Spain, and still are to be found there, who were Americans?'

Now, the author seems here to forget the nature of the accusation which he is answering. No one asserts that the Americans were unfairly treated in Spain, but it is maintained that they were practically excluded from office in their own country. To prove that they were not excluded in the mother country, is to do nothing towards meeting the charge. If, indeed, it could be shown that as the Spaniards had a monopoly of place in America, so the Americans had a similar monopoly in Spain, a case might be made out on this subject in favour of the former system. But, in truth, the Americans were (we believe) only allowed to eat the crumbs that fell from the table in Europe, and at the other side of the Atlantic were beaten out of the room in which their brethren were seated at so rich a feast. The preface, however, will tend on the whole to raise the character of the Spanish nation in the eyes of Europe, and to throw the blame on the right shoulders, those of the Government. We may also observe, that there cannot be a more absurd falsehood than one which has lately been printed in London, the assertion, namely, that General Torrijos defends the mode of government practised towards the American colonies. It is his whole object to show that the atrocious guilt of the rulers ought not to be visited on the people; and herein we are convinced that most reflecting men will agree with him.

We subjoin two brief extracts:

'Spanish America naturally followed in the steps of the mother country, with the sole difference, that to the evils common to both countries, was added the greater frequency of local abuses practised by subordinate agents, to whom distance from the seat of government gave encouragement to practices which probably would not have been ventured upon in Spain. Upon the whole, it may be doubted whether the enlightened despotism exercised by the viceroys in America was not, in many instances, of a less oppressive and degrading character than that exercised in Spain by some of her profligate kings, and not unfrequently by ministers and favourites. Be this as it may, one could hardly expect to find in the colonies of a nation enslaved and oppressed, either by fanaticism, or by the absolute power

of her kings, either good government, or justice, or liberty. America was prohibited from cultivating the natural productions of Spain, and the same barbarous and tyrannical policy forbade Spain to naturalize in her soil the productions of America. In conformity with the colonial system which has been adopted, and which is still acted upon, by all nations towards their colonies, America could trade only with Spain; but the Spanish Government, adhering to its restrictive and monopolizing system, confined the trade with America to a few privateers, at first from Seville, under the control of the Government, subsequently from Cadiz, and ultimately from a few other ports. Vandal and arbitrary as were many of the Government agents who went to America, had those who were appointed at home either more honesty or more moderation? What could be expected from a Government so demoralised and corrupt? America and Spain, at one and the same period, were exposed to the same calamities; and one caused the ruin of the other. The former, by supplying the precious metals, furnished the arms which despotism needed for oppressing the latter, by means of innumerable agents paid with this wealth, and deprived herself of her youth, who rarely returned to their native country, for the purpose of maintaining slavery in her colonies."—Pp. xvi., xviii.

'Ferdinand returned; but, instead of consolidating the national happiness, in return for the costly sacrifices that had been made for him,—instead of declaring himself the father of his people, and complying with the solemn promises he had made to the nation when he gained possession of the throne by the revolt of Aranjuez, he annulled the code which secured the liberties of the people; but, in order not to outrage public opinion, he offered to assemble the Cortes, to study the national happiness, and promised not to be absolute. Instead of complying with these solemn promises, he broke his word as a prince, his faith as a man of honour, and threw himself into the hands of the priests, who, up to that period, had been lying in wait, secretly conspiring against the Government and national institutions; becoming the agent of his own vindictive passions, he persecuted those who had best served their country in his absence, and who had most efficaciously exerted themselves to restore him to his throne.

'Not content with carrying on these persecutions in Spain, and, instead of sending emissaries to the different provinces of America, for the paternal purpose of terminating the dissensions there, he was hurried away by the persuasions of the barbarous and sanguinary fanatics who surrounded him, and immediately despatched an expedition, dragging from the bosom of their families thousands of individuals who had voluntarily taken up arms to serve during the war with France, and who, on the restoration of peace, obtained by their blood, hoped, at least, to be permitted to remain in the enjoyment of those domestic pleasures which they had so patriotically given up on the national summons, and, by the advice of the sanguinary Eguia, and of the profligate Ostolaza, intrusted the command to the atrocious Morillo.

'About six years succeeded of despotism, of victims, and of persecutions, in Spain; and of despotism, victims, persecutions, and a desolating war in America. The dawn of liberty beamed again in Spain on the proclamation of the Constitution, on the 1st of January, 1820, the seasonable fruit of so many unsuccessful attempts; and hereupon the liberal Government renounced the expeditions proposed by the absolute Government, then ready to set sail, and a general armistice followed, in America, the news of the liberty of Spain. Her representatives agreed to send special commissioners "to proceed to the different Governments established in the two Spanish Americas, to hear and receive all proposals that might be made for transmission to the mother country, with the exception of such as might go to deprive the European and American Spaniards, residing in any part of the provinces beyond sea, of the absolute liberty of transferring and disposing of their persons, families, and property, in the manner that may seem best to them, without being exposed to any impediment or any measure that may be injurious to their fortunes. 2. The commissioners shall remain there till replies are furnished," &c. &c. If a delicacy, perhaps excessive, in saving the honour of the Spanish name made them more tardy than might have been desirable and just, for the purpose of immediately suspending the effects of that disastrous war, at all events this step displayed, in some degree, the sentiments of the Spanish nation. The first national representation pronounced that the Americans possessed equal rights with the natives of Spain. The second, finding those countries struggling for their independence, offered to treat with them,

admitting that independence as the basis of the negotiation; and the third made manifest to a powerful nation their desire of mediation as to the form and manner of the recognition of the independence for which they were struggling."—Pp. xxiii.—xxvi.

ORIGIN OF THE SPANISH LANGUAGE.

Don Termopilo's Defence of the Prospectus of Dr. Puigblanch. By Perico de los Palotes. 18mo. 1829.

UNDER this equivocal title is given a small work, full of wit and learning, couched in the purest Spanish, and conveyed in the difficult and varied form of dialogue. Its object, however, is one of the highest importance to all lovers of etymology, and those especially who are curious about the origin of the Roman dialects, and particularly that of Spain. It owes its appearance to a prospectus issued some time since by Dr. Puigblanch, one of the Spanish Refugees now in London, of a work which he is preparing on the genius and origin of the Spanish language. That prospectus contains a good deal of wit, paradox, and whimsical novelty; sufficient, indeed, to turn the head of any one reading it for the first time. What is maintained is this: That the Spanish language, as it now exists, as well as the Portuguese, existed long before any of the Latin writings handed down to us, without even excepting the fragments of the 'Twelve Tables.' This is novel, at least; but, as Dr. Puigblanch only announces this new discovery, and promises proofs to satisfy the public in his forthcoming work, one of his companions in exile has ventured to forestall him, and under the assumed name of Don Termopilo, demonstrates the absurdity of such a supposition, and of a great number of other misconceptions into which the author of the Prospectus has fallen in support of his strange notion. The dialogue of this little work clearly evinces that the author is well versed in the literature of his country, and acquainted with all the delicacies of the Spanish language. It is written in a tone of highly-seasoned irony, and abounds with phrases, sparkling with grace and vivacity, peculiar to the colloquial language of Spain. In this double, relation it really does honour to the pen and the acquirements of the author. We are told it is the production of Dr. Villanueva: at all events his antagonist believes so; for he lately gave notice that, early in the present month, he should publish his reply to the 'Critique on his Prospectus, by Dr. Villanueva.' We have kept account of this promise; and, if Dr. Puigblanch's reply procures us another work similar to the dialogue under review, we do not care how soon he fulfils his threat.

EDUCATION ON THE CONTINENT.

Des Etablissements pour l'Education Publique en Baviere dans le Wurtemberg, et dans le pays de Bade, et Remarques sur les ameliorations a introduire dans ces etablissements pour les faire adopter en France, en Angleterre, et autres Pays. Par J. C. London, Membre de la Societe pour l'Enseignement Elementaire a Paris, &c. &c. 8vo. pp. 67. Mesnier. Paris, 1829.

IT is now more than twenty years ago since John Quincy Adams, in his 'Letters from Silesia,' gave us, so far as we know, the first details which were published in English of the state of parochial education in Germany,—proving that neither Scotland nor his own country, New England, had any right to assume the exclusive merit of the establishment of parish schools, though his nationality has made him somewhat inclined to assign the palm of superiority, in this respect, to New England. At the time when Mr. Adams wrote his very interesting letters, there were in Silesia a university and an academy, besides grammar-schools in every town in the province; and, moreover, a school was kept in every village, the master of which, and the other expenses of the establishment, were paid conjointly by the lord of the manor and his tenants, while they were all under the superintendence of the clergy. One fact, men-

tioned by Adams, is decisive in proving that they had advanced far beyond either Scotland or New England in the art of education, a seminary being provided for the express purpose of instruction; the teachers and young clergyman having been compelled to attend this seminary, in order to fit them for the duty of superintending the district schools. If they did not so qualify themselves, how able soever they might otherwise be, they could procure no living. The sum paid by the inhabitants for the support of the schools was levied somewhat in the manner of a rate or a tax; and even paupers, who could not pay this school-tax, were compelled to send to the schools all their children, from their sixth to their twelfth year, under the penalty of forfeiting double the school-tax.

Such was the system acted upon in Silesia before and during the sway which Napoleon exercised over Germany; and, though his marauding inroads shook German society to the very centre, yet it was never any part of his policy to obstruct, but rather to encourage, education. It was not likely, therefore, that he would interfere to suppress the schools which had been so judiciously organised. Napoleon, indeed, seems to have had an instinctive notion that a well-educated population were superior in industry, and, of course, could better afford the tyrannical and enormous imposts which his necessities required than people who were ignorant and idle. This, together with his insatiable thirst for fame, was the secret of the encouragement which he gave to education; whereas we think the present rulers of Bavaria, Wurtemberg, and Baden, are actuated by motives more disinterested and philanthropic.

The brochure now before us is the only detailed account we have met with of the state of those schools since Mr. Adams published his letters, and we have read it with higher interest in consequence of its coming from a Scotsman intimately acquainted with the boasted but very imperfect system followed in his native country. The following is our author's account of the system pursued in the public schools of Wurtemberg as described to him by M. Zoller, rector of a school in Stuttgart, and member of the National School Commission:

'1. There is an institution or college for the education of schoolmasters in a village near Stuttgart; where young persons are instructed in almost every branch of knowledge, and are obliged to undergo a complete examination before they can obtain the management of the most ordinary school. There is also an institution for young females, who are destined for the profession of instruction. They are taught the common branches of the sciences, and every kind of sewing, and kitchen, and household duties.

'2. In each village or hamlet there is a school, and a house and garden appropriated to the master; and in large towns or cities, there are one or two schools. In places where the population is considerable, the boys and girls are separated, and very frequently the latter are kept under the authority of a mistress during the two or three first years. When there is only a small number of children, boys and girls are instructed in the same school, but are not intermixed. The master is generally a married man, and his wife capable of acting as mistress, though this is not always the case. The master, besides a house and a garden, has sometimes a field allotted to him. He receives a fixed salary from the Commune, or what in England is called a parish; he has also a trifling remuneration for his pupils, according to the age of each, and instruction given. These remunerations are fixed by the Government, and are every where the same. The portion of land and salary given by the Commune, are regulated in such a manner, that the master may be provided with the means of subsistence, even in small hamlets as well as in very populous Communes.

'There exists a law which obliges parents to send their children to the school,—girls from the age of six to thirteen, and boys from six to fifteen, unless prevented by ill-health. In such cases of absence, every child must remain longer at school, to make up for lost time, or until it has attained a degree of instruction deemed sufficient by the persons who are appointed to decide upon this. If it happen that the parents are unable to pay all, or a part of the expenses

incurred in the education of their children, the Commune is answerable to the master for the deficit.

4. The branches of instruction required by the law for children are reading and grammar, that they may be in a condition to speak and write their native language with correctness; writing and arithmetic, and in the latter branch the knowledge of the child must be advanced as far beyond proportion as its capacity will admit. The works which are read are those which treat upon the duties that children have to fulfil in the world, together with geography, biography, and general history. The instruction of the girls in arithmetic is not so extensive as that of the boys; they are also taught to spin, weave, sew, knit, embroider; to make articles of apparel, even those of men; to understand culinary offices, and to take care of children. But if the parents desire it, or if the master perceive in a child, whether a girl or boy, a disposition for learning geometry, the dead languages, drawing, and other branches of education, these are taught at a very moderate expense. M. Zoller informed me that the greater part of the masters who had left the institution during the last thirty years had a knowledge of Greek and Hebrew, as well as of the higher branches of the mathematics, and that they were capable of affording any instruction that could be desired.

5. In each Commune there is a Committee of Policy, or what, in England, would be called a parish vestry; of which the priest or priests of the Commune, of whatsoever religion, always, and by right, compose a part. The committee, and particularly the Protestant minister belonging to it, is charged with the office of seeing that the children be sent to school, and that the master punctually discharge his duties. The prevailing religion in Wurtemberg is the Protestant; but in some Communes the inhabitants are all Catholics, and in others there are three or four religions, amongst which even Quakers are met with. The master must not interfere with the religion of the children; that is a distinct object, and is the care of the priest of that religion which the parents follow. I shall here remark, that the difference of religious tenets does not prevent the inhabitants of Wurtemberg from living together in bonds of the most perfect union. There the Catholic religion is almost as simple in its ceremonies as the Protestant; in a word, all the different creeds appear to be reciprocally neutralized.

There is, I am told, scarcely an instance in which parents have refused to send their children to the schools; although it would not have been prudent to leave at their discretion the time for their continuance there, for the poorest of the poor would very rarely resist the temptation of taking away their children at the age of eleven or twelve, for the purpose of making them labour in the fields. From this circumstance, it is perceptible that this part of the system is clearly essential to ensure success; and, however it may infringe upon absolute liberty, this measure is, nevertheless, I think, incontestably justified by the utility and well-being which are its evident result.

6. All the children undergo an examination annually in presence of the Committee of the Commune; and the boys and girls who have completed their fifteenth or sixteenth year, and are adjudged by the Committee to have attained the degree of instruction required by the law, receive a certificate, without which, it is prohibited to give employment to any native of Wurtemberg under the age of twenty-one.—P. 14.

Such is the sketch which our author has given of the system of public education in Wurtemberg, which appears defective, he thinks, in only one point; that is, it does not comprehend lineal drawing, which is one of the most essential objects of instruction for the children of both sexes, but more particularly of boys. In all mechanical arts, lineal drawing is almost, if not altogether, as useful as arithmetic or writing; and the author justly remarks, with respect to drawing, with what facility the essential principles of all the material sciences, and the knowledge of all the operations and products of the useful and agreeable arts may be communicated, by its means, to the minds of children of every age; and, that in almost every case, it would be instrumental in giving to persons who learn drawing a taste for other studies.

The author informs us, that in Bavaria, a similar system of education is adopted. The same laws concerning marriage are also in force there, and with respect to the state of landed property;

but these laws have only been effective during the course of the last thirty years, and, consequently, their influence upon its population, although nearly the same, is not so sensible as in Wurtemberg. Nevertheless, in Bavaria, an amelioration in the system of instruction has been effected, which it may be important to mention. M. Hazzi, an enlightened and patriotic individual, who introduced modern agriculture into that country a short time after the abolition of the convents, and the organization of public instruction by Count Monteglas, looking upon Bavaria as a country essentially agricultural, conceived the idea of teaching agriculture in the schools. He composed a catechism of agriculture, and had sufficient influence with the Government to have it adopted as a school-book throughout the kingdom. This catechism, of which our author presented a copy of the first edition, published in 1804, to the Society for Elementary Instruction, at Paris, has gone through several editions, and has been increased by the author, with such improvements in the plan as have been made from time to time. The lessons which it contains continue to be every where taught. Our author proceeds to say:

As each school has a field of two or three acres belonging to it, a portion of the day, during spring and summer, is devoted to the cultivation of it, and to the operations, which partially or entirely occupy the hours of recreation in these two seasons. Different methods of cultivating these gardens have been adopted, of which the following is perhaps the best:

Let us suppose there are eight different sorts of seeds to be cultivated, and that the number of scholars amounts to forty: the land is then divided into sixteen parts, and the children into classes of five; one of them has the direction of the others; and, if possible, it is so contrived, that each class consists of some of the youngest, one of middling age, and one of the eldest. Each class has two portions of land; but as there are only eight sorts of seeds to cultivate in all, it follows that there are two squares of each sort cultivated by two different classes. The object of this arrangement is to excite emulation among the cultivators. After a child has directed the cultivation during a season, it is placed as second in another class, and the one which was second to it becomes, in turn, chief of a class; the whole is so regulated, that, during the eight years required by the law, if each child remain at the school it is four years as a working husbandman, two years as first husbandman, under a chief, and two years chief. It is well understood that the master is director-general of the whole, and that during summer he gives his pupils practical instructions in the garden, upon all the principal points of vegetable physiology, on the rotation of the crops, on the manure, and on the principal operations of gardening and agriculture; for all these instructions, and many others, compose a part of the last editions of M. Hazzi's catechism. The children learn these by heart during winter. There is a portion of land in the garden exclusively appropriated to the use of the master; and only those pupils whose squares are in the best order are permitted to assist him in the cultivation of his particular patch of land. The degree of order is determined once a week by a committee, composed of the principal pupils. The most curious operations of gardening are exhibited in the garden of the master; and in case the latter has any taste for botany, a small collection of plants and trees of the country will sometimes be found. They are numbered, and the children are permitted on holidays and extraordinary occasions to make use of the catalogue to learn their names. It is almost useless to add, that they give themselves up with ardour to this occupation.

A portion of the gardens is reserved for children of the female sex for the cultivation of flowers. This is laid out and cultivated in the same manner as that of the boys, and placed under the general direction of the school-mistress. I gave M. Sckell, director-general of the gardens at Munich, the idea of collecting every year the seeds of all the flower plants, particularly of the annual plants of the Royal Gardens of Munich, in order that he might distribute them every year to the schools of the kingdom,—a plan which has already been followed with respect to the most useful vegetables.—P. 18.

We recollect no instance of statistical detail in which we have felt more interest, than in this truly Arcadian picture of rural instruction. It

leaves at an infinite distance the dry technical lectures on agriculture, which are given at Edinburgh, Dublin, Cork, and we believe at a few other places in the United Kingdom. One day's practical instruction is worth an eternity of prosing lectures upon such a subject. The following is our author's account of the state of education in Baden:

In the country of Baden, the state of education is as much as possible similar to what it is in Wurtemberg; and, as far as my observations extend, its effects upon the inhabitants are the same. The accounts which we have received on this subject have principally been furnished us by an Englishman and a Frenchman, both professors at the polytechnic school at Carlsruhe, and by Professor Kärcher, director of the girl-school (*Tochter-schule*) in that city. I examined the different classes of this school, and brought away specimens of the pupils' writing. There are mistresses for the youngest girls; and they inspect also the work of the eldest. Masters are charged with the care of the higher classes. A part of each day is devoted to working, drawing, singing, and dancing. Each of these occupations is carried on in different rooms, and under the inspection of mistresses. They pass an examination once every year, and the result of it is published. I send you adjoined the report of 1828, (*Darlegung, &c.*) in which you will find the detail of the different articles of instruction, hours of the day, and proportion of time devoted to each study. You will observe that when the girls reach the two higher classes, philosophy, natural history in general, mythology, (this title comprehends some observations upon the various religions, which exist or have existed,) astronomy, geography, arithmetic, French, German, singing and dancing, become the object of their studies. You will see, in page 13 and 14, with what care, and in what manner, philosophy and natural history are taught; that in botany, for example, they are made to study plants upon growing specimens, in the midst of fields and gardens in summer, and that this study is carried on during winter upon dried plants; that not only the name and distinctive mark are given to each plant, but the use of each, indigenous, and exotic, in the arts and principal manufactures of Europe, are made known. The same method is practised relative to the utility of the different animals in the study of zoology. (*Thierkunde.*)—P. 14.

The greater part of the girls thus instructed cannot aspire to higher connections in the world than becoming the wives of what would be called in England working men; the rest can only hope at most to be united to artisans, and persons occupied in low public employments. This is not however to be forgotten, that these working men and artisans are as enlightened and as polished as many gentlemen in other countries; in a word, they are deserving of such wives. You will observe at the end of this pamphlet the names of the one hundred and ninety-five scholars composing the four classes in question; each is reckoned in the class to which it belongs. This list is made out annually, during the seven years that the children remain at school, and accompanied each time by a printed report. These seven reports, and the seven lists in which the name of each of the children is inserted, become the permanent archives of their progress and respective capacities. It is useless to remark, that this measure must be a powerful motive of emulation both to pupils and parents, and that these reports are deserving of being adopted in all kinds of schools.—P. 20.

In Britain this system is partially acted upon from personal motives by those schoolmasters who publish lists of such of their scholars as have obtained prizes. In our Universities, also, it is usual to publish such lists; but in none of the establishments in Britain does the system seem to be acted upon with such regularity as in those under consideration.

Our author devotes some portion of his pages to what he thinks might improve the systems of which he has given the interesting details which we have just abstracted, and to the important inquiry how far the higher ranks, and particularly the priests, appear to promote the diffusion of knowledge among the labouring classes; but into this part of the work we have not left ourselves room to enter, and must refer those who are interested in it to the original, which is replete with shrewd remarks and judicious principles.

CHEMISTRY.

A Chemical Catechism, in which the Elements of Chemistry, with the recent Discoveries in the Science, are clearly and fully explained. Illustrated by Notes, Engravings, and Tables; and containing an Appendix of Select Experiments, &c. By Thomas John Graham, M.D., Member of the Royal College of Surgeons in London, &c. &c. 8vo, pp. 616. Joy. London, 1829.

WE think what has been falsely called the Interrogative System of Instruction, is decidedly on the wane; and, before many years elapse, we hope to have it in our power to report it obsolescent, if not altogether obsolete. Not that we think it possible to instruct by discarding interrogation; but, according to the exclusive manner in which it has been recently conducted by catechisms for every science, there cannot be the shadow of a doubt, that it has operated as a serious bar to the diffusion of sound practical knowledge. A boy or a girl at school, a young lady or gentleman, under private tuition, is furnished, for example, with a catechism of chemistry. Pincock's, Mavor's, Lewis's, Parke's, Forsyth's, Graham's,—no matter which, and is set to con over the answer to a question, to commit the words to memory, and at the next lesson to repeat these very words to the teacher; but all the while thinks little, if at all, about the facts contained in the answer which has been thus parroted. Now, from what we have repeatedly witnessed, we believe that this is no exaggeration, but the literal fact, whenever the interrogative method is systematically pursued, the memory being exclusively employed upon words, while things are seldom, if ever, thought of; and the judgment of the pupil is never called into action, but suffered to remain uncultivated and somnolent. Whereas, if we understand aright the philosophy of education, we should say the judgment of the pupil ought to be exercised even more carefully than the memory, which is, for the most part, sufficiently active in youth; and in few cases which have fallen within our notice, has it required the incessant stimulant inseparable from the interrogative system; while, on the other hand, the judgment of youth is always slow and imperfect, and consequently nothing can be of more importance than its cultivation. This can be but effected by putting children or young persons to discover and decide upon the differences of things, such as, in chemistry, the differences between an acid and an alkali,—a liquid and a solid, oil and water, gas and vapour, &c. In bringing this process of instruction into operation, we would not object to occasional questions being put—such will be necessary and useful; but we do most strenuously object to systematic categorical interrogation. Dr. Graham appears to have tacitly felt the evils inseparable from the system; for we find him in many instances abandoning the legitimate model of his predecessors, and deviating in his questions into the conversational style. Like Parkes, of whose book Graham's is an exact counterpart, he finds it impossible to introduce all his materials into the answers; and, finding no other place to dispose of his 'shreds and patches,' his cuttings from books and scraps from journals, he lumps them all into 'a ragged regiment' of notes, which furnish a regular running bass to the text, like Dr. Slop's curses in 'Tristram Shandy' to the lillibulero whistled by my uncle Toby. We need not go beyond the opening of the 'Chemical Catechism' to find ample ground for what we have now said:

'What is Chemistry?

'Chemistry is the science which treats of the specific differences in the nature of bodies, and the permanent changes of constitution to which their mutual actions give rise.'

Then follows the note à la Dr. Slop:

'Chemistry is a science by which we become acquainted with the intimate and reciprocal action of all the bodies in nature upon each other.—Fourcroy's General System of Chemical Knowledge.

'Chemistry may be defined, that science the object of which is to discover and explain the changes of composition that occur among the integrant and constituent parts of different bodies.—Dr. Henry's Elements of Chemistry.

'The nature of this science is very clearly explained by Sir Humphrey Davy, in his "Elements of Chemical Philosophy," p. 1. Most substances belonging to our globe are constantly undergoing alterations in sensible qualities, and one variety of matter becomes as it were transmuted into another. Such changes, whether natural or artificial, whether slowly or rapidly performed, are called chemical; thus the gradual and almost imperceptible decay of the leaves and branches of a fallen tree exposed to the atmosphere, and the rapid combustion of wood in our fires, are both chemical operations. The object of chemical philosophy is to ascertain the causes of all phenomena of this kind, and to discover the laws by which they are governed.

"The ends of this branch of knowledge are the application of natural substances to new uses, for increasing the comforts and enjoyments of man, and the demonstration of the order, harmony, and intelligent design of the system of the earth."

'The difference existing between chemistry and natural philosophy will be readily understood by reading the following explanation, given by Dr. Paris, in his "Elements of Medical Chemistry," p. 1. "As the minute particles of matter are alone actuated by such forces as attraction, heat, and electricity, chemical changes are not accompanied by sensible motions; a fact which enables us, very conveniently, to consider chemistry as distinct from natural philosophy, for the phenomena which are constantly referred to this latter province, are characterised by apparent motion."—P. 2, Note.

This bad management is continued from the beginning to the end of the work—answers following questions, and notes following both, in all the intricate confusion inseparable from such a system. With respect to the author's qualifications for writing upon the subject in any shape, we must say that he appears to us to possess much less acquaintance with chemistry than with books; and, imperfectly as he has performed the task which upon such a plan it was impossible to perform well, he has demonstrated that he is, upon the whole, a better book-maker than a chemist.

APICIAN MORSELS.

Apician Morsels; or, Tales of the Table, Kitchen, and Larder. By Dick Humelbergius Secundus. Post 8vo. pp. 348. Whittaker and Co. London, 1829.

THE intrusions of quacks into every department of science—into the sacred walks of poetry—into the holy sanctuary of the fine arts—into the deep and divinely inspired caverns of criticism—has been a subject upon which wise and good men have thought, without finding any escape from the anxious reflections which it occasioned them. That in the ordinary walks of life—in the common-place pursuits of business and pleasure,—good and evil men should be allowed to jostle each other; that there should be no distinct mark to distinguish the one from the other; but that their characters should await a manifestation from circumstances—is not surprising; but that, in those pursuits into which one withdraws from the hurry, and confusion, and medley of the world—that even into these retreats, which we should have imagined the bad would have voluntarily shunned, or, if they showed a disposition to enter them, would have been forewarned of the peril by the genius of the place herself,—they should come unforbidden, nay, should so occupy every corner, as scarcely to leave room for worthier spirits than themselves—here is matter, indeed, for speculation, and wonder, and melancholy.

There was one science, and but one, which we had believed saved from these invasions; one temple which we did fondly believe had been kept sacred from the foot of profanation; one altar from which nothing but the purest and the most fragrant incense had ever risen to heaven. We knew well that in the priests of this profession, as in every other, there were lurking defects of character; we knew that there might be superstitions in their rites, imperfection in their ser-

vices. But we did feel assured that no one had ever put on the sacerdotal vestment, in whose character a deep and holy reverence for the mysteries into a knowledge of which his ordination admitted him, did not constitute a prominent feature; not one who would venture to speak slightly or rashly of the duties of his calling. In all the qualities which constitute a great and commanding INTELLECT, the interval between the different ministers in this sanctuary is wide—almost immeasurable; perhaps there is no human scale which could determine the distance which separates the rude uncultivated mind of Mrs. Glass, or even the practical but narrow comprehension of Mrs. Rundell, from the intuitive and far-stretching genius of Ude. But still in all, even the weakest, of these writers, the moral feeling was untainted. There was a deep, earnest feeling of love and affection for their art, which shone through their weakness, and redeemed all the mistakes of their judgments. Numerous, therefore, as are the errors into which they have fallen, not the weakest of these works has really injured the mind of the country; but each, according to the wants of its own age, has added something to the science, has done much to strengthen the spirit of gourmanderie.

Of the work before us, we can, alas! speak in no such language. Weak in expression, poor in thought, it is yet worse for the feeling which it exhibits. This feeling is one of the most extraordinary presumption. An author without genius, without originality, fancied himself qualified to treat the subject of cookery; and then he depresses, we do not say in words, but in reality, the sublimity of the art that it may appear to be more on a level with his mean conceptions. With the utmost wish to be charitable, we cannot conceal our apprehension that no good motives have dictated this miserable attempt. To show how flavourless a collection of 'Apician Morsels' may be collected from the vast stores amassed by his predecessors, this has evidently been the object of the author before us; and who can doubt that he had a deeper and more wicked design, that he wished, by showing how poor a book might be written about cookery, to persuade the world, (we blush while we write down the words,) that the subject itself was unworthy the study of a man of genius. But, fortunately for mankind, the 19th century is not the time for such an experiment. In the dark ages, when cookery was confined to the cloister, and when it was the interest of priestcraft to persuade the multitude that it was not useful for them, such a work might have been as mischievous as it is ill-designing. But the march of cookery is going on, and we rejoice to think that it will not—cannot be arrested. No fury in its foes, no treachery in its pretended friends, can check its mighty progress, and, at last, its universal dissemination. The public will distinguish empirics from the true men; and nothing which is attempted by the folly or wickedness of the one will ever bring the wisdom and the virtue of the other into contempt. The author of the 'Apician Morsels' will be consigned to merited obscurity; but MAGNA EST ARS COQUINARIA, ET PREVALEBIT.

It would be too troublesome to collect instances of the utter incapacity of this man, and of the zeal which he has shown in gathering up the peels and rinds, and the impudence with which he has passed them for the viands from which they had been scraped by worthier hands. The subject of the following extract is too interesting to be wholly spoiled even by his mode of treating it. It will be new to not many of our readers, but it will revive delicious recollections in the minds of most of them:

'Invitation to the Restaurateur's, alias an Eating-house.

'It is extremely convenient for travellers, strangers, bachelors, for those whose families reside temporarily in the country, and for all those, in short, who have no kitchen of their own, to invite people to an eating-house. They are always certain of not exceeding the sum which they think proper to fix for their meals,

since they know, beforehand, the price of each article they may choose to call for. The amount having been once calculated, the inviter can command for the person whom he invites a comfortable, solid, and delicate or dainty meal, which he can moisten with wines of the best quality, according to his circumstances, and with all kinds of liqueurs from the new world.

The first *restaurants* were established in Paris, towards the end of the year 1774. We regret it is not in our power at the moment to recollect, for the benefit of modern gastronomers, the name of the founder of these institutions, where you dine *à la carte*; all we know is, that the bases of this useful institution were laid in the *rue de pecheurs*; and upon the sign of this father of restorers' house, was formerly read the following inscription in culinary Latin:—

"O vos qui stomacho laboratis, accurrite; et ego vos resurabo."

During the reign of Louis XIV., the people of quality frequently invited their friends to dine at a public-house. About the beginning of the eighteenth century, literary men and artists brought into fashion, dining at the *cook's shop*; since then, it is usually at the *restaurant's*, where men of every description, who are not in housekeeping themselves, dine and invite their friends.

If indifferent company occasionally be met with at the *restaurant's*, it is at least in a pretty place; and as much may be said of some splendid saloons, which are not quite so public. The life of a *restaurant* is tedious for those who make a necessity of it; and it is not without its little pleasures for those who are not accustomed to it. The ease which is there met with supersedes the etiquette of invitations; and the dinner which you make at one of these places, is seldom lost upon him who has availed himself of this medium of dining or of inviting a friend.

Are you going, for instance, to the *Catran Bleu* (blue dial)? The waiters, surprised to see you arrive alone, will ask you at first if you are waiting for any one? On replying that you are waiting for a friend, one of them will show you, without taking you, a hall or dining-room, which will admit of a hundred to dine, where you find people: you will there be warmed, served, and lighted, like any other commoner; but, should you ask for a private room, what activity prevails! All the bells in the house are put in motion; the waiters are scudding through the staircases twenty times in a minute, loaded with the most rare viands, the most exquisite wines; but that which is not upon the *carte à manger*, is still that for which the most is paid. At the first glance at these apartments, it is guessed that it is not customary to dine alone at the *restaurant's* on the Boulevard of the Temple, and that generally one only goes there with a friend.

Should you have it in contemplation to give a dinner to strangers or country people, on whom you would wish to impress a high idea of the establishments of this kind in the capital, and where you are yourself to do the honours of the table, you must take them to the *Café de Paris*. How you will enjoy their astonishment at the sight of those brilliant saloons, where every thing seems arranged to please the eye! Tables of granite, chandeliers of gilded bronze, those vases of flowers which are multiplied by the panes of glass with which the walls are lined, commence an enchantment, which the whiteness of the porcelain, the polish of the crystals, and the vermillion and splendour support, with the art of the cook, during the repast; but which, for the most part, is destroyed the moment the waiter comes in with the bill; for the sight of these kind of prodigies costs dear.

Do you wish to form an idea how students of different classes, or those of limited incomes, live at Paris upon twelve hundred francs (50*l.*) per annum? It is at the *restaurant's*, in the *Rue St. Jacques*, where you must go for this information precisely at four o'clock. You will neither find upon the bill of fare (*carte à manger*), *potage à la camerang*, nor *supremes au coulis de perdreaux*, nor *haris à l'Indienne*; but an abundant *potage*, soup, or stew, containing every possible combination of beef, roasted, boiled, and fricasseed; the inexhaustible *gigot aux haricots*, and the eternal *fricandeau*. Burgundy and Medoc have never poured the produce of their rich vintages into the cellars of the *restaurant's* of the Latin land; but, to make good this defect, La Brie, Orleans, Gascony, shower down torrents of a wine, *coupé* and generously baptized, with which, indeed, neither reason nor health have ever found fault. Taking every thing into consideration, there is much less difference between the quality of the wines and the meats, at the most moderate or most celebrated eating-house, than between the prices marked upon their cards respectively.

The inviters, who may be pleased to take up their residence at the most eminent *restaurants* of the capital, as well as the guests they often invite there, will not be sorry to know to what the greater number of these establishments are indebted for the fashion which has already inscribed their names in letters of gold in the great book of Gastronomy. Let them know, then, that the *Provincial Brothers* owe their reputation to the *brandade de morue*, (a cod-fish stuffed, or rather seasoned with garlic;) Very, to his *entrées truffées*; Henneven, to the mysterious *boudoirs*, upon his third floor; and Chatelin, to the *finesse* of his wines.

'A Peep into Chatelin's.

The double saloons of this learned patrician, examined with a little tact, present to the eye of the observing guest, a picture worthy of his interest, from the variety of objects which are there assembled.

In the first place, the bottom of the saloon is occupied by a young lady, who unites the most perfect grace to the most tender solicitude; her anticipations are equal to all the guests who come, without distinction, to make a stay, shorter or longer, in this kind of temple; she seems also to possess the gift of second-sight, for, with a commanding glance of the eye, the meats which you have most desired in silence upon the card, are brought and laid before you by one of the waiters, even before you have given the smallest intimation of that which you intend to take; just as if it were done by enchantment; and more than one consumer, were he put to the test, would confess that he has not with impunity been seated in a certain place, without having experienced the effects of this species of sorcery on his going away.

The fore-part of the saloon is usually occupied with solitary eaters, who never invite any body, because they are never invited themselves by any one; for this reason, they call loudly for what they want, wait impatiently, eat precipitately, and pay slowly, even on going away.

The lower sides of the saloon are usually furnished with travelling families, who, satisfied with a modest meal, sharpen it with one of those meats which is unknown to them; and they seem to enjoy with pleasure a sight entirely new to their eyes.

In the centre of the saloon, and in some measure concealed by a stove, laden with the richest gifts of Flora and Pomona, stands a small table, for the most part occupied with old customers, who frequently obtain a very considerable reduction by the care and delicacy of the *little dishes* which are presented to them by the hand of the master of the house. Here, then, is the place in question.

The saloon, upon the first floor, is usually occupied with two lovers; to judge of them by the eagerness of the one, the small faces of the other, and the sensuality of both, pleasure sparkles in their eyes; and by the choice which presides over the composition of their meal, one may guess the past, and foresee the future.

Lastly, in one of the particular cabinets, are two married people of the same stamp. One may judge, by the shawl which the lady has kept on her shoulders, and the respectable distance which the gentleman observes, that a long time has passed since they had any thing new to say to each other; they had, nevertheless, made up their minds to go to the play *en loge grillée*. They went in at half-past four, and it is now half-past eight. Not seeing them come down, though they had asked for nothing during three hours, *Henri* ventures to go into their cabinet—after, however, having tapped at the door with his fore-finger.....They are both asleep.

O ye, who have the good fortune to be invited to dine by a connoisseur at Chatelin's do not go so high; remain below, and place yourselves at the above-mentioned table near the stove, christened in the house by the name of the 8, for two reasons: the first, because—but you know them already!

Chatelin now advances, and presents himself to your *inviter*, for he knows well how to distinguish the *inviter* from the *invitee*, his *carte à manger* bound in *veau de Pontolue*, with gilt edges. His eyes are seeking to read in *ye*'s to what meats you intend to give the preference. But as this card, from its shape and bulk, might be taken for the supplement to the *Dictionnaire de l'Académie*, Monsieur Chatelin relieves you from the embarrassment, in which you are suspended, the first course and the *entremets*, by telling you, in a modest tone, to the tune of the "*King of Prussia's March*," in the following lines, which, as they would lose considerably by any translation, we shall give our readers in the original:

"A bon titre je suis
Renommé dans Paris,
Pour les morceaux exquis
Que je fournis;

"Mon salon est toujours garni
Et mon buffet bien assorti,
Des mets qui sont les mieux choisis;
Dans tous les tems, au même prix,
On peut trouver réuni
Des alimens de tout pays.

"On vante mon chablis,
Mes huîtres, mes radis,
Ainsi que mes salmis
De perdrix.

"Mes godiveaux au ris;
Mes tourtes, mes hachis;
Fameux pâtés, gros et petits,
Bien dorés et bien arrondis;
Bœuf au naturel, au coulis;
Mouton aux navets bien roussis."

As the uncertainty of the inviter is always the same, and, moreover, as it is impossible for you to eat of all these articles, Chatelin, who perceives this, continues to excite your sensuality, by giving you, in a higher key, the following short cut:

"Papillotes,
Poulets rôtis,
Gibelotes,
Macaronis,
Matelotes,
Salsifis,
Frits,
Fines compotes,
De puits,
Cuits.

Je conserve dindons farcis
Pour les maris,
Excellent thon pour les impolis.
Cervelle pour les étourdis."

Know, then, that once seated in this place, you have under your control, as the elements of the dinner that is offered to you, to choose between:

11 Stews,
29 Hors d'œuvres, cold and hot,
25 Entrées of beef,
27 Ditto of veal,
35 Ditto of poultry,
12 Ditto of game,
9 Ditto of pastry,
26 Ditto of fish,
29 Ditto of dessert.

The whole of which you may moisten with—

27 Kinds of red wine,
17 Ditto of white,
7 Ditto of vin de liqueur,
33 Ditto of liqueurs.

Without reckoning the coffee, and other mixtures, such as *gloria*, *punch*, *bisquit*, &c. &c.

Happy, indeed, is he who can every day verify the exactitude of this description, made to stimulate the curiosity and emulation of those who reflect on the surest means of putting the theories here taught in practice.—Pp. 205—211.

INDIAN REMINISCENCES.

Poems, Original, Lyrical, and Satirical, containing Indian Reminiscences of the late Sir Toby Rendrag, M. N. S. 12mo., pp. 200. Boys. London, 1829.

THERE is a consistency about this poem which we admire. The thoughts are worthy of the language, the language of the versification, and the spirit in which it is written, of all three. The notes are not at all more stupid than the text, and the text not the least more malicious than the notes. The author's wit cannot accuse his imagination of showing it off to disadvantage, neither can his imagination complain that it suffers injustice in being paired with his understanding. His knowledge of Indian habits is about as extensive as his knowledge of English taste.

The following extract will justify our observations:

'Not so your Musselmans—they're lewd, and proud,
Viewing with inward scorn as vile deceivers
All other sects—they raise their voices loud,
Abusing when they dare all unbelievers.
Like Spanish Priests, they'd plunder, purge, and vomit,
Jews, Pagans, Christians—for their saint Mahomet!

Some reader here may think that bile or spleen
Hath led me from the path of true narration :
I talk as I have heard, read, known, and seen
All Musselmans are foes to toleration.
To gain their favour free from sneers, derision—
Let grow your beard, and then try --- circumcision !

Waving religion, be it understood,
That Musselmans are liberal, bold, and zealous ;
Careless of money, prodigal of blood,
Obliging, neighbourly, when not too jealous.
Fond of their ease, wit, wine, and jocularly,
They sometimes court like us, for popularity.

Upon this subject we have said enough ;
Besides " *Qui hit* " may think it stale or foolish ;
Still worse—the Muse seems rather in a huff
Like some fond Miss in love, grown sick and mulish,
" Proceed (she says) you've other theme to handle,
Or I will leave you, and your farthing candle."

" City of Palaces " I greet thee low,
Although I think the term inapplicable—
There's vanity enough, God knows, and show ;
But palaces may suit an Eastern fable !
Some houses are substantial, airy, roomy,
And others dirty, mean, close, hot, and gloomy !

Calcutta ! low I greet thy modern walls,
Thy drains, rails, tanks, straw huts of Hindoo labour,
Large, straggling, flat-roof'd houses, good for squalls,
Scarce one in shape or size like to its neighbour.
Improve thy streets, lanes, bridges, rails and pottery,
Nor waste the public money gain'd by Lottery.

"Tis true, thy buildings *some* are worth a viewing—
Yet, sober Hindoos pass them one and all,
To see thy " *Great House*," and what's there a
doing,

Scarce deigning one side-glance at yon Town-hall.
Long may'st thou hold thy proud exalted station,
" *Great House* " of fame—the wonder of each nation !

Thy lions rampant, and thy kingly arms,
Thy double fronts, and wings in circle winding,
Thy stuccoed domes, and marble halls have charms,
When dust, hot winds, and Hackery wheels are
grinding,

Compared with *thee*, I've never seen thy brother—
I wish our King (poor man) had *such another*.

Fair is the strand from asses, cows and pigs,
And gay the scene at eve on ev'ry Sunday ;
There half-cast Dandies drive their loves in gigs,
And debtors (one in seven) have no *dun* day.
Flags, masts, ships, sinnaes, here far surpass—
The roaring beach—vain-glory of Madras !

Try not our city eastward here too far,
Where narrow zig-zags give poor natives shelter ;
Where many a drunken *Dhobie*, and *Lascar*,
Fight, dance, and fiddle—tumble helter skelter ;
Where Methodist fanatics may snarl
At laughing Hindoos, perch'd upon a barrel.

I never fancied vagrant preacher's canting,
Illiberal on all subjects but long prayers ;
Vulgar, illiterate—stretching truth by ranting
'Gainst worldly cravings, and grim Satan's snares.
Such as I've met, lived well themselves and thriving,
With flocks of children—for they all love wiving.

In modes and manners, there's a wrong and right,
And so there is in spiritual instruction ;
The fear of hell may heathen minds affright,
But education bears a sure production.
No Missionary serves a cause religious
By speech offensive, ranting, and litigious.

This book will give offence to no one except
the friends of Lord Byron, whose verse he has
adopted, and to those of Mr. Fairlee whose cha-
racter he has praised.

Duelling.—The *projet de loi* in the French Chamber
of Deputies is likely to meet with much opposition,
from the rigour with which some of its provisions have
been made. The *projet* assigns the following punish-
ments : for voluntary homicide, without premeditation
or malice prepense, hard labour for life. For killing
the antagonist, with premeditation and malice, death.
For wounds, producing illness or incapacity for more
than twenty days, if without premeditation, imprison-
ment from one month to two years, with from 16 to
240 francs fine ; if with premeditation, imprisonment
from two to five years, and from fifty to five hundred
francs fine.

LECTURES ON EDUCATION.

ABOUT a year since, we alluded to a course of lec-
tures upon the subject of Education, which, though
delivered in an obscure part of the metropolis by a
foreign gentleman, and though not forced upon public
notice by any pompous announcement, struck us as
displaying an intimate acquaintance with human nature,
and embodying more practical wisdom than almost
any thing we had ever heard or read upon the subject.
In spite of the immense disadvantages under which
these lectures were delivered, we are rejoiced that they
excited so much attention as to induce Dr. Biber, the
gentleman to whom we have alluded, to commence an-
other course next week upon the same all-important
subject. From the following paper our readers may
form some notion of the range of topics which these
lectures will embrace : but we will undertake to say,
that, unless by attending his course, they can form no
notion of the illustration which these topics are capable
of, received from so comprehensive and experienced a
mind.

The following are the questions which he intends to
treat :

I. What are the rights and duties of the family and
of society at large respecting the education of children
belonging to them ?

II. To what sort and degree of education can every
human individual, as such, lay claim, independently
of rank, fortune, or any other distinction ?

III. How far is the education of a child to be regu-
lated according to his natural capacities, and how far
must external circumstances be permitted to affect it ?

IV. What are the chief obstacles to a more general
education of the poor, and what are the leading errors
committed in this greatest of all charities, as far as it
extends at present ?

V. What are the chief errors committed in the edu-
cation of the wealthier classes, and by what means can
the education of both poor and rich be made to pro-
duce in the course of time a more harmonious state of
society ?

VI. How far has Christianity hitherto been allowed
to influence education, and by what means are the
difficulties arising from outward distinctions among
Christians to be obviated in it ?

For other information, we refer the reader to the
Advertisement.

CATALOGUE RAISONNE.

Two Lectures on Population. By N. W. Senior, Esq.
Saunders and Otley. London, 1829.

In an early Number of our Journal, we shall invite
our readers' attention to these interesting lectures,
from the pen of a writer who has already done much,
and who, we trust, will do much more, to rescue poli-
tical economy from the hands of empirical teachers, and
to give it a stable and scientific character.

The Origin of Man, &c. Wilson. London, 1829.

THIS work, we understand, is from the pen of a very
young lady. It displays a degree of talent which we
shall rejoice to see otherwise directed ; not in such dark
discussions as these, for it is with that practical me-
taphysics which is concerned in engaging the affections
and purifying the conscience, that we always wish to
find the female sex occupying themselves, and enlight-
ening us.

Nature Displayed, &c. London, 1829.

THOUGH we may entertain some doubts respecting
the application of Mr. Duffie's system of all languages,
we now feel no doubt whatever that it has been most
successful in communicating a knowledge of French.
The peculiar conventional character of that language
prescribes a plan of teaching somewhat different from
that which is, perhaps, abstractedly, the most complete
and methodical ; and we have the assurance of many
impartial persons, who have made this (the only fair)
trial of Mr. Duffie's system, that it has enabled them
to progress very surely and rapidly. The present edi-
tion is the ninth.

Natural History of Enthusiasm. Holdsworth and
Ball. London, 1829.

WE had intended to dismiss this work with a brief
notice ; but, after looking it over, we found that it con-
tained matter for more diligent perusal and ample
criticism, which we hope very shortly to bestow upon
it.

LOVE TENACIOUS OF LIFE.

ALL men that live to think and feel—
Have lofty thoughts and passions strong,
Do choose some object for their zeal,
And seek it always—right or wrong.

And when, by long and patient strife
The paramount desire is gained,
There is no more of good in life ;
And still to be—is to be chained.

To live when that for which they thought
Life only given, is all their own,
Is from the height an age had bought,
In one brief moment to be thrown ;

Or find, perchance, the toll-won prize
Unlike what, when remote, it seemed,
And strip of all the dazzling dyes
That round it, in the sunset, gleamed ;

Or feel that the insatiate heart
Still pines for something unpossessed—
That only strife can peace impart,
And labour only gender rest.

But I have sought—nor sought in vain—
And yet to die feel no desire ;
Nor have I lost my precious gain,
Nor does the rich possession tire.

Death the most fadeless wreath may be,
That, to the conqueror, Heaven can give—
To fly, with red-winged Victory,
To where the souls of heroes live ;

And sweet unto the failing sense
Of patriot bidding Earth farewell,
To hear, on his departure thence,
A nation's praise in chorus swell ;

Nor less unnatural to the bard,
When he has built his monument,
To pant, like Flaccus, to be starved,
And prune him for the long ascent.

But earthly love, to earth confined,
Demands of life the longest day ;
It is not only in the mind,
But mixes with the putrid clay.

J. M. H.

*Influence of the senses of animals upon their intelli-
gence.*—The body, according to Galen, is the organ of
the soul ; consequently, all the members are of great
utility. It is on this account that the members are
different, since souls themselves are of a different
nature. The bold and courageous lion has powerful
teeth and claws ; the bull is provided with horns, and
the boar with tusks. Timorous animals, such as the
hare and stag, are organized to escape from danger
by rapid flight. Man, endowed with intelligence, has
received from nature hands for his weapons and pro-
tection. These instruments he employs in the arts, in
war, and in peace. He needs neither horns nor tusks.
By means of his hands, he provides for himself shoes,
cuirasses, lances, arrows ; he constructs walls and
houses ; he makes clothes, and rivals in this manner,
not only the animals which inhabit the earth, but those
which fly in the air, or live in the sea. By means of
his hands, he writes laws, erects temples and statues,
constructs vessels, makes flutes, lyres, knives, pincers,
and all sorts of instruments necessary for the arts. It
is by these means he transmits his meditations to po-
sterity, while he holds a conversation with Plato, Ari-
stotle, or Hippocrates. The hands, then, are the best things
which could have been given to man, as an intelligent
being : but for this very reason Anaxagoras asserts he is
not the most intelligent being, whilst Aristotle main-
tains, from the same cause, that he is. It is not his
hands which have pointed out the arts to man, it is his
understanding. The hands are merely instruments ;
thus, it is not the lyre which instructs the musician,
nor the pincers which make the smith : yet they are
only artists by aid of their intelligence.

THE PASSING OF THE BILL.

The Passing of the Bill; a New Tragedy. By Mr. Shiel. (Still in MS.)

WHETHER it be true or not that the Duke of Wellington has directed the Poet Laureate to compose a *carmen triumphale* on the passing of the Catholic Bill,—that the present high-minded possessor of the sack-butt, unawed, like his official brother, Sir Charles Wetherell, by the nod and field-marshal's uniform of the Premier, has declined the task,—and that, in consequence of this obstinacy, the Rev. Mr. Millmann has kindly undertaken to furnish the required number of stanzas,—we have not been able, after making the most diligent inquiries, satisfactorily to ascertain. But, should the state of the case be as is reported, we have every reason to believe that the Professor of Poetry at Oxford will favour us with an early copy of his work, and that we shall be able to lay before our readers a hymn which will send down the name of Mr. Peel to a distant posterity in company with those illustrious characters whom the reverend gentleman has previously delighted to honour—Belshazzar and the Apollo Belvidere.

Meantime, a rival to this distinguished poet—divine—professor—has started up in a quarter from which some commemoration of the great recent event might certainly have been looked for. Our readers will hear without surprise, and doubtless with great pleasure, that recent events having emancipated Mr. Shiel from the daily toil which was his portion as long as the great Catholic Parliament continued its sittings, has returned to those pursuits whence his youthful forehead gathered laurels which only the thicker and more spreading wreath which has since been entwined for him could have shaded from public view.

'Your house, Sir,' he says, in a beautiful dedication to the Manager of the Dublin Theatre,—
'Your house was the little farm, the *rus paternum*, where I ploughed the deep furrows of age, and the soft untilled cheek of youth with the ploughshare of no ungenerous or un-Irish tears. But my country demanded its Cincinnatus, and I deserted the peaceful scenes of dramatical invention for the sanguinary field of real tragedy. But the battle is fought; the enemies of Ireland are vanquished; and I return with the *spolia opima* which I have won in the conflict, to hang them in the hall, which is endeared by a thousand youthful recollections, and was the scene of a thousand youthful triumphs!'

Our readers will gather from these remarks, that Mr. Shiel's forthcoming drama is an historical play, and that the subject of it is the PASSING OF THE CATHOLIC BILL. We should be misusing the opportunity which the kindness of an Irish friend has afforded, if we were to waste any time in general criticisms upon the performance of which we are about to give an abstract. We shall merely, therefore, remark, that if in poetical diction, and some of the inferior constituents of dramatical excellence, it falls short of some of Mr. Shiel's earlier works, it displays an attention, even a minute chronological attention, to historical truth,—an adherence to costume, and a skill in seizing situations, which are above all praise, and which must contribute prodigiously to add even to that treble reputation which he has won as a poet, an orator, and an agitator.

The play opens about the close of November last, and the first scene is a meeting of the Cabinet Council. The cavillers will, no doubt, complain that this scene too closely assimilates the meetings in Downing-street to those in the Corn Exchange, Dublin: they will inform us, that when twelve Englishmen meet together, it is generally for the purpose of talking, not of speechifying; and probably they will inform us, in a very authoritative manner, that since the commencement of the present premiership oratory is banished, not merely by custom, but by special edict from the Cabinet. All this we

think very absurd; for, if the members of the Cabinet do not take offence at the mode in which their proceedings are described, we should like to know who has a right to be offended; and, as we never heard that the individual members of the Cabinet complained of the reporters in the newspapers for giving coherency to their Parliamentary discourses, we do not think it likely that they should abuse a dramatist who performs a similar service for their ministerial deliberations. And as Mr. Shiel has successfully adopted, and even improved upon, the modern dramatical blank verse, that we are sure it will be impossible to detect the slightest approach to poetical formality in any part of the scene.

The first speaker is Lord Bathurst, who expresses himself decidedly hostile to a settlement of the question, as likely to prove fatal to the Constitution. He is followed by Lord Ellenborough in a somewhat ornate speech, at the commencement of which the Duke of Wellington sinks into a sound slumber. The Chancellor then delivers a powerful harangue, in which he expresses his opinion as a lawyer, that certain Acts do disqualify the Catholic from holding certain offices, which Acts, it is his opinion, the three estates of the realm have the power of removing. But he adds:

'Power without will, my Lords and Gentlemen,
Is nothing: both together move the heavens,
And could, no doubt, remove the 12th of Charles.'

There is a pause for a few minutes, after which Mr. Peel delivers a very long speech, which concludes in the following impressive manner:

'Thus, Lords and Gentlemen, I've laid before you
An abstract of the letters which have reached
Your humble servant, (servant of the Crown
Also,) touching the state of that poor country,
Whereof I once was the prime-secretary.
It must be owned things are not as they should be,
Nor, as for many reasons, chiefly public,
Though some of them referring to myself,
I could have wished they were.'

[Takes out a white pocket handkerchief, wipes his eyes: Mr. Goulburn having done the same, Mr. Peel proceeds.]

Forgive this feeling,
And listen while I offer what appears
To me, much thinking upon this sad subject,
[Lord Ellenborough across the table to Lord Aberdeen. 'He got that from Brougham.' Lord Aberdeen, haughtily: 'No, from Demosthenes: of course you remember *Εἰς μὲν οὐκ ἔστιν—um.* But pray let us hear what he is saying.']

And, often reading through both what I've shown you
Just now, and likewise sundry documents
Which I've received from various private sources,
The sagest counsel. It is a wish, my Lords
And Gentlemen, a wish most near my heart,
That all we do, both elsewhere and in Ireland,
May be so done that all our countrymen
Should in our measures be content and happy,
And for this end I would coerce the Papists,
Yet so that e'en the Papists should acknowledge
We did them service; I would restrain the fury
Of my dear friends the Orangemen, and win
Their love, by binding them: for madness
Beseems not man or woman, ox or dog.
The disaffected I would hang at once,
But in a mode which they should own was fair,
And even, in their cooler moments, pleasant.
This scheme of mild conciliatory coercion,
If it be feasible, I think would answer;
If not—and here I own a doubt steps in,
(For what we have not proved, we cannot tell
Whether 'twill do or no,) why then I feel
'Twere better that we sought some other plan,
And, if that plan be safe, I think 'tis wiser
That we should make the trial—if unsafe,
I think upon the whole we'd better not.

After a few words from Mr. Goulburn, who expresses himself perfectly in accordance with the sentiments of Mr. Peel, Mr. Herries delivers an anti-Catholic oration, in the midst of which the Duke of Wellington suddenly starts, rubs his eyes, and awakes. The whole council is in some alarm, and Mr. Herries hastily resumes his seat. The Duke then rises, and states in a few words, which are very properly given in prose, that he is rejoiced to find such a unanimous feeling in

favour of concession pervading the Cabinet, as his own opinions had long been made up, and as he had brought with him the heads of the measure, which he thought likely to accomplish the object; a measure which he had no doubt his Majesty, acting by their advice, would be happy to recommend in his speech to Parliament. The Council then breaks up; and Lord Bathurst remarks to Mr. Herries as they leave the chamber, that little reliance could be placed upon public men if they allowed their private convictions to interfere with their sense of public duty; in which observation Mr. Herries most cordially concurs.

After this, the scene changes to Ireland, and we find ourselves at a meeting of the Order of Liberators. During the celebration of divine service, or rather in the middle of a second sermon by Mr. Steele, the Brunswickers break into the chapel. A battle follows, which is described with uncommon power, but which we have not space to extract at length, nor the heart to spoil by selections. The scene terminates with an agreement between the two parties that they will keep the peace with each other, and argue the question in recitative. This ingenious artifice introduces the chorus, which consists half of Catholics—half of Brunswickers, who always appear in the intervals of the dialogue, even when the previous scene happens to be in London, to carry on the interest of the piece, and enlighten the people of England respecting the real state of their unhappy country. The first chorus brings the history down to the landing of St. Patrick; and, though we have always scrupled to express a decided opinion upon the general question, we must say that so far we think the reasonings urged in favour of Emancipation are considerably more powerful than those on the other side.

On the rising of the curtain at the commencement of the second act, the Marquis of Douro is discovered walking pensively in the garden behind Apsley House, contemplating the new buildings. During this walk, much is left, as in the case of Lord Burleigh, to the imagination of the reader; for the young nobleman only utters two words from which the subject of his meditations may be gathered. These words are, 'My father!' and 'Miss Lawless!' after pronouncing which last syllables, he rushes madly into the house. That we may finish this delicate part of the subject at once, we quote the apology which Mr. Shiel makes for this part of his poem, which, while we admire it as excellent art, upon personal grounds we must condemn. 'In imagining,' he says, 'an attachment between two interesting young persons, with both of whom I am utterly unacquainted, and to one of whom I have reason to believe there is no counterpart in the real world, I have been anxious, on the one hand, to give a certain sentimental interest to my play during its progress; and, on the other, by omitting the usual termination of such proceedings, to show how the streamlets of individual attachment are, at the present moment, lost in the great ocean swell of national rejoicing.' These two loving souls are so overcome with exultation at the passing of the Bill, that, as Lord Douro expresses it, in his speech at the close of the fifth act—

'Marriage were dull after such ecstasy.'

After all, the best excuse for the introduction of such allusions is, that the parties, though desperately smitten, do not meet once in the course of the play, and, it appears, never did meet before.

We are then transported to Oxford, on the first day of the session,—an admirable contrivance, by which the reader is saved from the too sudden shock of a direct announcement from the throne. The debate in the Convocation is characteristically dull; though nothing can be much better imagined than the arch solemn manner in which (after the petition is voted) the Vice-Chancellor takes Mr. Peel's letter from his pocket and reads it to the assembly. We hope to see Liston

in the part. The Chorus then enters, and traces the rise and progress of potatoes. Besides the research displayed in this composition, the versification is often very striking, and the Doric is more strictly preserved than in any other of the Choruses.

The third act opens with a fine dialogue between William Cobbett and a man from the West Country. The former having given his friend a general account of the intention of Ministers, the farmer responds:

Man.—Now, master Cobbett, I should like mainly to know whether you a'rnt chousing I, for to speak the plain truth, and I hope it won't give you no offence seeing as I mean none.—I say, I can't see as how they can be going to let in the Papishers when it is only three weeks next Wednesday,—for I mind the day well,—since I and my wife, and my three children, put our crosses to a petition to keep them out. And twan't a common petition either, Mr. Cobbett, for 'twere written upon a long piece of white parchment as smooth as my child's chin, and tied with blue ribbon at the corners. Now I don't see exactly how these two things agrees together.

Mr. Cobbett.—And did they really tell you, my good friend, that the people in the London Parliament House would care about your Devonshire petitions?

Man.—Why, as for its being a Devonshire petition, if you means anything slightly to the Devonshire people, I don't think it's very civil, and I should not mind, though you be a great man, and writes a great deal about Indi silks.—

Mr. Cobbett.—Indian Corn, Thomas, if you please. India silks indeed! do you think I would write about their poor flimsy, ragged, beggarly, salt and water Leadenhall-street taffeta?

Man.—Well, well, Indian corn then; but, as I was saying, if you abuses Devonshire I am your man; and, as for a petition 'twas signed by more great folks than you ever seed in your life, I'll answer for it. There was Squire Bastard, and Sir Thomas ——— no, he is not a Protestant, and our parson—he is an honourable in his own right, and the Bishop of Exeter along with Lord Rolle, a score other peers of the realm who signed their names out straight and plain without putting any Lord at all before them, as if they knewed the people we were petitioning, and could ax them anything as soon as they look at them, and tell them they might go to the devil if they did not give them what they wanted.

Mr. Cobbett.—Thomas, were you paid your wages last Saturday?

Man.—To be sure I was: what for do you want to know?

Mr. Cobbett.—Have you any of the money about you that you were paid in?

Man.—Yes, Sir, what I have saved up for four weeks to come up to London with. (*Produces a five-pound Bank of England note.*)

Mr. C. (*looks at it for some minutes, then throws it down and stamps about for some moments with great vehemence. The countryman follows him with his eyes, which exhibit much astonishment and perturbation.*)—The cowardly, dirty, treacherous, murderous borough-monger. Pay a poor man who has been slaving and starving for twelve hours a day for all the week, except the one day on which they send him to catch cold by sitting on one of the wretched seats they call free benches, in the churches which they stole from the Catholics; and all that he may hear a canting, hypocritical, mean-spirited sermon from one of the fat, feasting, titling, thieving shovel hats, to pay a man who has gone through all these miseries with such stuff as this. And they had the impudence to ask you to sign one of their petitions after this?

Man (*evidently alarmed*).—Why, gracious me, Mr. Cobbett, the bank that that's drawn on ha'n't stopped, has it?

Mr. C.—Not stopped, my good fellow, not stopped! yes, for the last thirty years. This rag, my good fellow, is worth just that, (*snapping his fingers*), and no more.

Man.—Well, that is a job! Who could have thought they'd have used me like that?

Mr. C.—Who could have thought it? Why, I thought it. I knew it, and I told you of it. Did you never hear of THE THING?

Man.—Lord, no, Sir, what is it?

Mr. C.—Then, my good fellow, I am sorry for your case; and, if you put this bundle of Registers in your pocket, they may do you some good.

Man.—Oh, thank you, Sir; then, if I take them to the bank, they'll give me gold for them.

Mr. C.—Give you gold for them, will they? No, they'll hang you as sure as you are born. Why, there is not such a set of hanging, butcherly, bloodsucking ruffians in the country. If you have any liking for your life, you had better keep out of their way.

Man.—And what must I do with this note, Mr. Cobbett?

Mr. C.—Why it's just possible, you may find as great a fool as yourself to take it of you.

Man.—I hope I shall; but rot me if I ever vote for the parson again if he does not right me for this. (*Exeunt.*)

We pass over all the scenes in the two Houses as perfectly insufferable: indeed, we hope Mr. Shiel will be induced to retrench those parts of his play with an unsparing hand. From these, the scene between the Duke of Wellington and the Marchioness of Conyngham, at the close of the third act, is a delightful relief. The act closes with a chorus, in which the different clauses of Poyning's Act are debated *seriatim*. An allusion to the passing Act is most happily introduced by way of contrast.

The fourth act brings us to Battersea Fields; and, in that open space, the Hibernian imagination of Mr. Shiel runs perfectly riot. The observations of the countrymen who are witnesses to the 'duel, though far too witty for the dull beef-eaters of Battersea, and altogether savouring of the potato, are, nevertheless, very amusing. Then follows a tremendous scene, which is laid, at night, in the caverns under the office of 'The Morning Journal.' Here are assembled Mr. Halcomb, Mr. Isaacson, the Rev. Edward Irving, and a number of other conspirators, who are discussing the best means of deposing his present Majesty, and placing the Duke of Cumberland upon the throne. After a few minutes, two muffled figures enter the room, whom, after some time, we learn to be the Marquis of Chandos and Mr. Trant. The scene reminds us, perhaps too strikingly, of the corresponding one in Marino Faliero; and the speech of the member for Dover especially recalled those pathetic lines,—

'You never eat their bread,' &c.

The chorus to this act is the most remarkable in the play. We must extract a passage.*

The fifth act flags less than might be expected. A Scotch devil belonging to 'The Morning Journal' reveals the plot to Mr. Joseph Hume, who he mistakingly imagined would suffer, as one of the ministry, from its explosion; and through him it is disclosed to the Government. The Marquis of Chandos and Mr. Trant are sentenced to be hanged; but just then the Bill passes, and in the universal enthusiasm they are pardoned.

After this we have the St. Patrick's Dinner, which terminates with a scene in the streets. Mr. O'Connell is seen walking home between the Duke of Devonshire and Lord Leveson Gower, to each of whom he ever and anon turns, saying in his impassioned manner:

'Hereditary Bondsmen! know ye not,

Would ye be free, yourselves must strike the blow?'

The hymn of triumph at the close is equal to any thing in Irish poetry.

A STORY WITHOUT A NAME.

CHAPTER V.

(Continued from page 220.)

FROM the foregoing letter, which I trust I have committed no breach of honesty in communicating to my readers, they will, no doubt, have formed a very favourable opinion of Miss Corrie.

In her countenance there was not much either to confirm or weaken such prepossessions. It was thin and angular, contained an unusually small mouth, a sharp penetrating nose, and a pair of grey eyes, more expressive and sparkling than grey eyes usually are. Whether that expression was one of intelligence, or of mere shrewdness,

* Quite impossible.—Ed.

or contained equal portions of cleverness and cunning, would have been a fair subject of speculation to a person looking at her face for the first time. It was a face that no person would have cared to look at twice for any pleasure that it afforded; but which was 'full of useful learning,' as the lawyers, say to those who were making up their minds upon some doubtful questions in physiology.

Her figure was short, but not so short as to hinder her from drawing it into an attitude of dignity when she was introduced to a new visitor, asked questions about her system of education, or thrown into the company of a sister of the craft. Nothing, however, could be further from dignity than her ordinary quick springing step, a characteristic never wanting in short persons who have a considerable sense of their own importance, and belonging par excellence to the editors of weekly newspapers, young templars, and ladies who are much in the habit of being consulted upon affairs of the heart.

Mr. Kinnon, whose acquaintance with the indications of character in the form and countenance, was naturally not more profound than his knowledge of the character itself, did not form many theories about his new governess. He was previously determined to be pleased; and, as he saw something in her face which looked to him like talent, and as he did not observe any symptoms there of a deficiency in good-nature, he easily persuaded himself that the dynasty of the new inmate would be of an unmingled advantage to his dear child.

By her first conversation with him, Miss Corrie contrived still more completely to establish herself in his good opinion.

'I am about to intrust to your care, Miss Corrie, the only possession of any value which I have left to me in the world. If I thought it were safe in my keeping, it should never have been given into other hands. In the foolishness of my vanity, I may once have flattered myself that I was capable of such a charge. I may have deceived myself into the belief that love would stand me in the stead of knowledge; that with nothing but a father's affection for my guide, I could grope my way through all the windings and intricacies of the female heart, and that with no other clue to the difficulties which must beset my child's path than is supplied by the quickness of a father's apprehension—I could anticipate them all—I fancied that my prayers would be effectual with heaven to grant to my weakness that assistance without which the greatest strength must prove ineffectual. But I have been cured, Madam, of this presumptuous confidence: I shall be trifling with my daughter's safety, if I any longer trust to such feeble protection as my own. I place her under the guardianship of one who, I am sure, will remember what a serious and solemn trust she is undertaking.

'With such feelings, my dear Sir, it is quite impossible that you could be an unfit person to manage the education of a daughter. You have been too diffident of your powers; for you could never have been aware of those mysteries in the character of our sex which you speak of, if you had not studied us very deeply.'

'No, Miss Corrie, I assure you my ignorance is not affected; I feel how little I am fit for such a task.'

'I am very rude to interrupt you,' rejoined the governess; 'but you must allow me to say that, on this subject, I cannot take even your testimony. I have seen something of pretenders to a knowledge of human nature, and I would venture to hope that I am myself not a pretender; but give me leave to say that there are in the remarks you have just made indications which I cannot mistake, that you have sounded the very deepest recesses of the female heart.'

'My experience of your sex, Madam, has been but limited; and I cannot claim such an exten-

ordinary degree of the light of nature as would enable me to make discoveries without it.'

'Yes, so say all gentlemen who really understand us. They are aware, from the search that they have made, how very much there is to learn. The coxcombs treat us differently. One class of them consider our minds perfectly transparent—fancy they can look through us at a first glance. The other regard us as mirrors which are to reflect their own absurdities. Mr. M'Kinnon has evidently studied in a different, and, I must add, a far better school than either.'

'One discovery I certainly have made,' said M'Kinnon, beginning to suspect himself of penetration, and feeling a great veneration for Miss Corrie growing up side by side with his self-respect; 'one discovery I have made, and that is, that the characters of women are much more various than is generally supposed. Does your experience bear me out in this remark?'

'It is a bold assertion,' said Miss Corrie, appearing to meditate upon the strikingly original proposition which M'Kinnon had just enunciated. 'A very bold opinion to maintain in the teeth of our great moral poet's common-place remark, that we have no characters at all. But I am convinced that you are right; indeed, I have always felt the truth of your sentiment, though I should never have dared to express it upon my own responsibility. Henceforth, I shall be more courageous.'

'I think, perhaps,' said M'Kinnon, much emboldened by this encouragement, 'that the difference of character is more observable in women when they are young than in men.'

'Delightful!' exclaimed Miss Corrie; 'that is the very idea I have been so long in search of, but I have never found it any where. Yes, it must be as you say; the diversities among men arise from the difference of their occupations; the diversities among women from the difference of their natures. You have made a most important addition to our stock of first principles, Sir.'

It was not in flesh and blood to resist such an attack as this,—to see a sentiment, which, when he first broached it, M'Kinnon, with all his ignorance, had almost suspected was none of the newest, treated as original, patronised, and actually turned into an apothegm, by a person of whose acquaintance with the subject to which his opinion referred he had heard so much.

The compliment was overpowering. Miss Corrie saw the impression she was making; and, if still more ambitious hopes did not for a moment float through her imagination, she at least felt that proper dexterity and caution alone were wanting to establish a supremacy over both father and child.

'A girl, on the other hand—in fact, I find I am only repeating your own remarks, you have so anticipated any thing I can say—in a girl, we must carefully watch the qualities which are already developed, to encourage or control them. In short, we must regulate ourselves, in the first case, for the object we have in view for the child; in the other, by the child itself.'

'As, at tennis, we keep our eye upon the point to which the ball is to be sent; in billiards, upon the ball itself,' said M'Kinnon.

'An admirable illustration!' exclaimed Miss Corrie; 'it makes me see my own meaning so much more clearly;' though she was perfectly aware that the Rector had merely put tennis-ball for boy, and billiard-ball for girl, in her own sentence, and consequently that it could not, in the least, have illustrated her meaning.

'Now, you see, my dear Sir, that I have always acted upon this plan of determining my course of study by the dispositions and habits of my pupil; always, of course, where I have found any one tendency very strong, using those studies which would most effectually counteract it. Thus, if my pupil exhibit marks of a strong imagination, I would make her attend exclusively to facts; if I

thought her reasoning powers were likely to get the upper hand, and, of course, to make her disputatious, I would oblige her to read poetry. This plan I have adopted, and found it answer; but I was merely acting by guess. You have taught me the reason why I was so successful; and now, too, I see more clearly than I ever did why it is so important to educate women for society; they have no other profession except that of making themselves agreeable.'

'You have done much, Miss Corrie, in the few minutes we have conversed, to clear up the difficulties which I had felt on the subject of female education; but, instead of making me regret my resolution to give up the management of my daughter, you have only made me more determined to resign her entirely into your hands.'

The result of this conversation was singularly satisfactory to Miss Corrie. In addition to the actual advantage she had gained, she had, in the course of it, sounded M'Kinnon's mind, and made herself thoroughly acquainted with all its shallow places. In her first experiment, she had followed the general principle, which probably will prove true in four cases out of five, that no amount of flattery is really felt excessive by the object of it, and that men are most pleased when the salve is applied to the rawest spots in their minds; still, as she had been so unfortunate as to meet with one or two exceptions to this rule, who had exhibited much indignation at the outrageousness of her compliments, she naturally felt apprehensive lest she might be venturing too far.

In addition to the more direct benefits of so speedily establishing her supremacy, she felt all the satisfaction of an amateur experimentalist upon human weakness, at finding that she had not been rash or hasty in her calculation. We should be doing Miss Corrie injustice, however, if we supposed that she was utterly hypocritical in her conversation with M'Kinnon. In affecting to think that he was versed in the system of female education, in pretending to borrow maxims from him which she had had in constant service for many years, she was merely practising upon the Rector's weakness. But she was not simply an impostor: she began life as one; but ere she had reached her present age of thirty-four years, her deceptions had become regularly domesticated in her mind. Practising all her early years for effect, and possessing, even in childhood, a skilful perception of the weaknesses and follies of those with whom she associated, she very soon discovered how cheap a reputation may be acquired among silly men and women by constantly talking in paradoxes. Her quick observation convinced her how many opinions pass current in the world, simply because they were just the reverse of the true opinions, how many remarks attracted notice because they were tricked out in the gay form of antithesis, which, stripped of that disguise, would appear dull, rapid, and worthless. It was no very difficult thing, she thought, for people to make their nonsense peculiar, and to turn what ideas they had into epigrams. Her success corresponded with her expectations. In the day of her prosperity, she passed as a very clever woman; her sayings were recorded; her points laughed at; her paradoxes believed. When her fortunes fell, her acquirements would have become useless, if she had not been able to make another, and I do not know, except on the world's principles of morality, a more unworthy, use of her talents. As she had before employed her trickeries to gain her reputation, she now employed them to gain her a support. She made gentlemen, like Mr. M'Kinnon, believe that she had a profound knowledge of character, because she described character in aphorisms; that she could educate their daughters because she laid down the principles of education in maxims. And at the same time, as we have seen, she obtained an additional security from those gentlemen's belief in the value of the knowledge she could

impart, by affecting to derive it from them. A long time, however, before she became an inmate of the Melcove parsonage, a change, which always takes place sooner or later, had taken place in her. She was still able to avail herself of her old deceptions for the old purpose; but in the deceptions themselves she had become a sincere believer. She really fancied that she had evolved an important principle of education, when she had merely uttered a happy and a pointed phrase; that she had obtained a principle when she had only manufactured a sentence.

The worst of this in Miss Corrie's case was, that she did not allow her maxims to retain their innocent silliness, or merely employ them to buy golden opinions of fools. She founded on them conclusions, not, of course, legitimately following from them—because from mere phrases nothing follows: they are essentially and natively barren—but suggested by her own fancy and attached to them, that she might delude herself into the belief that they were of some use. And upon these deductions she built her system of education. The effects of that system will be developed in our subsequent chapters.

HENRI III. ET SA COUR.

'HENRY the Third and his Court.' Such is the title of a successful play now acted at the first national theatre in France; since every body has been in Paris, or chooses to be thought to have been there, we may as well say at once, the *Theatre Français*. Let not our readers imagine, that, as in the old style and manner of the French Drama, the audience is, when the curtain draws up, presented with a pair of ladies, the one with more jewels and a much longer train than the other, who is thereby known to be the Queen, and who begins forthwith to relate, in measured verse and unvarying cadence, the whole story of her life and adventures, feelings and opinions, to the other, who, with a patience and address of which perhaps no English actress would be capable, exhibits by her countenance and gestures all the varieties of surprise and sympathy, and fills up each pause in the narrative by questions respectfully couched in very lofty verse, concerning matters which have passed and do pass every day before her own eyes. Let not our untravelled readers, if any such remain, with all the nerve and freshness of insular ignorance, imagine that the part for the audience to perform when 'Henry the Third' is played, is merely to sit and be told by *lengthy* eloquence, (as our friends of the New World have it,) how things have happened, how heroines sorrow, and how heroes rage. No; for once, at a French play, the audience becomes part and parcel of the *dramatis personæ*: the sympathy excited is simultaneous and direct. The language is, as in real life, ordinary prose about ordinary matters, and rising with the subject, borne upwards by the impulse of mind, to the elevation of lofty imaginings in impassioned diction.

There is no attempt at fine writing. The author disappears behind the creation of his fancy, hid by a veil of brightness. We never say, in a pause of attention, 'That incident is cleverly contrived,' or 'That character is well drawn.' But, when all is over, when the curtain closes on the victims of treachery and love, and when we wake from the illusion of the scene and find ourselves (thanks to our happy fate and the lapse of three centuries) living under the mild government of Charles X., instead of the dark tyranny of a Catherine of Medicis, by the title of Henry III., we say to each other, 'Well; but, though this be very like real life, it is but a play,—that play must be written by somebody of great power to have wielded our minds in this manner.' 'He is a very young man.' 'So much the better; he will have time to write us a great many more.' It is a good thing to have popular writers to show us

what the *good old times* were:—not half so good as the times we live in. Many persons have gathered all their knowledge of English history from Shakespeare's plays; and, though we do not apprehend that Monsieur Alexandre Dumas has kept quite so close to historic truth as the author of 'Richard II.' or 'King John,' yet in giving us an historic drama,—the subject taken from the annals of his own country,—he has the merit of striking out a new path, and of leading the way firmly and securely. His pictures are like Vandyke's portraits: the persons looking *themselves*, without affectation or pretence, or any indication of looks or gestures called up for the occasion. In drawing the character of the unhappy prince who fell by the knife of Jacques Clement, those vices and follies at which humanity blushes are discretely thrown into shade. We see not the Gallic Sardanapalus adorned in female gear, engaged in the shameless orgies of a wanton court; but his weakness, his irresolution, his fatal reliance on his cold-hearted, deep-thinking mother, are depicted with exact truth, and relieved by some bright touches of that chivalrous spirit which has seldom been found wanting to princes of the blood royal of France. Feeble of purpose, biggoted and ignorant, Henry III. is still eminently the gentleman, and shows himself willing to be the soldier.

Catherine would have been a very difficult part to write and to play, if the audience had not been let into the secret of her perfidy. She is exposed to us as a great bad woman; firm to her purpose, and careless of her means; very fit to govern while the bulk of society had not yet learned to feel its strength and to assert its rights; in short, to be loyal subjects, obeying according to the law, and not abject slaves to despotic will.

Guise the *balafre*, (that word is untranslatable,) ferocious, unrelenting, and of manners insolent and overbearing, is just such a leader as must draw to destruction those misguided men who cannot or will not learn from the history of ages how much 'the king's name is a tower of strength,' and how fatal is the error of deserting the throne of a legitimate ruler to follow the banner of a usurper, however brilliant his talents and seducing his promises.

The business of the piece is the check given to the power of Guise by the King, who suddenly declares his determination to take upon himself the command of the army of the league. The plot or intrigue turns upon the passion of the Count de St. Mégrin for the wife of Guise. This guilty love, which shows fair as maiden modesty at such a court, is fostered and promoted by the artifices of the Queen-mother, who contrives to betray the unhappy and faultless lady to the temptation of a private interview with the object of her tender, and hitherto unowned affection.

We say nothing of the several meetings of the lovers: those who have loved will find them to be just like nature, and those who have not, may learn without the risk of their own experience, what nature is like. As Catherine intended, the mutual tenderness is discovered by the offended husband, who cannot know how much temptation has been resisted; nor how pure has been the life, though the imagination is so warm. His jealousy rests on much slighter foundations than that of Othello; and his vengeance is, according to his character, much more brutal. By dint of personal violence, and the terror of his actions as well as words, he forces the unhappy lady to write an invitation to St. Mégrin. He falls into the snare, (when was love cautious or bravery suspicious?) and, waylaid by assassins placed by the Duke de Guise, dies, not in the sight, but in the hearing, of the audience. Never had life been so dear to him as the moment before he loses it; for, certain never to see him again, the lady had confessed to him her long-concealed affection. The Duke de Guise remains on the stage to direct from the window the murder of his victim, and feasts his ears with the sound of his last struggles, regardless of his

wife, who lies in a swoon at his feet, and then ends the piece by a line which announces his sinister views against the King, and may be thus done into English:

'The servant is despatched, now for the master.'

To what we have said of the author, we must add a few words concerning the actors. A new play is almost always well cast in Paris. The minor parts are never gone through with that air of pouting displeasure at implied inferiority, which is too common at the London theatres. The part allotted to Mademoiselle Mars is decidedly tragic, and it is perfectly well played by the first comic actress in Europe. A capital of real talent is like a capital of real specie; it may be turned in any direction, and applied to any purpose, and will always have its weight and its power. Firmin is the most pathetic lover on the boards. The English spectators may fancy they see in him the spirit of the graceful and tender Barry once more embodied, but in a smaller frame. All the costumes are correct, being taken from portraits of the period, and every tradition that could be worked into the web of the piece has been carefully interwoven. The author is attached to the household of the Duke of Orleans, who has shown himself zealous to promote the success of the play, which, though it might be sure to please all good connoisseurs, was by no means so certain to satisfy all princes. The favour of his Royal Highness, which is of itself fame, has of course excited as much envy as the applause of the pit, and has been made a matter of reproach; whereas, from his known good taste, discernment, and thorough acquaintance with the subject, it is in reality a sure sign of the merit of the performance.

A translation or imitation of the play may probably appear in London, and will doubtless excite intense curiosity and interest; but it never can be seen with so much zest in a foreign capital as by us who dwell among the very streets and houses rendered awful by tradition. We, the world, have had a turbulent youth: we are now arrived at the mature age of unfettered judgment and dear-bought experience. May he exert the one to diffuse the blessings of civilization, and guide our lives wisely by the other!

POETRY.

DISCONTENT AND CORRECTION.

SUMMER hours soon pass away,
Darkness tracks the brightest day,
Wasting hail and storms and rain
Sweep across the waving plain,
With one undistinguished ruin
Man's and nature's work pursuing!
Thus will all things that we love
To the dark grave onward move,
Sound of music, sight of flowers,
Memory of childhood's hours,
Hope, and joy, and gentle tears,
Odours which the west-wind bears,
Murmurs of the forest brook,
Eddying leaves in some still nook,—
All must fade and all must wane,
Visions of a dreamer's brain;
Hurrying, crowding, jostling on,
Till every form of beauty's gone,
And the world is empty left
Of hope, and love, and joy bereft!
Thus I mourned as I to day
O'er the mountains took my way:
Shaping, so my fancy wrought
On the web of troubled thought,
Nought but grief and pain and gloom
In our passage to the tomb;
Deeming we were striving still
Hopelessly through good and ill,
For an end which ne'er could bless
Man in this world—Happiness.
Yet I knew that some there were,
Even in this vale of care,
Who for love might never know
All things lovely perish so;
Hearts that burn with their own light,
Eyes with inbred beauty bright,

Which can robe with their own glory
Shore and cape and promontory,
Lofty tower and lowly cell,
Mountain, rock, or mossy dell,
Making common things to seem
Brighter than a fairy dream!
These will drink from their own treasure
Of sweet thoughts, abundant pleasure,
Which they've heaped this many a day
From the dull crowd far away:
Unobserved men, to whom
The world is nothing but a tomb
For hopes and fears, while all alone
They live unhonoured and unknown.
They from morn till eve will lie
In the light of summer sky,
Building up the dome of thought,
Fairer far than palace wrought
By a cunning master's hand
For a glory to the land.
Sights and sounds of birds and streams
Dimly mixed like shapes in dreams,
Sighs of breezes in the wood,
Shoutings of the mountain flood,
As it springs from steep to steep,
And the murmurs of the deep,
Build for them the fabric bright,
Wealthier than chrysolite;
Where they love to stray along,
Sheltered from the unquiet throng,
Who still toiling onward press
Through life's devious wilderness,
Haunted by those anarchy old,
Power and custom, pride and gold,
Like a giant-peopled shore
In a poet's tale of yore.
Such a man at eve I met,
Ere the golden sun was set,
Robing tower, and rock, and hall,
Dark-brown wood and waterfall,
With the soft and purple light
Which he scattered in his flight;
On a smooth and verdant beach,
Which the ripples scarcely reach
When the waves and winds at play
Toss aloft the golden spray
Toward the sun on summer's day,
We were standing side by side,
Gazing on the panting tide
As it gently rose and fell
With a soft and murmuring swell,
Making answer tenderly
To the shrill sea-swallow's cry.
'Why,' I said, 'should aught have power
To make sad so sweet an hour?
Why must pain and sorrow dull
All of bright and beautiful?
Is there aught in land or sea
Which may good and stable be?
While we speak the sun is sinking,
Larger draughts the flowers are drinking,
Night the sky's last blush is hiding,
Headless of the poet's chiding.'
'Peace!' the old man gently said,
Turning up his frosted head,
Where the steps of seventy springs
Left tokens of their visitings,—
'Peace!' and pointed where on high,
Looking through the eastern sky,
On her car of silver sheen
Rode in joy the evening queen,
Round whose state the eternal train
Of shining sister nymphs remain,
Weaving still their web of light
On the deep black floor of night.
While he gazed, a gladsome ray
O'er his features seemed to play,
Soothing every line which care,
Pain, or grief, had graven there,
Like the moonbeams soft and bright
On a lake some summer night,
Which with beauty chaste and tender
And their own exceeding splendour
Every ripple smooth away
Which upon its surface lay.
'Look aloft,' at length he said,
'There thy doubts are answered,
Shades may veil the bright and fair,
Pain, and grief, and canker care,
Flowers may fade and moons may wane—
'Tis but to be bright again!
Nought can die in heaven or earth
But must be a glorious birth,
To some other gorgeous thing.
Fair as poet's imaging.

If the sunbeams pass away,
 If dark evening tracks the day,
 'Tis that lines of living light
 May the Ocean forehead dight,
 When the sun sinks down to sleep
 In the bosom of the deep.
 Look when Spring lifts up the veil,
 Which Earth wore through winter pale,
 Snow-drops pure, through vale and hill,
 Crocus, violet, daffodill,
 Flourish for a little space;
 Then these fade, that in their place,
 Flowers of prouder scent and hue
 May the living garb renew,
 Which the modest Earth puts on
 At the wooing of the Sun.
 Fruits could not the traveller bless
 In the thirsty wilderness,
 Had not first the blossoms died;
 Nor throughout the meadows wide,
 Could there life and beauty be
 But for past mortality.
 Thus through summer, autumn, spring,
 With a constant visiting,
 Death and beauty, hand-in-hand,
 Walk through heaven, and sea, and land,
 Raising up to sweep away,
 And renew from day to day.
 So it is with essences,
 Nobler than the flowers and trees,
 Man himself must subject be
 To like mutability:
 First our gracious childhood dies,
 Then youth follows fast and flies;
 Manhood then; then slow old age
 Crowns and closes up the page.
 Joy hath smiled on every time,—
 Youth is beautiful, the prime
 Of man hath beauty for its dower,
 So age and childhood in their hour:
 Thus in turn we fade and bloom,
 Till beyond the mouldering tomb
 Death the bonds of earth hath riven
 And unbarred the gates of heaven!
 Thus he mildly spoke, reproving
 My faint hope; then slowly moving
 From the shore, he bade me speed
 In the faith that all had need
 Of some seasons less serene
 Than other hours might be, had been:
 And when we parted, home I went
 With higher hope, and more content
 Than when first at break of day
 I wandered o'er the mountains gray.

MR. HAYDON'S PICTURE OF EUCLES.

THE 'Chairing of the Members' has been removed from the Exhibition-room at the Western Exchange, and has given place to the unfinished painting of Eucles. This picture represents a Greek soldier, who ran from Marathon to Athens, as soon as the victory over the Persians was decided, and died from fatigue and wounds, as he entered the city. In order that the interest of this subject may be heightened, Eucles is represented, after having publicly announced the victory, arriving exhausted at his own house, and dropping as he reaches the threshold. His wife and children, rushing out to meet him, have their joy converted into terror and grief, on beholding the condition to which he is reduced; and these, together with a figure stepping forward to support the sinking warrior, form the principal group of the picture.

It would be presumptuous in any but one who is himself a professor of the art to pretend even to guess the ultimate effect of a painting, from viewing it in an unfinished state, or to counsel the author as to its future treatment. To his brother artists, therefore, Mr. Haydon must chiefly look for the benefit derivable from the animadversions which this exhibition of the Eucles may provoke. To see a work by an artist so eminent as Mr. Haydon in a state of progress, may be curious and satisfactory to a great portion of the public, to whom such an opportunity is not often afforded; and, as the former productions of Mr. Haydon's pencil, including 'The Judgment of Solomon,' are to be seen at the same time, the exhibition is well worthy of a visit.

As to the Eucles, we expect to be pleased with it when finished; although we fear even the composition, which is now complete, will not be free from objection. The immense stride of the man advancing to prevent the falling of Eucles, seems extravagant and forced. The figure of the child, rushing forward with extended arms, does not appear devoid of affectation and in appropriate character.

PANDEMONIUM.

BURFORD'S PANORAMA, LEICESTER-SQUARE.

TIMELY announcement had fully prepared the public for some grand and wonderful novelty at the Panorama, in Leicester-fields; yet there are few, we imagine, who take an interest in matters of this nature, who did not exclaim with surprise on learning that the promised exhibition was to be an illustration of Pandemonium. The approvers and admirers of Panoramas in general, held their opinion in suspense as to the probability of success in the bold and heterodox experiment. These pleasing exhibitions they had been accustomed to regard as peculiarly appropriated to the representations of natural scenery: many probably had considered them as adapted for that purpose exclusively, and had looked to them less as a sight, and as source of that sort of gratification which is derived from beholding a well-executed picture, aided by the effects of an ingenious contrivance, than as the means of adding to their stock of knowledge of the actual world, and of forming ideas more defined and accurate than could be received from oral or written description, of the form and aspect of sites and scenes which, while from the circumstance of their possessing transcendent picturesque beauty, or other remarkable local peculiarities, or from their historical or classical associations, they have acquired celebrity, and become the objects of interest and curiosity of civilized man in general, lie beyond the circumscribed range of the tether by which the locomotive power of most persons in this their mortal course is limited.

Not that a panoramic painting the most perfect that ever was strained around its ample circumference can do more than approach identity of character with the scene which it pretends to represent. However exact the outline, the breath of life and nature must ever be wanting from the former to leave sufficient difference between the reality and the picture to reserve a full measure of enjoyment for him who at any future period of his career shall visit a spot he has previously contemplated in panoramic exhibition. Yet as such pictures are the best substitute till now devised for actual observation, who would not feel jealous of every innovation, and apprehensive that disrepute might attach to all exhibitions of the kind, from the failure in the new attempt, or from a perversion to purposes less obviously within the scope of the original invention?

Such were the reflections suggested by the advertisement of the picture of Pandemonium. Yet it probably occurred to many persons, as it did to ourselves, even before Mr. Burford's modest preface to his 'Description' fell into our hands, that the panorama afforded advantages which might be made available for giving effect to efforts in the 'higher branch of the art,' and which might be employed 'to embody with boldness and grandeur the most sublime imagery.' But then the difficult question, Who is to design this 'sublime imagery?' Exists there the hardy pencil that dares aspire to portray Hell's dread Emperor and his millions of subject-spirits as depicted by Milton? The magic hand that traced the 'Last Judgment' must have failed in the attempt to embody, to the satisfaction of the readers of the 'Paradise Lost,' the sublime conceptions of the author, the tower-like form, the face, entrenched by thunder scars, of the apostate angel, as he stood

above the rest, and moved the mighty cherubim to brandish their flaming swords, illumining all hell around, and to hurl defiance towards the vault of heaven.

The attempt, in fact, has not been made, and Mr. Burford, although he has opened a panoramic view of Pandemonium after the design of Mr. Slous, has not essayed to represent the Pandemonium of Milton. Between the two there is this difference: Milton's painting is historical, the panorama is landscape; in the former, the animate objects are principal; the scenery and architecture are accessory; in the latter, the view of the infernal abyss forms the picture, its inmates act a subordinate part. The panorama, in fact, as those more penetrating divined that it would be, is a picture of the capital of Satan, somewhat in the style of Martin. It abounds in massive architecture and lofty and rugged mountains, floods and rocks of every hue, and of every temperature, from the fiery Phlegethon to the cold and oblivious Lethe. The outline is grand, and the colouring, where it is not intended to be mysterious, is powerful.

The figures, Mr. Burford tells us, are on a reduced scale, in order to give effect to the painting, and it is left to the imagination to supply their colossal dimensions. It is to be remarked, however, that the object of this arrangement has been in some measure defeated by the enormous size, and conspicuous prominence, and powerful colouring of the great dragon. The masses of architecture on the left hand of the dragon, and the vale through which Lethe winds its 'slow and silent stream,' seemed to us the best parts of the picture. The exhibition, we conclude, will be highly popular for a season; but, loving panoramas, we cannot help indulging a hope that the experiment may not be repeated.

THE DRAMA.

Drury Lane.

ON Easter Monday, or on what is vulgarly called 'boxing day,' it is not calculated that the holiday folk will give much tolerance to any thing serious; it is, therefore, remarkable that on Monday night the whole of 'Venice Preserved,' which, though a short and tiresome play, was heard without the least symptom of impatience, although the pantheon of the galleries was completely full, and the promised 'tours de force' of the Parisian 'phenomena,' were likely to have raised great and eager expectations in the breasts of as many of their godships as understood or had received an interpretation of the mysterious phrase. The excellent acting of Miss Phillips, who played the part of Belvidera better than even on the former occasion, must have a large share of the praise of having hindered the expression of impatience; for the *dramatis persone* had evidently received instructions to gallop through their parts, which they were by no means loath to obey. When the play was done, the 'Alcides' presented themselves. One is rather tall; the other short and thickset. They appeared in character, each with his club; but, laying them aside, went through a numerous series of attitudes, equally remarkable for gracefulness of position and muscular development. These pleased universally, but not so the subsequent 'tours de force.' The strength they displayed was very wonderful; but several of the exhibitions involved, in the minds of many of the spectators, such imminent hazard, that with them admiration yielded to terror, and partial hisses were heard. However, no one fainted. One of the feats performed by the stouter of the two,—whose limbs, in every thing but the colour and the dimensions, are like those of the Hyde Park monster,—deserves mention. Standing on a chair, he bent backwards over the back, and took from the stage a piece of lead, (which appeared a heavy burden to the two attendants who brought it thither,) and, holding it in both arms across his chest, recovered his erect position, and then returned it to the place whence he took it by the same process, and rose again without any appearance of effort or exhaustion. After these exploits, the melodrama of 'Thiarna-na-Oge' began. It is founded on the Irish legend of 'O'Donnoghue, Prince of the Lakes,' of whose sub-aqueous domicile and environs the beautiful scenery mainly consisted. We cannot go particularly into the plot, of which the said

Prince is the cardinal hinge. A young Irish girl, whom a wicked lord, in the guise of a peasant, had endeavoured to seduce, is under the protection of the 'good people,' who recover her from drowning in the lake, into which she had plunged to escape from the rude lust of her seducer, and persuade her to marry a young Irishman of her own rank, whom also they save from a double death at the hands of his unprincipled rival,—he, after having been shot by his lordship, being about to be hanged by his instrumentality for the supposed murder of his future bride, when the fairies interpose, and so enchant all parties concerned that Sampson Sinister, the servant of the Lord Glencar, is, by every one but himself, taken for the condemned lover, and, unable to convince any person of his identity, retires to the place of execution. Mr. Weekes was Dan O'Reilly, the honest lover; and Miss Booth, his mistress. He acted his part with excellent tact and much spirit, and sang two songs, in one of which he was encored, with good taste and appropriate expression. Miss Booth was received with the hearty welcome of a former favourite, and did what she had to do very well. The scenery is various and beautiful, and the 'good people' went through their antics in particularly good order.

Covent-Garden.

ON Monday night we went to see the first representation of the new Easter Piece at this theatre, which was preceded by 'The Point of Honour,' and that most amusing of farces, 'Honest Thieves;' and rarely do we remember to have witnessed, even on this classic ground of scenic splendour, the birth-place of Peter Wilkins, of Cherry and Faristan, a more excellent exhibition than 'The Devil's Elixir' displayed to us. In general, these pieces are no more than frames in which fine scenery and pretty music are to be set off; but this is in itself possessed of very considerable interest, and, supported as it is by some of the most beautiful scenery we ever saw, will not fail of being highly attractive. The following is a brief outline of the story: Francesco (Mr. Warde), a monk of the monastery of St. Anthony, and keeper of the reliques, is deeply, and of course desperately, enamoured of Aurelia (Miss Hughes), the betrothed bride of the brother of Count Hermogen (Mr. Wood). Among the reliques intrusted to his care, is a flask of the demoniacal elixir, the soul-destroying wine of the Shadow King. This having been once offered to St. Anthony, by a demon, in one of the famous temptations, was retained by the saint, who consigned his tempter to a sleep of a century. At the opening of the piece, this period having elapsed, the monster (O. Smith) is again abroad upon the earth, and, in hatred to St. Anthony, tempts Francesco to drink the liquid, whose effect is to metamorphose him into his brother's shape. This he does, and, leaving his cell, proceeds to Castle Hartzmere: here the two brothers meet, and the confusion is terrible. In vain Aurelia endeavours to discover which of the claimants is the impostor; her penetration is baffled, till Nicholas, the *ci-devant* belling-ringer of the monastery (Keely), recollecting that all who have dealings with the devil become shadowless, contrives to throw his lamp into such a direction as to convict Francesco of wanting that necessary appendage to a gentleman. He is hurried away to a dungeon, and Hermogen remains possessor of the lady. In the prison, however, Francesco is visited by the Demon, who engages to rescue him and give him his beloved, upon the usual conditions, with this particular stipulation; that, if before eight o'clock that evening, he should refuse Aurelia, he should immediately become the property of the infernal spirits of the Elixir. In desperation, Francesco consents, and is immediately transferred to the feet of his mistress, and his place filled by the real Hermogen and Nicholas. The ceremony is now approaching: Francesco and Aurelia appear at the shrine of St. Anthony; the clock is on the stroke of eight; the prior is about to hallow the union, when Hermogen, escaped from his confinement, breaks in upon them, but is immediately arrested, and ordered to be carried out for execution, when a burst of tender solicitude for his *absent* and dear brother Francesco awakes the good feelings of the latter, who, after a violent struggle, throws from him Aurelia's portrait, (which acted upon him as a spell,) and surrenders her hand, requesting instant death as a boon. Upon this the clock strikes eight, and the demon claims his forfeit; but it is All-hallows' Eve, the shrine of St. Anthony is at hand, and no evil spirit has power there: Francesco flies to the sanctuary, with the demon on his track; but, as the fiend sets his foot on the threshold, the insulted saint avenges himself by a thunderbolt; the shrine is dashed to pieces, and disappears, leaving a most beautiful champaign in its place, from the back of

which, clad in his pilgrim's weeds, comes the repentant Francesco, as from a long pilgrimage, and blesses the marriage of his brother. This, which was ably supported by all the performers, possesses a most powerful interest; while the transformations were so beautifully managed as to create the highest delight to the audience. There never were produced on any stage two more beautiful scenes than the exterior of the monastery to which Francesco's cell is changed upon his drinking the potion, and the last scene, after the destruction of the shrine. Hartzmere Castle, and the chamber in which the detection of the Shadowless Man takes place, are exquisite pieces of art. The only fault we have to find with the music, which is extremely pretty, is, that there is a little too much of it for a piece whose interest requires a rapid succession of events, and in which, by its very constitution, the music is intended to act a subordinate part. Upon the whole, we do not remember any Easter-piece which we consider superior to this in the interest of its plot, the splendour of its decorations, and the conception and execution of its beautiful scenery; but, even had these been less distinguished, the capital acting of the principal performers would have rendered it highly attractive. It was given out for repetition amidst the loud approbation of the audience.

FOREIGN VARIETIES.

THE GLOBE UPSET.—We have been vastly edified by a peep into Sandal's 'Cosmogoniz Antiquitatis,' &c., wherein he has wasted much pains and erudition in an attempt to prove, that at the completion of certain periods, our fugacious globe suddenly twists itself ninety degrees from its centre, in a curve from north to south. He affirms, that its last dislocation was the cause of the Deluge; before which event, we are instructed by him, the North Pole was seated in that tract of land on the African continent which lies under the equator! and that the equator, therefore, once on a time, begirt the present North Pole. By this mutation of the pole, the earth, after being cooled in one region, is steamed in another, and *vice versa*: moreover, our learned friend's theory deprives the discovery of mammoth bones in northern climes of its aptitude to addle the brains of geologists. The application he makes of passages from ancient writers, soars beyond the reach of all rational comment. For instance, he has called Herodotus (II. 142) to his aid, in that passage where he narrates, from information derived from the Egyptian priests, that, in the course of ages, the sun had set twice in the east, and risen twice in the west; and Cicero, (N. D. II. 7.), where he asks, '(Possentne) untotius cœli conversione cursus astrorum dispares conservari, nisi ea uno divino et continuato spiriti continerentur?' We would ask Mr. Sandal, *precontra*, how, and when, and by whom, our Latin *the saure* has undergone a revolution which would scuttlerly invert the sense of Cicero's query, as to warrant they inference, that he conceived the globe to have been jostled out of its regular course?

CHINESE COURIERS.—At certain distances along the roads and canals in China, say at intervals of two or three miles, are placed square buildings, with a scieih of sentry-box attached to them, where a soldier is seen on duty; and, should any tumult or breach of the peace occur, he pounces down, *sans cérémonie*, on the offender. The peculiar province of these sentries is to act the part of couriers; for there is no other sort of post in China, besides that dependent upon these runners; they transport the ministerial despatches from one station to the other, and convey letters from Peking to Canton in twelve days, which gives a rate of fifty leagues per day.

BIOGRAPHY.—We wish the example we are about to record might find imitators amongst ourselves. The family of Count Christian D. F. Von Reventlow have offered a premium of 100*l.* for the best biographical account of that eminent minister, particularly with reference to the advantages which Denmark has derived from his services, both in his private as well as his public capacity. And the Danish Royal Society of Arts and Sciences have responded to this patriotic appeal, by appointing a Committee to decide upon the merits of such essays as may be sent in to their Secretary on or before the 1st of May, 1830.

SWEDEN.—The subsequent information is derived from a report to the Swedish Sovereign, recently published by the 'Commission of Statistics.' The investigations, of which it presents the results, refer to a period of five years, beginning with 1821, and ending with 1825.

It appears that the number of *births*, during that interval, were 478,532, whereof 33,566 were illegitimate.

The preceding period of five years, (1816-1820,) the number had been 426,265; so that the comparative increase during the years 1821-1825, had been 52,267, or 8 3-20 per cent. The average number of illegitimate births was one in thirteen during the latter of these periods, including the returns of Stockholm, where it is a lamentable fact, that the number of natural born children is equal to nearly one-third of the whole number of births.

The return of the *deaths* for the years 1821-1825, exhibits a total of 294,594: whereas, during the five years preceding, it had exhibited a total of 311,643: the diminution for the former period, being 17,051, or 3,410 per annum. The greatest number of mortalities occurred in the months of March, and the least in those of September, in each year. In the five years from 1821-1825, twenty-six persons died after attaining the age of 100, though the longest life was that of a female, who was near upon completing her 107th year. It is remarkable that, in this interval, there were 1,941 cases of children suffocated whilst sleeping in the same beds with their mothers or nurses.

The entire *population* of Sweden in 1825, was 2,771,252, which shows an increase of 7 1/2 per cent. on the gross amount of its population in 1820. In the period of five years, ending 1825, there were 300 nobles, 3,201 citizens, and 203,103 peasants more; and 906 ecclesiastical, and 26,555 strangers. Jews, &c. less than in the latter period. In 1825, the numbers of the clergy were 3,476; of the army, 57,736; of the navy, 10,011; and of those concerned in manufactures and mining, 28,256. The indigent class amounted to 21,216. It will scarcely be credited that, in this year, so large a population as the Swedish should have contained only one manufacturing designer, one chocolate maker, one enameller, one colour-maker, and one wax-bleacher.

AMERICAN NAVY.—The Government of the United States did not bestow any serious attention upon the increase of its maritime power until the year 1815. The greatest number of vessels in the public service during the revolution did not exceed twenty-five, of which there were five frigates of 32 guns, twelve ships mounting from 24 to 28 guns, and eight from 10 to 16 guns. The Act of the 29th of April, 1816, appropriated an annual sum of one million of dollars to the increase of the naval force; but, in 1830, this appropriation was reduced to five hundred thousand dollars a-year.

The American navy consisted, in 1827, of twelve vessels of the line, sixteen frigates, and sixteen sloops of war. In 1828, its state was as follows:

	Ships.	Frig.	Sloops.	Schooners.
On Foreign Service	1	6	10	4
In Ordinary	6	5	3	8
Building	5	6	4	0
	12	17	17	7

Besides three steam frigates. The number of officers on service was 723, viz. 35 captains, 34 commanders, 262 lieutenants, and 392 subaltern officers. The sailors employed amounted to 5,864, and the annual expenditure to 3,000,000 dollars.—From the Report of the Secretary of the Navy, &c.

BEET-ROOT SUGAR.—At the meeting of the Academy of Sciences at Paris, held on the 8th of December last, Messieurs Tessier, Silvestre, and Thénard presented their report on the paper laid before the Academy by M. de Beaujeu, on the subject of manufacturing sugar from beet-root. 'M. de Beaujeu,' says the report, 'has established a manufactory of beet-root sugar on his estate in the department of the Orne: and he thus describes the process he has adopted, as the result of careful investigation and numerous experiments. After taking the roots out of the ground, he cleans them, cuts away the leaves, heads, and small roots, and then houses them in a state of readiness for rasping, or grating; for which last operation it is not necessary they should be washed. The rasping must be carefully and effectually done, and the juice be extracted immediately, because exposure to the atmosphere will speedily deteriorate its quality. He then impregnates the juice with a portion of lime, of which he uses but an inconsiderable excess: it is afterwards evaporated, and mixed with animal carbon. The rapid evaporation, together with the ebullition occasioned by an intense heat, causes the syrup to crystallize. If the operation be well conducted, he affirms that as large a portion of sugar will be obtained as by the tardier process which is usually employed; whilst much time will be saved, and a considerable quantity of crystalline formations, which are expensive and difficult to be dealt with, will be avoided. The method used by M. de Beaujeu is analogous to that adopted in the West Indies; and the

product obtained affords so handsome a remuneration to the manufacturer, that the article may now be considered as an established branch of French industry.—Our English and Irish agriculturists might profitably direct their attention to this subject. The duties on sugars do not extend to articles of native growth; and this is not an age when the Legislature would venture to interfere with their production.

TIFLIS GAZETTE.—We adverted in a former page (No. p.) to the literary phenomenon which had appeared in the capital of Georgia, under the title of 'Tifliskiya Vedomosti.' Subsequent information acquaints us, that it is published every Wednesday in the Russian language, with a translation into Armenian. Its professed object is to convey intelligence to the inquisitive on the other side of the Caucasus, as well as to the Armenian provinces which Russia has recently added to the 728,000 square leagues of Asiatic and American territory which she has converted to her use during the last hundred years. The expense of this journal is thirty roubles, or about twenty-five shillings, per annum.—However strange it may sound to the ears of free men, there is a spirit of mildness and beneficence in Russian despotism; whence, otherwise, the rapid increase which annually takes place in the population of Russia, or the pains and expense notoriously bestowed on the amelioration of its intellectual condition? The decreasing population and prosperity of Turkey may at least be adduced as proofs, indicative of the viciousness and barbarism of Ottoman despotism!

PRISONS.—The subsequent is an official statement of the number and description of the prisons in the Kingdom of the Netherlands. There are four principal jails or Houses of Correction: viz. For Belgium—one at Ghent for 1500, and one at Vilvoerde for 1300, prisoners. For Holland—one at Bois-le-duc for 800 prisoners, and one at Lewwarden for the like number. These all together possess accommodation, therefore, for four thousand four hundred criminals. Besides a Penitentiary for fifteen hundred prisoners at Antwerp, which is for the use of the Southern provinces, it is intended to build a second capable of containing one thousand individuals, for the use of the Northern. There are also two military prisons, which are nurseries for the colonial service; one of which is at Alost, and is calculated to hold 500, and the other at Leyden for 700 prisoners. In the year 1826, the number of criminals employed in labour was 6535, of which 5545 belonged to the chief and 990 to the minor prisons. These last consisted of 54 Spunging Houses, 12 Correctional Houses, &c., 26 Jails, 4 Asylums or 'Depôts,' besides twenty one places of confinement for the military. In speaking of the English prisons it is remarked by Doctor Julius of Berlin, who has lately published a very interesting work on the 'Science of Prisons, their Amelioration, &c.,' and given some curious details of the actual state of these establishments in the various countries of Europe and America, 'that England and Wales united contain 518 prisons of all descriptions, in only 23 of which a classification by sexes had been introduced, whilst in 59 of them the males and females were huddled indiscriminately together! With the exception of the Penitentiary at Millbank, he affirms, that the worst-organized prisons in England are the twelve London jails, particularly that of Clerkenwell!' The leading principle which prevails throughout his valuable work, is the transforming of public places of confinement into schools of amendment, from which the offender may return into the bosom of society, not simply after he has undergone the penalty of his offence and closed his account with justice, but after his evil propensities and depraved habits have been thrown off in the crucible of morals and wholesome industry.—He states that, from 1810 to 1826, sentence of death was passed, in England, on 15,632 individuals, of whom 1384 were executed; and in France, on 2755, of whom 850 expiated their offences with their lives.

POPULAR LITERATURE.

'Ut in vita, sic in studiis, pulcherrimum et humanissimum existimo, severitatem comitatemque miscere, ne illa in tristitiam, hæc in petulantiam, procedat.'—*Phinti Epistola.*

1.
'Collecting toys
As children gathering pebbles on the shore.'
Millon's Paradise Regained.

I.—POETICAL.

Cowley's Ode to Brutus.—Cowley commemorated in an ode, the genius of Brutus, with all the enthusiasm of a votary for liberty. It so displeased the king, that, when Cowley solicited for some reward for his services, he was told that his pardon was his reward.

He retired to the country, complained of 'barren praise,' and 'neglected verse,' and denominated himself the 'melancholy Cowley.'

Home.

Home's home, although it reached be
Through wet, and dirt, and night; though heartily
I welcomed was, yet something still,
Methinks, was wanting to fulfil
Content's old appetite; no cheer,
Says I, so good as that which meets me here.

Home, home, sweet home, releaseth me
From anxious joys, into the liberty
Of unsollicitous delight;
Which, howsoever mean and slight,
By being absolutely free,
Enthrones me in contentment's monarchy.

Dr. Beaumont, edit. 1749.

2.—SENTIMENTAL.

Remorse.—The sense of existence pursued him like a ceaseless torment. His mind no longer presented a wide field for reflection, but haunted him with one single image armed with daggers.—*Himly.*

Parental Love.

Dear babe, that sleepest cradled by my side,
Whose gentle breathings, heard in this dead calm,
Fill'd up the interspersed vacancies
And momentary pauses of the thought!
My babe, so beautiful! it fills my heart
With tender gladness, thus to look at thee,
And think that thou shalt learn far other lore,
And in far other scenes! For I was rear'd
In the great city, pent 'mid cloisters dim,
And saw nought lovely but the sky and stars.
But thou, my babe! shalt wander like a breeze
By lakes and sandy shores, beneath the crags
Of ancient mountain, and beneath the clouds
Which image in their bulk both lakes, and shores,
And mountain crags; so shalt thou see and hear
The lovely shapes and sounds intelligible
Of that eternal language which thy God
Utters, who from eternity doth teach
Himself in all, and all things in himself.
Great Universal Teacher! he shall mould
Thy spirit, and by giving make it ask.

Coleridge.

3.—DRAMATICAL.

Plutarch's Attack on Aristophanes.—There is, sooth to say, in the structure of his phraseology, something tragi-comic, bombastic, as well as pedestrian—there is obscurity—there is vulgarity—there are turgidity and pompous ostentation—together with a garrulity and trifling, that are enough to turn the stomach! Aristophanes can neither please the multitude, nor be endured by the refined; but his muse, resembling a decayed courtesan, that imitates the dignity of a matron, is at once disgusting to the many from her insolent assumptions, and abominated by the graver few for her lewdness and malignity.—*Plutarch. Aristoph. et Menandr. Com.*

Bona verba, Plutarche!

Nicodemi Frischlini Defens. Aristoph.

4.—ROMANTIC.

A Night Storm.—The wind increased to a storm; but we walked about the heath for several hours, listening to the roar of the blast among the tall firs, and observing the dark ocean of clouds driving along the firmament. I was myself charmed with the wildness of the scene; but, forgetting his grievances for the time, Wilton became absolutely enchanted with visionary ecstasy.

'O! how I could wish,' he said, 'to be wrapt in these viewless winds, and dash along from mountain to mountain, and from cloud to cloud! I feel as if I could spurn the earth from under my feet, spring aloft into the dark air, and companion me with the spirit of the storm! Richmond! you may call this dreaming madness, but it is a dream I like to indulge in. I like to let my fancy go with the blast, and revel among the clouds; and a night storm is so grand, so sublime, so darkly beautiful! the very music of magnificent sound, the very poetry of resistless motion! Do you remember the lines I once repeated to you on this glorious subject?—

'The midnight winds are forth, with high career,
Urging their cloudy chariots rapidly,
As if they rush'd to war, or fled in fear,
Along the champagne azure of the sky!
The heavens are all in motion—and the eye
Beholds the wonted visions of its search,—
Moon, star, and cloud, all hurrying rapidly

Away, as if upon their final march,
As if the Archangel's trump had pealed along that arch.
'So when the hand of mighty seraphim
This pictured volume from our eyes shall roll,
Unfolding to all eyes the face of Him
Who sits enthroned behind it,—O, my soul!
How wilt thou shrink to see, in funeral stole,
Nature, distracted, in convulsions lie
On flaming pyre; and at his destined goal,
Time, worn and weary, lay him down to die
On the paternal breast of hoar ETERNITY!'

Richmond.

5.—CRITICAL.

St. Jerome's Translations of the Scriptures.—A singular anecdote is given by St. Augustin of the gross superstition and ignorance of the early ages of the Christian Church, in the following manner: 'A certain Bishop had given way that this new Latin translation should be read in his church, but with very ill-success; for when the people understood that St. Hierome, in the prophecy of Jonah, had put it down *Hederam*, instead of that which anciently, according to the Greek, had been *cucurbitam*, there was a great tumult raised among the parishioners, inasmuch that the Bishop was forced to ask counsel of the Jews; who, notwithstanding that they had answered that the original word might bear either of the constructions, yet the people would not be contented till the Bishop had blotted out *Hedera*, and set down *cucurbita*, according to what it was before.'—*St. August. Epist. ad Hierom.* Now, it is very probable, that neither the one nor the other is the proper term; for the Hebrew *kikajou*, which more probably meant the plant from which the oil of KIKI, mentioned by Herodotus, (b. ii. *Euterpe*), was expressed; and bearing the same name in Hebrew also; viz. the oil of kik, as may be seen in treatise 'Shabbath,' chap. ii. Mishna i.

6.—CLERICAL.

Catholic Continence.—A brother of the order of Minorite Priors, valiantly confiding, like holy Sara of the Thebais, in his own virtue, said to brother Giles of Assisi, 'Father, I have overcome a terrible temptation! There was a woman behind me in the street, and the devil assaulted me fiercely. The nearer she came, the stronger the temptation grew. At last, I determined to brave the old enemy by standing still, and looking the woman full in the face. And so I conquered.' 'Was the woman handsome?' said Giles. 'No, father,' he replied, 'she was old and excessively ugly.'—*Dam. Carneg. Chron. Serafica, l. 591.*

7.—THEOLOGICAL.

Miracles.—'God the Word,' says Lord Bacon, 'in the miracles which he performed, (and every miracle is a new creation, not arising from a law of the first creation,) wished to do nothing that did not altogether breathe of grace and beneficence. Moses performed miracles, and harassed the Egyptians with many plagues; Elias shut up the heaven that it rained not, and brought down the fire of God from heaven, upon captains and their troops; Elisha evoked bears out of the desert, who tore children to pieces; Peter brought death upon the sacrilegious hypocrite Ananias; and Paul struck the sorcerer Elymas blind; but Jesus did nothing of this kind. He was the Lamb of God, without wrath, and without judgment. All his miracles related to the body of man, as all his doctrines to the soul of man. He performed no miracle of judgment; all were works of beneficence.'—*Baconi Opera, vol. x. p. 320.*

8.—ONEIROLOGICAL.

Visionary.—In the divine visions of Hans Engelbrecht, whom God sent from the dead to be a preacher of repentance and faith to the Christian world, it is stated that he not only had gone to the place of torments, and smelt the stink of the infernal pit, but brought some of the stink back with him, to convince his friends that he had been there. 'This,' he says, 'was a sign of my having been before in hell. God made the people who were with me to smell such a diabolical, horrible, and infernal stench, whilst I was getting out of bed, which was so immeasurably bad, and such a dreadful stench, that no other stench they could think of in all the world was comparable to it; and I thereupon said, By this are you to conclude infallibly that I have been before hell. God makes you to smell this diabolical and infernal stench that it may be a certificate or testimony to you; and a testimony it indeed is that I have actually been before hell.'

Had poor Engelbrecht been an Arab instead of a German, and produced this *à posteriori* proof of his vision among his own countrymen, he must have fled his country, without any hope of returning to it.—*Divine Vision, translated from the German edition, 1780.*

LIST OF BOOKS PUBLISHED DURING THE WEEK.

White's Farriery, vol. 1, 12mo., 2s.
Mawe's Gardener, a new edition, with corrections and additions, by Main, 12mo., 7s. 6d.
New Manual of Devotions, new edition, 12mo., 2s. 6d.
Scard's Sermons for Schools, vol. 1, 12mo., 5s.
Brown's Repentance, and other Poems, post 8vo., 5s.
Kerby's Sermons on the Temptation of Christ, 8vo., 7s. 6d.
Hawkins's Medical Statistics, 8vo., 7s.
The Family Library, No. 1.—Life of Napoleon, vol. 1, 8s.
The Brass Founder's Manual, 1s. 6d.
Lewis Cornaro's Essay on Longevity, 37th edit., 18mo., 2s. 6d.
Syder's Examinations, new edition, 18mo., 5s.
Dabiel's Græca Minora, new edition, 8vo., 6s.
Clouds and Sunshine, post 8vo., 8s. 6d.
The Italian Confectioner, by G. A. Janior, fourth edition, with additions, 9s.
The French Cook, by L. E. Ude, tenth edition, 13s.
Carpenter's School Speaker, new edition, 12mo., 2s. 6d.
Sadler's Ireland, 2d edition, 8vo., 12s.
Cottle's Malvern Hills, Poems and Essays, 12mo., 3 vols. 12s.
Peace Campaigns of a Cornet, 3 vols., small 8vo., 1l. 7s.
Savigny's History of the Roman Law during the Middle Ages 8vo., vol. 1, 14s.
Williams's Views in Greece, 2 vols. imperial 8vo., 7l. 10s.
Capper's Topographical Dictionary, new ed., 8vo., 1l. 11s. 6d.
Mills on the Lungs, Heart, &c., 8vo., 8s.
Fridolin, with Illustrations by Retzsch, 2s.
Faust, with 26 Designs by Retzsch, 3s. 6d.
Hamlet, with Illustrations by Retzsch, 2s. 6d.
Poems and Essays by John Bennett, 12mo., 2s.
Ten Chapters on the Bath, 18mo., 3s. 6d.
Miscellaneous Poems, by Abraham Wildman, 12mo., 4s.
The Advantages and Deficiencies of the Protestant Reformation, by J. P. Dobson, 2s.
Every Man his own House Painter and Colourman, by J. H. Vanherman, 8vo., 8s.
Whitfield's Select Works, 1 vol. 8vo.

The Seventh Number of
THE FOREIGN QUARTERLY REVIEW
will be published on the 29th.
Soho-square, April 14.

This day is published, in post 8vo., price 8s. 6d.,
CLOUDS AND SUNSHINE.
 London: printed for Samuel Maunser.—Also,
MONTGOMERY'S OMNIPRESENCE of the DEITY, Eighth
 Edition, 7s. 6d.
 Mrs. GODWIN'S POEMS—'The Wanderer's Legacy,' &c.,
 8s. 6d.
CONVERSATIONS on GEOLOGY, with Engravings, 7s. 6d.
CHRISTIANITY, PROTESTANTISM, and POPERY COM-
PARED, 7s. 6d.
 And, in the press, the third edition of
MONTGOMERY'S UNIVERSAL PRAYER, &c., 7s. 6d.

This day is published, in one thick vol., price 7s. 6d.,
THE PRACTICE OF COOKERY, adapted to
the business of everyday life. By Mrs. DALGAIKNS.
Printed for Cadell and Co., Edinburgh; Simpkin and Mar-
shall, London; who will publish very shortly.
ANNE OF GEIERSTEIN. By the Author of 'Waverley.'
3 vols.
TRAVELS IN NORTH AMERICA. By Captain BASIL HALL,
R.N. 3 vols.

Just published, in 2 vols. 8vo., 2d edition,
THE MEMOIRS OF GENERAL MILLER;
 also, a **SPANISH EDITION**, translated from the Eng-
 lish, by **GENERAL TORRIONES**, with a **Prefatory Essay** by the
 Translator.
 'To collect, arrange, and place in a brilliantly attractive
 light, such a mass of amusing and instructive details as are
 here comprised within a moderate compass, cannot have been
 done without advantages which are rarely combined, namely,
 peculiarity of subject, great diligence and research, ample
 materials, and, in the composition, taste and spirit. And such
 literally are the distinctive qualities of these volumes. . . .
 It is in fact a text-book on the curious and novel subject to
 which it relates.'—*United Service Journal*, April, 1839.
 Printed for Longman, Rees, Orme, Brown, and Green.

DR. BIBER will deliver, this Spring, another COURSE of LECTURES on EDUCATION, to begin on Tuesday the 28th instant.

For particulars apply to Messrs. Darton and Harvey, Gracechurch-street; Mr. William Darton, Holborn-hill; Messrs. Stewart and Pantou, 130, Cheapside; Mr. J. Nisbet, 21, Berner's street, Oxford-street; and Messrs. Koller and Cahlmann, 21, Soho-square.

WESTERN LITERARY AND SCIENTIFIC INSTITUTION

PATRON—THE KING.
THE next CONVERSAZIONE will be held on Saturday the 25th inst., at eight o'clock in the evening.—By order.

20th April, 1879. THOMAS SNELSON, Secretary.

THE EXHIBITION of Mr. CAREW'S
CLASSICAL GROUPS.—Adonis attacked by the Boar—
 Arethusa, a Nymph of Diana, and Venus, reconciling Vulcan
 —executed in marble for Lord Egmont—is now open to the
 public, from ten till five, at the King's Mews, Charing-cross.
 —Admittance. 1s.: Catalogues. 6d.

AUTOMATA.—Now open at the Horse Bazaar, King-street and Baker-street, Portman-square, the magnificent Exhibition of **MUSICAL and MECHANICAL AUTOMATA**, comprising nearly twenty different subjects, including the celebrated Musical Lady, Juvenile Artist, Magician Rope Dancer, and Walking Figure; also, a magnificent Vase, made by order of Napoleon, together with a Serpent, Birds, Insects, and other subjects of Natural History, the whole displaying, by their imitation of Animated Nature, the wonderful power of Mechanism. Open from Eleven till Six, Admittance 1s. 6d., Children 1s. The whole of the Exhibition for Sale; also several other self-acting and other Musical Instruments.

THE KING'S CONCERT ROOMS,
HANOVER-SQUARE.

UNDER THE IMMEDIATE PATRONAGE OF
Her Royal Highness the Princess AUGUSTA,
Her Royal Highness the Duchess of GLOUCESTER,
Her Royal Highness the Duchess of CLARENCE,
Her Royal Highness the Duchess of KENT,
Duchess of St. Albans,
Dow. Marchioness of Salisbury
Countess of Jersey,
Countess of Gosvenor,
Countess of Darlington,
Countess of Devon,
Countess of Wiltton,
Countess of Beatrix,
Lady Elizabeth Rippon,
Duchess of Leoda,
Hon. Lady Lucy Clive,
Dow. Countess of Dartmouth,
Countess Fortescue,
Countess of Arran,
Countess of Verulam,
Lady Anne Vernon,
Hon. Mrs. Leigh,
Countess St. Antonic.

Miss WILKINSON respectfully announces that her CONCERT will take place at the above Rooms, on Monday Evening, May, 4, 1830. The Vocal and Instrumental Department will comprise most of the eminent Performers, whose names, with the Programme of the Concert, will be speedily announced. Tickets, Half-a-Guinea each, to be had of Miss WILKINSON, No. 20, Upper Baker-street, and at all the principal Music Shops.

LICENSED BY HIS MAJESTY'S COMMISSIONERS OF
EXCISE.

TRANSPARENT PAINTINGS, and IMITATIONS OF STAINED GLASS, by WILLIAM BACON, No. 40, Great Russell Street, Bloomsbury,—who begs leave, most respectfully, to acquaint the Nobility, Gentry, and the Public, that he has prepared, and is now ready to submit to their inspection, a New and Elegant Assortment of TRANSPARENT PAINTINGS, consisting of Architectural Subjects, and Italian and Swiss Scenery; the correctness of which, as regards Drawing, Coloring, and general Effect, renders them particularly Elegant, Ornamental, and Useful Adaptations to Drawing-Room Windows. He has also many others, from Grecian and Gothic Designs, in Imitation of Stained Glass, admirably adapted to Church, Chapel, Library, or Staircase Windows.

Gentlemen residing in the Country may be supplied with Blinds painted to any Design, mounted, and complete for fixing, by sending the Dimensions of their Windows to No. 40, Great Russell Street, Bloomsbury, near the British Museum.

**FULLER'S IMPROVED ICE-PAIS, FOR COOLING WINE,
FRUIT, BUTTER, &c.**

THE Nobility and Gentry are respectfully invited to inspect **FULLER'S ICE-PAISLS**, at his Manufacturing No. 63, Jersey-street, six doors from St. James's-street, (formerly Patterson's), where he constructs on philosophical principles, so as to produce and retain any required temperature. The present Ice-Pails are greatly improved by the discovery made of a metal which is not corroded by rust; and they have met the decided approbation of every one who used them during the last season. Cases for Icing Champagne, and the Improved Cream-Freezer, by which Ice-Creams may be made in any climate, without the aid of Ice. Also, Freezing Powders of matchless quality.

W. Fuller also begs attention to his improved Spare-Bed Airer, which is not liable to rust, and precludes the possibility of damp beds. This vessel will retain its heat for two days together, and is particularly recommended by the Faculty for invalids labouring under asthma, or affections of the lungs. It emits no smell nor vapour. Carriage Feet-Warmers, upon the same principle.—The above articles of scientific discovery are constantly on view at 40, Jeremy-street.

ROWLAND'S KALYDOR.—Its soothing; cooling, and ameliorative properties immediately allay the smarting irritability of the skin—assuage inflammation—kill harsh and rough skin—remove cutaneous eruptions, and produce a Beautiful Complexion—affords soothing relief to ladies nursing their offspring; and to gentlemen after shaving, it allays smarting the pain, and renders the skin smooth and pleasant, 4s. 6d. and 8s. 6d. per bottle, duty included.—Each genuine bottle has the Name and Address engraved on the government stamp, which is pasted on the bottle—
A. Rowland and Son, 30, Hatton-Garden.

On Saturday, May 9, 1839, will appear, No. I. of
THE EDINBURGH LITERARY GAZETTE.
 To be published every Saturday morning.

The purpose and value of a *Journal conducted on the exclusive plan of The London Literary Gazette*, containing critical notices of new works, and forming a compend of general literature, are so universally understood as to need no additional explanation. For periodical works of this description, Edinburgh affords peculiar facilities. As the seat of a flourishing University, and of one of the great European Libraries, it has long held an eminent rank in the republic of letters; and with reference to the trade of literature, it is the second publishing market in the British empire. It is the residence, or at least the occasional resort, of all the nobility, learning, and wealth of the country; and it forms the common centre of attraction for connoisseurs, artists, and men of science; the national mart where alone their genius and their works can be adequately appreciated and rewarded. With all these advantages, it must be considered rather extraordinary, that in a city so distinguished, no work of the kind now projected should hitherto have existed. At this moment it is the subject both of surprise and reproach, that Edinburgh possesses nothing in the shape of an exclusively literary paper at all corresponding with her resources, or worthy of her literary fame. A register or journal of criticism, unmixd with politics, containing an ample review of the current literature of the country, with an account of the progress and improvements in science and the arts, must be regarded as a desideratum which the Scottish press has yet to supply.

Anxious to avail themselves of these local advantages, and to furnish the British public with a work that shall unite the copious and solid information of the more elaborate reviews with the interest and amusing varieties of a literary newspaper, the Projectors of 'The Edinburgh Literary Gazette' have determined to commence their labours, fully convinced; that with the resources at their command, nothing but publicity and perseverance are wanting to crown their efforts with success. With regard to the practical part of the work, they pledge themselves that neither exertion nor expense shall be spared. As for the nature and arrangement of the contents, a very few words will suffice. It was easy to frame a specious and imposing prospectus, which too frequently amounts to nothing more than an abstract theory of good intentions; a mere anticipation of ideal excellence, rather than a true index of the intended performance. Avoiding all such ostentatious display, the Conductors of 'The Edinburgh Literary Gazette' will make no promises on their part, and excite no expectations in the public which they are not amply prepared to realise.

The Projectors have only farther to add, that the most ample and efficient assistance has been secured. Each department will have its own appropriate contributors, on whose judgment and abilities the public may rely with confidence. Without affecting any boastful pretensions of ways and means, or making an empty parade of names, they may be permitted to state, that in their list of auxiliaries will be found names which already have done honour to modern literature; and whom the Author of 'The Confessions of an Opium Eater,' De la 'Blackwood's Magazine,' and Mr. Orlinton, the Translator of Koch's 'Revolutions of Europe,' are mentioned, it will be some guarantee of what the public have to expect. Still, though the Projectors may not perhaps be able at once to develop their plan fully, and in all its parts, they are assured that any primary obstacles will speedily be overcome. They will be content to peril the character and success of the whole undertaking on the first Six Numbers of the work.

'The Edinburgh Literary Gazette' will be printed on a sheet equal in size to the largest literary paper in Britain, and will be published weekly, on Thursdays, at 10, Prince's (the premises occupied by the late Mr. Combe,) where Subscriptions and Advertisements will be received. A list of Agents will be given in a future advertisement. In the mean time, Orders, &c. will be received and transmitted by all respectable Newsmen and Booksellers throughout the United Kingdom.

Price of each Number, 2d. unstamped, or 1s. stamped, sent free by post.

Books, &c., for reviewing, Communications, Orders, and Advertisements, are received by Messrs. Ebers and Co., Old Bond-street, London; who will publish 'The Edinburgh Literary Gazette' every Monday.

Edinburgh, No. 10, Prince's-street, March 2, 1829.

On the 1st instant were published, price 1s.

CASES OF CONSUMPTION OF THE LUNGS
 cured by inhaling the Vapour of the true *Berardus* Tar, &c.; of Nervous Indigestion and Bilious Affection, by the *Chirayitti* herb; of Local and General Debility and Dropsy, by the Round-leaf Cornel; of Asthma, by the *Lobelia Infusa*; of Rheumatism and Chilblains, by Naphtha; of Gouty Tic Douloureux, by the Colchicum; of St. Vitus's Dance, by attention to the Spine; of Palsy, by Acupuncture; and of Distortions of the Feet, by mechanical management: effectual Remedies for Cancerous Ulceration, for the Prevention of Sea Sickness and Measles, for Piles, eruptions of the Skin, for chapped or sore Nipples, tedious Labour, Diabetes, habitual Constipation, &c.: the tonic properties of the Essential Salt of the Round-leaf Cornel, and the deobstruent effects of the Fustic Chenopody; exposure of the Fee trade of John St. John Long, and Courtney; conviction of Doctors Manny Simpson for killing William Burkit; prosecution of Drs. J. and C. Jordan, by Miss May, and exposure of the Balsam Rakasiri quackery: composition of Boyce's Ointment for Chilblains; Powell's Balsam of Aniseeds; Remarks on Animal Magnetism; Dissection of Human Bodies; and on the American Mode of preserving Herbs, &c. &c. appear in the fifth Number of the GAZETTE of HEALTH, published on the 1st inst. A Number of this Work, which is supported by the most eminent Medical Gentlemen of Europe and America, is published on the first of every month, price One Shilling. The Volume for 1822 is now complete.

London: Printed and Published every Wednesday Morning,
by WILLIAM LEWIS, at the Office, No. 4, Wellington-street,
Strand.

THE ATHENÆUM

AND

LITERARY CHRONICLE.

No. 79.

LONDON, WEDNESDAY, APRIL 29, 1829.

Price 8d.

CONVERSATIONS ON POLITICAL ECONOMY.

MRS. MARCET'S little volume on this subject has acquired great reputation as an introduction to the subject of Political Economy, chiefly, we imagine, because the reading public incline greatly to prefer such works on that science as are the shortest. Some portion of the popularity of that work may, we imagine, be attributed to the colloquial form in which Mrs. Marcet delights to convey instruction, and which is particularly adapted to the development of economical science. It is, indeed, emphatically an oral philosophy; and we merely follow out the course of nature, in expressing, in the form of conversations, the higher and more recondite doctrines of a science of which we always learn the first elements in conversation. It is our purpose, therefore, to give a course of dialogues on subjects connected with Political Economy; not, however, presuming, like Mrs. Marcet, to set up some ideal Mrs. B. as the expounder of principles which are to be adopted, but introducing into the conversational circle the most celebrated economists of the day, in whose mouths we intend to put the most logical exposition which we can devise of the doctrines which they honor by their support.

DIALOGUE I.—ON INTERCHANGE.

SCENE—Bellamy's Coffee-room. Waiters, Members of Parliament, &c. &c.

[Enter Sadler, Baring, Bankes, and others. To them a Waiter.]

Waiter.—WHAT may I bring you, Gentlemen?

Sadler.—We mean to have some mutton-chops; but, in the first place, send Bellamy here. (Exit Waiter.) I think it highly probable, Gentlemen, that Mr. Bellamy may have adopted some of the absurd principles of free trade; and consequently it will be necessary for one of us, previous to any consumption of his mutton-chops, to give him a succinct exposition of our principles, of interchange.

Bankes.—If Bellamy is a free-trader, he must also be an atheist; we must not, therefore, eat his mutton-chops, lest atheistical mutton-chops should sap our religious principles.

Baring.—Gently, gently; you must recollect that Bellamy's liberalism is only hypothetical, being assumed by Sadler for the purpose of argument.

Bankes.—Well, d—n it, let's ask him at once whether he is for Free Trade or not. That will show us immediately whether we ought to have any thing to say to him or not.

Baring.—Oh, that would be very little good; for Bellamy is a practical man, and of course has the privilege of practical men—of using words in any sense that is most convenient to them. Why, what in the world except my being a practical man could explain my having been for free trade in 1824, and against it ever since? Therefore do you speak, Sadler; for I will reserve myself.

Sadler.—I wont now enter into the general question of free trade, but merely say enough to prevent Bellamy's making any mistake.

[Enter Bellamy.]

Bellamy.—The waiter tells me that Mr. Sadler wanted me.

Sadler.—Yes, I sent for you. These two gen-

tlemen and myself are going to take some mutton-chops; but, previously to ordering them, we wish that you should specifically understand on what conditions we take them.

Bellamy.—Certainly, Sir; your'e very good. (What the devil does he mean?)

Sadler.—I must inform you, then, though it is not my intention to enter into the question of free trade in all its bearings, that I have no objection to free trade when it is restricted.* My principle is never to get from any body else what I can supply for myself.† We have, therefore, endeavoured to raise a sufficient quantity of mutton-chops, without depending on any body else for our supply of them; but we have not been able. We actually cannot dress mutton-chops. This, then, is one of those cases in which we must draw up the commodity desired from an extraneous source in the bucket of foreign trade.

Bankes.—Hear! hear! hear! Devilish fine!

Sadler.—In undertaking, however, so perilous an experiment, it is necessary for us to proceed with great caution. We must insist on your meeting us half way.

Bellamy.—Certainly, Sir. How shall I do it?

Sadler.—Listen. Man, Bellamy is born to labour. He does not, as some theorists imagine, labour in order to get what he wants, because really the labour itself is the great thing needed. As long as the people of a country work hard; it matters little what they get for their pains. This is our fundamental principle. When, therefore, we allow you to supply us with mutton-chops, we deprive ourselves of the pleasure of the trouble of dressing the chops; but you get that pleasure. Here's a pretty state of things. You can't suppose that we're going to let you deprive us of so much labour, and pour in an equal quantity of your labour upon us, without granting us the privilege of taking trouble in some other way to an equal amount. If you were to give us your mutton-chops without taking any thing from us in turn, you would ruin us in the long run. This might go on for some time; but it must end in our being utterly impoverished, and your enriching yourself at our expense.‡

Bellamy.—God forbid, Sir, that I should be guilty of such a thing!

Sadler (with solemnity).—I hope not, Bellamy. But this was the way in which Poland was ruined. The neighbouring nations would insist on giving the Poles every thing they wanted, without taking a farthing of payment; the natural consequence of which was, that the Poles actually ran dry, and now hav'n't got a shirt to their backs.

Bellamy.—Well but, Sir, I hope you don't think me such an extortionate monster as to wish you to take my mutton-chops without paying for them? (With emotion.) It is an act of which I never was guilty.

Sadler.—You're a fine fellow, Bellamy, upon my word. You have none of the devilish feelings of a political economist, or a blood-thirsty metaphysician; but I cannot trust you implicitly, because all men are liars. (Cheers from Mr. Sadler's personal friends.) I therefore insist upon it, that,

* See his speech on the Silk Question, April 14.

† See this idea beautifully expanded in the same speech.

‡ For the truly 'practical' doctrine, that a country is ruined by getting what it wants without paying for it, and the 'fact' respecting Poland, see Sadler, *ibid.*

when we consent to take your mutton-chops, you bind yourself to take from us in return a quantity of goods, which shall demand a quantity of labour equal to that of which we have deprived ourselves by allowing you to dress the chops.*

Baring.—I think, Sadler, in this case, we may give Bellamy money instead of goods.

Bankes.—Oh! don't let us part with the precious metals.

Sadler.—I am very averse to it; but, as we happen not to have our own produce at hand—yes, a sudden thought strikes me, and I will out with it. Bellamy, I've a lot of my speeches unsold—I insist upon your taking them.

Bankes.—No, no, that would not be fair on us—it would be as bad as exporting machinery; for, if you let Bellamy see your speeches, he may learn the art of speaking, and throw us out of the oratorical market. We must pay in gold and silver.

Sadler.—I consent for this reason, that I see Bellamy is rather puzzled at our doctrine, and the introduction of my speeches into the process of barter might add to his confusion. Mark me, nevertheless, Bellamy, and comprehend. We will take your mutton-chops, on condition that you pledge yourself to receive from us their full value.

Bellamy.—I do assure you, Sir, that I never intended to let you have the chops without being paid the full price for them. Nay, Sir, I am perfectly ready to allow you to pay me as much more as you can wish.

Sadler.—No, Bellamy; no, my good man: we will not take advantage of your benevolent simplicity. And now, that we have settled this important negotiation, we will pay your bill first, in order to be doubly sure. (Pays.) And now, let's have the chops. (Bellamy bows, and exits.)

Baring.—Well, Sadler, I do not see my way clearly. You know I've always been for free trade in general; but I must confess that mutton-chops were the last article that I ever wished to see exposed to competition; because we succeeded so very ill in dressing chops, that was the very reason that that art required an especial degree of protection.†

Sadler.—Upon my word it is so; and, oh heaven! mutton-chops are delicate exotics which require to be kept on a platform.‡

A Waiter advancing.—Gentlemen, Mr. Huskisson desires me to say, that he has just finished his dinner, which will come to six shillings, and that if you will give him a pint of sherry, he will allow you to pay his bill.§

* The idea that we should force foreign nations, by strict treaty, to receive payment for what we get from them was, we believe, evolved by Mr. Robinson, in the same debate, not by Mr. Sadler.

† 'It was in the unfortunate manufacture of silk alone that we were behindhand, and in that manufacture he thought we never could compete with other countries.' Mr. Baring on the same occasion. Hence he argued that the silk trade was the very last to which the principle of free trade should have been applied; that is, that we should continue most obstinately to do that which we do the worst.

‡ Mr. Sadler said, 'The silk trade is yet an exotic, and still retains all the delicacy as well as the beauty of one. Your state horticulturists have removed it from the sheltered platform,' &c.

§ See the Methuen Treaty.

Sadler.—Poor fellow! does he really act in private life on the absurd theories by which he has ruined the nation? Would it be fair to take advantage of his insanity?

Banhes.—Oh, we ought not to lose such an advantageous outlet for our capital. I had no idea Huskisson would have been so good-natured.

Sadler.—Oh, I dare say Huskisson thinks he has got the best of the bargain. Why, you know, he says that the prosperity of a nation consists in its receiving more than it pays.

Banhes.—Ha! ha! ha! as if the exports should not be greater than the imports. Well, pay his bill.

(*Sadler pays. Divers Members present their bills for payment.*)

Baring.—My dear Sadler, this'll never do. Don't you see that the precious metals are leaving us?

Sadler.—So they are, plain enough. But what shall we say? They'll charge us with inconsistency.

Baring.—Oh, that's very easily done. Gentlemen, in the present unsettled state of the currency.* (*Loud cheering, and the claimants depart.*) Sadler, we may just as well go.

Sadler.—Yes; but wont that be cheating Bellamy out of eating his mutton-chops?

Banhes.—Never mind that. The man cannot grumble at an Equitable Adjustment.

(*Escort Banhes, Baring, and Sadler. The member for Gatton takes their place. Enter to him Bellamy with the chops, and says with marks of surprise.*)

These chops were ordered, Sir, by Mr. Sadler and two other gentlemen, who sat here just now.

Member for Gatton.—Yes, I know that. They're just gone; and, as I'm their virtual representative, you'll let me have the chops.

Bellamy.—Virtual representative, Sir! Why, the gentlemen have paid for them.

Member for Gatton.—Well, man, is'n't that as it should be? I eat what they've paid for. Do we not stand in the relative positions, and discharge the reciprocal duties of virtual representative, and constituents?—(*Eats.*)

FEMALE EDUCATION.

Blicke in das Wesen der weiblichen Erziehung. Für gebildete Mütter und Töchter, von Rosette Niederer, geb. Kasthofer, Vorsteherin einer Erziehungsanstalt zu Yverdon. Berlin, 1828.

THERE is hardly a subject more hackneyed among us, nor one on which public discussion is yet more needful, than education. 'The schoolmaster is abroad,' is the cry of battle of that proud and chivalrous host which boldly and readily unsheatheth its two-edged tongues for the glorious 'march of intellect.' 'The knowledge of the truth is filling the earth as the waters cover the sea,' is the song of triumph of that other still prouder and more adventurous army whose descent upon the shores of ignorance and superstition much resembles Caligula's renowned expedition against Britain, which the self-applauding emperor celebrated in these words: '*Abite lati, abite locupletes.*' That the schoolmaster is abroad, no one can doubt; but whether he be of the right school and a good master, is a question not quite so easily answered. That knowledge of truth is spreading, who can deny? but whether it be a living or a dead knowledge, knowledge of human and therefore sectarian, or of divine and consequently universal truth, is again a question of considerable difficulty. We have a society for preventing Cruelty to Animals, and an Anti-slavery Society; but where are those who exert themselves for the prevention of that cruelty which is daily exercised over the minds and hearts of hundreds and thousands of children; who lift up their voice against that slavery in which the

rising generations are held, by a false, prejudiced, factious instruction, as much, and more perhaps, than by ignorance; who propose the measure of unqualified emancipation from the inability under which all parties and all denominations unmercifully keep the children born among them, the inability to become what they ought to be, men of independence in thought and action, true and unsophisticated men, heartfelt and uncanting Christians? Education in its primitive sense, what does it mean but the drawing forth of the energies of the creature, and giving them a right direction? Education, on the contrary, in its present practical acceptance, what is it but a cramping of every faculty and power of the soul, and a perverting of the little, the growth of which cannot be got rid of, to selfish, mean, and narrow purposes? The accusation seems a hard one; but that is no objection against it. If it be a true one, the harder it is, the more is there need that it should be brought forward. And that it is true, it is not difficult to prove; the facts are too manifest to be hidden any longer, and all that seems to be required is, that we should have a right understanding of those facts. Let us see what the various systems of education, those with which the present generation has been encumbered as with an old inheritance, as well as those which it cherishes as its own offspring, are aiming at. What is the test by which the public judges of them, and by which they themselves wish to be judged, as to the degree of their excellency and utility? Is it not their approximation to the operations of mechanical power? Whilst we have come to the glorious epoch, when the moral and intellectual rights of the individual are acknowledged in the concession of unlimited religious toleration, we are most grossly violating those same rights in education, where it is not asked, what is the individual intended for, and what are the claims which he has upon our care, according to the peculiar constitution of his nature; but solely, what do we wish to make of him, and by what means can we most safely, and most quickly, bring him to this? We have learned to respect man as man in his adult state; but in childhood, we still treat him as a merchandize; and we teach and discipline children, as we spin and weave wool or cotton, by machinery, and if not by steam, most certainly by vapour. Is not the instruction of our public and private schools a mere beat after words, which every party makes in that province of life in which it is most at home, or for which it has a sectarian predilection? The Churchman insists upon the Creed and the Church Catechism being got by heart; the Dissenter does the same with his peculiar tenets, and with the Assembly's Catechism; the mass-priest with the mass-book; the infidel with his Chrestomathic tables; the useful-knowledge man with his encyclopædic compilation of matters of fact. At Eton, the poor scholar fags through the Eton Grammar and the parsing book; at the Leicester-square and Highgate Hamiltonio-Pestalozzio-Fellenbergian cataglottic establishments, through the interlinear translation; at the Infant Schools, through the pence-table; at the Lancasterian Schools, through the lesson-boards; and at the National Schools, profaneest of all, through the sacred pages of Holy Writ. And what is it that the poor pupil gets after all this labour, with all this apparatus? Nothing, alas! but words, vain empty words; unmeaning, if not in themselves, at least to him, who is never allowed breath sufficient to reflect. It is indeed disgusting to see how all the mean and quackish tricks by which the shopkeeper disgraces himself, to maintain his ground in the ranks of an unfair competition, have been adopted by the 'scholastic' tradesfolk; and it is still more disgusting to see, how parents allow themselves to be duped by the grossest mountebankism, on a subject on which, of all others, they should be most circumspect. 'Cheap bargains' are as common now at 'classical and commercial schools,' as they are at tailors' shops; 'economy and dispatch' are held out on the road to learning, as much as on the turnpike-road; pro-

missory notes of 'elegance and fashion' are offered by teaching, as well as by shaving establishments: and, to fill up the measure of humbug, lessons are, as blacking bottles, sold 'warranted.'

While these means are successful with the great mass of the public, there is verily but little hope that good sense and real merit will get a fair hearing; nor is it very likely that they will enlist with such competitors in the strife for popularity. However, as, according to an 'old saying and true,' there is

'No ball-room without pretty girl,
No dunghill without shining pearl;'

so, likewise, in the midst of all this quackery, nonsense, and sectarianism, which our age has honoured with the name of education, is there, now and then, a mustard-grain of wisdom to be found. Such a one we introduce to the notice of our readers by the present remarks; and, although it be the production of a foreign soil, yet on that account we think it not less worthy of attention, as it seems to us that the importation of an article of which our own country is so very unproductive, should be encouraged rather than otherwise.

We have, on some former occasions, already mentioned the name of Pestalozzi; and we gladly revert to it—in spite of the abuse that has been made of it in some quarters—as often as we have before us a genuine production of the same genius by which that great man was inspired. This seems to us to be in an eminent degree the case with the volumes, the German title of which our readers have overleaped at the head of this article; wherefore we give a paraphrase of it here for their benefit. It runs about thus: 'Hints on Female Education,' or, for those who wish to get a literal idea of a German title, 'Peeps' or 'Looks into the Essence of Female Education.' The author of it is Madame Niederer, who, as the title-page informs us, has an establishment for female education at Yverdon, in Switzerland, and who, as we happen to know from other sources, has been highly admired, both as regards her character and her abilities, by some English ladies, who spent some time in her house.

The volume which lies before us, is divided into four parts, the first of which treats of the wants and habits of man; the second, of the cultivation of the affections; the third, of that of the mind; and the fourth of education with reference to our social position. Each of these books contains from twelve to twenty chapters, in which, under as many heads, the most interesting points of the subject are considered. To enable our readers to judge for themselves of the view which Madame Niederer takes of the education of her sex, we extract the following passage:

'It is not sufficient that some individuals of distinguished energy among our sex should emerge to the bright summit of human culture: the whole sex ought to be aroused from their present condition, and stimulated to exert themselves for the attainment of a more elevated state. The powers and faculties with which woman is gifted are peculiar, but not less rich than those which have fallen to the lot of man; and the claims, therefore, which she has upon education, upon influence and a dignified position in society, are, although not of the same nature, yet no less important or extensive, than those which the other sex prefers. It is essential to the fulfilment of those duties which devolve upon man that he should have a correct knowledge of human nature abstractedly, and in its various manifestations in individual character, as well as of the influence exercised upon it by the domestic circle, by education, and by social life; and in the same manner it is indispensable for woman to have a clear apprehension of the nature of the child, generally and individually, and of the demands which it makes in children of either sex upon maternal care and guidance. This knowledge should be imparted to all those that constitute civilised society, lest they be incapacitated for the accomplishment of their most essential duties; the neglect of it will infallibly cause our species to retrograde in its own cultivation, however great its progress may be in science, art, and industry.

'It is in the hands of the female that God has

* See Mr. Baring in the same debate, and, indeed, any body else in any other debate.

deposited the primitive power of all education; she is exclusively entrusted with the awakening and first unfolding of the human energies. The tie of closest union which attaches the heart of the child to the mother's love and care, gives to the female an incalculable influence over the destinies of mankind, and an absolute power to decide the bias of the first tendencies for good or evil, for truth or error. To enable the female rightly to exercise that primitive power of education of which she is possessed, it is necessary that we should lead her to a clear perception of the primitive elements of life, of knowledge and of practice, so that her influence upon the first development of the human being may be one of light and not of darkness.

'The foundation of all knowledge rests on an intellectual apprehension of the first elements. If we learn them with clearness, and in the connection which they have among themselves and with the primitive powers of our mind, our knowledge will be well grounded; every progress will lead to a further development of our own powers, and to a deeper insight into the nature of things. However narrow the compass of our knowledge may be, its foundation will be deep and lasting; and it will impart to the mind such a tendency to progressive development, that no experience and no exertion in future life can ever be lost for the enlargement of the sphere of knowledge.

'The superficiality of knowledge arises, not only from the absolute want of foundation, but also from a merely mechanical apprehension of the elements. If they be inculcated without regard to the bearings which they have upon each other and upon our intellect, our knowledge must be superficial; and every farther progress can only lead to mental confusion, and to a greater alienation from the nature of things. However extensive the system of knowledge so acquired may seem, it will only be the more flat and superficial; and every additional experience, every new exertion, can only increase the mechanism of knowledge, adding death unto death.

'These observations may tend to explain the strange phenomena of young persons leaving school, splendidly furnished with knowledge and acquirements of every kind, by which they earn great applause, and raise mighty expectations; but, so far from answering the latter, remain stationary, and shut up against every further development; so that, by degrees, they sink down to mediocrity, or even below its level; whilst, on the contrary, others who, at the termination of the years of tuition, make a modest appearance, and excite neither admiration nor any great anticipations, yet rise from development to development, and from progress to progress, and accomplish the task of their life in a manner both satisfactory to others and creditable to themselves.

'To produce this latter effect, ought to be invariably the object of female education. Not the extent of knowledge, but its solid character,—not mechanical accumulation in the memory, whilst the mind is stupefied and paralysed, and every tendency to development crushed, but intellectual acquirement, which enlivens and exercises all the powers of the mind, and produces a desire for improvement that will last to the end of life,—such are the characteristics of the mental endowments with which a daughter should be dismissed from the parental roof, or from the house of education. If her mind be so fitted out, she will not fail to accomplish the task of her life; as mother and instructress, she will be a shining light for the first education of man. If, on the contrary, she be defective in this, her failure is inevitable; she can produce nothing but confusion and darkness in education, and in the whole sphere of domestic life.

'To open to children the path of true intellectual culture, by a well-grounded and intelligible elementary instruction, is easy and delightful to those that understand it; and so it is likewise to lead them from such a pure and solid basis to the higher degrees of knowledge and wisdom; but, to lead the more advanced youth back from superficial and mechanical knowledge to spontaneous mental exertion, to attention, reflection, and perseverance, is a hard and ungrateful task. It is hard, because it requires a great expense of time and labour enduringly to awaken, strengthen, and enliven the mind, when it has been stunned and enervated by lifeless instruction. It is ungrateful, because, in a world where appearance is the object generally in request, and the general test by which things are judged, it is impossible to aim at the reality, and to reach it, without incurring constant misjudgment, however great and important results may have been obtained. Nevertheless, he who has the welfare of youth and of mankind at heart, who works not for temporary or temporal

purposes, but for the real wants of his age, and for an eternal end, will find that easy which is otherwise hard, and that which is ungrateful, will carry for him a high and everlasting reward.

'The multitude reject the way of development, because, although secure, it is slower; they claim the more rapid results of a system of rote. To know something of every thing, and to be able to talk of every thing, is, with the great mass, the object of female education; hence it is that superficiality, presumption, flatness, and vanity, prevail on all sides; that knowledge and acquirements wear off by practice, and are, in young mothers, like salt which has lost its savour, and is of no use in domestic life or in education.

'But it will not remain so for ever. The day of a better knowledge is dawning upon our sex; its high vocation for the cause of human culture begins to be felt and understood; its exertions have already broken through those narrow limits, and are extending to subjects of universal improvement. Our age has seen noble-minded princesses, taught in the school of life, devoting themselves with faithfulness and dignity to the work of education, and showing, by their example, to the rest of their sex, what they ought to do for it. And how many others, though inferior in rank, yet no less noble-minded, go out, in the power of faith, to give instruction in the schools of the poor, to bring refreshment into the cottage of the needy, consolation to the couch of the sick, and deliverance, in a heavenly sense, into the prison where the criminal is chained to his guilt by iron fetters. They are as many purifiers of the public feeling, diffusing in society the spirit of humanity, and building education upon a lasting foundation. Their exertions will not be without fruit: blessed are they! —P. 344—350.

We cannot better conclude this article than by concurring in the pious wish here expressed by our author, whose strictures, we fear, are as applicable to our state of things as the improvements contemplated by her are urgently wanted.

THE AGE. A POEM:

The Age. A Poem. In Eight Books. Fec. 8vo., pp. 298. Hurst and Co. London, 1829.

THE author of this poem remarks, in speaking of the pride of authors, that

' Oft it lies
Concealed amidst a reprehensive strain
Against his fellows, he, poor man! forgetting
That all these faults are centred in himself.'

We very much fear that this is sometimes the case; that long poems may be written to denounce the spirit of the age; to show how essentially its 'besetting sin' and 'ruling passion' is pride; to trace this pride through all its manifestations; in the church, in the bar, in the senate, in the army; among doctors, at school, at college, among Anti-Catholics, among Liberals; in reviewers, in editors of newspapers, in the frequenters of theatres, balls, and bible meetings; and that, after all, that very spirit, that very pride, may be the presiding genius, the inspiring muse, of the whole book. Such may be, such has been, the case; and it behoves every writer who proclaims a high rule of virtue, who is rightly dissatisfied with the mere conformity of actions to his strict law, but who looks, also, that the current of the feelings should be regulated in accordance with it,—it behoves, we say, such a man to examine, most keenly and anxiously, that he may ascertain whether the evil he is attacking may not have struck their roots into the soul of the censor.

We will not rashly take upon ourselves the office of determining, in any case, whether a man who sets himself up to scourge the Age, is prompted to undertake his high mission by a spirit of 'hatred, envy, and uncharitableness,' or by the 'spirit of power, of love, and of a sound mind;' whether he belongs to the herd of bilious satirists, men to whom all God's beautiful creation is hateful, either because there is a native core of bitterness in their hearts, or because they are the weak slaves of a bad digestion; or whether he claims kindred with such beings as Milton, who were impatient of every jarring note in that mighty harmony to which their own spirits were attuned. This only we will say, that, when we see writers

who imitate, or profess to imitate, great men in one of their marked characteristics, we like also that they should form themselves upon the entire model. Give us a little of Milton's other qualities; and trust us, we will not quarrel with you for mimicking him in his vituperation. Give us but one of his prayers, and you shall be free to copy his invectives as long as you will. Be able, as he was, to lay your hands on your hearts and say,—'I am pure in word, and deed, and thought;' pure, not from coldness, not from education, but from a spirit within, which would not stoop to crime, and turned every thing which it touched into good: be able to say this, and you shall denounce other men's vices so long as you have breath to rave with. In short, show that, like him, you have something within yourselves that is not of the age, but above it; and then curse and rail at it to your heart's content. Till then, beware!

And this we must say further, though the application may seem personal to the author of this volume, as well as to his acknowledged prototype, Mr. Pollok, that nearly all the men from whom they can draw any precedent for their own vituperative propensities, and Milton more remarkably than any of them, however vehement they may have been in that prose dialect, which they adopted that they might wrestle with flesh and blood upon its own level, the moment they began to speak their native language, gave utterance to no thoughts but such as belonged to a region of purity and love.

We will give some extracts from the work before us. Of the feeling in which it is written we shall, for the reason we have mentioned, express no opinion: on the quality of its poetry, we will be equally silent. We have read some lectures to the religious public upon the grossness of its tastes; and with these we shall be content. *Liberrimus animas nostras*; and henceforth, let it feed upon what garbage it will, we shall trust its cure to the sickness which must infallibly ensue from such foul gluttony:

' Open the college gates, and enter in
Each room, each heart, and scan the inmost depths.
Here, many learning seek,—the most, as sought
The schoolboy, that they may obtain applause
From mortals: but another kind of pride
In others now arises, or shoots forth
Branches more vigorous;—a pride of name,
Of family, and rank. And they will feel
No small degree of rapture, that their house,—
Beyond memorial infamous,—has stood
So many generations,—that their vaults
Contain the relics of so many gone;—
Gone whither?—Precious legacies are they.
These worthless scarce to look will condescend,
Upon their tutor, if of plebeian birth;—
Much less to listen to him, and less still
To follow his example, and be wise.

' Some make a boast of horses, dogs, and guns,
And horrible! of harlots!—Some delight,
They say, in Christianising all their dress,—
Infernal blasphemy, that seems to beg
Heav'n's thunders to descend and crush the wretch!—
And name each article of popery
After themselves,—that all may know them fools.

' Would that the echoes of my harp could reach
The youth of Britain;—reach them and awake
From slumber,—worse than slumber,—drunkenness
With sin, their never-dying souls. How long
Will God have patience and forbear to strike?
Souls made for holiness, for heav'n and bliss,
Thus to run riotous in ruthless scorn
Of holiness, of heav'n, of bliss, of God!—
To seek their glory on the mountain top
Of the bleak Alps, or in a harlot's arms,
Or on the race-course, or the chequer'd board,
Or in the gaudy look of their own selves,
In wanton lust, intemperance, the death
Of those they ruined,—or the latter fame
Of him, the suicide!—To such pursuits
To dedicate their lives, their souls, their powers!
All given to promote the glory, praise,
And majesty, of Him they scorn, their God;
Of Him, whom they defy, their King, their Judge!
Such souls, such powers, immortal, boundless, vast

Beyond all vastness, infinite beyond
All space,—to none but Heaven inferior,—
Such souls, such powers to prostitute, to plunge
In infamy and pride, to damn to hell.
God of all mercy, still withhold thine arm!
Hold back thy thunders; let not vengeance slip
And blast them in a moment!—spare, still spare,
And shower mercy on an Age of Pride!
Return once more to earth.—The love of wealth
Which, tho' denied by all, each class pervades,
Shall be the theme: but tho' denied by all,
'Tis universal; scarce a heart but feels
The golden passion, infamous as wide
Extended, brutish, devilish, as base.
Some say that wealth is power; and alas!
I fear it is so; their immortal souls,
Vast, mighty, boundless things, it sinks to hell,
To deep destruction:—pride of wealth is power.

'Senseless, infatuated, purse-proud man!
How can he feel a pride for what requires
Such days of labour, and such nights of pain
And watching, and anxiety to manage?
His real weight of care who begs his bread
From door to door, compared to this man's, seems
As nothing, calmness, happiness serene.
To spend is trouble,—to preserve, is more.
The very joys wealth promises, arrived,—
The joys, I mean, of sense, the vain delight
And nonsense pleasures of a carnal world,—
Arrived, are found deceitful; with a sting,
A venom'd sting embosomed in the honey;
And yet,—it nearly passes all the bounds
Of credence,—will the disappointed man
Form more, more schemes, whose nature is the same!

'To spend is trouble,—to preserve, is more.
Bear witness all ye shutters, bolts, and bars,
Ye nightly watch and dogs ferocious, traps!
And unseen guns, the robber to destroy;—
Your testimony bring, what heartfelt care
And trouble wealth's security demands.
Is not all this sufficient to convince
That pride of wealth is folly?—I can bring
Reasons still stronger, arguments more high,
That none can gainsay or dispute;—of wealth
Th' uncertainty,—of his, the miser's heart,—
Victim despicable! the dreadful sight.
These cannot be subverted;—ev'ry day
Is pregnant with example,—of the wings
Invisible of gold,—the anxious care,
Moody, suspicious, brooding jealousy,
The thought distracted, and the appetite
Craving for more, and never, never cloy'd.—
That tear the miser's canker'd, loathsome heart.'

LIFE OF ARCHBISHOP CRANMER.

The Life of Archbishop Cranmer. By J. A. Sargent.
12mo., pp. 320. Hurst, Chance, and Co. London,
1829. (Unpublished.)

We could scarcely select a finer illustration of the profound sentiment of Fichte, that 'every thing great and good has been brought about entirely and exclusively by the conduct of magnanimous and undaunted men, who have sacrificed all the enjoyments of life for the sake of an idea,' (*Athenæum*, April 22, p. 241.) than Archbishop Cranmer, to whom we owe much that is valuable in our religious liberties as well as our religious literature. The Bible in our vernacular tongue, the Liturgy of the Church, and our ecclesiastical laws, were all mainly indebted to Cranmer for their establishment; and he gave, in his life, repeated instances of that bold and crafty spirit of independence which has been long considered one of the most glorious characteristics of our countrymen. To look upon such men as Cranmer in the exclusive light of martyrs for Christianity, is, we humbly conceive, taking up only one prominent point of their character, and throwing the others into unmerited shade. So far as they contributed to diffuse, by their exertions and example, the exalted principle of personal freedom in matters of opinion—so far as they put forth their influence to reform existing abuses, no matter whether these were incident to the Roman Catholic profession or not—so far as they were zealous in promoting the circulation of religious knowledge among the people, by translations of the Scriptures and other publications,—such men

as Cranmer ought to be placed in the highest rank of their country's benefactors.

We cannot give a better outline of the character of Cranmer than that which has been drawn by an eminent German reformer, who was intimately acquainted with him in the early part of his career. 'Cranmer,' he says, 'possessed many excellent qualities and endowments, in common with other men; but some were extraordinary and peculiar to himself. He had learning beyond the common degrees of it; was benign and liberal to all, especially to those that were studious and of good literature:—of the more abstruse and heroic virtues of his mind, rarely to be found in the age wherein he lived, viz. his wisdom, prudence, fortitude, temperance, and justice, a singular love towards his country, the highest faithfulness towards the king, a contempt of earthly things, a love of heavenly, a most burning study towards the evangelical truth, sincere religion, and Christian glory.' (*Osiander, Harmonica Evangelica*, Pref.) We may add to this what Cromwell, Earl of Essex, said to Cranmer himself on a memorable occasion,—'My Lord, you were born in a happy hour; you can do nothing amiss: were I to do half of what you have done, my head must answer for it.'

Such was the man whose life Mr. Sargent has undertaken to write in the work before us; and, with the exception of there being a hostile feeling towards Roman Catholics throughout the book, which gives it a strong taint of partizanship and partiality, it is extremely well written, spirited in the narrative, full of interesting anecdote, and, where inferences are drawn from the incidents, shrewd, judicious, and closely reasoned. We were much struck, indeed, with the ingenious and clever defences which the author makes of those parts of Cranmer's conduct that have been considered worthy of severe censure by many, either from prejudice, as Mr. Sargent thinks, or from misrepresentation and mistake. The following apology, for example, in behalf of Cranmer's conduct, in his advocacy of the divorce between the King and Catherine of Arragon, struck us as plausible, well-managed, and well-written, though, perhaps, it is not conclusive; and, were we disposed to brush up our logic, we could, perhaps, make his better reasons appear not the best:

'Cranmer was conducted into the Royal presence, and a long conversation ensued, at the close of which he received the King's positive command to lay aside all private pursuits, and devote himself to the subject in question. Henry's own words must not be passed over in silence, as they materially serve to remove all reproach from the conduct of Cranmer on this occasion. "I protest," said he, "before God and the world that I seek not to be divorced from the Queen, if by any means I might justly be persuaded that our matrimony was inviolable, and not against the laws of God; for, otherwise, there was never cause to move me to seek such extremity. I assure you, that for the singular virtues wherewith she is endowed, besides the consideration of her noble stock, I would be right well contented still to remain with her; if so it would stand with the will and the pleasure of Almighty God. I therefore pray you, with an indifferent eye, and with as much dexterity as lieth in you, that you for your part do handle the matter for the discharging of both our consciences." Such a declaration and injunction on the part of the monarch, may surely fairly exonerate Cranmer from the charge laid against him by his enemies, of conniving at, and furthering, the unlawful passions of the King, in opposition to every acknowledged principle of rectitude. Upright and honourable himself, with a disposition equally removed from deceit as from suspicion, it was extremely improbable that he should have doubted the sincerity of his royal master's word: nor would he have been justified if he had, for Henry had given no proofs of a disingenuous or an unamiable disposition at the time, nor indeed at any future period, amidst all his vices, could that of dissimulation be said to form one. His very assertions must, perhaps, not be discredited by posterity. No attempt is here intended to screen him from deserved censure; but it is neither repugnant to reason nor morality to believe that he was not designedly a hypocrite in this instance. It is not improbable that he himself was deceived as to the nature of his feelings, and really fancied he was

acting from a conscientious motive, when in fact he was swayed principally by the dictates of a recent but violent attachment; for it requires no great acquaintance with the human heart to know how readily it shelters its favourite inclinations under every specious excuse, and clothes its most equivocal acts under the appearance of necessity, or of virtue; and ascribing even merit to itself, for the performance of actions which have only passion for their foundation, and self-gratification for their object. Merely, however, to acquit the illustrious subject of this memoir of culpability seems not enough; justice requires some farther concession in his favour, and though no person can better afford these partial deductions from his merit than Cranmer, it would be an omission on the part of his biographer to leave any thing unsaid which may be said with truth to his advantage. Reviewing the circumstances as they pass, his conduct appears not only blameless, but commendable. Extremely doubtful of the legality of the marriage in question, if not indeed thoroughly persuaded of its illegality,—a stranger to the sophistry that the duration of sin could remove its criminality,—aware of the horrors which threatened the kingdom, in the renewal of those wars which had so lately desolated it,—and solemnly called upon by his sovereign for his assistance,—it does not appear possible that he could, under such circumstances, have denied the exertion of his talents.

'Henry was obeyed; and, not confining himself merely to the proofs of the illegality of the marriage, he proceeded still further to demonstrate, from the authority of Scripture, of ancient authors, and of general councils, that the Bishop of Rome possessed no authority whereby he was enabled to dispense with the word of God. The king was much pleased with the manner in which he had acquitted himself of the task; and now convinced of his ability, it only remained for him to prove his sincerity; for it naturally occurred to him, that if the latter were equal to the former, no person could be so proper to undertake the execution of the project, as he who first conceived it. After expressing his satisfaction at what he had already done, he asked him if he would maintain his opinion openly in the Pope's presence. "Most willingly," replied Cranmer, with all the honest frankness of his nature; "with God's grace, if your Majesty send me thither." An answer which bears intrinsic evidence that he was really actuated by a thorough conviction of the truth of what he had asserted; for otherwise he would never have agreed so instantaneously either to meet the Pope or to embark in a cause which he was aware he could only support by casuistical disputation. Nor ought it to be forgotten, that in every former instance of his life, he had proved himself to be a conscientious and an honourable man. They who are in the habit of acting from principle, seldom act from a less worthy motive: and it is from minute circumstances like this, that much true light is thrown upon every character. The public acts of celebrated men may mislead the most accurate biographer; for they are liable to so many interpretations, and bear so different a construction in the various points of view in which they may be regarded, that it is often difficult to determine where censure is deserved, or where commendation is merited; but in moments of privacy, when the heart unveils itself in confidential communications, and when the glare of adventitious circumstances no longer dazzles, the true motive becomes visible, and we are left to condemn or admire with justice.'—P. 24.

Cranmer's conduct has been no less censured with regard to the part which he took when Anne Boleyn fell under the displeasure of the merciless and remorseless Henry. The circumstances of this transaction, which so deeply stains the pages of our history, are thus stated by our author with his usual spirit of favouritism towards the Archbishop:

'It is remarkable that during the whole of the proceedings against this Queen, the Archbishop was directed by the King's command, to confine himself to his palace at Lambeth: the reason is obvious. The Popish party by whose address these proceedings were instituted, and who were resolved upon her destruction, as a means of crushing the Reformation, dreaded alike the influence and the integrity of Cranmer. They, therefore, removed him out of the way, and thus gave a striking though as unintentional evidence, of the uprightness of that character which they had taken such pains to vilify. Not content with depriving the unhappy queen of existence, Henry determined upon obtaining a divorce from her, that, the princess Elizabeth being made illegitimate, the right of succession might devolve upon

his future posterity. In consequence of which, it was alleged, that a pre-contract, by which the parties were held as much bound as if the actual ceremony of marriage had taken place, had subsisted between her and the Earl of Northumberland. The fact was denied on oath by the Earl; but the queen, either through terror, or with a hope to save herself, (for she might justly suppose, that, if her marriage were in the first instance illegal, she could not be considered amenable to laws which she had not broken,) admitted the truth of the charge to Cranmer. It is added, moreover, that she made a full disclosure of her guilt to him; but the admission of the pre-contract was sufficient to warrant the dissolution of the marriage, and accordingly the sorrowing primate pronounced the sentence of divorce. But whatever motives might have influenced the unhappy Anna in this avowal, they were of no avail; Henry was not to be moved from his determination, and she suffered the fearful penalty of the law on Tower-hill.

Much blame has been attached to Cranmer for the share he had in this transaction; but with more plausibility, probably, than justice. With a view, however, to his exculpation, it is necessary to take into consideration the various circumstances of the case. To have served the queen in the public manner which some affirm to be necessary to the honour of his character, was impossible. It must be remembered, that during the whole of the trial he was forbidden to leave his house, and, therefore, all opportunity of befriending her by his personal influence or interference was denied him. It is, moreover, a fact, that, finding himself thus restricted in his exertions and intentions, he addressed a letter to Henry, in which he endeavoured, by every argument that he thought likely to affect him, to soften his anger, and induce him to alter his determination. No one, perhaps, but himself dare have ventured upon such a step; for the imperious monarch spared neither friend nor foe in his resentment; his will was a law to all around him, and contradiction in the most minute points was always dangerous, and frequently an unpardonable offence.

No umbrage, indeed, seems to have been taken against him on this occasion; but he gained nothing for the unhappy object of his solicitude: the only reply to his remonstrances being a command to hear the confession of the queen. This task, painful as it was, he could not decline; and, consequently, whether the confession were voluntary or extorted, true or false, he could only receive it as it was delivered, and no other alternative presented itself than to give sentence upon it, or to resign his office. Circumstanced as he was, the latter would not only have been unadvisable, but by no means commendable. On his own continuance in power depended every hope of the Reformation; and, while his downfall, and not improbably his death, would involve that of numbers, it could in no way be beneficial to the queen, whose destruction was inevitable. To relinquish his post, would have been to gratify completely the views of their mutual enemies, and to place in their hands that power, the possession of which was the principal cause of their proceedings. No step in this great man's life seems to have been taken without the greatest circumspection and prudence; and, therefore, it is not likely that this alone should have been concluded upon without due consideration. At all events, we are bound by the numerous examples of inflexible integrity displayed throughout his eventful career, to believe that, if every circumstance were known, we should probably have cause to be as much satisfied with his conduct in this respect as in others of a less equivocal nature. It is not to be supposed that his warmest advocate would wish to represent him as a faultless being, or to assert that it was impossible for him to act wrong or unadvisedly. Perfection belongs to no man; and the character of Cranmer presents an assemblage of virtues rarely to be met with: some errors, doubtless, found a place in his heart, and bore testimony to his own conscience, at least, that "there is no one that doeth good; no, not one." It is, moreover, a privilege due to exalted worth, to grant it our confidence in the absence of positive evidence; and justice forbids us to condemn, where charity allows us to hope.—P. 74.

The following anecdote speaks more in favour of the genuine Christianity of Cranmer than a whole volume of abstract argument:

A person of great rank at Court, who was secretly his enemy, having requested his interference with the King, in a suit in which he was much interested, he readily granted the favour, and took the earliest opportunity of addressing the King on the subject. Henry,

who was better acquainted with the sentiments of the nobleman than Cranmer, asked him, in a tone of surprise, if he knew for whom he was making suit; and whether he was acquainted with his disposition towards him. "I always took him," replied the Primate, "for my friend." "No," returned the King; "he is your mortal enemy; and so far am I from granting his request, that I command you, when you see him next, to call him knave. The Archbishop intreated his Grace not to compel him to use language so unchristian-like, and so unbecoming his station; but Henry, in a still more peremptory tone, vociferated, "I command you to call him knave; and tell him, I ordered you." Cranmer, however, continued firm in his negative; and the King, with a smile, at length gave up the contest.

Several of the conspirators having been committed to prison, Gardiner took the alarm, and immediately addressed a letter to the archbishop, in the following abject terms:—"Gentle father, I have not borne so tender a heart towards you as a true child ought to bear, though you never gave me occasion otherwise; but rather by benefits provoked me to the contrary.—I ask mercy of you with as contrite a heart as ever David asked of God. I desire you to remember the prodigal child; I am full sorry for my fault, heartily confessing my rashness, and deliberate doings. Forgive me this fault, and you shall never hereafter perceive, but that at all times I shall be as obedient as ever was child to his natural father. I am yours, and shall be yours, and that truly while I live. Good father! I have given myself unto you, heart, body, and service, and now remember that I am your true servant." This letter answered the purpose of its hypocritical writer. The slightest concession was enough at any time to appease the anger of Cranmer, and the appearance of penitence at once ensured his forgiveness. It was long a proverb, "Do unto my Lord of Canterbury displeasure, or a shrewd turn, and then you may be sure to have him for your friend while he lives." Dr. Hethe, afterwards Archbishop of York, who was rather piqued at his lenity one day, said to him, "My Lord, I know how to win all things at your hand well enough."—"How so?" inquired the Archbishop. "Marry," returned the other, "I perceive that I must first attempt to do you some notable displeasure: and then by a little relenting obtain of you what I can desire." Cranmer looked thoughtfully at this, and, biting his lip, as he usually did when he was moved, replied—"You say well; but you may be deceived. Howbeit, having some consideration so to do, I may not alter my mind, and accustomed condition, as some would have me to do."

"You call me father," said he, in reply to Gardiner; "and in good truth I will prove myself one to you." Nor were these mere professions. Hearing that the king was about to lay the bishop's letters before the Parliament, he went to him; and, by urgent persuasion and entreaty, prevailed upon him to relinquish his purpose, and to let the matter entirely drop. But, though the king was thus far prevailed upon to forego his intentions, he never entirely forgave Gardiner, nor was he ever afterwards able to regain his confidence.—P. 144.

As a contrast to this, (every bright character having some dark spots, like the sun, to cloud its splendour,) we revert with pain to another incident of a very different character. There can be no question, indeed, about the general candour and mildness of Cranmer's disposition, notwithstanding the bold manner in which he maintained the right of personal independence in matters of opinion; but there is one incident in his life which appears not a little inexplicable upon this view of the principles that in other cases uniformly guided him. We allude to his conduct towards the infatuated enthusiast, Joan Bocher, commonly called Joan of Kent, whom he persecuted to the death merely for holding a speculative opinion. With one set of Anabaptists, this fanatic held, that Christ was not truly incarnate of the Virgin, whose flesh being sinful, he could take none of it. It must be allowed, indeed, that she provoked her judges to cruelty by an indecent sauciness of behaviour, which ought to have moved their compassion, as it brought conviction of her brain being disordered. Cranmer could not without great difficulty persuade the young King, (Edward VI.,) to sign her death-warrant: although he argued from the law of Moses, that 'blasphemers should be stoned, and that Joan had rushed with violence against the Apostles' Creed, and deserved the punishment of a blas-

phemer,' the argument was not sufficient to satisfy the young monarch's conscience. At last, however, the Archbishop prevailed; but the amiable prince, all in tears, said, 'I sign this sentence, because I am under your authority; but, if I am doing wrong, you must answer it to God.' (*For*, vol. ii. page 2, Edit. 1684.) This awful declaration, although from the lips of an infant, struck the venerable prelate with such horror that he strove to save the woman; but her 'jeers and other insolences,' which ought to have been regarded merely as additional proofs of her insanity, provoked him to hasten her execution, and she was burned at the stake, Bishop Scory preaching while she was consumed to ashes.

We should willingly have extended these extracts, as there is a profusion of interesting anecdote and incident highly worthy of notice; but, as we cannot spare room for these at present, we must refer our readers to the volume itself, which they will find well deserving perusal. We remarked, however, a few expressions which jarred not a little with the general correctness of the style—such as 'he was vain to a degree,' (page 81,) a phrase which occurs more than once: the question naturally arises 'To what degree?'

GERMAN POETRY.

Historical Survey of German Poetry, interspersed with various Translations. By W. Taylor, of Norwich. 8vo. Vol. II. 15s. Treutzel and Würtz. London, 1829.

In noticing Mr. Taylor's former volume, we felt bound to express, along with the most sincere admiration for the talent and research which it displayed, our regret that the author should have thought it necessary to express some very odd, paradoxical, and, as it seemed to us, wilfully perverse opinions. In the first chapter of the present, which contains an ingenuous confession of some errors and deficiencies which the critics had not detected in it, he mentions, that objectors to the part of the work which contained these heresies have assailed him, as it was natural they should, from many quarters. He adds,—"Without, however, their impairing my private sense of their equity; the English people have so long been accustomed to view the history of the Reformation through the coloured spectacles of a clergy whom it has quenched, not through those of a citizenry whom it has oppressed."

We were not aware, till we were apprised of the circumstance by Mr. Taylor, that the Reformation had added greatly to the revenues of the Church; and we are half inclined to believe that the ingenious writer must have drawn his information from a history made by order to match with his philosophy. But waving this point, the true answer to Mr. Taylor's defence is, that the persons to whom his statements respecting the Reformation gave the most grave offence, were not those unfortunate Englishmen whose senses are so much impaired by the use of clerical spectacles, but hard-thinking, strong-headed Germans, men in whose minds the most prominent characteristic is certainly not a reverence for ecclesiastical authority or any other.

We will be bold to say, that if Mr. Taylor takes the pains to investigate the feelings which prevail in the most manly school at present existing in that country, he will find, among the deepest graven of them all, a reverence hardly stopping short on this side idolatry for the memory of Martin Luther. Here he is regarded as little more than the improver of a creed, and is constantly spoken of in the same sentence with Calvin or any of the mere closet theologians. There he is felt to have been the assessor of the moral freedom of a whole people, to have been not merely the mechanical combiner of the dry bones, but also the spirit that quickened them; and, what more concerns the present question, to have been the real author of that truest and highest form of German literature, in which it

appears, not as the lazy interpreter of the fancies or speculations of lazy men, but as the diviner of whatever is most glorious in human nature, and the chain which rivets it to the divine nature. If Luther had never existed, if Germany had still slumbered on in the sensuality of Romanism,—a sensuality too much akin to some of the worse tendencies of the national character, and too much fostered by the spirit of its government,—it might have possessed an Oberon and a Werter; but it could never have boasted of a Wallenstein or a Faust. We know not whether these opinions of the best patriots in this great country, supported as they are by a weight of evidence perfectly overwhelming, will have any influence with Mr. Taylor; for we gather, from some passages in his present volume, that his literary creed has its peculiarities like his philosophical, and that he holds the French sophists of the eighteenth century to have been the supporters of the dignity of poetry and of art, as well as of right and mankind. We, also, believe them to have been one just as much as the other: we can trace the most intimate and harmonious connection between the criticism that would exclude all spirituality, and the philosophy that would banish all belief; and we hail it as one of the mightiest effects of the freedom of the soul, produced by the Reformation, that it enabled England and Germany to discover, that, as in politics the French spirit would have compelled the nations

to wear the name

Of freedom on a heavier chain.'

So, under pretence of exalting poetry, it would have destroyed all its real grandeur and virtue. It is, at least, some confirmation of this hypothesis, that all the efforts of the better spirits in Catholic Italy, to emancipate their literature from the chains of French taste, backed as they have been by the good wishes and the practical help of so many foreigners, have hitherto been almost entirely ineffectual, and that in Spain even the first signs of rebellion have hardly made their appearance.

We have not had much time to study Mr. Taylor's new volume; but our impression is, that it is far more interesting, and is free from at least some of the faults of its predecessor. We have detected some passages against which we should be obliged to enter our vehement protest, but that they are written with such *bonhomie*, such an obvious consciousness of their being three parts monstrous, and such a carelessness about forcing a belief of them upon any one else, that they lose half their evil in losing all their sophistry. Besides the extravagance of some of Mr. Taylor's literary paradoxes forms such a good running commentary to his opinions upon other subjects, that those who have had due warning by encountering the one are in vastly little danger of running into the other. If any one were inclined to think with Mr. Taylor, that it is a good general principle for men to adopt the religious faith of their fathers-in-law, because it facilitates advantageous matrimonial connexion, produces in a family the desirable harmony of religious persuasion, secures the sincere education of the daughters in the faith of their mother, and leaves the young men at liberty to apostatise in their turn, to exert their right of private judgment, and to choose a worship for themselves;—if we saw any one inclined to adopt this singular moral doctrine, we should only have to mention that the broacher of it likewise maintains, and with quite as much earnestness, that Homeric rhapsodies were written by the philosopher Thales; and we think he would possibly suspend his judgment, and call for further evidence of the former proposition as well as on the latter. To compensate for all this, Mr. Taylor, in addition to some interesting biographical sketches, has presented his readers with ingenious translations of some of the most interesting German poems of the 18th century.

Any notice of the former we must defer to another occasion: of the latter, we will extract two specimens.

The following is a poem of Stolberg's, to which we think the translator must have done great justice:

'Ode to a Mountain-Torrent.

Thou streamest forth from rocky caves;
No mortal saw
The cradle of thy might;
No ear has heard
Thy infant stammering in the gushing spring.
How lovely art thou in thy silver locks;
How dreadful thundering from the echoing crags!
At thy approach
The fir-wood quakes;
Thou castest down, with root and branch, the fir;
Thou seizest on the rock,
And roll'st it scornful like a pebble on.
Thou the sun clothes in dazzling beams of glory,
And paints with colours of the heavenly bow
The clouds that o'er thy dusty cataracts climb.

Why hasten so to the cerulean sea;
Is not the neighbourhood of heaven good,
Not grand thy temple of encircling rocks,
Not fair the forests hanging o'er thy bed?
Hasten not so to the cerulean sea;
Youth, thou art here
Strong as a god,
Free as a god.

Though yonder beckon treacherous calms below,
The wavering lustre of the silent sea,
Now softly silver'd by the swimming moon,
Now rosy-golden in the western beam;
Youth, what is silken rest,
And what the smiling of the friendly moon,
Or gold and purple of the evening sun,
To him who feels himself in thralldom's bonds!

Here thou canst wildly stream
As bids thy heart:
Below are masters ever-changeable winds,
Or the dead stillness of the servile main.

Hasten not so to the cerulean sea;
Youth, thou art here
Strong as a god,
Free as a god.

The second is from a rural epopœa called 'Luise,' by Voss.

'Wandering thus through blue flax-fields and by acres
Of barley,
Both on the hill-top paus'd, which commands such a
view of the whole lake
Crisp'd with the lenient breath of the zephyr, and
sparkling in sunshine;
Fair were the forests beyond of the white-bark'd birch,
and the fir-tree,
Lovely the village at foot half-hid by the wood.—Then
Louisa

Listening observ'd: Do I hear from afar oars dashing!
Again now.—
Meanwhile Charles, who had run off before them, im-
patiently came back,
Shouting in glee: Make haste, or the boat will be
ready before us:
But for the reeds you would see it, I saw it the while
I was yonder.

Wing'd were the steps they now took; winds blowing
the robes of the maiden
Close to her well-shap'd limbs, and disheveling curls
on her shoulders.

Now from the stern of the boat the pastor descried
them, and call'd out:

Decently, children, and softly; you run like the fowls
in the court-yard,
When cook flings them some crumbs, or a handful of
barley or oatmeal.
Cautiously, daughter, you'll stumble else over the
roots of the bushes.

Breathless they halted awhile, and the boat lay dabbling
before them,
Resting the keel of her prow on the pebbles that gar-
nish'd the lake-shore.

Walter had fetch'd them a flat stone, placing it firm
in the water,
So they could land dry-shod, and he offer'd his hand
to the pastor,
Next to the good old lady, and both got safe on the
meadow:

Baskets were landed the last, which the boatswain
handed to Walter.
Lovely Louisa had welcom'd her parents, and shown
them a green mound,

Under an old beech-tree, where the prospect was very
inviting—

There we propose, said she, to unpack, and to spread
out the breakfast;
Then we'll adjourn to the boat, and be row'd for a time
on the waters.

Quick then, and strike us a light! so rejoind'd the
affectionate pastor,
I shall be smoking a pipe, while you are preparing the
coffee.

Then to the boatswain whisper'd the notable wife of the
pastor:

John, first fasten the boat; strike light, and do make
us a brisk fire

So that the smook may be wafted away from the spot
we shall sit on,

Under the family-beech, where the names of my
children are graven.

Pick us up sticks, you young ones, and bring us some
wispes of the reed-straw:

Proverbs remark that the angler must not fight shy of
the water.

Now had the servant with flint struck glittering sparks
from the bright steel,

Mushroom-tinder received them hissing; he lighted a
match next,

Holding the straw to the flame, and it caught, reek'd,
blaz'd, in an instant.

Sticks, twigs, heap'd on the fire, and resinous cones
of the fir-tree

Crackled and torch'd, and scudded the smook in the
air-stream.

Just where the wind blew into the fire was station'd
the trivet,

On it the well-clos'd kettle, replenish'd with chrystal-
line water.

Meanwhile carried Louisa his pipe to papa, and tobacco
Wrapt in the velvety hide of the seal, and a paper for
pipe-light:

Calmly the old man sat, and he whiff'd, and he smil'd,
and again whiff'd.

Soon as the flame had surrounded the kettle, and
steam from the lid burst,

Out of a paper-envelope the good old lady her coffee
Into the brown jug shower'd, and added some shavings
of hartshorn,

Then with the boiling water she fill'd up the pot to the
summit.

Kneeling she waver'd it over the fire, and watch'd for
its clearing.

Hasten, my daughter, she said, to arrange all the cups
in their places,

Coffee is soonly enough, and our friends will excuse it
unfilter'd.

Quickly Louisa uplifted the lid of the basket, and took
out

Cups of an earthen ware, and a pewter basin of sugar,
But when all had been emptied, the butter, the rolls,

and the cold ham,
Strawberries, radishes, milk, and the cowslip wine
for the pastor,

Archly Louisa observ'd: Mamma has forgotten the
tea-spoons!

They laugh'd; also the father; and the good old lady she
laugh'd too—

Echo laugh'd; and the mountains repeated the wander-
ing laughter.

Walter presently ran to the birch-tree beside them, and
cut off

Short smooth sticks with his clasp-knife, offering
skewers for stirrers.'

VARIETIES OF THE HUMAN RACE.

*Distribution Primitive du Genre Humain à la Surface du
Globe. Par le Colonel Bory de St. Vincent. 8vo.
(with a coloured chart.) Paris, 1829.*

It has long and warmly been disputed, whether
the differences among the various tribes of the
human race are to be ascribed to the influences
of different causes upon the descendants of two, or
of more, primary parents, all similar, or of origi-
nal differences in more than two primary parents.
The question has, unfortunately, been com-
plicated, by referring to the authority of the
Bible. As it is, therefore, necessary, at the
very threshold of the subject, to take notice
of this complication of the subject with sa-
cred authority, we may be permitted to say, that
we agree, respecting this authority, with our two
great philosophers, Lord Bacon and Locke, whose
belief in Christianity cannot be doubted, and who

held it improper to bring philosophical inquiry unnecessarily under the yoke of religious faith.

'Huic autem,' says Lord Bacon, 'vanitati nonnulli ex modernis summâ levitate ita indulserunt, ut in primo capitulo Geneseos, et in libro Job et aliis scripturis sacris, philosophiam naturalem fundari conati sint; inter *Viva quærentes Mortua*.'—*Novum Organum*, i. 65.

And again,—

'Haud alias opiniones et disputationes magis secundis ventis ferri reperies, quam eorum, qui theologiæ et philosophiæ conjugium veluti legitimum multa pompâ et solemnitate celebrant, et grata rerum varietate animos hominum permulcentes, interim divina et humana inauspicata permiscunt.'—*Cogitata et Visa*, Opera, vol. ix. p. 167, 8vo. edit.

'Nor can we be obliged,' says Locke, 'where we have the clear and evident sentence of reason, to quit it for the contrary opinion, under a pretence that it is a matter of faith, which can have no authority against the plain dictates of reason. But there are many things wherein we have very imperfect notions, or none at all; and other things, of whose past, present, or future existence, by the actual use of our faculties, we can have no knowledge; these, as being beyond the discovery of our natural faculties, and above reason, are, when revealed, the proper matter of faith.'—*Hum. Underst.*, iv. 18.

A true revelation, therefore, as it has been well remarked, cannot suffer by the progress of philosophy; though philosophy has often and seriously suffered by ignorant appeals to Scripture. In favour of the opinion that we are all brothers, it has been urged, (laying aside the Scripture record,) that the universal simplicity of nature's causes would induce us to imagine no more than two to have been originally created, if the varieties among us be merely accidental; for two individuals were evidently sufficient for the production of the rest of mankind. Nor ought there, perhaps, to be deduced a contrary presumptive argument from the length of time, during which immense portions of the earth must have thus remained unpeopled. One of Nature's objects seems the existence of as much successive life as possible, whether animal or vegetable, throughout the globe. For this purpose, every species of animal and vegetable possesses an unlimited power of propagation, capable of filling the whole world, were opportunity afforded it. The opportunities of exertion are indeed very scanty when compared with power: climate, soil, situation, may be unfavourable; one vegetable, one animal, stands in the way of another; even the impediments to the increase of some, act through them as impediments to others. The incessant tendency of the power of multiplication to exert itself, seizes every opportunity the moment it is presented, and thus, though every living object has a fixed term of existence, and may be carried off much earlier by innumerable circumstances, all nature constantly teems with life. The slow increase of mankind could not interfere with this apparent object of Nature; the deficiency of our race must have invariably been fully compensated by the opportunities which it afforded for the multiplication of other existences: for that man alone was not designed to enjoy the earth, is shown by the vast tracts of land still thinly peopled.—(*Elliotson's Blumenbach*, p. 563, edit 1828.)

On the other hand, it is remarked by M. Bory de St. Vincent, in the work before us, that

'As the white and the black produce together fruitful mongrels, and by various combinations the descendants sprung from their crossings have been traced to one of the sources, it has been erroneously concluded that they have an identity of origin; for the faculty of producing fruitful mongrels is not a proof that the father and mother are identical. The goat (*capri agagris*) and sheep, the wolf and the domestic dog, the linnet and sparrow, which are very distinct species, give life, by their union, to beings capable of reproducing themselves for ever: but from the horse and the ass, how much soever resembling, there proceed mules, which are commonly unfruitful. Whilst in the same genus, resembling species, which do not produce, are frequently found, or whose adulterous union yields only barren productions, we find examples of dissimi-

lar species prospering hybrides, multiplying, and becoming sometimes the heads of races always reproduced, and which on the contrary end at length, by acquiring even the physiognomy which must sooner or later give them the right of admission to the rank of species.

'To prove that the white and the black derive their difference from that of the climates under which they live, the lineage of the black or of the white must have changed without crossing from black to white, or from white to black, after having been transported from the south to the north, or from the north to the south; the circumstance has never occurred, yet writers, obstinate in their narrow views of identity, have affirmed it, though it seems even impossible. These writers, abusing the axiom that colour is not a specific character, have pretended not to know that there are nevertheless cases which, when they are constant, furnish sufficient characters. It has been particularly remarked on the coast Angola, at St. Thomas, for instance, situated under the Line, and at the bottom of the Gulph of Guinea, that the Portuguese established there, some hundred years since, under the influence of a burning sky, are become little darker than those on the Iberian Peninsula, and that they have remained there white as long as they were not crossed. Under this burning Equator, which passes over, in the ancient world, the country of the Ethiopians and Papous, whose colour is ebony, negroes are found in America; the natives of this other land, on the contrary, appear to be much whiter as they approach the Equinoctial Line; and the proof that the black colour is not caused only by the heat of the intertropical countries is, that the Lapons and the Greenlanders, born under a frigid sky, have a darker skin than the Malays of the hottest parts of the universe. Those who among these Hyperboreans rise nearest the poles are become almost negroes in colour.

'It is not, besides, from colour only that the species of men derive their differences; they are, moreover, distinguished from each other by their structure, and by many minute traits of their organization, the influence of which extends over the intellectual faculties, and which consequently determine the degree of moral development which each can attain.

'As each is capable of communicating morbid virus and contagious diseases to the other, this circumstance has been argued in favour of the identity of the white and of the negro. We shall not attempt to deny this lamentable truth, which has been but too much demonstrated to conviction, by the dreadful exchange which the Old and New World have made of the small-pox and syphilitic disease. But has it not been proved that the venereal poison has been communicated to dogs, and the small-pox to monkeys? and, consequently, that the same virus may act, under certain circumstances, upon species which belong to the most distinct genera. If any one should be inclined to doubt this fact, will he not find himself constrained to acknowledge from the discovery of the immortal Jenner, that man must be confounded with oxen, because cows supply him with matter for vaccination? And have not entomologists confessed that the lice of the negro are of a different species from the lice of the white? And is it not known that warm-blooded animals breed according to their species aracknidæ always different from that genus? In a word, it has been very judiciously said, "if naturalists see two insects or two quadrupeds so constantly different by their exterior forms and permanent colour, the white man and the negro, notwithstanding the spurious offspring which may result from their intercourse, they would not hesitate to set them down as two distinct species."

'Let us abandon these denominations of white and black, from which, perhaps, the principal source of error arises, and the impropriety of which has been already pointed out by Desmoulins, in the "Dictionnaire Classique D'Hist. Nat." Let us reject all specific names borrowed from colours, and which would not be known to be more exact than those which have been borrowed from a *habitat* too minutely circumscribed. In searching over, in establishing what the true species are which compose the genus to which we ourselves belong, let us endeavour to impose on these species the most appropriate names, that they may not be found equivocal.'

Following out these principles, M. Bory has made what he considers an improvement upon the classification proposed by Desmoulins, who divides the human race into eleven species, making fifteen species, and a considerable number of subordinate varieties, according to the following table:

I.—LEIOTRIQUES; à *cheveux unis*. (Leiotrics; with straight hair.)

i. PROPRE A L'ANCIEN CONTINENT. (Proper to the Old World.)

1. ESPECE JAPETIQUE, *Homo Japeticus*. (Japetic species.)

A. *Gens Togata*. Wearing loose garments.

a. Race Caucasique, (Occidentale.) (Western Caucasian race.)

β. Race Pelage, (Meridionale.) (Southern Pelagian race.)

B. *Gens Bricata*. Wearing tight garments.

γ. Race Celtique, (Occidentale.) (Western Celtic race.)

δ. Race Germanique, (Boreale.) (Northern Germanic race.)

Variété Teutone. (Teutonic variety.)

Variété Slavone. (Slavonic variety.)

2. ESPECE ARABIQUE, *Homo Arabicus*. (Arabic species.)

a. Race Atlantique, (Occidentale.) (Western Atlantic race.)

β. Race Adamique, (Orientale.) (Eastern Adamic race.)

3. ESPECE HINDOUE, *Homo Indicus*. (Hindoo, or Indian species.)

4. ESPECE SCYTHIQUE, *Homo Scythicus*. (Scythian species.)

5. ESPECE SINIQUE, *Homo Sinicus*. (Chinese species.)

ii. COMMUNES A L'ANCIEN ET AU NOUVEAU MONDE. (Common to the Old and New World.)

6. ESPECE HYPERBOREENNE, *Homo Hyperboreus*. (Hyperborean species.)

7. ESPECE NEPTUNIENNE, *Homo Neptunianus*. (Neptunian species.)

a. Race Malaise, (Orientale.) (Eastern Malay race.)

β. Race Oceanique, (Occidentale.) (Western Oceanic race.)

γ. Race Papoue, (Intermediaire.) (Intermediate Papoo race.)

8. ESPECE AUSTRALIENNE, *Homo Australasicus*. (Australasian species.)

iii. PROPRE AU NOUVEAU MONDE. (Proper to the New World.)

9. ESPECE COLOMBIQUE, *Homo Colombicus*. (Columbian species.)

10. ESPECE AMERICAINE, *Homo Americanus*. (American species.)

11. ESPECE PATAGONNE, *Homo Patagonus*. (Patagonian species.)

II.—OULOTRIQUES; à *cheveux crepus*,—vulgairement les Negres. On n'en connaît pas de Blanches. (Oulotrics; with crisp hair,—vulgarly Negroes. No Whites are known among them.)

12. ESPECE ETHIOPIENNE, *Homo Æthiopicus*. (Ethiopian species.)

13. ESPECE CAFRE, *Homo Cafre*. (Caffre species.)

III.—HOMMES MONSTRUEUX.

a. Les Cretins. (Cretins.)

β. Les Albins. (Albinoes.)

One of the most extraordinary facts bearing upon this question which has come to our knowledge, was first recorded by Volney, in his 'Travels in Egypt and Syria,' with respect to the Mamelouks,—who tells us, that, during the five hundred and fifty years that they have been in Egypt, not one of them has left subsisting issue; for there does not exist one single family of them in the second generation, all their children perishing in the first or second descent. Almost the same thing happens to the Turks; and it is observed, that they can only secure the continuance of their families by marrying women who are natives, which the Mamelouks have always disdained. Let the naturalist explain why men, well formed and married to healthy women, are unable to naturalise on the banks of the Nile, a race born at the foot of Mount Caucasus! and let it be remembered, at the same time, that the plants of Europe, in that country, are equally unable to continue their species. Some may refuse to believe this extraordinary fact, but it is not on that

account less certain, nor does it appear to be new. The ancients have made observations of the same nature: thus, when Hippocrates asserts, that, among the Scythians and Egyptians, all individuals resemble each other, though they are like no other nations; when he adds, that, in the countries inhabited by these two races of men, the climate, seasons, elements, and soil, possess a uniformity nowhere else to be found, does he not recognize that kind of exclusion now alluded to? When such countries impress so peculiar a character on every thing native, is it not a reason why they should reject whatever is foreign? It seems, then, that the only means of naturalising animals and plants would be to contract an affinity with the climate, by alliance with the native species; and this the Mamelouks have constantly refused. The means, therefore, by which they are perpetuated and multiplied, are the same by which they were first established; that is to say, when they die, they are replaced by slaves brought from their original country. (*Volney Voy. en Egypte et en Syrie*, i. 87.)

This extraordinary fact has been confirmed by J. S. Crompton, Esq., an intelligent English gentleman recently returned from the East. From the various inquiries which he made in Egypt, he considers the statement just given from Volney perfectly accurate. The persons whom he asked had never read his *Travels*, and, till the inquiry was made, had never thought on the subject; yet still they could not bring one instance to their recollection, of the children of two Whites, born in the country, ever coming to maturity. Mr. Crompton was also told that children begotten by Europeans out of Natives, (a circumstance which, however, rarely happens, owing to the Copts and Arabs being very particular on that subject,) entirely lose their appearance of European origin in the third generation. The physiognomy of the Copts is very striking; he never remembers seeing the least European mixture, which would be visible if they had made alliances with the Turks, who are as different in the form of face as can well be imagined: the Turks have Roman noses; the Georgians, Grecian; the Mamelukes both; but the Copts are *snubs*. Mr. Crompton was farther told, that at Damietta, the port on the Eastern branch of the Nile, an Italian family had flourished amazingly; afterwards, he learned that the mother was a Maltese, which, if true, more strongly corroborates the fact, as the Maltese are supposed to be of Arabian origin; they speak a jargon so like Arabic as to make themselves understood by the natives on their arrival in Egypt.

What Volney says about vegetables, Mr. Crompton likewise found to be true. When he left Cairo, a gardener hearing that he was going to Jaffa and Damascus, and likely to return, begged him to bring him some melon and cauliflower seed, as, though those plants thrive exceedingly well in Egypt, unless the seed be renovated constantly, it degenerates so as to become quite another plant. This is also the case with Brussels sprouts, so celebrated in the Netherlands. Plants raised from seed from Brussels thrive well in this country; but seed saved here, though it ripens thoroughly, greatly degenerates in the second generation.

The race of Mamelouks had been entirely destroyed by the present Pasha, Mahommed Ali. Only a few escaped the general massacre in the citadel and fled to Dangola. These few have been gradually dying off, so that now there are only a very few left; one old man is the only remaining Mamelouk at Oairo, and his life would not have been spared, had he been capable of bearing arms. — (*Edinburgh's Blumenbach*, p. 576.)

On the other hand, the late lamented Bishop of Calcutta, Dr. Heber, tells us, in speaking of India, that all Whites, Persians, Greeks, Turks, Tartars, and Arabians, in a few generations, even without any intermarriage with the Hindoos, infallibly assume the deep olive tint, little less dark

than a negro, which seems natural to the climate. The Portuguese have, during three hundred years' residence in India, become as black as Caffres. Surely, adds the Bishop, this goes far to disprove the assertion which is sometimes made, that climate alone is insufficient to account for the difference between the Negro and the European. — (*Heber's Narrative of a Journey*, p. 54.)

From these facts, so very marked and striking, though apparently leading to opposite conclusions, we may learn to appreciate better the following remarks of M. Bory:

'Acknowledging,' he says, 'as we have just seen, fifteen species of men, and admitting the consideration that others exist, individuals of the race of Japhet, among whom civilisation developed the need of information foreign to other animals, will not fail to accuse us of incredulity. They will be willing, with the hope of tormenting us, to elevate themselves, by saying to us, ungrateful children, you deny the primitive and sacred couple, formed by the hands of God to give us existence, and the only source of mankind!'

'To reply beforehand to every envenomed allegation, few words will suffice. The revelation which has reached us, and reported in page 290, respecting the Arabic species, and adopted by Christians only, belonging to whatever species they may be, ordains in no manner to rest exclusive belief on Adam and Eve. The inspired author, whom we have mentioned before, evidently only occupies himself with the Hebrews, and speaking of other species by economy, seems to have wished to abandon their history to the naturalist. At a later period, when redemption established a new covenant between earth and heaven, God confirmed, in positive language, the silent testimony of all the ancient traditions of the Scriptures concerning the diversity of the origin of men, calling to him the *Gentiles*; that is, the *other species*, with whom, during four thousand and four years, he had been no more occupied than the rest of animals.'

'Then only these *Gentiles*, or younger species, entered into the heritage of those supernatural benefits which, until the birth of our Saviour, had been reserved for an Arabic race, rendered finally unworthy of them by their incorrigible ingratitude. And let it not be said that such a system, isolating men, and breaking asunder the bonds of parentage, may tend to encourage them to hate each other more than they have already done; it only makes them universally cousins, for all possible species arose alike from the bosom of beneficent nature. Whether that eternal Eve, made fruitful by the Creator, produced at once, or one after another, a first family of mankind, or fifteen, will the children who perpetuate those families be less brothers in God? From pole to pole, men will be but branches from the same trunk. "It is to naturalists alone that we are indebted for the physical proofs of this moral truth which ignorance and tyranny have so long continued, and which Europeans outrage when they buy their brethren to make them submit to a burden without relief, a labour without any remuneration,—to mix them with their flocks,—to form a property of them in which there is nothing lawful but the hatred breathed by slaves against their oppressors, and imprecations addressed by those unfortunates to the ear of Heaven against so much barbarity and impunity."—*Vie d'Asyr*, *Eloge de Buffon*, ed. de Verdiere, t. i. p. 67.

'Let us cease, then, to make the American, the Hyperborean, the Patagonian, or the Malayan, crissped on the land of Van Dieman's Land, to spring from an unknown point of Mesopotamia; let us but once acknowledge, with safe conscience, that each Adam must have had its peculiar birth-place, and let us endeavour to find out what are the points of difference among the species which necessarily compose the human race.'

'We shall not ask, "Why the great Being should not have been equally able to create Aborigines in the New, as well as in the Old World?" We have already declared, that we have not the temerity thus to inquire the wherefore of things; we could make, if required, honourable amend for having printed, as the author who has permitted this interpellation, but about the age of twenty; "as man is only a creature as others, why should there not exist many species in his genus, as in the most part of those which are presented to us in the table of nature?" For the present, we shall confine ourselves to the study of facts, which sufficiently answer such questions.'

'Virey, who admitted two species and six races, acknowledged, also, primitive birth-places (*foyers*), from

which they become disseminated and scattered by de-grees. This author does not believe, any more than ourselves, in the Adam only which Moses tells of, but he expresses himself more clearly in this respect than the Jewish legislator. "These birth-places," he says, "may be recognised from the beauty and corporeal perfection of each family by which they are peopled; and, as mankind dispersed by colonies, it is natural to believe that they first of all traversed across countries before they exposed themselves to an unknown ocean, and the inconstancy of the waters. The families of men appear to have established their primitive birth-places upon elevations of the globe, and, like rivers, to have descended from the mountains, and to have run to the extremities of the earth, and the borders of the sea."—(*Dict. de Deterville*, t. xv. p. 175. Paris, 1817.)

It is important, we think, to remark that modern discovery has made us acquainted with eight coloured nations inhabiting the warmest regions of the globe, with dark nations inhabiting the coldest, and with others of various shades of colour, although in the same climate. Many instances corroborative of these facts have been adduced by Lord Kaimes, M. Virey, Dr. Prichard, and our author. Baron Humboldt, for example, found the people of the Rio Negro, swarther than those of the lower Orinoco; and yet the banks of the first of these rivers enjoy a much cooler climate than the more northern regions. In the forests of Guiana, especially near the sources of the Orinoco, are several tribes of a whitish complexion, the Guaiacas, Guajaribs, and Arigués, of whom several robust individuals, exhibiting no symptom of the malady which characterises albinos, have the appearance of true mestizoes. Yet these tribes have never mingled with Europeans, and are surrounded with the other tribes of a dark brown hue. The Indians, in the Torrid Zone, who inhabit the most elevated plains of the Cordilleras of the Andes, and those who are under the 45° of south lat., have as coppery a complexion as those who, under a burning climate, cultivate bananas in the narrowest and deepest valleys of the equinoctial regions. We every where perceive that the American depends very little on the local position in which we see him. The Mexicans are more swarthy than the Indians of Quito and New Grenada, who inhabit a climate completely analogous, and we ever see that the tribes dispersed to the north of the Rio Gila are less brown than those in the neighbourhood of the kingdom of Guatemala.

Such are a few of the curious facts and reasonings connected with this interesting inquiry, which, had our space permitted, we could easily have extended. Those who are fond of such investigations will find much to please them in the work of M. Bory.

ARMS OF THE NEW RUSSIAN PROVINCE.—The heraldic arms adopted by the Russian Government for the new province of the Caucasus, lately conquered from Persia, consist of a shield divided into two compartments. The upper half has, on a field of gold, the Russian Eagle on the summit of the Caucasus, holding in its talons a crown of laurel and a thunderbolt; while at its feet lie the broken chains of Prometheus. Should the promise here implied prove as sincere as the allusion is classical, where is the friend to man who would not wish that success and conquest may attend the arms of the modern Hercules? The lower half of the shield has, on an azure field, a warrior of Caucasus on horseback, galloping over the plain and drawing a bow; in the distance is the snow-covered summit of the chain of the Caucasus.

LETTER TO —.

THERE is a joy and beauty unto them
Whom the clear streams upbraid not, nor condemn,
In the swift flow of waters : to the pure
They cannot be indifferent ; and be sure
That, therefore, dearest friend, I would that thou
Listened the steady rippling at the bow
Of my light boat, whose tall and slanted mast
Stoops ever to the unremitting blast.
The living wind rejoices, and is strong,
And would bear swiftly our swift thoughts along ;
The tide flows broadly up, and blots away
The river's windings ; though, in ebb, it lay
Sinuous, and twisting like a silver snake
That winds its lithe form through the sounding brake.
Then might we mark how, when the currents shift,
The barges, anchored in mid channel, drift
Heavily round, and with the current flow
Far as their outstretched tethers let them go ;
Or how the wavering sea-wreck, and all weeds
Which ocean in its oozy bottom feeds,
Stream backward with the altering stream ; and sedge,
Heaped up by many tides o'er all the ledge
Of shore, and mixed with pebbles, shells, and sand,
To be a wall betwixt the sea and land,
Is fast left bare, save where the ebb trails back
A few lank weeds, like ribbands, in the track
Of its retreating. Would that thou mightest view
How the clouds, sailing o'er heaven's ocean blue,
Outstrip not us ; or view them from behind
Moulded and shifted by the shaping wind
That drives them, as the Poet, thought on thought,
Drives, shaping ever, until he has wrought
From their fine substance an immortal woof,
Spreading a temple's overarching roof,
To screen him from the glare and undelight
Of the day's splendour, of a day as bright
As this is now ; yet which can weave a night
Of gloom upon life's onward stream, more dark
Than the shadow of my ocean-wandering bark,
Darkening my path before me, on this river,
More changing, more unquiet, and for ever
Eluding grasp.

But I will cast behind
These thoughts, or give them to the clear north wind,
Which I have sometimes deemed is strong to bear
Our ill thoughts from us, through the desert air ;
A besom sweeping cobwebs from the brain,
And dreams in hope not woven, but in pain,
Despondency, and self-reproach, and fear,
Even as it makes the dark sky deep and clear.
But of such dreams one is not, that before
The summer's parting we may tread that shore,
Where young philosophy has made her home,
And her high priests built her a starry dome,
Where few may kneel ; 'twere joy that would not fade
With thee to pace some echoing colonnade ;
For I am not unmindful quite, that, led
By thee, that sacred fount I visited
Of modern song, which not the swart sun's blaze,
Nor arid winds, that in these latter days
Parch the green rivers, yet have chid from flinging
Over this Earth the music of his singing ;
Him, too, whom I some beauteous bird would deem
In Western Island, or by Indian stream,
Snared with ungentle craft, and caged hear,
And chaunting, in his prison dull and drear,
Wild melodies and a remembered strain ;
While aye he did his shattered plumage stain
With his own blood ; and we, methinks, have heard
The notes together of that other bird—
A golden-feathered bird, of such sweet song,
They who to crouches and crows had listened long,
And deemed it music, with discordant shout,
As on those Thracian hills the Bacchant rout
Tore the sad harper ; these were spirits mild,
Twin spirits, that lived and died unreconciled
With the world's works and ways, and went apart,
And trod with bleeding palms and breaking heart
A rugged way ; yet oft from wayside bowers
Would pause to wreath a coronal of flowers,
Which the sad tears of poesy shall feed,
And still keep green, when many a gaudy weed
Has fall'n into the portion of outworn
And faded things, a mockery and a scorn.

And sometimes when I send my hopes abroad,
Unballasted by aught of all that load
The tyrannous Future lays on us, of care
And duty, so that even the lightest air
My thoughts like feathers on its wings may bear ;
Then am I wafled to some sunny land,
Greece or Aonia, or methinks we stand

Mid Sicily's holm-oaks and pastoral hills,
Seeking the well-heads of those sacred rills
Which the wise poets found in elder times :
So when to us the aspect of those climes,
Their towns and fields are known, shall many a strain,
Which now floats by unheeded and in vain,
Have deeper tone—nor less by them is brought
The spirit to a loftier pitch of thought.
For I am strong to think that not in vain
We dwell near starry pillar, massive fane,
And solemn temple, where some work divine,
Statue or painting, lurks in every shrine.
Like gales from pleasant places bearing health,
These things breathe forth their effluence, a wealth
Of lofty thoughts, and by unmarked degrees
When all the mental vision reads and sees
Is beautiful, the mind itself creates
Like to the beauty which it contemplates.
This was the faith the elder sages held,
Though if, as Plato bids us, we expelled
All who can track not to its dwelling-place
The printless footsteps of retiring grace,
All who see not this beauty throned apart,
And only in partaking which their art
Is lovely ; we, I fear, should desolate
Your capital city, winnowing the state
Of painters, builders of triumphal gate
And loftier rhyme.

Oh, Friend, we know not where,
Or piloted by what invisible air,
We are borne onward—lo ! here is a cove
Silent, serene, and sheltered by a grove,
Though leafless now—I knew not till to-day,
Such nook lurked unexplored upon my way,
And even so is it on our life's high way.
Its sunshine comes in unexpected gleams,
We know not where the meadows are, or streams
That make their channel and their verdant bed
Of the long flowing grass themselves have fed ;
And in this faith I will no more prolong,
With talk of distant wanderings, my song,
When meadows and clear rills at home may 'keep
A pleasant bower for us, and a sleep
Full of sweet dreams' and quietness, and love,
And joys until their coming known not of.

R. T.

NOTES ON ROME AND THE POPEDOM,
1829.

THE Cardinals are put through a regular course of political education. Before they can venture to aspire to the highest ecclesiastical dignities, or even to the triple-crowned 'Rock of St. Peter,' they are required to pass through successive appointments, as ministers of justice, finance, war, and ecclesiastical affairs. It is true, they hold them for so brief an interval that it is impossible they should become adepts in the duties of any one of these stations ; yet the regulation is not without its uses, inasmuch as each succeeding appointment calls upon them for the exercise of such a portion of zeal and application as is requisite to prevent them from committing blunders, and betraying the interests of the state by ignorance or glaring indiscretion. The situation of an 'Auditor' or Secretary, on the contrary, is as permanent as that of his master is ephemeral : the latter is not expected to be deeply versed in the duties of his office ; but the Auditor, who is usually of plebeian extraction, is looked up to for information and experience in his department. His ghostly superior, therefore, becomes his client, and enacts the hero of the drama under favour of his prompter. The Roman has never abandoned his privilege of abusing the 'powers that be : ' the Cardinals, Prelates, Judges, and Ministers of State are, therefore, condemned to swallow, as best they may, whatever pill the critic or lampooner may choose to administer to them. I have even known an epigram spirted against the host itself !

Neither popular opinion, nor the opposition which grows out of its expression, is, however, arrayed against the system or principles of the Roman Government, but against the laches in its administration. Facts and results, not political speculations, are the ailments of intellectual commotion among the quidnuncs of Rome, who have

yet to learn that wholesome principles lead to salutary effects. *Par exemple*, I have heard them call down maledictions upon the *prevotal* tribunals, for the summary manner in which they condemn and execute robbers ; but not one of the vituperators appeared to recollect, that the same arbitrary proceedings, which lighted upon the head of a bandit, might equally crush an innocent person.

No insolvent can be incarcerated for a longer period than twelve months, unless he have been guilty of fraudulent conduct. There is a singular process adopted here for deferring the payment of a debt even after judgment has been given. The debtor procures an order from his confessor to put himself under a course of preparation for receiving the sacrament ; and, whilst this course is in progress, he is privileged against arrest or imprisonment. The duration of the fortunate ordeal depends upon the favour of the Cardinal-legate of the department or his secretary.

THE ROMAN STATES.—The first circumstance which strikes an individual as indicative of the spirit in which the affairs of a nation are conducted, is the state of its population and revenue. If he can obtain authentic information on these points, he can be at no loss to ascertain the complexion of its Government, and the comparative healthiness or viciousness of its character. The moral preponderance of a state is always analogous to the powers of its industry : weakness marches hand in hand with poverty, and wretchedness with ignorance ; whilst wealth follows in the train of virtue and mental civilization. The Roman States contain a population of two millions and a half ; their public debt amounts to twenty millions sterling ; the revenue does not exceed eight hundred thousand pounds ; they have a military force of ten thousand men, and a navy of five insignificant vessels. Now, if we suppose the twenty millions of public debt to have been borrowed at par, the Papal dominions are burthened with the payment of an annuity of one million sterling ; so that the sum total of their revenue is not adequate to defray the yearly interest upon the debt. In the teeth of this fact, the Holy Father contrives to pay his fleet and army, repair the roads, and maintain his own state, and his civil establishment, and his foreign missions. These cannot surely be provided for out of his 'Extraordinaries,' such as, the first year's income of benefices and bishoprics ; or dispensations for marrying a niece or a cousin ; or the one hundred and twenty pounds paid on the nomination to a crosier ; or the seven hundred pounds (3,000 scudi,) received for a cardinal's hat !—The deficit is probably made good by pecuniary allowances from Catholic countries, pious donations, bequest, and other resources, of which the course of events may one day strip the see of Rome *in toto*. What would then be the fate of a sovereignty, which has depended so essentially on Christian benevolence ? The more enlightened, (and this city is by no means deficient in that class,) would eagerly trace the defalcation to its real source. Though at a late hour, they would become sensible of the ruinous effects resulting from lazy corporations ; they would perceive the error of accustoming a whole community to a state of contemplative existence ; they would call for reforms within the priory and convent ; and the want of manna would drive the indolent out of their beds with the first glow of the solar ray. It would be an exhilarating sight to witness the robber involved in one common fate with his refuge, the land furrowed by the ploughshare, and the stagnant marsh disappear in the same hour with its epidemical progeny !

There can, in truth, be no great difficulty in tracing the evils which undermine the prosperity of the Roman dominions to their immediate origin. Beggary, that daughter of monkhood and idleness, has, under various disguises, found her way across the thresholds even of the higher classes ; the 'date obolum' has ceased to call a

blush upon the cheek, since Rome has become a hanger-on upon the charity of the whole world. The 'Eternal city' is converted into a general rendezvous of mendicants from every corner of the globe; and, in proportion as the indolent are driven out from the bosom of the labouring community, they find their way to a kind-hearted society, where sloth basks in the sunshine of privileges to which merit alone has any legitimate title.

When considered under this point of view, the states of Rome afford a very singular contrast with the condition of other European climes. I have insisted upon the moral influence and prosperity a nation derives from industry and I will draw my proof from one of the minor sovereignties of Europe. Denmark comprises a population of 1,800,000 souls, and her revenue amounts to eight hundred and forty thousand pounds; her debt is twelve millions sterling less than that of Rome; her army consists of thirty thousand men, and her fleet of eighty vessels. The public income of Denmark is, therefore, nearly double that of the Papedom, when taken in all its bearings; its military force treble, and its maritime strength beyond all comparison greater. Whence originates a state of things, so infinitely in favour of a country which is exposed to the deprivations of an ungenial climate, and suffering yet from the ravages of a hostile invasion? The germ of its prosperity lies in the laborious habits of a robust and pains-taking people, in the diffusion of education even over the sandy districts of Jutland, and in the absence of parasite communities. The laws and usages, the institutions and domestic habits of this northern region, do not interfere with the individual in the discharge of the duties befitting his station, or discourage him from seeking happiness in the pursuits of industry.

THE MARRIAGE STATE.—If I spring across to this subject, recollect Mr. Grattan has recently told us, that there is no step between the sublime and the ridiculous. And ludicrous enough it is to see the fair Roman smiling contempt on the vicious habits of ultramontane society, whilst she is pluming herself upon her constancy and devotion to her favoured innamorato, and pronouncing those to be 'fallen angels' who are guilty of the smallest aberration in this particular. Marriage in Italy is nothing beyond a formality; a sort of stepping-stone to a name and rank in life. The nuptial progress is soon told. The maiden receives her education in a nunnery; and this education consists in teaching her to kneel gracefully at church, to confess twice or thrice per mensem, and to fast on Fridays: her instructors are not such Goths as to dream of fitting her for domestic life, or boring her with allusions to moral fitness. Some fine day brings her word that a partner is in attendance, and she marries. And in the next four-and-twenty hours she is plunged into the vortex of a gay world, utterly destitute of an expanded mind, at the mercy of a fiery imagination, and encircled by the syrens of her own sex, whose darling topics centre in the recollection of their amorous adventures. She is rated on her incapacity; her husband is not so henpecked as to concern himself about her moral conduct; nay, it would seem as if he delighted in lending a public sanction to her infidelities by his own example. In such a state of things, the panoply of Diana would scarcely achieve invulnerability. The amorous propensities of the Italian dames imply, therefore, a far less depravity of morals than they do when indulged in by a French, or, much more, an English or German, woman.

A STORY WITHOUT A NAME.

CHAPTER VI.

(Continued from page 251.)

We have said that the actual teaching which Ellen received from her new governess, assisted, in our humble judgment, very little to the development of the pupil's mind and character.

We shall be excused, therefore, for only noticing, in the most brief manner possible, what that teaching consisted in. Miss Corrie being, as our readers are aware, a person who cultivated singularity, as much as was consistent with the essential common-placeness of her feelings and views, would naturally attempt to make the subject of her pupils' studies in some measures different from those of ordinary young ladies. The ambition of being a reformer in education was, at the commencement of Miss Corrie's career, very strong in her mind. Numerous were the innovations upon the existing system which she had contemplated, and to the benefit of which she was resolved that her pupils should bear a living testimony. Young ladies, she would say, generally learn French and Italian; and why not also French, German, Spanish, and Portuguese—ay, (and when she arrived at this bold sentiment, she would throw back her head with all the conscious dignity of one who believes herself at least half a century in advance of her contemporaries,) and why not Latin and Greek too? Botany was a fashionable study; was not chemistry altogether a more useful and desirable accomplishment? History was studied, but why should young ladies not read the philosophy of history likewise?

All these questions, and a thousand more of the same kind, Miss Corrie asked herself, and the different companies into which she was thrown; and it must be owned that the answers made to them were not the best calculated in the world to convince even a person more open to conviction than that lady of the wisdom of 'things as they are.'—'Such a system would make a daughter pert, stiff, and artificial,' said the father of a young lady, in whom it was difficult to say whether the character of the coquette or of the prude predominated. 'It would make our wives our tutors and lecturers, instead of our companions,' said a young barrister who, while at Oxford, had ran off with the bar-maid at the Mitre Inn; 'and destroy all their relish for domestic duties and pursuits,' exclaimed a member of Brooks's, whose partner would have furnished some excellent hints to a performer who was studying the part of Lady Townley. But, though these alarming demonstrations did not shake Miss Corrie's firm faith in the efficacy of her new principles, she soon discovered the truth of a profound remark, made for the first time by a country gentleman, with whom she had once argued for three quarters of an hour upon the subject, and who, having snored assent to every step of her demonstration, said, rubbing his eyes at the end of it, 'that what was very good in theory, might be very bad in practice.' Not that the young lady upon whom the first experiment of the new system was made, materially disappointed Miss Corrie's expectations; she took kindly enough to Parke's Catechism, and learnt probably more of Lavoisier's barbarous nomenclature than he could have repeated himself. Moreover, she acquired all the Latin which the combined exertions of Mrs. Corrie and her father, who had been at Harrow sometime in the last century, could commemorate. In short, every thing was promising about Miss Louisa Courtenay, till she reached that fearful moment in a young lady's life, when, all preparatory tracing at an end, she is fairly entered to run for those great stakes, in comparison of which the Oakes and the St. Ledger themselves sink into insignificance. It was then that young gentlemen who wished to ingratiate themselves into the favours of rival mothers, entertained the breakfast table with anecdotes of Miss Courtenay, treatises upon caloric at the dance of the preceding night: it was then that those mothers, with faces, which, on this occasion, refused to be hypocritical, (though that was their natural expression,) forbade these naughty young gentlemen, under pain of their severest displeasure, to kill them with stories at the expense of the child

of poor dear Mrs. Courtenay, whom they pitied from their souls; it was then that the daughters of those mothers in the honesty of a first rivalry, before jealousy and hatred have learnt to conceal themselves under holiday phrases and delicate innuendoes, 'wondered that such a prodigy as they had always understood Louisa Courtenay to be, was not learned to keep a little of her learning to herself;' it was then, lastly, that Mrs. Courtenay, her maternal chagrin seeking, as usual in such cases, vent in abuse of the unfortunate, 'responsible minister,' accused Miss Corrie of spoiling all the prospects of her child, by her absurd, new-fangled notions, and ended her oration with a sentence, which deprived Miss Corrie of the means of injuring (any further than she had done already) the remaining six Misses Courtenay. Such a lesson as this was not lost upon Miss Corrie. It must be an heroic, unselfish-hearted governess, indeed, such a person as one meets with twice or thrice in the course of a life, who could make herself a martyr for the sake of the children of parents, who generally regard her as a vastly less important personage in their family than the butler or housekeeper, (and for a very sufficient reason,) for the keeper is valued in proportion to the value of the thing kept: and who would talk of one's urchins, but one's plate or wife? Miss Corrie, at any rate, had no idea of making such a sacrifice: her opinions upon the subject, she soon discovered, had not been taken up on deliberation; and she would revise them. What this revision led to, we need not inform those who have looked at all into the history of reformer's second thoughts. Miss Corrie was even more fortunate, in finding arguments for her change of opinion, than most of her brother and sister tergiversators. The changes she had contemplated, were really changes of no real consequence; changes which respected only the outward form of the system, and which would have left its inward parts just as radically rotten as they are at present; changes, the mooted of which (as they are merely formal) uselessly and vexatiously unsettled people's opinions, without improving them; and changes which, while they are confined to a few, do really, in most cases, produce these disagreeable consequences, of conceit in the half-taught girl, and disgust in those who witness it, which are so loudly talked of by the advocates of the existing mode. Now, of all this, Miss Corrie, being a shrewd woman, and having, withal, an interest in finding the case to stand as it actually did stand, speedily discovered she had still, however, a lurking motive, which combated with her other strong wish to abandon her former creed.

As we have seen, she loved singularity; loved it in some degree for its own sake, but chiefly for the reputation it procured her, as well among the people whom her novelties terrified, as among those who acknowledged their wisdom; but as well because this was her object, as on account of the character of her mind, this was nearly the only path to singularity open to her. Alterations in the spirit of systems which wise men are always labouring to introduce, knowing well, that whatever is vicious in the former, will soon be worked off when that is regenerated—these may go on silently for years, without exciting the admiration, or awakening the alarm, of any class of fools. But in these little outside novelties reformed, which wise men, who see that they tend neither to good nor evil, regard with an indifference, only not amounting to contempt because they do not take upon them to pronounce that there may not, in the course of time, be a reaction from the form upon the spirit: these are what one class of fools regard with the amazement of admiration, and another and larger with the amazement of terror. To lose the suffrages of both these last sets, was a hard sentence upon Miss Corrie, who liked even abuse for talent's sake. She consoled herself, however, with the

reflection that there was still a path to fame and honour left to her. She must become in a great degree common-place in her mode of teaching children: no doubt, but she could still talk points and paradoxes to grown-up gentlemen; she could still be addressed by old ladies, as 'You wicked creature,' (which, in the vocabulary of persons who have a sort of consciousness that the goodness of their own creed is the result of ignorance, means much the same as 'clever creature,') for calling Napoleon a great, useful man. She could still perplex old persons like Mr. McKinnon with new views of human nature; and was not this enough for the ambition of any human being? And after all, though it was a great advantage to have some broad, general answer, to make to a gentleman, who should inquire of her what were the peculiarities of her system of education, and who expected to receive a full and satisfactory answer in the space of three minutes, yet, only give her time to introduce a few pithy little aphorisms about the child's nature, &c., and she had very little knowledge of her own powers, if she did not make it appear that she was unlike the herd of governesses in her method of teaching, as in every thing else.

The subjects, then, which Ellen studied, were not essentially different from those which are studied by most of her contemporaries. We will not run over the arts and sciences which are to be found particularised under the head Hackney, or Homerton, or Clapham establishments for young ladies, fifty times in every 'Times' newspaper. French and Italian Ellen was taught by masters, fully as well qualified as the majority of those in London; for Melcombe, like most places on the sea-coast, was at times stocked full of emigrants of all descriptions, whom the lives-and-fortunes gentlemen of the neighbourhood, out of pure consideration for the sufferings they had undergone for the throne and altar, hired to accomplish their daughters at half-a-guinea a quarter. The Italian master did duty, likewise, as teacher of the harp and piano; and he attended in all these capacities upon our little heroine. And, as Miss Corrie was by no means a cruel woman, and, therefore, did not use any violent methods for crushing her pupils' minds; and as we have already said that Ellen was a very clever little girl, it may seem unnecessary to say that in all these studies she made very rapid and sufficient progress.

PRESENT STATE OF TRIPOLI.

TRIPOLI, not only from its geographical position, which renders its shores the most convenient point of communication with the interior of Africa, but from the character of its government and people, which affords a pleasing contrast with that of the other states of Barbary, has obtained of late years no inconsiderable portion of public attention. We feel assured, therefore, that we need make no apology to our readers for bringing them better acquainted with its present state, and, to this end, making use of the interesting details we have recently acquired through the medium of M. Graborg de Hemso, the Swedish Consul in that port.

The regency of Tripoli has continued in the Caramamli family for the last hundred years, and the reigning Bey, comparatively with any other African sovereign, is a pattern of moderation: he is happy in his choice of ministers, and seldom known to swerve from the principles of justice and equity. Even when misled by the false representations of some artful courtier, he lends a ready ear to appeals against them, and never refuses to listen to the claims of justice. Lord Exmouth effected the abolition of Christian slavery at the time of his bombardment upon Algiers, and the terms then agreed upon have been nobly upheld by Mr. Warrington, the English Consul-general. It is from this period that we may date the advances which Tripoli has made in her social

character. Warrington possessed and exercised great influence over the deportment of all classes; before his time no Christian could be certain of moving about without being molested; at the present moment he may roam, without an attendant guard, through most parts of the country. The inhabitants are beginning to appreciate the advantages of trade and industry, and are gradually laying aside their former wild and wandering habits, as well as throwing off their dependence upon a lawless soldiery. Such an amelioration as this, affords a much more solid ground for future hope, than the casual circumstance of their being governed by a sensible master. Withal, however, it must not be forgotten, that we are speaking of the first advances from a state of mere barbarism, and should be careful to keep our expectations within reasonable bounds. The natural resources of the country are abundant, though grossly neglected from the indolence of its owners. The absence of all statesman-like theory or practice on the part of the Government, the monopoly conferred upon Jews and other speculators in certain articles, the exclusive right of sale which the Bey reserves to himself in others, the injurious restrictions imposed upon trade, and the heavy duties with which exports and agriculture are burthened,—weigh heavily upon the industry of the country. The frequent pillage committed by the Bedouins in the interior, and the want of capital, which cannot fail to obtain in regions where the acquisition of wealth is a signal for persecutions, and the concealment of riches is consequently preferred to their circulation,—operate as inevitable drawbacks upon all agricultural improvements. Even the first appearance of civilisation has its sombre, as well as its bright side: the country people cannot bring their produce to the bazaar, without attempting deceit and imposition; they have learnt to mix water with their oil, to conceal stones in their bales of wool, and to practise a variety of similar artifices, to which they were formerly strangers. 'The time is still fresh in the memory of the living, when Musulman honesty was proverbial: they are honest, it is true, in their dealings with each other; but they have ceased to be so in their intercourse with Christians, who frequently took a most immoral advantage of the ignorance of the Mohammedan, and his reverence for the Alkoran.'

The only manufactures known in Tripoli, are those of the coarse carpets of Messurate, the baracans, or cloaks, and red and yellow Morocco leather; the celebrated green-and-blue leather of this description, is made nowhere else but in the vicinity of Taflet, which is a dependency of Morocco. This branch of trade consumes about five thousand goat-skins annually. The preparation of potash is monopolised by the Bey, as well as the export of salt, which exists in such abundance that it has been considered adequate to the entire consumption of Europe. The Venetians, when an independent power, paid a considerable sum of money for the privilege of exporting salt, and shipped it from the promontory of Zoara. The remaining articles of export are wool, hides, oil, salt butter, oats, dates, saffron, wax, and madder: together with horses and cattle, the latter of which are principally shipped to Malta. There is not one of these branches of trade which might not be greatly improved and increased, if the people would but attend to the due cultivation of the soil, and leave less to the rude hand of nature; but they are so careless of their own interests, that the gradual deterioration of many of those articles is perceptibly diminishing their consumption, in spite of the reduction of price they submit to; the wool is dirty, and mixed with sand; the oil good, but produced in small quantities, though with common industry it might become a trade of immense importance; and the saffron is of excellent quality, but usually deteriorated by fraudulent practices. Although the mulberry tree grows luxuriantly, not a single silk-worm has been introduced.

A spirituous liquor, called Lagbi, is obtained by incision from the date-tree: when first drawn off, it is sweet and cooling; but it rapidly ferments, and becomes stronger than brandy. The name of the spirit was mistaken by Hornemann and his expositor Langles, for that of the tree from which it is procured, and gave rise to many unprofitable inquiries; on Langles part into a supposed discovery of an unknown species of plant. A kind of brandy (rum?) is also obtained from the fruit itself. A Jew and his partners enjoy the monopoly of this liquor, as well as of wines and spirits, for which they pay twenty thousand dollars per annum.

From the detailed report of the imports and exports of the three leading ports, Tripoli, Bengasi, and Derne, the value of the former appears to be 524,790 dollars, and of the latter 449,000. The vessels principally employed in this trade, are French and Italian, the shipping of the natives being confined to boats of thirty tons burthen and under, in which they carried on a coasting trade with Tunis and Egypt, before it was checked by the Greek privateers. The port of Derne has been the greatest sufferer by this interruption.

The profit derived from the sale of European commodities, particularly those adapted to warm climates, is seldom less than sixty per cent.; but the seller is fortunate if he obtain payments within some months, as it is often deferred for years. The buyer seldom pays down upon the nail; the Government never, although it is the principal purchaser of many articles, for which it gives assignments (Tezkheret) at long dates, upon the provincial governors and collectors along the coast. The payees discharge these assignments by delivering to their holders an equivalent in the products of their respective districts, such as oils, salt, grain, cattle, &c.

The intercourse carried on by barter with the interior, forms another branch of Tripolitan trade, and is the source from which the central regions of Africa are chiefly supplied with European productions. The caravans pass between Tripoli and Murzuk, the capital of the tributary kingdom of Fezzan, where an extensive fair is held in the months of December and January; and the merchandizes they convey are exchanged for those brought from Bornu, Sakkatu, Haussa, Kaslina, and Timbuctoo. The caravans destined for Murzuk pass through Gadames, which is governed by three sheiks, and pays tribute to Tripoli. The inhabitants of this state are considered to be an aboriginal race; they possess a language of their own, which they term 'A'Dems,' and not only differ from the Arabs, by whom they are encompassed, but are constantly at war with them.

The dealers of Gadames and Fezzan come to Tripoli in February or March, and lay in their stock of goods, intended for the consumption of the interior: these being obtained upon credit, after a lapse of a twelvemonth and frequently longer, they return and pay off their creditors in gold-dust, ostrich feathers, ivory, senna, red-alum, cotton wool, and dates from Fezzan, salt-petre, and black slaves. The gold-dust comes chiefly from Timbuctoo, and amounts to nearly 1500 ounces a year; independently of between four and five hundred ounces, which constitute the annual tribute from Fezzan. There are about two thousand slaves brought every year to Tripoli; these wretched beings are taken by the Musulmans in their predatory excursions, and the major part of them are shipped away to Egypt and Turkey; some few of them, however, remain in the service of the Tripolitans, and in general experience humane treatment. They are sold in the market at the following prices: a full-grown man at 90 to 100 dollars; youth, of from ten to eighteen years of age, at 70 to 80; children under the age of ten, 40 to 50; a full-grown woman, in proportion to her personal attractions, at 120 to 150 dollars; a girl, at 90 to 100; and a eunuch, at 650 and as high as 700. The Christians residing at Tripoli

are prohibited from purchasing, or even dealing, in this human merchandize.

Few, I believe, are aware that the slave-trade, against which the war of words and treaties has raged so fiercely upon the Atlantic, is carried on in the Mediterranean as openly as the sun at noon-day. The former export of slaves from Tripoli was full twice as great as when its vessels could traffic unmolestedly with Tunis, Egypt, and the Levant; but the Barbary dealers have become fearful of trusting their property to the protection of their native flag since the breaking out of the Greek insurrection, and they have consequently had recourse to the mercenary intervention of Christian navigators! Ship-timber, brought under the Turkish flag from the coast of Albania, is a considerable article of barter for female black-slaves, who are sold to good account in European Turkey, and particularly at Constantinople.

A portion of the internal trade of Africa is in the hands of the people of Augila, a town within the jurisdiction of this Regency: of late years, they have opened a direct traffic with Bornu and Bagermi, and forward their merchandize straight across the Libyan deserts into Egypt. The great caravans of pilgrims and traders, which formerly passed through Tripoli on their annual route from Morocco to Mecca, have become latterly of rare occurrence. The only one I have seen was in the year 1824: it consisted of about three thousand men, some hundred of women and children, and two thousands camels; was under the command of an Emir, had traversed Algiers and Tunis, and halted about thirty days under the walls of Tripoli, whence it proceeded through Barca and part of the desert to Alexandria, Cairo, and Mecca. Numbers of pilgrims are now in the habit of embarking for Egypt on board of Christian vessels; but the Bey, as regards his own subjects, throws every sort of difficulty in the way of their performing this hallowed pilgrimage.

The annual tribute which, in spite of the utter insignificance of his naval power, the Bey manages to extort from the fears of the Christian Powers, amounts to twenty thousand dollars: yet his finances are in so lamentable a state, that this branch of his revenue is constantly pledged some years in advance.

The European character, overcast as it is with niggling jealousy, self-interested motives, and thirst for fraud, has never stood in much estimation with the wily, but untutored and fanatical, natives of the coast of Barbary. The succession of adventurers, whom France, Italy, and Spain, send forth, are mere outcasts, who have just stopped short of doing enough to merit punishment and ignominy in their own countries. Armed with fraudulent passports, cards and dice, they live upon the simple-hearted Moor; and with the fruits of their knavery, they open brothels and drinking-houses, where the lower classes indulge in the prohibited use of spirituous liquors. Others roam about the country with obscene articles, puppets, &c., which are frequently of so disgusting a nature as to exasperate the feelings of the natives themselves. I have even heard a Moor of Tunis vent his indignation by exclaiming, as he turned away, 'If the Christians had any religion at all about them, they would make short work with the fingers that fashioned such detestable objects.' Besides all this, the readiness with which many Christians forsake their Church and embrace the tenets of Islamism, either for the sake of gain, or with a view to escape punishment, has no small tendency to degrade the very name of a Christian in those countries, upon which the Christian himself looks down with contempt, forgetting the far more substantial motives for pride which the Musulman possesses, who extorts tributes from his European contemporaries, and whose character is not obnoxious to the charge of meanness and duplicity.

Independently of the Turks of the Levant, who live in the town, and constitute the militia of the

country, the population of the Tripolitan territory is composed of Moors, Bedouins or wandering Arabs, and Berbers or the inhabitants of the mountains in the interior. A portion of these Moors are descended from the Spanish Moors; they inhabit certain quarters of the city of Tunis, as well as Soliman, a little town on the coast, and the two inland villages of Zowan and Destur. They are an industrious, thriving, and inoffensive race: their women are said to be handsome; and they seldom intermarry with other Moors. The traditions, which tell of their earlier migration from the 'heavenly skies of Andalusia,' are still current amongst them; and many a family preserves the keys of their ancient habitations on the other side of the Pillars of Hercules with the most religious veneration.

ON A MUSICAL SNUFF-BOX.

Poor little sprite in that dark narrow cell,
Caged by the law of man's resistless might,
With thy sweet liquid tones, by some strong spell
Compelled to minister to his delight,
Whence, what art thou? Art thou a fairy wight
Caught sleeping in some lily's snowy bell,
Where thou hadst crept to rock in the moonlight,
And drink the starry dew-drops as they fell?
Say dost thou think sometimes when thou art singing,
Of thy wild haunt upon the mountain's brow,
Where thou wert wont to list the heath-bell's ringing,
And sail upon the sunset's amber glow?
When thou art weary of thy oft-told theme,
Say, dost thou think of the clear pebbly stream,
Upon whose mossy brink thy fellows play,
Dancing in circles by the pale moon-beam,
Hiding in blossoms from the sun's fierce gleam,
Whilst thou in darkness singest thy life away?
And canst thou feel when the spring-time returns
Filling the earth with fragrance and with glee,
When in the wide creation nothing mourns
Of all that lives, save that which is not free?
Oh if thou canst and we could hear thy prayer,
How would thy little voice beseeching cry
For one short draught of the sweet morning air,
For one short glimpse of the clear azure sky!
Perchance thou singest in hopes thou shalt be free,
Sweetly and patiently thy task fulfilling,
While thy sad thoughts are wandering with the bee
To every bud with honey-dew distilling.
That hope is vain, for even couldst thou wing
Thy homeward flight back to the greenwood gay,
Thou'dst be a shunned and a forsaken thing,
'Mongst the companions of thy happier day:
For fairy sprites, like many other creatures,
Have fleeting memories that come and go,
Nor can they oft recall familiar features,
By absence touched, or clouded o'er with woe.
Then rest content with sorrow, for there be
Many that must that lesson learn with thee,
And still thy wild notes warble cheerfully,
Till when thy tiny voice begins to fail,
For thy past bliss sing but one parting wail,
Poor little sprite, and then sleep peacefully!

MR. HAYDON'S PICTURE OF THE PASSOVER.

It is a long time since we have seen a newly-exhibited picture which has pleased us so much as the *Passover* of Mr. Haydon. This painting represents Pharaoh dismissing Moses after the smiting of the first-born of Egypt. The King of Egypt, on a step on the spectator's left hand of the picture, without hazarding to meet the regards of Moses, with arm extended, makes a sign to the Jewish lawgiver that he yields to the will of God, and consents to the departure of the Jews out of the land. On the opposite side of the picture, is Moses in the attitude of the St. Paul preaching at Athens of the cartoon of Raphael, with one hand pointing to heaven, indicating that he was but the instrument of a superior being; and with the other to the dead child and group around, as if reproaching the king with the consequences of his obdurate incredulity. Moses is attended by Aaron, abstracted and wrapped in meditation, and accompanied by other figures in shade, forming an admirable background to a group in the middle, consisting of a fine child, the heir of Pharaoh's house, just deprived of life, sunk into the lap of the distracted mother: the corpse supported on one side by the younger daughter, while the elder, with her back turned to the spectator, clasps her hands in agony as she extends

them towards the mournful scene. This is altogether a delightful group, full of grace and feeling. The mother is dignified and elegant in form; but we doubt whether the artist might not have found means quite as effectual, and yet more pleasing, of giving to her frame and features the strongest expression of anxiety and anguish, as that deadly paleness which he has thrown over her whole person. To the daughter near her we have one objection to make—it is a head with which we are already too familiarly acquainted, and that under circumstances widely different from those under which it is used in the present picture. We have the same face in the Bucephalus, and again crowned with a flower wreath, as the Venus in the picture, representing the visit of the Goddess to Adonis. But the most charming figure of all is that of the eldest daughter. This is lovely, delicate, and elegant in form: the drapery thrown over her is most graceful and simple. Both the principal figures, unless, as we would do, we consider the group we have just been contemplating as the principal part of the picture, have a little soil of affectation; nor from this objection can we even exempt the copy (!) from Raphael's copy of Masaccio!! (Why will Mr Haydon lay himself open to his enemies?) A fine tone of colour pervades the picture, which at first sight bespeaks itself the production of no ordinary artist.

*Our other duties have not allowed us time this week to do justice to the Exhibition of the Society of Painters in water-colours, which opened on Monday. We shall give a detailed notice of it in our next.

STATUES OF TAM O'SHANTER AND SOUTER JOHNNY.

We cannot agree with those of our contemporaries who have expressed regret that these sculptures are not in marble. On the contrary, we think them much better in the humble, unpretending material in which they have been executed; and the very homeliness of which enhances one of the principal merits on which the works themselves rest for the praise which has been by no means unsparingly bestowed on them, that, namely, of propriety, or, if the term may be allowed us, of appropriateness. The stone, in short, is quite in keeping both with the figures and the execution; and we doubt much whether the group would produce half the effect it does at present, had it been worked in a finer material. Souter Johnny is certainly an admirably characteristic figure; his broad, quietly humorous visage; his fatness, his ease of attitude, his drapery and broad buttons, are all expressed with the utmost fidelity to life and nature. The Souter's apron and collar especially, are capitally done; the difference of character also in the two cronies is perfectly imagined and well maintained, not more in the physiognomy than throughout the figures.

The figures both in design and execution have a dash of rudeness, well suited to them under all circumstances, considering that they are intended for a monument to a rustic poet near the Alloway Kirk in Ayrshire, N. B. Most of our readers will guess the part of the poem professed to be illustrated: for such as may desire to have their memories refreshed, we extract the following:

'Ae market night,
Tam had got planted unco right;
Fast by an ingle, bleezing finely,
Wi' reaming swats that drank divinely;
And at his elbow Souter Johnny,
His ancient, trusty, drouthy crony:
Tam lo'ed him like a very brither;
They had been fou for weeks thegither.'

VARIETIES.

MANETHO'S HISTORY OF EGYPT.—Professor Seyffarth, speaking of the result of his gleanings last year in the Museum of Egyptian Antiquities at Turin, observes, 'The most important discovery I have made, or could ever have made, has been an outline of Egyptian history, described on each of the closely-filled sides of a papyrus between fourteen and eighteen feet long, and two feet broad. It corresponds with the customary chronological accounts by dating its narrative from the times of the dominion of the Pagan deities. The first sovereigns of Egypt were Ammon, Vulemus, and Ammon Sol; then follow their successors until the days of Osiris, Typhon, Horus, Thouth, Ambis, and Horus II: the whole comprising an interval of thirteen thousand nine hundred and seventeen years, and corresponding, in this respect, with Manetho's testimony.

Thouth alone is said to have reigned 3936 years; but the period of Horus' sway is stated at 300 only. To these succeed the heroes and other kings of Memphis, whose reigns, added to those of the preceding, occupy a total space of 25,200 years. These fabulous dynasties being disposed of, the series of real dynasties begins with Menes. The mention of each dynasty is accompanied with an account of the town from whence it came, the number of sovereigns it gave, and the duration of its dominion: and this is followed by the names of the several princes, and brief historical remarks to each. To the respective Pharaohs it assigns the precise number of years, months, and even days of their separate reigns. As far as our acquaintance with Manetho's history extends, this valuable document is in perfect accordance with his report: and I shall now state what occurs to me upon it. The character of the writing itself belongs to the age of the first Ptolemies. Egypt had no earlier or later annalist than Manetho. This papyrus is the outline of a more extended history of Egypt, and contains a variety of corrections, which are evident from the amended passages inserted on pieces of papyrus, stuck upon the original pages. Another museum contains a passage respecting Manetho, one of the high priests; and I should be almost induced to consider the present as Manetho's original history, and in his own hand-writing: it was deposited in his sarcophagus within his tomb, and I may perchance fall in hereafter with his mummy. At all events, it is of the highest importance, that we should at last be possessed of a genuine history of Egypt, that we should be rid of doubts and conjectures in respect of the times of the Pharaohs, of whom three hundred are here enumerated, and that an original Egyptian manuscript should determine the length of each individual's reign;—a point as to which so much uncertainty and confusion has prevailed in consequence of the misrepresentations of falsifiers or the blunders of copyists. It is a subject of deep regret to me, that portions of the papyrus are wanting in some few places, but more so that a part of the fragments, amongst which I discovered this remarkable document, has been thrown away at Turin by some careless individual.

AUSTRIAN STATES.—They lie between 41°20' and 51°2' of northern latitude, and 26°14' and 44°35' of eastern longitude, and contain a superficies of 12,153½ geographical square miles. Their population has been recently estimated at 31,624,888 souls. They comprise 9 distinct ranges of mountains; eight principal rivers; nineteen canals; and their inhabitants are divided into twelve varying races.

MAIUS COLLECTIO VATICANA.—The third and last published volume of Angelo Maio's 'Collectio Vaticana Scriptorum Ineditorum' contains, amongst other subjects of minor importance, 'The Gospel of St. Matthew,' printed from a very ancient MS.; four new Greek syllable books; and a description of a variety of MSS. in the Monte Cassino Library.

UNIVERSITY INTELLIGENCE.—The following is a return of the number of students at eight of the principal German Universities, during the winter session, 1828-1829:

Göttingen, 1386; viz.,	Theology . . . 377	Natives, . . . 719 Foreigners, 627
	Law . . . 337	
	Medicine . . . 283	
	Philosophy . . . 153	
Breslau . . . 1112; viz.,	Theology . . . 500	
	Law . . . 357	
	Medicine . . . 96	
	Philosophy . . . 167	
Erlangen, 429 Halle . . . 1330; viz.,	Theology . . . 944	
	Law . . . 239	
	Medicine . . . 58	
	Philosophy . . . 89	

Warzburg, 563; of whom 366 natives and 217 foreigners.
Heidelberg, 506; ——— 263 ——— 241 ———
Tübingen, 602
Münch, 1743

The foundation stone of a university building at Alabama, in the United States, was laid on the 9th of October last, upon a site which was part of a forest not more than thirty years back.

In the spring of last year, the numerical state of three out of the four Gymnasias, or High Schools, of Berlin, was as follows:

The French Gymnasium,	246 pupils.
Joachimsthal ditto . . .	456
Grey-clister ditto . . .	543

In the year 1820, the number of students in all the Prussian Universities amounted to 3144; whilst in 1828, it attained to 5934.

UNIVERSAL CATALOGUE OF MSS.—Dr. Haenel, Professor of Jurisprudence at the University of Leipzig, is at this moment engaged in publishing a very valuable work, under the title of 'Catalogi Librorum Manu-

scriptorum qui in Bibliothecis Galliae, Helvetiae, Hispaniae, Lutetiae, Belgii, Britanniae Magnae asservantur.' He has been engaged for the last seven years in personally exploring the various libraries which contain these inedited treasures, and we cannot doubt he will meet with the encouragement to which so important an undertaking is entitled. It will be published in four parts; each part containing from twenty to twenty-four sheets, of a quarto size; and, to subscribers, the price of each part will be six shillings (two rix dollars) only.

INDIGO OF SENEGAL.—A letter addressed to Baron Roger, ex-Governor of Senegal, and dated from Saint Louis, the 18th January, 1829, affords some interesting details on a subject which deserves the attention of the friends of African civilisation. 'I have passed fifteen days in Walo,' says the writer, 'which I had not visited since my return into France; and in compliance with the request you made upon my departure, I sit down to communicate my ideas upon a country to which we are both attached; yourself from a feeling of disinterested friendship, and I from an expectation of the commercial advantages which are to be derived from it. I have now ascertained that the success of the cultivation of indigo in this country is no longer a matter of doubt, and that this cultivation will afford a very essential harvest when it has acquired that stability which admits of its being perfectly followed up. The inconsiderable produce obtained from the plants sown during the last rains has yielded a most satisfactory result; all our horticulturists are now making indigo of a quality quite equal to that of Bengal. They find it totally unnecessary to irrigate their land; indeed, many of them say that they can dispense with much of the labour of cleaning, by an early sowing before the rains, as the indigo springs up soonest, and smother the other plants and weeds. I observed that the labour was, in general, better and more economically performed than when I was in Walo two years ago, and the further means of ensuring success are in no wise diminished. Great numbers of labourers roam about the country soliciting work, which is refused them; and I found about fifty of them tenanted the ruins and carcasses of the royal dwellings, and subsisting, I know not by what means, until they could find an opportunity of obtaining employment. Millet, which is now worth twelve shillings a barrel, was only worth eight shillings for the last six months, so that a labourer's food does not cost one penny per day. It is unfortunate that the oxen should be subject to an episodic disease, which prevents their being made use of with effect for husbandry purposes.

'You would derive much gratification from seeing the Senegalese and Barroul plantations, with their extensive fields of indigo plants. I am certain they will each of them produce from two to three thousand pounds weight of indigo next gathering. Laussac comes next; this contains fifty-five acres of plain, and thirty-seven acres of island, recently sown with the plant. The plantations are compact, and of very healthy growth, and the land is well trenched; so that they promise a handsome harvest for the next rains. I enjoy for my own use two lines of dykes, conjointly with the plantation Elizabeth, and am about to solicit the Government to assist me in forming a third.

'If France be desirous of securing any speedy and important results, the cultivation should be pushed upon a more liberal footing; the production of the most valuable of colonial articles requires a considerable capital; and it were to be wished that the French merchants who encounter so much risk in bringing indigo from Bengal, would be satisfied with fetching it from a less distance, and on much more moderate terms, in exchange for their indigenous manufactures. A capital of 10,000*l.*, supplied by our leading commercial towns, would suffice to establish five or six large plantations of indigo; which, in conjunction with those already formed, would provide no inconsiderable portion of the whole quantity of this dye annually consumed in France. I shall probably transmit to you a prospectus for such an enterprise as this, when shipping six cases of indigo, by the first vessel that starts for Bordeaux.

POETRY HIGHLY PRIZED.—Sweden bids fair to outbid Great Britain in her pecuniary patronage of the gods of song. Tegner, the Swedish Oesian, whose epic poem, 'Fristhiof,' has been honoured with three translations into the German, two into the Danish, and as many into our own language, has refused fourteen hundred pounds for the manuscript copy of his fugitive pieces. When we consider the limited circle of readers which such a country as Sweden affords, the offer will appear scarcely less extraordinary than the refusal!

ALPINE TRADITIONS.—The shepherd of the Alps is one of the simplest and easiest-satisfied of human beings; his 'house and home' consists of a low cabin on the summit of some Alpine height; he relieves the tedium of his pastoral watchings by making butter and cheese, and knows no ambition beyond that of increasing his flock and herd. The primitive race of which he is a member have had their 'golden age,' as well as Greek or heathen, though they are not likely to revel again under the sceptre of Saturn. Their description of the halcyon times is altogether in harmony with the tenour of their habits of life, and does credit to their credulous simpleheartedness.

'In those days,' says the tradition, 'the cows were of portentous size, and afforded such immense supplies of milk that the herdsman was compelled to milk them into ponds, which were speedily filled to the brim. After this, the shepherds sailed about in vessels, and gathered off the cream. On one of these occasions, a man was drowned in the milky element; the whole valley mourned his loss, and searched for his body, in order that the last rites might be paid to it; but he was not found until some weeks afterwards, when he was discovered stirring about butter in the midst of frothy billows of cream, which had thrown up a mound of butter, as high as a church steeple.'

POPULARITY OF THE WORKS OF ROUSSEAU AND VOLTAIRE.—The reprints of the works of Rousseau and Voltaire have greatly increased within a few years. Independently of separate publications of their principal productions, more than one hundred thousand copies of their works complete, have been sent into circulation in the course of the last ten or a dozen years.

EDUCATION IN SWEDEN.—A Committee of Public Education, composed of twenty-two members, selected from the most distinguished among the men of letters and science in Sweden, with the Crown Prince Oscar for President, which has been some time in existence, has concluded its labours by the proposal of a plan of reform, which will be submitted to the Diet next autumn. In the mean time, as it appears, the system of mutual instruction is rapidly spreading. It is only a few years since the first school of this kind was established, and already in a population not exceeding three millions a thousand have been instituted. The schools for gymnastics flourish also under the direction of M. Ling, chief of the central school of Stockholm. A professor of gymnastics is attached to each university. The number of names on the roll of students at Upsal, the principal university of Sweden, is more than 1400, of whom nearly 1000 actually attend. Thus it appears that the number of students at Upsal is greater than that of many of the most famous universities of Germany, which do not count more than six, seven, or eight hundred students. A circumstance, however, more particularly distinguishing Upsal is, that out of the 1000 students nearly 200 are sons of families of the peasantry. The number of students at Lund is about 400.

THE DRAMA.

King's Theatre.

As a proof of the change which has come upon the constitution of the Italian Opera in these latter days, may be mentioned, the double duty of him who now undertakes to review its proceedings, compared with that of his predecessors in the office of criticism. It is not now merely a comparison and measurement of one or two songs, which were the permanent trial-pieces of every new singer; it is not enough to say that the prima donna has a delicate soprano, the primo tenore a genuine *voce di petto*. We take into account much more collateral accomplishments; and the dramatic propriety of the singing is a point almost as jealously considered, as the power of voice or skill of execution. We will venture to assert that the natural answer of almost every one, if asked what his opinion might be of Mad. Malibran Garcia, would have a reference, first to her acting, and afterwards to her singing. And on this account it appears to us that this lady has not been injudicious in selecting the character of Desdemona for her debut,—a character which, despite the formidable competition of others and our own remembrance of their transcendent excellencies, she could reasonably hope to support with no less fame, by her great dramatic attributes, and by them almost alone. The result has, in some measure, put the fact of her discretion, in this respect, almost beyond the reach of question. Her success has been signal and deserved; not a voice has

been raised to decry her performance, and the only doubt that seems to have arisen turns upon a comparison of our new Desdemona with that which was subject of all men's praise—the part when played by Madame Pasta.

Falling into the view of others, we can hardly avoid looking at these two great rivals in juxtaposition, though it is a habit which should not be encouraged for the sake of either, and beyond this, has a tendency to disturb our present pleasure in all cases. As illustrative, however, of their different styles, not as balancing their degrees of merit, it may be well to view them for one moment together; and perhaps the difference of their characteristics will prevent any invidiousness which might otherwise spring from such a comparison. We all know, and shall continue to feel, the effect of Pasta's splendid personation of this character; her peculiar grandeur and simple pathos are not and cannot be forgotten. Mad. Malibran has less grandeur, less simplicity, probably more study, and, as some think, a more gentle pathos. She has not that richness of intonation which made her predecessor's voice a treasury of passionate expression. She cannot paralyze by a look, for her countenance has not the same dignity and living truth; nor by any single means reach the same high ground as that on which Pasta can at all times raise herself in triumph. But she commands a stronger body of auxiliaries; she has a softer and more feminine sweetness; a thousand changes of attitude and gesture, which are graceful beyond any thing we have seen on the stage,—precision and delicacy in the most subordinate parts,—and a disposition of the whole very beautiful and appropriate and almost faultless.

Speaking generally, it seems to us that the performance of Madame Pasta was distinguished by a few noble and intense traits;—the effects of Madame Malibran are obtained by a multitude of fine and minute touches. The latter, indeed, is most liable to exception for this very profusion of labour: it appears almost redundant; but perhaps we have been spoiled by the severe and classical simplicity of her predecessor.

Does this seem but tempered praise? We would not that it should be so taken. Madame Malibran has evinced talent of the very highest kind; but study seems to have directed it, not inspiration. It is impossible to go into any minute account of separate excellencies, when every portion of the performance is made up of such detached beauties. As in Pasta it was difficult to fix upon minutiae, from their subservience to the whole, so here the same thing is hard, because the minutiae are the whole, and in themselves infinite in number. The celebrated finale to the first act gives her scope for the display of these successive beauties, in almost every bar. Her short interview with Emilia in the second act, her disquietude, and appeal to the chorus for intelligence respecting Otello, and then the burst of joy, in the words—

'Salvo del suo periglio!
'Altro non chiedo il cor!'

were admirably done. The entrance of her father checks this exultation; and she approaches him with fear and uncertainty to ask his pardon. This is managed with a bewitching tenderness and skill that surpass any thing attempted by Madame Pasta in the same situation. In the third act there is no diminution of effort, though the quiet feeling which reigns throughout its opening scene, has one living representative with whom in such cases Madame Malibran cannot compete.

As a singer, there are many we have known with whom she will not bear comparison. Still, the qualities of her voice and science are well balanced, and do not in any particular discover a material defect. To go through the music of 'Otello,' and support every part without shrinking from or compromising its difficulties, is an achievement which determines the extent of her powers. We shall know more of their quality, viewed in their vocal character alone, when we have witnessed her representation of Rosina,—a part which possesses no intensity of dramatic interest sufficient to make us forget the merits of its music.

The rest of the opera is very excellently got up. Donzelli is most splendid as Otello; but he should not sacrifice the ornaments of the music to a mere display of his own intonation. He rests too much on the merits of his *portamento di voce*.

M. Le Vasseur, a new bass, promises to be more serviceable in that capacity than all his forerunners of the season put together. And Curioni executed the part of Roderigo as well as we have seen him do anything since his first appearance amongst us.

The excessive delight which we have received from Madame Malibran's performance must not prevent us

from remonstrating with M. Laporte on some defects in his now almost perfect establishment. We can hardly express the horror which we experienced at witnessing the 'Divertissement' of Tuesday last, which was to have been repeated on Saturday, had not Coulon fortunately been lamed by a special interference of Terpsichore. By way of connection between the second and third acts of the opera, and in order to soothe the wounded sympathies of the audience, dancing was introduced. The scene was some spot in some Oriental city, much resembling the Adelphi Terrace. A cushion was placed in the back-ground, and an unfortunate fat man in a turban squatted on it. Several of the *corps-de-ballet* then came forward in front of the Turk, and danced as badly as they could. Then came Pean and Gopelin, who kicked their feet in each other's faces till they were tired; and then gave way to the great attraction of the evening, Madame Vague Moulin, who has come all the way from Milan to dance indecently in London. Nothing but great strength and activity could enable this lady to display such want of grace. Her performance surpassed what we had ever witnessed of salutory indecency, awkwardness, and distortion. The meaning of her motions (and what is dancing without meaning?) we were utterly unable to comprehend, unless she wanted to show her extraordinary power of walking on her toes, and her still more extraordinary refinement on the pirouette. The pirouette had always before been confined to a rectangular position of the two legs; by which we had always supposed that a sufficient quantity of indecency and awkwardness had been elicited. By extending the right to an obtuse angle, Madame Vague Moulin has at once increased the pristine indecency and awkwardness in a ratio which will be easily seen from the accompanying diagram, ABC being the angle of femoral contortion.

Modern, or Obtuse-angled
Pirouette.

Old Rectangular
Pirouette.

Sorry we were to see that these physical exertions were received with an applause which reminded us of the worst days of the Opera. The beautiful pantomime of 'La Somnambula,' the splendid spectacle of 'Masaniello,' had, we hoped, showed the British public what effects the pantomime and the dance might be employed to produce. To find them applauding dancing, when introduced without meaning, and executed without grace, is peculiarly annoying to us, who have learned to require these qualities in the dance. Coulon's jumping, in emulation of the lady's agility, was more graceful, but rather a degradation of one whom we would wish to look on as only a first-rate actor. We cannot hope to see Madame Vague Moulin's style of dancing equalled or imitated, nor do we wish it.

We suppose that it is to this precious *divertissement* that we must in part attribute another defect to which we must call Mr. Laporte's serious attention,—we mean, the continuing the performances to so late an hour. Midnight had passed at least half an hour ere the opera was over, and the ballet was not hurried over till half-past one. It is annoying to be kept looking, for long intervals of time, at the great red curtain; annoying also is it to see a beautiful ballet languidly performed, owing to the mere indolence of scene-shifters; annoying to have one's horses or one's coachman catch cold in waiting; annoying not to find one's servants up when we get home: but these annoyances are the least evils to which Laporte has subjected us. Let him think of the derangement of the domestic affections which his dilatoriness may have produced; let him picture to himself the anxious mother, beholding the gradual defection of her daughter's sleepy beaux—the modest virgin, trembling in the disappointment of a comfortable passage through the crowdless squeeze-room—the head-ach in the succeeding morning necessitating the excuse for the succeeding ball; and, last, to close the scene, let him imagine the anxious husband returning from his club at the hour when the carriage usually returns from the Opera, finding his house untenanted by the object of his affection, creeping slowly and sadly to his companionless pillow, and starting with imminent terror from his first dream, when the rustling of silk announces the partner of his heart returned, indeed, to his arms, but only to tell the tale of her sleepiness and discontent. These things may be borne in France, but here they will not be tolerated. We have lost our Constitution, but we will not lose our sleep.

NEW MUSIC.

'I'm an arch little black eyed daughter,' sung by Mad. Vestris, Miss Stephens, Miss Love, Miss Graddon, and Miss Paton; the poetry by Richard Ryan, the music by John Sinclair. Dale.

We are surprised that this trifle is not exceedingly well known, if all the enumerated vocalists have sung it, especially as it is so common-place a production; it is an allegretto in F, very much resembling a little ballad adapted from Mozart, and formerly sung by Miss Povey, as 'The Child's wish for May,' and the first strain is note for note the same with the Italian Canonet sung by Catalani, &c. 'La Biondina in Gondolletta,'—thus novelty in this ballad is out of the question: it is very pleasing notwithstanding.

Dressler's Selection of Beauties, with Embellishments for the Flute, dedicated to Amateurs. No. XII. Cocks and Co.

We have at length the pleasure of noticing the 12th and concluding Number of this very interesting and desirable periodical; and perhaps there is not any similar work from which more variety and amusement could be extracted, especially for the price—158 closely printed pages of pleasing flute music for 14. 11s. 6d. (the sum required for the whole twelve Numbers when bound,) or each separate Number (which may be had detached) for 3s.

The following is a sketch of the contents of this last Number, viz.—Six preludes by the author, Isabel, the favourite Spanish tune, a Romance, Adagio sentimentale in G Minor, the old admired glee 'Glorious Apollo' as a duet in the key of F, Oginaky's celebrated Polonaise, and Haydn's military movement, arranged as duets by Wm. Ford, a Greek air, 'Bocage que l'aurore,' a French air, a Romance of Kuhlman's, and 'God save the King,' all as duets, and 'Kelvin Grove,' as finale: 'multum in parvo.'

Select Airs from Spohr's celebrated Opera of Faust, arranged as Duets for the Piano Forte, and inscribed to his friend Charles Cowden Clarke, by Vincent Novello. Book I. Published by the Editor.

SPOHR is unequivocally the finest classical writer now living, and Novello (who is organist to the Portuguese embassy) is a very talented and highly respected professor. It is matter of surprise and regret, that the opera of 'Faust,' which is so highly popular in Germany, should not yet have been performed entire in this country; but we conjecture that the learned and scientific nature of Spohr's composition, renders it unfit to exhibit the vocalists so supereminently above the instrumental parts as they could wish, and as Rossini and others of the Italian school have done. As the pieces are rather long, only three are presented in this first Book. No. 1.—Aria e Coro, 'Ch'il vino,' a pleasing Allegretto in C, 6-8 time, of a lighter description than might have been expected from the noble mind of the author. No. 2.—Duetto, 'Segni oh cara,' a delightful Andante in F 3-4 time, quite in Spohr's own charming style; and No. 3.—Aria, Cuneogonda, 'Si, lo sento,' the fine Larghetto, and Allegro in B flat, sung by Miss Paton with the greatest success at the Philharmonic Concert (see page 206 of this work). Every note would do honour to the mighty names of Beethoven, Mozart, and Haydn, and Novello's arrangement is as good as possible.

'Why does my mother say "beware?"' Song, composed by Samuel Henhall, of Liverpool. Boosey and Co.

A LIVELY, familiar, and pretty trifle, upon the plan of 'Bid me discourse' and 'Cherry ripe,' with a moving accompaniment of a similar nature in common time. It may find a place by the side of those popular songs, and we recommend that amateurs cause it to do so.

German Air, with an introduction, and variations for the Flute, and an accompaniment for the Piano Forte, composed and dedicated to R. Tewart, Esq. of Southgate Park, by W. Card. Published by the Author.

MR. CARD was for several seasons a professor of the flute at the King's Theatre, and is one of those non-conformists, who honourably refused to subscribe to the disgraceful terms proposed by the worthy colleagues, La Porte and Bochsa!—Card is a successful and clever teacher of the flute, and the publication now noticed is gay, pleasing, and admirably adapted for learners upon that instrument. It is the first of Card's productions we have yet met with; but we hope to review some others soon.

'The red rose is Queen of the garden bower,' sung by Mrs. Geesin at the Theatre Royal Drury Lane, in Miss Mitford's Tragedy of 'Rienzi,' composed by John Barnett. Mayhew and Co.

WE warmly and confidently recommend this very flowing and tasteful ballad to the notice of amateur vocalists, as an unusually pleasing production, and yet very easy to be performed with voices of moderate compass. It is an Andante Affettuoso in G, common time, but is performed by Mrs. Geesin in the superior key of A flat. Its transposition in publication renders it less difficult for the piano-forte accompaniment, at the expense (we fear) of deteriorating its effect.

'The Plough Boy,' (con variazioni,) for the Flute, with an accompaniment for the Piano Forte, by Bernard Lee. Mayhew and Co.

THIS very much resembles the German air above noticed of Card's, and will be equally acceptable to the amateur flutist. It is expressly well adapted to that instrument, and is the production of one who understands it, and without doubt teaches it with propriety and success. It is published as No 1, of a series of admired airs, to be issued in a similar manner, and we shall, from time to time, notice them in their progress.

POPULAR SCIENCE.

'How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as is Apollo's lute.'—Comas.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing.'—Genesis.

1.—ANTHROPOLOGY.

Insensibility to Pain.—The following extraordinary circumstance is given, on the authority of Mr. Leonard Knapp, in 'The Journal of a Naturalist.' A travelling man one winter's evening, laid himself down upon the platform of a lime-kiln, placing his feet, probably benumbed with cold, upon the heap of stones newly put on to burn through the night. Sleep overcame him in this situation, the fire gradually rising and increasing, until it ignited the stones upon which his feet were placed. Lulled by the warmth, he still slept; and, though the fire increased until it burned one foot (which probably was extended over a vent hole) and part of the leg above the ankle entirely off, consuming that part so effectually that no fragment of it was ever discovered, the wretched being slept on! and in this state was found by the kiln-man in the morning. Insensible to any pain, and ignorant of his misfortune, he attempted to rise and pursue his journey, but missing his shoe, requested to have it found; and when he was raised, putting his burnt limb to the ground to support his body, the extremity of his leg-bone, the tibia crumbled into fragments, having been calcined into lime. Still he expressed no sense of pain, and probably experienced none, from the gradual operation of the fire, and his own torpidity during the hours his foot was consuming. This poor drover survived his misfortunes in the hospital about a fortnight; but, the fire having extended to the other parts of his body, recovery was hopeless.

2.—MAZOLGY.

The Marten, or Whittet.—Of all our animals called vermin, we have none more admirably fitted for a predatory life than the marten; it is endowed with strength of body; is remarkably quick, and active in all its motions; has an eye so large, clear, perceptive and moveable in its orbit, that nothing can stir without its observation, and is supplied apparently with a sense of smelling as perfect as its other faculties. Its feet are well adapted to its habits, not treading upright on the balls alone, but with the joint bending, the fleshy parts being imbedded in a very soft and delicate hair, so that the tread of the animal, even upon decayed leaves, is scarcely audible; by which means it can steal upon its prey without any noise betraying its approach. The fur is fine, and the skin so thin and flexible, as to impede none of its agile movements. Thus every thing combines to render the marten a very destructive creature. It seems to have a great dislike to cold, residing in winter in the hollow of some tree, deeply imbedded in dry foliage, and when in confinement, covering and hiding itself with all the warm materials it can find. In genial seasons it will sleep by day in the abandoned nest of the crow, or buzzard, and its dormitory is often discovered by the chattering and mobbing of different birds on the tree. It is certainly not numerous in England, our woods being too small, and too easily penetrated, to afford it adequate quiet

and shelter. Its skin is still in some little request, being worth about two shillings and sixpence in the market; but it is used only for inferior purposes, as the furs of colder regions, than ours are better and more easily obtained.

3.—ORNITHOLOGY.

Extraordinary Migrations of the Gold-crested Wren.—The migrations of birds have long attracted the eager observation of naturalists, as a phenomenon no less wonderful than in many respects inexplicable. But we are acquainted with no instance of this more remarkable than that of the golden-crested wren (*motacilla regulus*) that usually only flits from tree to tree, and never attempts upon common occasions a longer flight, but in the north is known to traverse the vast distance from the Orkneys to the Shetland Isles, over stormy seas, that admit no possible rest during its long voyage of above fifty miles! There it breeds its young; but, this one object accomplished, it leaves those isles, dares again this tedious flight, and seeks a milder clime.—With us it never migrates, lives much in our fir groves during the winter, and breeds in our shrubberies in summer. Peculiar necessities, such as these, may incite the migration of many birds; but that certain species, which lead solitary lives, or associate only in very small parties, should at stated periods congregate from all parts to one spot, and there hold council on a removal, in which the very sexes occasionally separate, is one of the most extraordinary procedures that we meet with among animals.

4.—ENTOMOLOGY.

Battles of Butterflies.—The common white butterflies of our gardens are contentious animals, and drive away a rival from their haunts. We see them progressively ascending into the air, in ardent unheeding contest; and thus they are observed, captured, and consumed in a moment by some watchful bird; but we have few more jealous and pugnacious than the little argus. When fully animated, it will not suffer any of its tribe to cross its path, or approach the flower on which it sits, with impunity; even the large admiral (*vanessa atalanta*), at these times, it will assail and drive away. There is another small butterfly, (*papilio phlaeas*) however, as handsome, and, perhaps, still more quarrelsome, frequenting, too, the same station and flowers; and a constant warfare exists between them. We shall see these diminutive creatures, whenever they come near each other, dart into action, and continue buffeting one another about till one retires from the contest; when the victor returns in triumph to the station he had left. Should the enemy again advance, the combat is renewed; but, should a cloud obscure the sun, or a breeze chill the air, their ardour becomes abated, and contention ceases.

The *papilio phlaeas* enjoys a combat even with its kindred. Two of them are seldom disturbed, when basking on a knot of asters in September, without mutual strife ensuing. Being less affected by cold and moisture than the argus, they remain with us longer, and these contentions are protracted till late in the autumn. The pugnacious disposition of the argus butterfly soon deprives it of much of its beauty; and, unless captured soon after its birth, we find the margins of its wings torn and jagged, the elegant blue plumage rubbed from the wings, and the creature becomes dark and shabby.

II.—NON-ANIMATED NATURE.

'The meanest flow'ret of the vale,
The simplest sound that swells the gale,
The common sun—the air—the skies—
To him are opening Paradise.'

GRAY.

1.—GEOLOGY.

Extinct Animals.—'Some naturalists,' says M. Cuvier, 'reckon much on the thousands of ages which they accumulate with the dash of their pen; but in such matters we cannot venture to judge of what a long time might operate, except by multiplying in idea what a shorter period does produce. I have, therefore, collected with care the most ancient documents concerning the forms of animals, of which none now in being equal in antiquity and abundance those furnished by Egypt. This country presents us not only with pictures of animals, but their very bodies embalmed in its catacombs.

'I have examined with the greatest pains the figures of animals and birds, engraved on the numerous obelisks brought from Egypt to ancient Rome. All these figures have, when viewed as wholes (which was the only object of their artists), a perfect resemblance to the species, as we see them now-a-days.'

M. Geoffroy St. Hilaire collected in the tombs and temples of Upper and Lower Egypt as many animal mummies

as he could. He brought home with him cats, ibises, birds of prey, dogs, apes, crocodiles, and a head of a bull, all embalmed; and certainly no greater difference can be perceived between these beings and those which are now most familiar to us, than between human mummies and the skeletons of the modern race of men. M. Cuvier has proved in a special memoir on the ibis, that this bird is now the very same animal in every respect as it was in the days of the Pharaohs.

'No ascertained fact, therefore, countenances, in the slightest degree, the opinion that the new genera discovered, or established among the fossil skeletons, such as the palmotheriums, anoplotheriums, megalonyx, mastodontes, pterodactyles, ichthyosauri, plesiosauri, megalosauri, equanodontes, &c., have been the parent stocks of any of the animals of the present day, which animals owe their differences to the influence of time or climate. Were it true (which I am very far from thinking) that the fossil elephants, the rhinoceroses, the elks, the bears, differ no more from the existing ones than the breeds of dogs differ from each other, we are not, on this account, warranted to conclude that the species were identical, because the canine race has been subjected to the influence of domesticity; while these other animals have neither suffered nor could endure it.'

2.—BOTANY.

Love of Flowers.—The love of flowers seems a naturally implanted passion, without any alloy, or debasing object, as a motive; the cottage has its pink, its rose, its polyanthus; the villa its geranium, its dahlia, and its clematis; we cherish them in youth, we admire them in declining days; but, perhaps, it is the early flowers of spring that always bring with them the greatest degree of pleasure, and our affections seem immediately to expand at the sight of the first opening blossom under the sunny walk, or sheltered bank, however humble its race may be. In the long and sombre months of winter, our love of nature, like the buds of vegetation, seems closed and torpid; but, like them, it unfolds and reanimates with the opening year, and we welcome our long-lost associates with a cordiality that no other season can excite, as friends in a foreign clime. The violet of autumn is greeted with none of the love with which we hail the violet of spring; it is unseasonable, perhaps; it brings with it rather a thought of melancholy than of joy: we view it with curiosity, not affection; and thus the late is not like the early rose. It is not intrinsic beauty, or splendour, that so charms us, for the fair maids of spring cannot compete with the grander matrons of the advanced year; they would be unheeded, perhaps lost, in the rosy bowers of summer and autumn; no, it is our first meeting with a long-lost friend, the reviving glow of a natural affection, that so warms us at this season; to maturity it gives pleasure, as a harbinger of the renewal of life, a signal of awakening nature, or of a higher promise; to youth, they are expanding being, opening years, hilarity and joy; and the child let loose from the house, riots in the flowery mead, and is

'Monarch of all he surveys.'

There is not a prettier emblem of spring, than an infant sporting in the sunny field, with its osier basket wreathed with butter-cups, orchises, and daisies. With summer flowers we seem to live as with our neighbours, in harmony and good-will; but spring flowers are cherished as private friendships.

EFFECT OF INTELLECTUAL PURSUITS ON THE HUMAN FRAME.—In youth our senses and the organs of them wander; in the middle of life they cease to do it; in the old age, the body itself, and chiefly the head, bends over and points to the earth, which must soon receive it, and partakes in some measure of its torpor and passivity. The higher delights of the mind are very different in their effects, from its seductive passions. These cease to gratify us the sooner the earlier we indulge in them; on the contrary, the earlier we indulge in thought and reflexion, the longer do they last, and the more faithfully do they serve us. So far are they from shortening or debilitating our animal life, that they prolong and strengthen it greatly. The body is as much at repose in the midst of high imaginations as in the midst of profound sleep. In imperfect sleep it wears away much as also in imperfect thoughts, in thoughts that cannot rise from the earth, and sustain themselves above it. The object which is in a direct line behind a thing, seems near: now nothing is in a more direct line than death to life. Why should it not also be considered on the first sight as near at hand? Swells and depressions, smooth ground and rough, usually lay between; the distance may be rather more or rather less; the proximity is certain.

DISCUSSION OF RELIGIOUS QUESTIONS ON THE CONTINENT.—A society existing at the Hague for the defence of the Christian Religion against its modern opponents, yearly offers prizes for the best polemical treatises on questions proposed by it. Out of the six subjects proposed last year, not one produced an essay deemed worthy of receiving the prize. Among these subjects, one was 'A Reward for proof that the holy scriptures are the only pure source from which the knowledge of the Christian doctrine is to be drawn; that they also are held as the sole rule of faith and practice; with an inquiry into the value of the ancient traditions and decrees of the Assemblies of the Churches, and what uses are to be made of them. On this subject, a treatise in Flemish was sent in, but it was not deemed deserving of the prize.

On the required collection of examples of distinguished persons in different ages, who, in extraordinary and difficult circumstances, had given proofs of the virtue of the Christian faith. Two essays had been delivered, but were unsuccessful.

There were the same number of essays on the question as to the credibility of the books of Chronicles and their value as concerns the Biblical history. These essays were not devoid of merit, but they had failed in establishing the credibility of the books of Chronicles, so clearly, as to deserve the reward. The question is allowed to remain open for the 1st of January, 1830. Among the new subjects proposed, is one for a treatise on the proofs, that the variety of opinions among Protestants, affords no ground for asserting that Protestantism will not be of long duration, but must fall by its own weight. This essay must be in Flemish, German, or Latin, and be sent in with the required formalities, before the 1st of February, 1830.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Coleridge's Poetical Works, 3 vols. crown 8vo., 11. 16s.
Chronicle de Ville Hardouin, 8vo., 10s. 6d.
Bishop Kaye's Account of the Writings and Opinions of Justin Martyr, 8vo., 7s. 6d.
Griesbach's Greek Testament, with Select Notes, 18mo., 7s.
Tacitus Agricola, part 1, with interlinear translation on Locke's System, 12mo., 2s. 6d.
Mrs. Dalgairn's Practice of Cookery, &c. 8vo., 7s. 6d.
Voltaire's Charles the Twelfth, revised by Catty, French, 4s.
Manual des Conversations, par Madame Holmes, 18mo., 2s. 6d.
Valpy's Greek Testament, 4th edition, 12mo., 5s.

Sun. 26.48	45	45	29.55	E.	Clear.	Cumulus.

Nights and mornings generally rainy.

Highest temperature at noon, 38°.

Astronomical Observations.

The Moon and Jupiter in conj. at 8 1/2 h. on Wednesday.
The Sun and Herschel quartile on Sunday, at 8 1/2 h.
Venus's geocentric longitude on Sunday, 39° 39' in Aries.
Mars's ditto ditto ditto 11° 55' in Gemini.
Jupiter's ditto ditto ditto 14° 18' in Sagitt.
Saturn's ditto ditto ditto 28° 0' in Cancer.
Sun's ditto ditto ditto 5° 57' in Taurus.
Length of day on Sunday, 14 h. 39 min. Increased 6 h. 45 m.
Sun's hor. motion on Sunday, 2' 25" plus. Logarithmic num. of distance, .042061.

THE FOREIGN QUARTERLY REVIEW,

No. VII., will be published on Thursday, April 30. Soho-square, April 27.

Under the superintendence of the Society for the Diffusion of Useful Knowledge.

THE LIBRARY OF ENTERTAINING KNOWLEDGE, Part II., being VEGETABLE SUBSTANCES used in the Arts.—TIMBER TREES.

The Second Edition of 'The MANAGERIES,' Part I., will be published in the same day.

London: Charles Knight, Pall-Mall East; sold by Longman, Rees, Orme, Brown, and Green; and all Booksellers.

In a few days will be published, in one vol. post 8vo.,

FUGITIVE PIECES AND REMINISCENCES OF LORD BYRON: containing an entire new edition of the Hebrew Melodies, with the addition of several never before published; the whole illustrated with Critical, Historical, Theatrical, Political, and Theological Remarks, Notes, Anecdotes, Interesting Conversations, and Observations made by that illustrious Poet; together with his Lordship's Autograph. Also, some Original Poetry, Letters, and Recollections of Lady Caroline Lamb. By J. NATHAN, Author of 'An Essay on the History and Theory of Music,' 'The Hebrew Melodies,' &c. &c. London: printed for Whittaker, Treacher, and Co., Ave-Maria-lane.

Just published, handsomely printed, in one volume, 8vo., price 14s. boards.

BEWARE; from Coll. ii., 8.—This Work im- parts the writer's opinions respecting the Soul, the first verse of the Bible, the world it alludes to, the land and the water, the Paradise, Flood, Egypt, Wilderness, Babylon, Tyre, Zion, and Jerusalem, the Heavens and their Host, the Kingdom of God and of Heaven, the Millennium and Atonement, and the Holy Christian Religion.

N.B.—The Author thinks that the whole of the Sacred History refers to the Soul, or Inner Man; and that no part of it ought to be understood in the usual literal and vulgar sense.

Sold by Sherwood, Glibert, and Piper, Paternoster-row.

THE KING'S CONCERT ROOMS, HANOVER-SQUARE.

UNDER THE IMMEDIATE PATRONAGE OF
Her Royal Highness the Princess AUGUSTA,
Her Royal Highness the Duchess of GLOUCESTER,
Her Royal Highness the Duchess of CLARENCE,
Her Royal Highness the Duchess of KENT,
Duchess of St. Albans,
Dow. Marchioness of Salisbury,
Countess of Jersey,
Countess of Grosvenor,
Countess of Darley,
Countess of Wilton,
Countess of Bective,
Lady Elizabeth Repton,
Duchess of Leeds,
Hon. Lady Lucy Clive,
Dow. Countess of Dartmouth,
Countess Fortescue,
Countess of Arran,
Countess of Verulam,
Lady Anne Vernon,
Hon. Mrs. Leigh,
Countess St. Antonio.

Miss WILKINSON respectfully announces that her CON- CERT will take place at the above Rooms, on Monday Evening, May 4, 1830. The Vocal and Instrumental Department will comprise most of the eminent Performers, whose names, with the Programme of the Concert, will be speedily announced. Tickets, Half-a-Guinea each, to be had of Miss WILKINSON, No. 30, Upper Baker-street, and at all the principal Music Shops.

WAVERLEY NOVELS.

On the 1st of June will be published, Inscribed by Permission to the King's Most Gracious Majesty, volume first of a new edition of

THE WAVERLEY NOVELS; to be con- tinued in Monthly Volumes, revised and corrected, with a General Preface, an Introduction to each Novel, and Notes, Historical and Illustrative, by the AUTHOR, Embellished with Frontispieces and Vignette Titles, from Designs executed expressly for the present edition, by the most Eminent Artists.

NOTICE BY THE PUBLISHERS.

There are few circumstances in the history of letters more remarkable than the rise and progress of 'The Waverley Novels.' Unlike most other productions of genius, they had no infancy to struggle with, but reached at once the highest point of public favour,—a station which they have ever since maintained with undiminished popularity.

The circulation of these works having been hitherto confined, in a great degree, to the wealthier ranks of society, the Proprietors have resolved to place them within the reach of readers of all classes, by republishing them in a less costly, but at the same time more elegant shape, and with the additional advantage of a periodical issue.

The Publishers have, therefore, the honour of announcing the speedy commencement of a New Edition, to be published in Monthly Volumes.

In this undertaking they have had the cheerful co-operation of the Author himself, who has not only revised every one of the Novels, but has added Explanatory Notes, and a new Introduction to each of them.

This edition will not only be improved in the manner just stated, but also enriched by the pencils of the eminent Artists who have been engaged to embellish it; among these may be named,

David Wilkie, R.A.; Edwin Landseer, R.A.; C. R. Leslie, R.A.; Abraham Cooper, R.A.; A. E. Chalon, R.A.; G. S. Newton, A.R.A.; P. P. Stephano, H. Corbould; William Kidd; J. Standish; John Burnet; and A. P. Bonington.

The Engravings will be executed on steel, by Charles Heath, William Finden, Charles Rolla, James Mitchell, F. Engleheart, Ambrose Warren, Robert Graves, J. C. Edwards, W. J. Cooke, W. Ensom, Davenport, Shenton, Duncan, Miller, and other eminent engravers.

PLAN OF THE WORK.

I. The size to be royal 18mo., printed in the very best manner, and hot-pressed; each volume to contain about 400 pages, price 2s., done up in cloth.

II. The Publication to commence on the 1st of June next; and to be continued regularly, on the first day of each month, till the whole is completed.

III. Each volume to have a frontispiece and vignette title-page, both containing subjects illustrative of the Novel to which they are attached.

IV. The Work will be completed in Forty Volumes, commencing with 'Waverley,' and closing with 'Woodstock.' The Author's additions will form about two of these Forty Volumes.

V. The edition is so far advanced at press, that regularity of publication may be depended on; and, to such subscribers as may wish to have some of the Novels complete on the appearance of the first volume of each respectively, the publishers have to state, that the whole of 'Waverley' may be had on the 1st of June, in 2 vols., for 10s.

And, in like manner,

GNV MANNERING, in 2 vols., on the 1st of August.

THE ANTIQUARY, in 2 vols., on the 1st of October.

BOB ROY, in 2 vols., on the 1st of December.

As well as such others, during the progress of the edition, as its arrangement enables the publishers to deliver in complete Tales.

The public are respectfully requested to inspect the designs and engravings at the premises of the publishers,

And at Moon, Boys, and Graves, Printers to his Majesty, 6, Pall Mall, London, by whom they will be sold separately, as well as afterwards announced.

Printing for Cadell and Co., Edinburgh; Simpkin and Marshall, London; and to be had of every Bookseller throughout the Kingdom.

TALES OF A PHYSICIAN.

On May 1. will be published, in 1 vol. crown 8vo., bds., 7s. 6d.,
TALES of a PHYSICIAN. By W. H. HARRISON; containing, The Victim—The Curate—The Gossip—The Fate of a Genius—Disappointments—The Neglected Wife—The Jew—The Stranger Guest—The Struggler.
London: R. Jennings, 2, Foultry.

THE BRITISH PRESERVE; comprising accurate Representations of Animals and Birds peculiarly the object of the Sportsman; drawn and etched in characteristic style by S. Howitt; with concise and familiar descriptions of the subjects, illustrative of their habits, manners, &c. By CHARLES ARMIGER. Royal sto., 11. 18s.

Contents: Fox—Badger—Otter—Hare—Rabbit—Stag—Fallow Deer—Roebuck—Wild Swan—Grey Wild Goose—Brant and Barnacle Goose—Wildrake and Pintail—Garganey and Teal—Sheldrake and Shoveler—Widgeon and Pochard—Heron—Bittern—Woodcock—Snipe and Jack Snipe—Curlew—Red and Grey Godwit—Ruffe and Reeve—Great Plover—Golden Plover and Lapwing—Coot and Moorhen—Cora Crane and Water Rail—Bustard—Wood Grouse—Black Grouse—Red Grouse—Partridge—Pheasant—Partridge—Red Partridge—Quail—Wood Pigeon.

Published by T. Griffiths, 3, Wellington-street, Strand; and may be had of any Bookseller in the Kingdom.

MR. J. B. CRANMER respectfully announces to the Nobility, Gentry, and his Friends, that his MORNING CONCERT will take place at WILKIE'S Rooms, King's-street, St. James's, on FRIDAY, MAY 1, 1830, to commence at Half-past One o'clock precisely.

ACT I.

Overture (Calypso.) Winter.
Duetto, Madame Stockhausen and Signor Donzelli (Armida.) Rosini.
Concertino in E flat, Pianoforte, Mr. Cramer. Cramer.
Song, Mrs. W. Knuytt, 'I'm thine, ever thine.' (From a volume of selected melodies.) Cramer.
Fantasia, Flute, Mr. Nicholson. Nicholson.
Song, Mr. Phillips, 'The Maid of Llanwellyn.' J. Clarke.
Grand Scene, Madame Camporese, with accompaniment obligato for the Clarinet by Mr. Willman. Mozart.

ACT II.

Song, Madame Stockhausen.
Second Concerto in D minor Pianoforte (by desire), Mr. Cramer. Cramer.
Air, Miss Marian Cramer. Mozart.
Scene, Signor Donzelli, with accompaniment obligato for the Harp by Mr. Wright. Meyerbeer.
Quartetto, Pianoforte, Viola, Alto, and Violoncello, by Messrs. Cramer, P. Cramer, Moralt, and Lindley. Mozart.
Finale. Beckwith.
Tickets, half-a-guinea each, to be had at all the principal music shops, and of Mr. Cramer, 201, Regent-street.

THE BLUE PILL AND CALOMEL SUPERSKIDED.

AMPLE experience has fully established the very important fact, that the Chirayita herb essentially deteiges the liver and promotes a healthy secretion of bile than the Blue Pill or any other preparation of Mercury, and at the same time strengthens the digestive organs and the nervous system, and regulates the bowels; and hence its salutary effects in establishing the general health in cases of indigestion of the liver and nervousness is permanent. The peculiar detergent and stomachic properties of the Chirayita were first noticed by Dr. Fleming in 'the Asiatic Researches,' and lately by Dr. Baker, in 'The Lancet,' &c. &c. Dr. Johnson, in 'The Medico-Chirurgical Review,' by Dr. Kluge, lake, Rees, Sully, &c., in 'The Monthly Gazette of Health,' and by several eminent physicians of the East Indies, who have found it in bilious affections more efficacious than the blue pill or calomel, and at the same time entirely exempted from the objection made to the Blue Pill or any other preparation of mercury. Baker's tincture of Chirayita, which contains all the medical virtues of the herb, is sold, with directions for its use, by Sanger, 150, Oxford-street, London; by Milnes, Chemist, Bristol; Moxon and Co., Hull, &c. Price 1s.

FOR THE SKIN AND COMPLEXION.

ROWLAND'S KALYDOR, Patronised by the Royal Family, the Prince and Princess Esthary, the Prince and Princess Polignac, and the Nobility.

This valuable Specific is warranted perfectly innocuous, and possesses Balsamic Properties of surprising energy. It eradicates all Cutaneous Eruptions, Pimples, Spots, Redness, gradually producing a delicately clear soft Skin; transforms even the most Sallow Complexion into Radiant Whiteness; successively renders harsh and rough Skin beautifully soft, smooth, and even; imparts to the Face, Neck, and Arms, a healthy and juvenile bloom, and removes inflammation.

ROWLAND'S KALYDOR is equally indispensable in the Nursery as at the Toilet. Perfectly innocuous, it is recommended by the first physicians to be used by the most delicate lady or infant, with the assurance of safety and efficacy, possessing softening and healing properties. It gives, in cases of incidental inflammation, immediate relief; opens the mouth of the infant, and enhances maternal pleasure in the act of administering alimentary nourishment.

To Gentlemen whose Faces are tender after Shaving, it will be found excellent beyond precedent in ameliorating and allaying that most unpleasant sensation, the irritability of the skin.

Sold in Half Pints, at 4s. 6d. each; and Pints, at 8s. 6d. each.

CAUTION.—To prevent imposition, and by Authority of the Hon. Commissioners of Stamps, the Name and Address of the Proprietors is engraved on the Government Stamp, affixed on the Cork of each Genuine Bottle.

'A. ROWLAND AND SON, 24, HATTON GARDEN.'

London: Printed and Published every Wednesday Morning, by WILLIAM LEWIS, at the Office, No. 4, Wellington-street, Strand.

AND

LITERARY CHRONICLE.

No. 80.

LONDON, WEDNESDAY, MAY 6, 1829.

Price 8d.

THE HAMILTONIAN SYSTEM.

The History, Principles, Practice, and Results of the Hamiltonian System, &c. By J. Hamilton, author of 'The Hamiltonian System.' Sowler. Manchester, 1829.

THERE can be no doubt that the nineteenth century is, *par excellence*, the Mechanical Age. The most vehement flatterer of the present times dare not affirm that we have discovered any Objects of which our fathers had not intuition,—its most unsparing disparager cannot deny that there are in our power Means for effecting those objects which our fathers did not possess. It is impossible to fix upon any one great conception, and say, This is the property of the present age. And it is just as impossible to examine the history of those heroes of former times in whose minds great conceptions dwelt, and not to feel that had they been called to realise them in our days, they would have had infinitely fewer obstacles to hew down in their course, or infinitely better devices for overcoming them. In one sense, therefore, it may be no fault in us who live in these latter times,—though, perchance, a bitter misfortune,—that we are so emphatically mechanical. It may have been the especial vocation of a former period to originate mighty projects, and to bequeath them for an inheritance to us; it may be the humbler yet as needful task of ours, to contrive schemes for clothing with practical results what they left us in the naked magnificence of an idea. It is not for this that the good man faints or mourns, or murmurs; it is not because he is fallen upon a time when to concentrate the whole of his mind upon one mighty thought is almost impossible, from the multiplicity of outward relations that are distracting and harassing him; when to *originate* is a power, not, as was once the case, given to all who will scorn delights and live laborious days, but reserved for a few of the highest and most elect spirits,—that he claims a right to abuse his destiny. He is willing, if so it must be, to take the part which is assigned him, and steadily to act it out; he may look back for a moment, with a pardonable melancholy, at the time when there were giants on the earth, but it will be the melancholy resignation of Schiller, when, at the commencement of a work dedicated to the task of exhibiting the powers which are still laid up in human nature, he exclaimed, *Jene Zeiten sind vorbei jene Menschen sind nicht mehr*. But he has another and a far deeper reason for lamenting the tendency of that age wherein he is born, and in the infirmities of which he is a partaker. The experience of every day and every hour convinces him, that not merely by its striking out no idea of its own, or merely by its furnishing the material instruments for effecting those ends of which our ancestors furnished the spiritual conceptions, has the nineteenth century justly earned the title of Mechanical. Granted that this is as it should be, granted that it is a part of the order of nature that the fifteenth century should produce a Columbus, and that ours should produce steam-boats. But what if, being unable to frame our objects for ourselves, we have lost sight of those objects which our fathers discovered to us; what if, in the pride of our inventions, we have forgotten that on account of which they were invented; what if, after all, this vast machinery, in the construction of which we might well boast if it were applied to any worthy end, should turn out useless, or should only minister to vanity and

selfishness, because we have spent our time in comparing our ingenuity with the clumsiness of our ancestors, instead of studying their inventions to see what they were intended, though, perhaps, not well able to effect? Whether this be so or not, is an important question, under any view of the case. Above all, it is important for those to perpend, who boast that this is an eminently utility-seeking, practical age. Press these persons for the reason of their faith, and the answer always is, Do you not consider that a man gives a proof of practical wisdom who performed by a very brief process, that which his ancestors performed by a very long process? Or do you consider there is some particular virtue in long processes? Now it would rather blunt the edge of these pointed interrogations, if it should unfortunately be determined that the thing which we are doing, and the thing which our ancestors were doing, are totally different things. It would, at any rate, destroy the force of the comparison, for no one will contend, that, if their object was to find Westminster Abbey, and ours to find the first of April, that there can be any very exact parallel between the methods taken to accomplish their two intentions. But it would do something more; for it seems to be implied in the boast, that we are doing, in a short time, what our ancestors did in a long time; that we mean and ought to be doing the same thing. If, therefore, it should turn out that we and they were bound in quite different directions, all this fine talking about the marvellous rapidity with which we are moving to the point of our destination, will be somewhat impertinent, seeing that we are not moving by any means to that point, but to some other, quite wide of it.

Our present intention is to examine this question in reference to one of the most important subjects upon which, we of the enlightened age, and our forefathers of the unenlightened ages, are at issue. We have before us several pamphlets giving an account, not of the newest, for

'the last minute's puff
Doth hiss the writer;'

but the most lauded and popular of all the modern schemes for communicating a knowledge of languages. The praise put forth in behalf of this system by the author, in his four thousand advertisements, and in two reviews which have volunteered articles on the subject, is this,—that Mr. Hamilton effects, in three or four months, that object, which the scheme of instruction adopted at our public schools, effects in two or three years. Now, from what we have said already, our readers will see the course of the inquiry we mean to institute. Firstly, we wish to know whether Mr. Hamilton does propose the same object to himself as was proposed by the founders of our public schools. Secondly, if not, what is the character of his system, and in what sense will it convey a knowledge of languages. And thirdly, upon what principles ought we to proceed, if we would introduce reforms in the system of education. We can, of course, but faintly indicate our opinions upon all these subjects, but we will try to be as explicit as is possible within the very narrow limits to which we are confined.

There is not a proof of more miserable stupidity, of greater incapacity for judging the feelings of another age except by the standard of our own, than is furnished by those who assign, as the reasons

for our ancestors making language the key-stone of education, that it was the only study which it was possible for sensible men in that ignorant period to hold in esteem—that it is likely to advance the interests of their pupils in the world, or that it would bring them acquainted with a literature the merits of which were then first bursting upon their view. The assertion that there were no other studies in the middle ages, besides languages, in which men took interest, is too laughable to need refutation; and, if it had not been urged a thousand times over in different forms, would have seemed too monstrous to be produced in grave discussion. The notion that a knowledge of languages, and especially of the ancient languages, was thought useful, because it would forward men's interests in an age when commerce was in its infancy, when the last thing that men thought of was, how they might strengthen distant social relations, and when, if they had made that a primary object, their simplicity would have led them to adopt the more direct method of enforcing attention to the languages of Europe;—this notion, we say, may be fairly dismissed with the same indifference and contempt as the former. And, lastly, if some persons in our own day, not remarkable, on ordinary occasions, for too fierce a support of morality and religion, have talked about the danger of putting the immoral Pagan classics into the hands of youth, we may imagine that this feeling, at least, as strongly pressed upon the conscience of a pious, or, if you like it better, a superstitious age, and was in their minds a very considerable set-off (larger than it should have been) against any over-respect they might feel for the literature of Greece and Rome. If our ancestors had set themselves upon any one of these grounds to weigh the evidence in favour of and against the learned languages, it is not too much to affirm that they would have decided against them, far more resolutely, far more instantaneously, than we, in our times, could possibly do. The truth is, that nearly all the arguments drawn from the practical advantages of a knowledge of the tongues to the merchant, the lawyer, and so forth, which many advocates of the present system now-a-days put forward in its support have grown true since, and were actually unknown to those ancestors whom they are supposed to have determined in its favour. Seek as you will, you can find no clearer exposition of their design than this, that, as they felt language to be the organ whereby the thoughts and feelings of humanity are expressed, so, in the study of it, they felt that more thought and feeling, more essential humanity, is called forth, than by any other study whatever; in other words, that *no study contributes so much to the formation of a manly character*.

We see the grin upon the face of that debating-society urchin as we enunciate the words, and we can foretell the answer (for we know the ways of the beast) which he is about to snort out. 'Indeed!' he will say, 'Their object then, if I understand you, was to form a manly character by the study of the *Propria quæ maribus*. They were foreseeing people, those ancestors, doubtless!' Pert idiot! stand still while we brain you with your great-great-grandmother's fan. We presume, you who rise every night at your club to praise the nineteenth century, suppose it has some particular advantages over its predecessors. Have you the least notion what these advantages are with respect to the cotton trade, to take in,

stance which you will possibly understand what is the merit of this age? Is it that it introduced the trade, or that it introduced spinning jennies? And is not the same true generally? Do you not, in extolling the age, mean to extol it for this,—that it has invented better schemes for effecting certain ends than any former one? Because, if you do not mean this, you mean nothing; since that is the distinction which all men of all opinions who are acquainted with the subject, admit to belong emphatically to our time. Then do you not see that you are uttering extreme nonsense when you bring it forward as a confutation of the claims of a former age to the discovery of a principle, that it did not discover the best means to gain that principle efficiency? Do you not see that if it had, your age's occupation would have gone, and what is more painful, that the occupation of its panegyrist would have gone likewise.

'Oh, then, you do admit that it is possible the methods of teaching may be shortened. Then it is only a difference of words after all.' 'Not quite, Orator, any more than it would be a mere difference of words between Sir Richard Arkwright, who should propose to invent spinning-jennies, which would shorten the labour of making cotton, and some other enlightened individual like yourself, who should boast that he could shorten the labour immensely by making fleecy hose instead of it. What we say is, that the principle of our ancestors was that language was to be taught to youth as the best intellectual discipline that can be resorted to for creating a manly mind and character. Keep this end steadily in view; and then apply your nineteenth century methods as you will. But there is still an objector undaunted by the discomfiture of his predecessor. This objector is a metaphysical one; so it behoves us to keep on our best behaviour, and listen to him, for no doubt he is a great oracle in his coterie. His objection is on this wise,—that, as our ancestors did not possess the powers of analysing human nature so well as we possess them, ergo they could not tell so well as we whether language was so intimately connected with human nature; ergo they could not be so good judges whether the study of language was a proper branch of early education. We will grapple too with this learned Theban. Analysis, we presume, must always be of something existing, and analysis of the human mind presumes the human mind to exist. But, as the existence of mind is nothing else than its feelings, its consciousness, the analysis of the human mind must be the analysis of what it feels and is conscious of. This being the case, we cannot, for our lives, see how analysis is to help us in the present emergency. Our ancestors felt strongly the connection between language and thought: we all acknowledge the fact, so we cannot as we are in the habit of doing, when others proclaim experiences which we have not, doubt the possibility of its being felt; and our ancestors evidently did feel it in a most living sense. They could not analyse the feeling: poor creatures, how sorry we are for them! Yet seeing they were certain of this connection between thought and language, seeing that they knew from their own experience how in the perception of language they became conscious of more feelings, of more life, than in the perception of any thing else whatever, we do not exactly see how the want of a faculty which should determine of what elements this feeling is composed, could destroy its virtue or hamper its practical use. But then, is not analysis wanted to come in between the feeling of the use of language in calling out thought, and the conclusion founded upon it that the study of language should become a principal branch of education? How could it come in? We feel that the perception of language is, for certain ends, useful. Surely the very next thing is to give that perception, by the best means we know of, to those who it is desirable should seek those ends. If analysis breaks this connection between the feeling

and the action, it is perfectly epistodical; unless, indeed, it came in for its legitimate purpose of fixing what are the best means for giving the action efficiency; and that we have shown already is not the question now at issue between us.

So far, we think, we have sufficiently vindicated the propriety of adhering, in this case, to the general rule we laid down at the beginning of this article, that the determination of objects should be entrusted to our ancestors, and the selection of means undertaken by ourselves. But a candid querist might interpose a very fair objection before we proceed to the next step. The selection of two particular languages, Greek and Latin, for the purpose you have mentioned, to which class does it belong, means or ends? If to the former, your defence of the present system is inadequate; if to the latter, you must show how you make it out. We admit that this point does constitute a debateable land between the two provinces which we have respectively assigned to our ancestors and ourselves. But we contend, that, even if it lies no nearer to them than to us, yet that its separation will much more affect the integrity of their territory than of ours. Our reason is this. The idea of our ancestors was to teach languages for the purpose of moulding a manly character. Now, to the completeness of this idea it was necessary that the languages selected should be such that there would not be any so great collateral advantages resulting from the study of them as would, in the minds of the pupil or the teacher, ever take precedence of this one mighty object. Whether it was this recollection which determined our ancestors against adopting the modern languages into their scheme of education, instead of the ancient ones, we do not say. Possibly not; for, at that time, the collateral advantages resulting from them were comparatively trifling. But there was a prophetic spirit in those elder men, by which, on this, if not on many other occasions, we have profited. Or, if we must suppose it merely a blind instinct which led them, we must be grateful to that divinity which provided against the risk of our losing all sight of the true ends of education, by stirring up our ancestors to make the schools which their piety endowed, places for communicating a knowledge which, as it savoured not of the ledger and the counting-house, as it tended not to the satisfaction of man's physical wants, or to the cultivation of his appetite for honours and distinctions, proclaimed aloud that he was born 'for something better than to live and die.'

[We have thought it better to cut short our contributor's review at the first stage of his argument, as its extreme length made it impossible to insert it in one, or, we fear, even in two numbers.]

ALL FOR LOVE.

All for Love; and the Pilgrim to Compostella. By Robert Southey, Esq., LL.D., Poet Laureate, &c. Post 8vo. pp. 221. Murray. London, 1829.

THERE is not one living character which has been subject to such minute and unceremonious dissection as Mr. Southey's. The reasons are sufficiently obvious. His enemies he has provoked to look for defects in himself by not showing much mercy in his treatment of them; to his friends he has exhibited qualities which might well tempt them to believe that a further investigation could be well repaid by the excellencies which it must disclose; and the mere philosophical analyst has been sufficiently tempted by the curious and paradoxical appearance of the subject.

We boast, that after much toil and hard thinking, after hearing a thousand contradictory opinions, and changing our own with the last which was broached in our presence, we have at last arrived at a rational theory of this difficult character; and we shall not surprise those who have done us the honour to peruse the remarks which we have ventured on Mr. Southey's writings

in former Numbers, when we say that that theory inclines most decidedly to the side of charity. That the Quarterly Reviewer, the panegyrist of Laud, the reviler of Milton, is not in feeling so utterly at war with the person whom the united voices of all his friends proclaim to be the most amiable and benevolent of men, as to make it needful that we should have recourse to the hypothesis of a double soul; that his reasoning powers are in fault whenever he is in error; and that his heart is only answerable for his adopting a tone of vehemence which those who are less honestly and earnestly wrong than he is do not affect—this has long been our creed; and it is one which, we believe, is becoming every day more prevalent among those whose opinions are most worthy of consideration. So, all is clear; but here we stop. If we are called upon to define what the peculiarities of that intellect are which we have so coolly laden with all Mr. Southey's enormities, we honestly confess that we are at a loss. And there is this peculiarity about the case,—that whereas, in other instances, some assistance is generally obtained in discussing the abstract qualities of a man's mind by observing how these qualities, when they are brought out in speaking or writing, affect us, here the great difficulty is to know how they do affect us. In general, one can say, 'This novel and this poem produced such and such influence upon me—what am I thence to infer respecting the author?' But here there is a long question to settle first. We find the greatest difficulty in saying what feelings we experience when we read Mr. Southey, and, most of all, when we read his Poetry. We will talk over his poems, one by one as we remember them.

Is there a single man in England who could give a conscientious opinion upon 'THALABA'—a single man who knows what is his own opinion upon it? There are few among us who have not read it more than once, and yet which of us can say that any portion of it lives in his mind? What sudden light has flashed from its pages, revealing to us wonders in some spot of nature which we had gazed at for a thousand times, but on which, till then, some thick shadow had always rested? What deep truth in our own minds has it at once brought within the sphere of our consciousness, startling us 'like a guilty thing surprised?' What shocks have we experienced in reading it from that electrical chain of analogies by which the whole universe and our own natures are invisibly linked together? And then, how few of the substitutes for those high qualities of poetry does this strange composition contain! There is neither the literal veracity of Scott, appealing to the matter-of-fact part of our mind; nor the ingenious unreality of Moore, appealing to our artificial tastes; nor the boiling foam of Byron's, appealing to whatever in us is heterogeneous and discordant. And yet, with all this absence of the higher attributes of poetry, and of their plausible counterfeits, is there any one who has not a pleasing impression of 'Thalaba?' any one who would not turn away with a feeling of annoyance from the critic who should endeavour to wring from him a confession, that he had been admiring he knew not what?

'MADOC' stands on a different footing. We object decidedly to be catechised about our feelings respecting that poem likewise, but for another reason; namely, that we fear we should commit some blunders in our account of it; since, owing to an infirmity of nature to which we are subject, we were never able to accomplish the reading of it.

Then comes 'KEHAMA;' and who shall gainsay us when we proclaim that to be a noble poem, full of rich colouring and gorgeous pageantry; denoting a quaint fancy, and a most rare invention? Is there nothing more? We have always thought so, and think so we will in spite of all theories to the contrary; and yet, we cannot exactly at this moment fix upon the passages by which we should at once prove, to the utter con-

fusion of all scoffers, and to the great strengthening of our own faith, that there really is existing in Mr. Southey, and manifested in this his best work, that 'shaping spirit of imagination' which creates, not the machinery, but the thoughts of a poem, as it constitutes the life of the poet. But why not attribute this to our own lack of memory? and why suffer ourselves to be further disturbed with the thought that the admiration of the book may have been increased by the circumstance of its containing a most delightful collection of Glendoveers and Lemons, who have often stood us in admirable stead when we have been at a loss for a simile; and who, moreover, we found would disentangle themselves more easily than will the conceptions of some poets that we know of from the context.

Last comes,—but whether last will go, is a question yet to be determined—'RODERICK THE GORN.' And surely, while the ocean-music of that passage,* which all our readers have by heart, is still ringing in our ears, and while that splendid horse curls his majestic neck, and shakes his mane before our eyes; neither the recollection of the struggle which we maintained against our fleshly eyes before we could teach them to remain open at all parts of the volume; nor of the sinking of soul which we have experienced more in Mr. Southey's writings than in those of any other man, and more in this book than in any other of Mr. Southey's writings, when a thought which seemed to be blazing gloriously upwards has suddenly gone out with feebleness and smoke; nor the painful dissatisfying rhythm, less free, and varied, and Miltonic, than even the ordinary blank verse of our days;—not all this shall induce us to lift up our voices against the praises which have been heaped upon it by its most fervent and passionate admirers.

That there is a spirit of malignity prevailing against Mr. Southey in certain quarters, we know well; and this spirit may seek gratification, if it will, in pulling to pieces his laureate poems. We do not believe that they can find their account in so doing, for there are only two ways in which any inference can be drawn from such productions which will affect the talents of the author. If they are less good than other compositions of the like kind by other hands, this, though it will not take from his reputation for any higher quality, will at least show that he was deficient in a certain mechanical readiness which they possessed. If these compositions are not worse than the other literary compositions of the author, they will furnish a fair presumption that he was made to run in a go-cart, and that he is unfit to run alone. Now both these tests Mr. Southey can stand. His birth-day odes are not worse in their generation, but better, than those of his predecessors; so that there is no reason to accuse him of wanting any knack or diligence which belonged to them. And by common consent the difference between these poems and those which are properly speaking Mr. Southey's, is much greater than that which existed between the bidden numbers and the voluntary numbers of any preceding laureates. Compare the verses of Wharton, or Pye, or Settle, when they are executing a government order, with those which they wrote at the dictation of their Muse, whoever she may have been; and the interval between them is scarcely discernible. Compare 'The Vision of Judgment' with 'Roderick,' or the 'Carmen Triumphale' with many of his Metrical Ballads; and you will require a knowledge of the circumstances under which they were respectively written, to believe that they proceeded from the same author.

The mention of METRICAL BALLADS reminds us that we have neglected to mention one of Mr. Southey's highest poetical claims upon our esteem. His ballads are by far the best that have been written in our day. We do not, of course, include among the authors with whom we

compare him, Wordsworth, whose wonderful talent has created a new species of ballad altogether,—one which expresses perfectly whatever is purest in the spirit of our day, as the best ballads of the olden time, expressed what was most excellent in theirs. We merely place him by the side of those who have laboured to restore the old ballad, and to bring back to us, as nearly as may be, the times in which it originated. Of these infinitely the truest and the heartiest, the one who has felt the beauty of his models most keenly, and has followed them with the greatest courage and the least slavishness, is Mr. Southey. In summing up, then, the opinions which we have expressed in detail, what shall we say of Mr. Southey as a poet? That—we will proceed to 'All for Love, and the Pilgrim of Compostella.'

We will tell our readers the story of the first of these poems—its merits they shall judge of from the extracts. A young freed man, hight Eleëmon, falls in love with his mistress Cyra, who is unfortunately about to take the veil. He takes the natural course under such distressing circumstances, and applies for assistance to the devil. Satan is very good-natured, and, after a few pertinent remarks upon the great advantages which he has derived from the common habit among mankind of falling in love, consents to Eleëmon's prayer upon the usual terms. The bond is signed, sealed, and delivered; and that night, Cyra, who is sleeping in the light of her earlier thoughts, is visited by a dream. The next morning she intimates with great delicacy to her father that she cannot go through the ceremony which was appointed for the following day, seeing that she has been convinced by the visions of the night that she was destined to another spouse than the one to whom she was about to be united in the convent. The fair narrator added that all doubt in her mind about the course she ought to pursue was removed by the nocturnal visitor pronouncing very distinctly the name of Eleëmon, and likewise by his pointing to certain rosy-cheeked animals in the distance, an evidence Cyra inferred with that rapid intuition for which her sex is remarkable, that something beyond spiritual wedlock must have been in his thoughts. Now it happened, strangely as it would appear if we were not in the secret, that her venerable father had been favoured with a vision to precisely the same purpose the same night, so that, instead of there being any difficulty on his part, he is in the best humour possible. Arrangements for the change of nuptials are immediately ordered, and the day upon which Cyra was to have been devoted to the Church, she is devoted to the devil's bondsman.

Well, in spite of the great red spot upon Eleëmon's breast, which Satan's finger had left there, the couple live, and, to all appearance, happily for twelve years; and Eleëmon makes such an excellent husband, that we really tremble lest the young ladies of our day should be induced to look out for persons in his circumstances, which, in the long run, we fear, would not be for their interest. At the end of these twelve years, her father dies, and is buried. A short time after that event, he appears to Cyra and Eleëmon in the night, and directs the former to make particular inquiries about the damned spot on the breast. Thereupon, as soon as he wakes, she commences her catechism; and, in due time, by the use of woman's arts, wrings from him the confession of the crime which he had committed for her sake. The lady sees that not a moment is to be lost: so she takes him at once to Bishop Basil. The good Bishop has very little hope; nevertheless, he gives the poor man what encouragement he can; and he and his wife begin in good earnest to pray for the removal of the curse. In time, Eleëmon's penitence became so sincere, and his intercession so earnest, that Satan, in considerable alarm for the consequences,—an alarm which he conceals under his usual

sardonic grin,—makes his appearance, and, after indulging in some severe remarks upon the attempt to deprive him of his rightful slave, openly challenges Basil to an argument upon the validity of the bond. The cause comes on for hearing the next day, in a church; Satan, it appears, having waived his right to take exception against the character of the court. The rest Mr. Southey shall tell in his own language; and we are sure our readers will agree with the Devil in his opinion of the profession for which the defendant's counsel was naturally destined.

'The church is fill'd, so great the faith
That city in its bishop hath;
And now the congregation
Are waiting there in trembling prayer
And terrible expectation.

'Emmelia and her sisterhood
Have taken there their seat:
And choristers and monks and priests,
And psalmists there, and exorcists,
Are stationed in order meet.

'In sackcloth clad, with ashes strewn
Upon his whiter hair,
Before the steps of the altar,
His feet for penance bare,
Eleëmon stands a spectacle
For men and angels there.

'Beside him Cyra stood, in weal
Or woe, in good or ill,
Not to be severed from his side,
His faithful helpmate still.

'Dishevelled were her raven locks,
As one in mourner's guise;
And pale she was, but faith and hope
Had now relumed her eyes.

'At the altar Basil took his stand;
He held the Gospel in his hand,
And in his ardent eye
Sure trust was seen, and conscious power,
And strength for victory.

'At his command the chorister
Enounced the prophet's song,
"To God our Saviour mercies
And forgivenesses belong."

'Ten thousand voices joined to raise
The holy hymn on high:
And hearts were trilled and eyes were filled
By that full harmony.

'And when they ceased, and Basil's hand
A warning signal gave,
The whole huge multitude was hushed
In a stillness like that of the grave.

'The sun was high in a bright blue sky,
But a chill came over the crowd,
And the church was suddenly darkened,
As if by a passing cloud.

'A sound as of a tempest rose,
Though the day was calm as clear;
Intrepid must the heart have been
Which did not then feel fear.

'In the sound of the storm came the dreadful Form;
The church then darkened more,
And He was seen erect on the screen
Over the holy door.

'Daylight had sickened at his sight;
And the gloomy presence threw
A shade profound over all around,
Like a cheerless twilight hue.

"I come hither," said the demon,
"For my bondsman Eleëmon!
Mine is he, body and soul.
See all men!" and with that on high
He held the open scroll.

'The fatal signature appeared
To all the multitude,
Distinct as when the accursed pen
Had traced it with fresh blood.
"See all men!" Satan cried again,
And then his claim pursued.

"I ask for justice! I prefer
An equitable suit!
I appeal to the law, and the case
Admitteth of no dispute.

"If there be justice here,
If law have place in Heaven,
Award upon this bond
Must then for me be given.

* See Roderick, book 2.

"What to my rightful claim,
Basil, canst thou gainsay,
That I should not seize the bondsman,
And carry him quick away ?
"The writing is confess'd ;—
No plea against it shown ;
The forfeiture is mine,
And now I take my own !"
"Hold there !" cried Basil, with a voice
That arrested him on his way,
When from the screen he would have swoopt
To pounce upon his prey ;
"Hold there, I say ! Thou canst not sue
Upon this bond by law !
A sorry legalist were he
Who could not in thy boasted plea
Detect its fatal flaw.
"The deed is null, for it was framed
With fraudulent intent ;
A thing unlawful in itself ;
A wicked instrument,—
Not to be pleaded in the Courts—
Sir Fiend, thy cause is shent !
"This were enough ; but, more than this,
A maxim, as thou knowst, it is
Whereof all laws partake,
That no one may of his own wrong
His own advantage make.
"The man, thou sayest, thy bondsman is :
Mark now, how stands the fact !
Thou hast allowed,—nay, aided him
As a freedman to contract
A marriage with this christian woman here,
And by a public act.
"That act being publicly perform'd
With thy full cognisance,
Claim to him as thy bondsman thou
Canst never more advance.
"For, when they solemnly were then
United, in sight of angels and men,
The matrimonial band
Gave to the wife a right in him,
And we on this might stand.
"Thy claim upon the man was by
Thy silence then forsaken ;
A marriage thus by thee procured
May not by thee be shaken ;
And thou, O Satan, as thou seest,
In thine own snare art taken !"
"So Basil said, and paused awhile ;
The Arch-Fiend answer'd not ;
But he heaved in vexation
A sulphurous sigh for the Bishop's vocation,
And thus to himself he thought :
"The law thy calling ought to have been,
With thy wit so ready and tongue so free !
To prove by reason, in reason's despite,
That right is wrong, and wrong is right,
And white is black, and black is white,—
What a loss have I had in thee !"
"I rest not here," the Saint pursued ;
"Though thou in this mayest see,
That in the meshes of thine own net
I could entangle thee !
"Fiend ! thou thyself didst bring about
The spousal celebration,
Which link'd them by the nuptial tie
For both their soul's salvation.
"Thou sufferdest them before high Heaven
With solemn rights espoused to be,
Then and for evermore, for time
And for eternity.
"That tie holds good ; those rites
Will reach their whole extent ;
And thou of his salvation wert
Thyself the instrument.
"And now, methinks, thou seest in this
A higher power than thine ;
And that thy ways were overruled,
To work the will divine !"
"With rising energy he spake,
And more majestic look ;
And with authoritative hand
Held forth the Sacred Book.
"Then with a voice of power he said,
"The bond is null and void !
It is nullified, as thou knowest well,
By a covenant whose strength by Hell
Can never be destroyed !"

"The Covenant of grace,
That greatest work of Heaven,
Which whose claims in perfect faith,
His sins shall be forgiven !
"Were they as scarlet red
They should be white as wool ;
This is the All-mighty's covenant,
Who is All-merciful !
"His Minister am I !
In his All-mighty name
To this repentant sinner
God's pardon I proclaim !
"In token that against his soul
The sin shall no longer stand,
The writing is effaced, which there
Thou holdest in thy hand !
"Angels that are in bliss above
This triumph of Redeeming Love
Will witness, and rejoice ;
And ye shall now in thunder hear
Heaven's ratifying voice !"
"A peal of thunder shook the pile ;
The Church was fill'd with light,
And when the flash was past, the Fiend
Had vanished from their sight.
"He fled as he came, but in anger and shame,
The pardon was complete
And the impious scroll was dropt, a blank,
At Eleemon's feet.
"The Pilgrim of Compostella" is not equal to
its predecessor ; for Mr. Southey never succeeds
well without infernal assistance. There are, how-
ever, three or four miracles which, in some mea-
sure, atone for this deficiency. The story is very
simple :—The pilgrims, a father, mother, and son,
on their way to the shrine of Compostella, stop at
an inn. At this inn is a female, whose dispositions
are thus revealed to us by Mr. Southey :
"Now, the inkeepers, they had a daughter,
Sad to say, who was such another
As Potiphar's daughter, I think, would have been,
If she followed the ways of her mother."
This naughty young lady, having in vain assailed
the virtue of the more youthful pilgrim, denounces
him to the Alcayde as a thief ; the Alcayde con-
demns him, and he is hung ; having first exacted
a promise from his parents that they will proceed
on their journey. They do so ; and, on their re-
turn, they still find their son hanging in great
comfort upon the gallows, and are consoled by his
positive assurance,
"That he could not complain he was tired,
And his neck did not ache in the least."
The parents go to the Alcayde, who is at dinner,
and mention the circumstance. He disbelieves it,
and says, he could as soon believe that the fowls
upon his dish would start to life as that Pierre was
still breathing. The consequences of this rash re-
mark are detailed in the following lines :
"Four weeks they travelled painfully,
They paid their vows, and then
To La Calzada's fatal town
Did they come back again.
"The mother would not be withheld,
But go she must to see
Where her poor Pierre was left to hang
Upon the gallows tree.
"Oh tale most marvellous to hear,
Most marvellous to tell !
Eight weeks had he been hanging there,
And yet was alive and well !
"Mother," said he, "I am glad you're
return'd,
It is time I should now be released :
Tho' I cannot complain that I'm tired,
And my neck does not ache in the least.
"The sun has not scorched me by day,
The moon has not chilled me by night ;
And the winds have but help'd me to swing,
As if in a dream of delight.
"Go you to the alcayde,
That hasty judge unjust :
Tell him Santiago has saved me,
And take me down he must."
"Now, you must know the alcayde,
Not thinking himself a great sinner,

Just then at table had sat down,
About to begin his dinner.
"His knife was raised to carve
The dish before him then :
Two roasted fowls were laid therein ;
That very morning they had been
A cock and his faithful hen.
"In came the mother wild with joy ;
"A miracle !" she cried ;
But that most hasty judge unjust
Repell'd her in his pride.
"Think not," quoth he, "to tales like this,
That I should give belief !
Santiago never would bestow
His miracles, full well I know,
On a Frenchman and a thief."
"And pointing to the fowls, o'er which
He held his ready knife,
"As easily might I believe
These birds should come to life !"
"The good Saint would not let him thus
The Mother's true tale withstand ;
So up rose the fowls in the dish,
And down dropt the knife from his hand.
"The cock would have crowed if he could ;
To cackle the hen had a wish ;
And they both slept about in the gravy
Before they got out of the dish.
"And when each would have opened its eyes,
For the purpose of looking about them,
They saw they had no eyes to open,
And that there was no seeing without them.
"All this was to them a great wonder ;
They staggered and reeled on the table ;
And either to guess where they were,
Or what was their plight, or how they came there,
Alas ! they were wholly unable :
"Because, you must know, that that morning,
A thing which they thought very hard,
The cook had cut off their heads,
And thrown them away in the yard.
"The hen would have pranked up her feathers,
But plucking had sadly deformed her ;
And for want of them she would have shivered with cold,
If the roasting she had not warmed her.
"And the cock felt exceedingly queer ;
He thought it a very odd thing
That his head and his voice were he did not know where,
And his gizzard tucked under his wing.
"The gizzard got into its place,
But how Santiago knows best :
And so, by the help of the Saint,
Did the liver and all the rest.
"The heads saw their way to the bodies,
In they came from the yard without check,
And each took its own proper station,
To the very great joy of the neck.
"And in flew the feathers, like snow in a shower,
For they all became white on the way ;
And the cock and the hen in a trice were refledged,
And then who so happy as they !
"Cluck ! cluck ! cried the hen right merrily then,
The cock his clarion blew,
Full glad was he to hear again
His own cock-a-doo-del-doo !"
The rest of the poem is occupied with accounts
of the canonisation of the Cock and Hen, and
the fame of their posterity.

THE MISFORTUNES OF ELPHIN.

The Misfortunes of Elphin. By the Author of Headlong Hall. Hookham. London, 1829.

WE have certainly not shown with any un-
wonted alacrity the great pleasure which we felt
at receiving the first work which the author of
'Headlong Hall' has subjected to our criticism.
If it were as easy to write a good as a bad novel,
we might institute an unfavourable comparison
between the indolence or sterility of this gentle-
man and the prolific industry of his contem-
poraries. That a novelist of considerable repu-
tation should appear before us for the first time
in the 18th month of our reign, and present us with
a widely-printed duodecimo of 240 pages, is con-
trary to the spirit of the nineteenth century. In
the same period of time, we have received more
than one tribute of greater magnitude from most

of his fellow-labourers. We have seen the rise, the progress, and even the fall, of romantic reputation. The one anonymous volume of a first publication has been expanded by a more practised dullness into three, or been dilated into a new being by the additional tedium of a fourth. The awkwardness of juvenile insipidity has not unfrequently, in the course of a year, ripened into the flippancy of anility; and the sentimental of January, after greeting us in the summer with the slang of fashion, has returned at Christmas to dogmatise in slip-slop on metaphysics and morality. The supply of light literature for the unrestricted demand for absurdity, has increased at a rate that gives us an astounding idea of the infinite deteriorability of the human wit. The splendid monuments of pejority which are daily evolved from the press, induce us to hope that we shall, ere long, realise the great ideal '*pessimus*,' the object of so many labours. And it is with pleasure that we see our popular writers of both sexes working so heartily for this great object, and sharing the elephantine gestation of yore by the multiplicity of their auricular parturitions.

The author of '*Headlong Hall*' apparently labours for a different end. He has not those intellectual weaknesses which require the relief of such constant discharges: he appears to wish rather to fulfil his own idea of excellence than to be content with satisfying the moderate demands of a publisher. He is one, accordingly, of that rare class whom the facility of obtaining approbation in the present day has not rendered unmindful of deserving it. Hence, also, he is, of all contemporary novelists, the one whose general popularity bears the most insignificant proportion to the esteem in which he is held by the thinking portion of the reading public. His wit would be more admired, if it were employed on subjects of less philosophical speculation: his humour, to be popular, must be more gross; his knowledge more ostentatiously exhibited; and his fine imagination totally freed from the restraints which are imposed on it by a taste truly classical. As it is, he must consent that his writings should be praised more than they are read, and read more than they are understood.

It is some excuse for this, that, in addition to his merits, the works of the author of '*Headlong Hall*' have never developed, in any great degree, the quality which is the most essential to the success of a novel, and which is really that most requisite to constitute excellence. In none of his novels does the story excite our interest: the different incidents are well told, but their nature and connection are such that one seldom appears to have been produced by another, or excites any curiosity for that which is to follow. In that pleasing work, '*Maid Marian*,' this fault is particularly obvious. It is a series of tales respecting the same persons, but with so little connection besides the identity of the actors, that we are actually annoyed very often that there is not some more formal mark of separation between the different stories. It is true, that from their peculiar merits these novels seldom suffer much from the want of a better constructed plot; but it is a deficiency which is, of all, the most likely to be perceived by the generality of readers. That the author might, if he chose, fully satisfy them, is obvious, because to compose a plot that shall interest is very easy. But we know not whether he possesses the power of composing a perfect story—a power which Aristotle justly considers the greatest excellence of a poet.

It is very rarely that our author has had any opportunity of displaying any great degree of dramatic skill in the development of characters. The personages who appear in his novels are not introduced to express the feelings of human beings in particular situations, but merely to give utterance to particular classes of opinions. They are not men and women who act and feel—they merely ink and talk. The whole duty of his man is to

develop a system; and, if it is a man, it is Hume's man,—a bundle of ideas and opinions.

Now, though these are quite enough for the author's purpose, they do not satisfy the reader. We miss half of human nature in his human beings; we miss all the traits which distinguish individuals who hold the same opinions; we lose, in consequence, all the pleasure which is derived from forming distinct images of different personages, and observing the resemblance which the portraits bear to the originals which we find in nature. The beings whom he brings before us dwell not in our recollections as persons whose nature we have understood; they are alike imperfectly fashioned and unanimated boards, placarded with various systems, and distinguishable only by the difference of the doctrines which they expound. This fault is most obvious in that which is, perhaps, the best of his novels, '*Melincourt*;' in '*Nightmare Abbey*,' two or three of the characters are much more dramatically developed; and, indeed, the young Irish lady is a very nice person, and all but flesh and blood.

Interest in the story and in the characters, are the two feelings which the readers of novels are most easily brought to entertain, and which, when successfully excited, are the most pleasurable. It is no wonder, therefore, that the reading public should find some difficulty in discovering the merits of novels in which they are disappointed of the very qualities which they consider most essential to their amusement. The ridicule of systems and opinions is intelligible to those only who are familiar with their nature, and capable of perceiving their absurdity. It is the delicate wit with which our author has satirised the follies of various systems, the skill with which he has exposed some of the most prevalent forms of cant, that have been most relished by the better classes of his readers. We think that Swift himself hardly ever showed more power of eliciting the full quantity of absurdity contained in any system, than has been displayed by our author in his representation of Lord Monboddos's ape in '*Melincourt*,' his account of Cimmerian Lodge, and of the conversation between the partisans of things as they are, and his admirable description of the breaking of a country bank in the same work,—the dialogues of Mr. Escot, Mr. Foster, and the churchman in '*Headlong Hall*;' and the various arguments of Mr. Flokey, Mr. Too-bad, and Scythrop, in '*Nightmare Abbey*.'

We know not, however, whether this very prominent merit has not induced many of our author's admirers to overlook other excellencies, which, if less obvious, are at least of as high an order. His exquisite sense of the ridiculous and base is accompanied by an equally acute sense of the good and beautiful. Amid the constant wit and gaiety of his style, we can constantly discover an honest, manly, and truly moral strain of feeling, too much obscured sometimes by an unnecessary continuation of his usual irony, and perhaps intentionally disguised in order to avoid any semblance of ostentation and cant. That he has read much, and thought much and well, we can also perceive: he never laughs ignorantly at what is good, but is always instructive while he amuses. He has a sincere and pure love of nature, and he is one of those rarely-gifted persons who can accurately describe nature, because he can explain the feelings which have been excited in him by her presence. Add to this a merit rarer than any in the present day, that of expressing his ideas in plain and yet forcible language. His style is never deficient in vigour; but its copiousness is at the same time restrained by a perfectly classical simplicity of taste. The different parts of '*Maid Marian*,' in particular, are perfect models of narrative. The author has thoughts and feelings to express, yet he can express them without borrowing the style of any other person: he can tell his story in language always adequately descriptive of his meaning, without adopting the

simplicity of slip-slop, or the dignity of confusion and tautology.

'*The Misfortunes of Elphin*' is a work less likely to please than any of his former novels. The story is fully as meagre, and rather less connected than its predecessors: the characters are imperfectly developed, and there is much less of that obvious and continued satire which formed to most readers the chief attraction of his previous works. The story is laid in Wales; and it is no small objection to the work, that his former admirable nomenclature, which so much resembled Bunyan's, is replaced by the unintelligible cacophonies by which those of the Cymry, who possessed the faculty of speech, distinguished names and places.

The prosperity of the Plain of Gwaelod depended on an embankment, which was confided to the care of a High Commission of Embankment; and Elphin, one of the Kings of Gwaelod, being warned by mysterious voices of the danger of an inundation, walks with a friend to the castle of the Lord High Commissioner along the embankment:

'The sea shone with the glory of the setting sun; the air was calm; and the white surf, tinged with the crimson of sunset, broke lightly on the sands below. Elphin turned his eyes from the dazzling splendour of ocean to the green meadows of the Plain of Gwaelod; the trees, that in the distance thickened into woods; the wreaths of smoke rising from among them, marking the solitary cottages, or the populous towns; the massy barrier of mountains beyond, with the forest rising from their base; the precipices frowning over the forest; and the clouds resting on their summits, reddened with the reflection of the west. Elphin gazed earnestly on the peopled plain, reposing in the calm of evening between the mountains and the sea, and thought, with deep feelings of secret pain, how much of life and human happiness was intrusted to the ruinous mound on which he stood.'—Pp. 13, 14.

'*The Drunkenness of Seithenyn*.
'The sun had sunk beneath the waves when they reached the castle of Seithenyn. The sound of the harp and the song saluted them as they approached it. As they entered the great hall, which was already blazing with torchlight, they found his highness, and his highness's household, convincing themselves and each other with wine and wassail, of the excellence of their system of virtual superintendence; and the following jovial chorus broke on the ears of the visitors:

'*The Circling of the Mead Horns*.
'Fill the blue horn, the blue buffalo horn:
Natural is mead in the buffalo horn:
As the cuckoo in spring, as the lark in the morn,
So natural is mead in the buffalo horn.

As the cup of the flower to the bee when he sips,
Is the full cup of mead to the true Briton's lips:
From the flower-cups of summer, on field and on tree,
Our mead cups are filled by the vintager bee.

Seithenyn ap Seithyn, the generous, the bold,
Drinks the wine of the stranger from vessels of gold;
But we from the horn, the blue silver-rimmed horn,
Drink the ale and the mead in our fields that were born.

The ale-froth is white, and the mead sparkles bright;
They both smile apart, and with smiles they unite:
The mead from the flower, and the ale from the corn,
Smile, sparkle, and sing in the buffalo horn.

The horn, the blue horn, cannot stand on its tip;
Its path is right on from the hand to the lip:
Though the bowl and the wine-cup our tables adorn,
More natural the draught from the buffalo horn.

But Seithenyn ap Seithyn, the generous, the bold,
Drinks the bright-flowing wine from the far-gleaming gold:
The wine, in the bowl by his lip that is worn,
Shall be glorious as mead in the buffalo horn.

The horns circle fast, but their fountains will last,
As the stream passes ever, and never is past:
Exhausted so quickly, replenished so soon,
They wax and they wane like the horns of the moon.

Fill high the blue horn, the blue buffalo horn;
Fill high the long silver-rimmed buffalo horn:
While the roof of the hall by our chorus is torn,
Fill, fill to the brim, the deep silver-rimmed horn.

'Elphin and Telthrin stood some time on the floor of the hall before they attracted the attention of Seith-

enyn, who, during the chorus, was tossing and flourishing his golden goblet. The chorus had scarcely ended when he noticed them, and immediately roared aloud, "You are welcome all four."

"Elphin answered, "We thank you: we are but two."

"Two or four," said Seithenyn, "all is one. You are welcome all. When a stranger enters, the custom in other places is to begin by washing his feet. My custom is, to begin by washing his throat. Seithenyn ap Seithyn Saidi bids you welcome."—Pp. 15—18.

Seithenyn, on being informed of the dangerous state of the embankment, tells the alarmists that it works well; that parts are rotten and parts sound; and that the parts that are rotten give elasticity to those that are sound; in fact, that it works well. A storm, however, rises, the sea breaks over the mound, and the castle-wall is sapped by the waves. The retreat of Elphin and his companions over the broken mound is beautifully described:

"Another portion of the castle wall fell into the mining waves, and, by the dim and thickly-clouded moonlight, and the red blaze of the beacon fire, they beheld a torrent pouring in from the sea upon the plain, and rushing immediately beneath the castle walls, which, as well as the points of the embankment that formed the sides of the breach, continued to crumble away into the waters.

"Who has done this?" vociferated Seithenyn, "Show me the enemy."

"There is no enemy but the sea," said Elphin, "to which you, in your drunken madness, have abandoned the land. Think, if you can think, of what is passing in the plain. The storm drowns the cries of your victims; but the curses of the perishing are upon you."

"Show me the enemy," vociferated Seithenyn, flourishing his sword more furiously.

Angharad looked deprecatingly at Elphin, who abstained from further reply.

"There is no enemy but the sea," said Teithrin, "against which your sword avails not."

"Who dares to say so?" said Seithenyn. "Who dares to say that there is an enemy on earth against whom the sword of Seithenyn ap Seithyn is unavailing? Thus, thus I prove the falsehood."

And, springing suddenly forward, he leaped into the torrent, flourishing his sword as he descended.

"Oh, my unhappy father!" sobbed Angharad, veiling her face with her arm on the shoulder of one of her female attendants, whom Elphin dexterously put aside, and substituted himself as the supporter of the desolate beauty.

"We must quit the castle," said Teithrin, "or we shall be buried in its ruins. We have but one path of safety, along the summit of the embankment, if there be not another breach between us and the high land, and if we can keep our footing in this hurricane. But there is no alternative. The walls are melting away like snow."

The bard, who was now recovered from his *awen*, and beginning to be perfectly alive to his own personal safety, conscious at the same time that the first duty of his privileged order was to animate the less-gifted multitude by examples of right conduct in trying emergencies, was the first to profit by Teithrin's admonition, and to make the best of his way through the door that opened to the embankment, on which he had no sooner set his foot than he was blown down by the wind, his harp-strings ringing as he fell. He was indebted to the impediment of his harp for not being rolled down the mound into the waters which were rising within.

Teithrin picked him up, and admonished him to abandon his harp to its fate, and fortify his steps with a spear. The bard murmured objections: and even the reflection that he could more easily get another harp than another life, did not reconcile him to parting with his beloved companion. He got over the difficulty by slinging his harp, cumbersome as it was, to his left side, and taking a spear in his right hand.

Angharad, recovering from the first shock of Seithenyn's catastrophe, became awake to the imminent danger. The spirit of the Cymric female, vigilant and energetic in peril, disposed her and her attendant maidens to use their best exertions for their own preservation. Following the advice and example of El-

phin and Teithrin, they armed themselves with spears, which they took down from the walls.

Teithrin led the way, striking the point of his spear firmly into the earth, and leaning from it on the wind: Angharad followed in the same manner: Elphin followed Angharad, looking as earnestly to her safety as was compatible with moderate care of his own: the attendant maidens followed Elphin; and the bard, whom the result of his first experiment had rendered unambitious of the van, followed the female train. Behind them went the cupbearers, whom the accident of sobriety had qualified to march: and behind them reeled and roared those of the bacchanal rout who were able and willing to move; those more especially who had wives or daughters to support their tottering steps. Some were incapable of locomotion, and others, in the heroic madness of liquor, sat down to await their destiny, as they finished the half-drained vessels.

The bard, who had somewhat of a picturesque eye, could not help sparing a little leisure from the care of his body, to observe the effects before him: the volumed blackness of the storm; the white bursting of the breakers in the faint and scarcely-perceptible moonlight; the rushing and rising of the waters within the mound; the long floating hair and waving drapery of the young women; the red light of the beacon fire falling on them from behind; the surf rolling up the side of the embankment, and breaking almost at their feet; the spray flying above their heads; and the resolution with which they impinged the stony ground with their spears, and bore themselves up against the wind.

Thus they began their march. They had not proceeded far, when the tide began to recede, the wind to abate somewhat of its violence, and the moon to look on them at intervals through the rifted clouds, disclosing the desolation of the inundated plain, silvering the tumultuous surf, gleaming on the distant mountains, and revealing a lengthened prospect of their solitary path, that lay in its irregular line like a ribbon on the deep.—Pp. 47—53.

Elphin marries Angharad, daughter of Seithenyn, establishes a fishery, and one day catches, instead of a salmon, a boy, who turns out afterwards the famous Taliesin. The loves of Taliesin and Melanghel, the daughter of Elphin, the captivity of Elphin, and the exertion of Taliesin for his rescue, form the remainder of this small volume. The first chapter contains a description of the state of Wales at that time, full of our author's best style of satire on the manners of the present day. He thus defends the human sacrifices of the Druids:

"When any of the Romans or Saxons, who invaded the island, fell into the hands of the Britons, before the introduction of Christianity, they were handed over to the Druids, who sacrificed them, with pious ceremonies, to their goddess Andraste. These human sacrifices have done much injury to the Druidical character amongst us, who never practise them in the same way. They lacked, it must be confessed, some of our light, and also some of our prisons. They lacked some of our light, to enable them to perceive that the act of coming, in great multitudes, with fire and sword, to the remote dwellings of peaceable men, with the premeditated design of cutting their throats, ravishing their wives and daughters, killing their children, and appropriating their worldly goods, belongs, not to the department of murder and robbery, but to that of legitimate war, of which all the practitioners are gentlemen and entitled to be treated like gentlemen. They lacked some of our prisons, in which our philanthropy has provided accommodation for so large a portion of our own people, wherein, if they had left their prisoners alive, they could have kept them from returning to their countrymen, and being at their old tricks again immediately. They would also, perhaps, have found some difficulty in feeding them, from the lack of the county rates, by which the most sensible and amiable part of our nation, the country squires, contrive to coop up, and feed, at the public charge, all who meddle with the wild animals of which they had given themselves the monopoly. But, as the Druids could neither lock up their captives, nor trust them at large, the darkness of their intellect could suggest no alternative to the process they adopted, of putting them out of the way, which they did with all the sanctions of religion and law. If one of these old Druids could have slept, like the seven sleepers of Ephesus, and awaked, in the nineteenth century, some fine morning near Newgate, the exhibition of some half-dozen sunipundulous forgers might have shocked the tender bowels of his humanity, as much as one of his wicker baskets of cap-

tives in the flames shocked those of Cæsar; and it would, perhaps, have been difficult to convince him that paper credit was not an idol, and one of a more sanguinary character than his Andraste. The Druids had their view of these matters, and we have ours; and it does not comport with the steam-engine speed of our march of mind to look at more than one side of a question.

"The people lived in darkness and vassalage. They were lost in the grossness of beef and ale. They had no pamphleteering societies to demonstrate that reading and writing are better than meat and drink; and they were utterly destitute of the blessings of those 'schools for all,' the house of correction, and the treadmill, wherein the autochthonal justice of our agrestic kakistocracy now castigates the heinous sins which were then committed with impunity, of treading on old footpaths, picking up dead wood, and moving on the face of the earth within sound of the whirr of a partridge."—Pp. 89—93.

Elphin comes on a party of Britons, who, under the command of King Melvas, had just taken the castle of Dinas Vawr.

"The hall of Melvas was full of magnanimous heroes, who were celebrating their own exploits in sundry chorusses, especially in that which follows, which is here put upon record as being the quintessence of all the war-songs that ever were written, and the sum and substance of all the appetencies, tendencies, and consequences of military glory:

'The War-song of Dinas Vawr.'

'The mountain sheep are sweeter,
But the valley sheep are fatter;
We therefore deemed it meet
To carry off the latter.
We made an expedition;
We met a host, and quelled it;
We forced a strong position,
And killed the men who held it.

'On Dyfed's richest valley,
Where herds of kine were browsing,
We made a mighty sally,
To furnish our carousing.
Fierce warriors rushed to meet us;
We met them, and o'erthrew them:
They struggled hard to beat us;
But we conquered them, and slew them.

'As we drove our prize at leisure,
The king marched forth to catch us:
His rage surpassed all measure,
But his people could not match us.
He fled to his hall-pillars;
And, ere our force we led off,
Some sacked his house and cellars,
While others cut his head off.

'We there, in strife bewild'ring,
Spilt blood enough to swim in:
We orphaned many children,
And widowed many women.
The eagles and the ravens
We glutted with our foemen;
The heroes and the cravens,
The spearmen and the bowmen.

'We brought away from battle,
And much their land bemoaned them,
Two thousand head of cattle,
And the head of him who owned them:
Ednyfed, king of Dyfed,
His head was borne before us;
His wine and beasts supplied our feasts,
And his overthrow our chorus.'

Pp. 140—143.

From Melvas, Taliesin finally recovers Gwenyvar, wife of Arthur, who consequently releases Elphin; who shows his gratitude by giving Melanghel to Taliesin.

The translations or imitations of Welsh poetry, we must own, we do not much like, with the exception of the two songs which we have quoted. But, on the whole, though we consider this work in most respects inferior to the previous works of the author of 'Headlong Hall,' we recommend it to every person who can relish wit, humour, and exquisite descriptions, as a work of a very superior class to the popular novels of the day, and one which every father of a family may safely put into the hands of his children of either sex.

CANALS IN FRANCE.

Dissertation on the Canal of Provence. By M. Jules Juliani, Merchant, forming the third part of the Letters on Marseilles. Paris, 1829.

THE incalculable advantages of canals are become proverbial. Experience has long since proved them to us. We shall not, therefore, attempt to show how much they contribute to the glory and usefulness of nations; but we cannot refrain from recommending to our readers the above publication. After having traced the benefits of canals in general, and given an historical view of the ancient and modern canals of either hemisphere, the author goes into a detailed description of the works to be achieved in opening a canal to bring the waters of the Durance to Marseilles, and the immense advantages which the public will derive from it. This canal, which will necessarily have the greatest influence on the future condition of Marseilles, will commence at the rock of Cantepedrix, and fall into the sea at Aren, after having traversed in divers directions about 150 miles of country. It will serve the two-fold purpose of irrigation and navigation. The author, with equal profoundness and sagacity, makes it appear that this canal will treble the value of the surrounding districts, and will render Marseilles capable of being made a manufacturing town.

It is surprising that the formation of this canal should have been so long delayed, considering the extraordinary profits that the capitalists who undertake it will derive; for, according to the calculations made, it will produce an annual sum of 2,700,000 francs, while the expense of making it will only be 15,150,000 francs, leaving more than seventeen per cent.

We regret our inability to expatiate on a book which certainly does great honour both to the talents and the feelings of its author. It is an acknowledgment due to the city of Marseilles, which numbers among its inhabitants many men distinguished for their knowledge, their philanthropy, and their patriotism, among whom we instance with pleasure, M. Ant. Ancy, author of an excellent treatise on Infant Education, a work which should be in the hands of all classes of society, and of which an abridgment should be made whose moderate price would bring it within the reach of the poorest.

THE FAMILY LIBRARY.

The History of Napoleon Buonaparte, with Engravings in steel and wood. 18mo. vol. 1. Murray. London, 1829.

THE getting up of this book, as of every thing which proceeds from the same quarter, is admirable, and augurs well for the series, of which it is the commencement. The life of Napoleon, also, must be considered a good specimen of the class of works to which it belongs, being vastly less pretending than the biographies of 'The Useful Knowledge Society,' and much more fair and moderate than those which have generally appeared in 'Constable's Miscellany.' The battle at Lodi Bridge offers a fair specimen of the author's talents at description, though we are doing him some injustice in quoting it, as it brings his work into comparison with one of the finest passages in that of Sir Walter Scott.

'The wooden bridge of Lodi formed the scene of one of the most celebrated actions of the war, and will ever be peculiarly mixed up with the name of Buonaparte himself. It was a great neglect in Beaulieu to leave it standing when he removed his headquarters to the east bank of the Adda: his outposts were driven rapidly through the old straggling town of Lodi on the 10th; and the French, sheltering themselves behind the walls and houses, lay ready to attempt the passage of the bridge. Beaulieu had placed a battery of thirty cannon so as to sweep it completely; and the enterprise of storming it in the face of this artillery, and of a whole army drawn up behind, is one of the most daring on record.

'Buonaparte's first care was to place as many guns as he could get in order in direct opposition to this

Austrian battery. A furious cannonade on his side of the river also now commenced. The General himself appeared in the midst of the fire, pointing with his own hand two guns in such a manner as to cut off the Austrians from the only path by which they could have advanced to undermine the bridge; and it was on this occasion that the soldiery, delighted with his dauntless exposure of his person, conferred on him his honorary nickname of *The Little Corporal*. In the mean time, he had sent General Beaumont and the cavalry to attempt the passage of the river by a distant ford, (which they had much difficulty in effecting,) and awaited with anxiety the moment when they should appear on the enemy's flank. When that took place, Beaulieu's line, of course, showed some confusion, and Napoleon instantly gave the word. A column of grenadiers, whom he had kept ready drawn up close to the bridge, but under shelter of the houses, were in a moment wheeled to the left, and their leading files placed on the bridge. They rushed on, shouting *Vive la Republique!* but the storm of grape-shot for a moment checked them. Buonaparte, Lannes, Berthier, and Lallemand, hurried to the front, and rallied and cheered the men. The column dashed across the bridge in despite of the tempest of fire that thinned them. The brave Lannes was the first who reached the other side, Napoleon himself the second. The Austrian artillerymen were bayoneted at their guns, ere the other troops, whom Beaulieu had removed too far back, in his anxiety to avoid the French battery, could come to their assistance. Beaumont pressing gallantly with his horse upon the flank, and Napoleon's infantry forming rapidly as they passed the bridge, and charging on the instant, the Austrian line became involved in inextricable confusion, broke up, and fled. The slaughter on their side was great; on the French, there fell only 200 men. With such rapidity, and consequently with so little loss, did Buonaparte execute this dazzling adventure—"the terrible passage," as he himself called it, "of the bridge of Lodi."

'It was, indeed, terrible to the enemy. It deprived them of another excellent line of defence; and blew up the enthusiasm of the French soldiery to a pitch of irresistible daring. Beaulieu, nevertheless, contrived to withdraw his troops in much better style than Buonaparte had anticipated. He gathered the scattered fragments of his force together, and soon threw the line of the Mincio, another tributary of the Po, between himself and his enemy. The great object, however, had been attained: the Austrian General escaped, and might yet defend Mantua, but no obstacle remained between the victorious invader and the rich and noble capital of Lombardy. The garrison of Pizzighitone, seeing themselves effectually cut off from the Austrian army, capitulated. The French cavalry pursued Beaulieu as far as Cremona, which town they seized; and Buonaparte himself prepared to march at once upon Milan. It was after one of these affairs that an old Hungarian officer was brought prisoner to Buonaparte, who entered into conversation with him, and among other matters questioned him "what he thought of the state of the war?" "Nothing," replied the old gentleman, who did not know he was addressing the General-in-chief—"nothing can be worse. Here is a young man who knows absolutely nothing of the rules of war; to-day he is in our rear, to-morrow on our flank, next day again in our front. Such violations of the principles of the art of war are intolerable!"—Pp. 39—41.

NEW MUSIC.

'*La Petite Capricieuse, Air Variee pour le Piano, et dediee à A. C. B. Par G. F. Kjalmark. Clementi and Co.*

A PLEASING and familiar *Grazioso e Scherzando*, in C, with five variations, respectively exhibiting the various styles, *Legato*, *Scherzando*, *Delicatamente*, *Agitato*, and *Alla Marcia*, quite teachable, and acceptable to pupils of moderate practice and acquirements. It is composed by the younger Kjalmark, who is a brilliant and excellent performer, as well as teacher, of his instrument, doing infinite credit to his preceptor, Moschelles.

No. 1. of the Gems of Melody for the Piano-Forte, with an Accompaniment for the Flute, (ad lib.) Selected and Arranged by William Forde. Cocks and Co.

THIS is the commencing number of a very trifling, but pleasing, adaptation of admired airs, published briefly upon two pages for only 1s., and comprises Meyerbeer's 'Gioviette Cavalier,' from his 'Crociato.' 'Trifles light as air' are frequently highly acceptable for teachers and incipient performers.

'*Rise, gentle Moon!*' sung by Miss Love, in the historical drama of 'Charles the Twelfth, or the Siege of Stralsund.' Written by J. R. Planche, composed by John Barnett. Mayhew and Co.

THIS graceful and admired ballad has become so well known, that it may be, in a great measure, a work of supererogation to offer remarks respecting it; but it has not been sent to us before the present period, although its date of publication is rather distant. To those who have not heard it sung by Miss Love, or who have not yet met with it, we beg to say, that it is a very pleasing allegretto in waltz time, published in the key of C, (but performed a semi-tone lower, to render it more particularly suitable to the counter-tenor part of Miss Love's voice.) It is within a very moderate number of notes, consequently very easy of performance, and decidedly the most popular thing going.

Instructive Exercises for the Guitar, containing Twenty-four Progressive Lessons, composed by F. Horetzky, Op. 15, in two books, each 3s. Boosey and Co.

A SERIES of clever, well-arranged pieces, exhibiting a great variety of style and character, and in various keys; to a teacher of the guitar they must be peculiarly acceptable, and the author is evidently a talented musician and writer.

My heart is with Thee. A ballad, sung by Mr. Gibbon, at the London and Provincial Concerts. Written by a Lady, the Melody by Mr. Gibbon, the Symphony and Accompaniments by Mr. Coote. Dale.

MR. GIBBON'S melody is common-place, but in a flowing good style. The harmonising and arrangement of Mr. Coote, proves him to be a very well-informed and clever artist, and the *tout ensemble* is altogether pleasing and desirable. Two wrong notes, accidentally engraved in the concluding chords on the first page, create a very mischievous error, as they form the passage into the harmony of A minor, instead of C major.

Introduction, and the 'British Grenadier's March.' Arranged with Variations for the Piano-Forte, and inscribed to Miss Wright, by George Frederick Harris. Monro and May.

A FLOWING and brief Siciliano of one page, (in the key of C,) forms the introduction to the old martial air, and the whole arrangement and character of the piece eminently resembles that of 'La Petite Capricieuse,' noticed above, and composed by another George Frederick. The variations are eight in number, and exhibit much pleasing variety in a very familiar form, without puerility; the fifth is very characteristic and is intended to imitate a drum. We cannot but notice the unusually superior manner in which it is brought out, especially as to the printing and paper.

'*Flow, gentle Deva.* A Duet. Composed expressly for Mr. Braham and Mr. Phillips, and most respectfully dedicated to the Right Hon. the Earl of Cawdor, by John Parry. Harmonic Institution.

MR. PARRY is the Editor of the 'Welsh and Scottish Melodies,' and is a very highly respected and clever writer. On the title to this work he has caused the words to be engraved, and his duet is composed in a very appropriate manner to them, expressing, by turns, all the alterations of 'grief and joy,' of 'weal or woe,' &c.

'Flow gently Deva; on thy mossy banks
The valliant Tudor sleeps; sweet be his dreams;
And when he wakes, O may he wake to peace!' *Andante 6-8*
'Ah! no; I hear the clashing sound of arms.
Rouse the gallant warrior. Rise, Tudor, rise!
And lead us on—to death or victory!' *Rechtaites Agitato, in com. time.*
'Then shall the bards in sad notes ring our
knell, *Largo.*

Or chaunt in happy strains the song of Joy.—*Allegretto, 3-4.*

For two singers, (tenor and bass voices,) this duet must be very acceptable, and it is by no means difficult of performance.

EDINBURGH LITERARY GAZETTE.

A NEW rival of ours, to be ycleped 'The Edinburgh Literary Gazette,' is about to make its appearance in the north, on the 16th of the present month. The proprietors, we understand, have secured the co-operation of Professor Wilson, Mr. Lockhart, and we know not who besides. They have one contributor, who, if he really exerts himself for them, may well make us Southrons tremble for our reputation. If we had any jealousy of our brother periodicals, that one of them which should present its readers each twelvemonth with an article from the pen of Mr. De Quincey, would cause us more distress than one which should obtain, each week, all the fashionable intelligence that could be gleaned from all the discarded footmen in the metropolis.

A POETICAL EPISTLE.
(FROM THE GERMAN OF GOETHE.)

[This epistle was first published in 'The Horen,' a journal conducted by Schiller; who may, therefore, be regarded as the friend addressed in it; and what is said of him is well suited to his ardent and noble character.]

Now that the whole world reads, and that many a reader will only Turn impatiently over the leaves, and then snatching his own pen Dexterosly graft on the dwarfishest book a new portlier volume, I too, thou wilt have it, my friend, must add to the number, Writing to thee about writing, and telling thee all my my opinions, That so others again may broach their opinions about mine, And wave driving on wave may roll everlastingly onward. Thus however the fisherman goes out to sea, when the morning Summons him, if but the wind bids fair; he plies at his task still, Though his comrades by hundreds are skimming the glittering waters.

Generous friend, thou hast so much at heart,—the good of mankind first, Then that of thine own countrymen, and, above all, of thy next-door Neighbour: thou darest the mischief of mischievous books. We have seen such Often, alas! What, then, ought one to do? what might be accomplished, Would honest men knit firmly together! were princes in earnest! It is a grave, a momentous inquiry, but happens to find me In an agreeable humour. The corn-clad country is smiling Under the warm bright sky, and the gentlest breezes are blowing, Cooling their wings in the waves, and gathering scents from the blossoms; And, to the cheerful the world has a face of gladness; afar off Care is seen floating away in thin clouds that are ready to vanish.

All that my light slim pen marks down you may easily blot out; Nor are the traces of types much more enduring or deeper, Though it is said they defy eternity. True, the black column Speaks to a thousand at once; but anon, just as every one, after Seeing his face in the glass, forgets it, in spite of its sweetness, So words, too, are forgotten, although they be graven by iron.

Speeches are tossed to and fro with such marvellous ease, when a number Talk away, each only hearing himself in the words that he pours forth, Yea, only hearing himself in the words that proceed from his neighbour. Just in the same way fares it with books; all, every reader Reads himself out of the book that he reads; nay, has he a strong mind, Reads himself into the book, and amalgams his thoughts with the author's. Thus it is all lost labour, where'er you endeavour, by writings, Man's preconceived inclinations and made-up likings to alter. But you may do thus much; you may strengthen him in his opinions, Or, if he be but a youth, this and that you perchance may inculcate.

Shall I tell you my mind? it is life, life only, that fashions Men, and that teaches and trains them; words mean little, do little. True, we readily listen to all that confirms our own notions, But what we hear never forms those notions. When we dislike aught, We may perhaps go along with its advocate, if he be clever,

But when escaped from his clutches we hasten adown the old sheep-track. Would you be heard with delight, and be hearkened to willingly, you must Flatter. Whether you speak to the mob, or to nobles, or princes, You must tell them all stories that place, as though living, before them Just what they like, just what they themselves would wish to befall them.

Think you that all would have listened to Homer,—that all would have read him, Had he not smoothed a way into the heart, persuading his reader That he is just what he would be? and do we not in the high palace, Or in the chieftain's tent, see the warrior exult in the Iliad? While in the street, or the market, where citizens gather together, All far gladder hear of the craft of the vagrant Ulysses. There, every warrior beholdeth himself in his helmet and armour; Here, in Ulysses, the beggar sees even his rags are ennobled.

Thus was I walking one day on the well-paved quay of the city, Dearly beloved by old Neptune, in which winged lions are worshipped Almost as though they were gods, when a tale was a telling. A circle, Close, thick, breathless, surrounded the voluble tatterdemalion. Once, so he sang, I was driven by storms on the shores of an island, Called by the name of Utopia. I wot not whether another

Out of this company ever set foot there; it lies in the ocean, West of the Pillars of Hercules. There I was welcomed most kindly, Led to an inn, hard by, had the best of both eating and drinking, All were on tiptoe to serve me, my bed was the softest and warmest.

Thus did a month glide swift as a song. I had fully forgotten Cares grim looks and the furrows of want; when in secret this question 'Gan to disquiet me sore: What face will the reckoning put on, When thy meals are all done? There was not a doit in my pocket.

Do not bring me so much, I cried to the host; but he brought me Still more dishes and more. This increased my distress, and I could not

Eat any longer 'mid all my uneasiness: so I entreated, Pray, master host, let my bill be a fair one. At this he grew angry, Eyed me askance with a dark look, caught up a cudgel and swung it

Over my back, and the blows came pattering down on my shoulders, Down on my back without mercy, and beat me almost to a mummy.

Fast as I could I ran off, and inquired for the Justice: he forthwith

Sent for the host, who was now grown calm, and grave was his answer:

'So must it be unto all who outrage the laws of our island, Wronging a host whose rights are sacred, and wickedly asking

After a bill from the man who has courteously treated and fed them:

Was I then tamely to brook such an insult? in my own house too!

No! I should have but a sponge and never a heart in my bosom,

Had not my blood boiled over at such an offence to my honour.'

Then said the Justice to me: 'Friend, think no more of your beating, For if you had your deserts your punishment would be much harsher.

But if you choose to abide in this island and settle amongst us,

You must prove yourself worthy and fit to be one of our body.'

'Oh! I exclaimed, 'kind Sir, I have most unskilfully never

Felt any liking to labour, and nature gave me no talents So as to earn my bread at my ease: my brethren all called me Jack Do-nothing, and turned me away from the house of my father.'

'O then, welcome amongst us,' the Justice replied: thou shalt always Sit at the top of the table whenever the Commons assemble, And shalt have in the senate the place thou nobly deservest.

Only be with thy guard that no backslidings entice thee E'er to disgrace us by working, that no spade ever be met with, No oar ever be found in thy house; for if so, in a moment

Thou wert utterly ruined, and no one would honour or feed thee.

But to sit hour after hour in the market-place, folding thy arms thus

Over thy well-filled paunch, and hearing the merriest minstrels

Singing their ballads, and seeing the gay girls dancing, the glad boys

Gambolling: these are the duties that thou must promise and swear to.'

Such was the story he told; and there was not a hearer whose forehead

Did not grow open and cheerful, and all on that day began wishing,

That they could find such a host, nay, that they could get such a beating.

SONNET.—THE BOAT.

Why may not I, lulled like that boat to sleep By music of the waters and the sky, Motionless as the ripples passed me by, Be cradled on the bosom of the deep! While thro' the vault of heaven soft breezes creep, And the sun dances on the golden river, Why must I stem, with toil and harsh endeavour, The streams which towards their ocean boundary sweep? Is it that tempest by a spark divine, A spirit of life and love, I may not glide In idleness, nor be by wind or tide Borne passively, a strength that is not mine, But ever towards the founts aloft that play, By patient toil winning my weary way!

The Exhibition of works of living British Artists, at the Gallery of the British Institution, we are informed, will close on Saturday next.

FRANCE AND ENGLAND.—Dupin has calculated that the productive powers of France in 1780 were equal to the employment of 38,792,666 hands, and in 1826, to 48,814,889, showing an increase of productive power equivalent to the employment of 10,202,223 hands in forty-six years. For England he estimates the same power in 1780 at 31,281,052, and in 1826 at 60,206,311, showing an increase in the same period of time equal to 28,935,270 of new hands! Such have been the rapid strides made in the productive powers of both countries mainly by the extended use and growing perfection of machinery and the arts of industry.

DENMARK VACCINATION.—The report of the 'Danish Council of Health' states, that 28,419 individuals were inoculated with the vaccine matter during the year 1828 within the territory of Denmark Proper; namely, exclusive of its German possessions, Greenland, the Faroe islands, and the colonies. We believe this to be the only country in which it is a law that no person can be received, confirmed, or employed in a public office, unless he produce a certificate that he has had either the small-pox or the cow-pox.

EXTRACTS FROM MY NEPHEW'S DIARY.

DEAR MR. EDITOR,

THE following documents I gleaned from the voluminous journal of a lately deceased nephew. They are evidently written in the most careless manner, yet not without an occasional spice of affectation; and, therefore, my regard for the memory of one who was almost a child to me would have restrained me from publishing them, if I had not really believed they might be of some slight use to the present generation of young men. Of their general sincerity I have no doubt, though a passage here and there occurs in which the author seems to have got up the feeling for the sake of writing about it. You will judge whether they are suitable to your journal.—I am, Sir, your obedient servant, R.

Jan. 2.—I foresee this will be a remarkable year in my life, and I am determined to record its progress. The years I passed at college were barren—how could they be otherwise? What were mathematics to me, and what was I to mathematics? What even were the more genial studies which are encouraged in these ancient foundations? Interesting, no doubt, to a certain extent; for it is true, though Mr. Campbell says it, that distance does lend a sort of enchantment to the view, but nowise germane to the matter, nowise connected with the feelings and sympathies of which, as a citizen of this age, I am conscious. And then, all our social intercourse—how much it partook of the same character! How little it savoured of reality, and yet how desperately we struggled to give it that taste! There was none of the imaginary quietness of the cloister,—for, to the best of our ability, we were men of the world; and nothing of the genuine bustle of society,—for our attempts to mimic it, though very praiseworthy, were eminently unsuccessful. Henceforth the course of my life will be different. Stiff breezes, of course, frequently; sometimes real storms; now and then a raking fire from some hostile vessel; but still it will be a straight, steady, onward course,—a conscious progress; not that miserable tossing which brings with it the sensation of sickness, though we know all the while that we are only in

'A painted ship
Upon a painted ocean.'

My studies henceforth will mean something; my converse with men and——no, I did not mean women, though, by your smiling, Sir, you seem to say so—will all tend to something; and, come what will, that is a satisfaction. I will arrange my plans at once, (what delight in being able to arrange my plans for myself, without the interference of tutors and statutes!) and adhere to them. Let me see—to law's grave study—umph!—how much must one give to that? Will six hours do? Say seven; then there will remain seventeen. Give seven to sleep, and five to nature; the deuce is in it, if one cannot make something of the other five. Political economy? Yes, that is a good practical study, particularly belonging to this age. I begin with Mill's 'Elements' to-morrow. That will occupy, say two hours. Two from five and there remain three: an hour and a half of this will do for metaphysics,—an hour and a half still on hand. Hang it, I shall have too much time. Well, one will want so much for odds and ends:—poetry, novels, and now and then a little history; and, perhaps, a new language.

Jan. 5.—Law studying is very unfairly abused. Blackstone is very pleasant reading: I was quite annoyed to break off much earlier than I intended to-day, in consequence of an engagement to visit the National Gallery with some ladies. It is very hard that these public institutions are not open at more convenient hours. To this, in fact, may be attributed nearly all the idleness of young men. Dined out: a sad interruption to one's general studies.

Jan. 7.—Have cut all the pages of Mr. Mill's

work, and read the first chapter. It is a very wonderful book. What a model of a style! each sentence a light post carriage, fitted up for accommodation of one *idée nette*, as the French call it, and with none of the heavy baggage of clauses and qualifications. And a safe style; you are so sure that it is not tricking you; every word has been filtered half-a-dozen times through a logical sieve, till it is perfectly free of all figurative particles; and no thought is admitted which is not willing to take the form of a dilemma. He disgusts me with the vagueness and intangibility of the law books.

Feb. 1.—Law is an intolerable study. No plain general principles; nothing clear, nothing demonstrable; all a loose collection of facts and formalities. That I should submit to such drudgery! It is dry, disagreeable; and is it quite right? am I not destroying the powers of my mind by doing so? and is not this a crime, the greatest that can be committed? And what valuable time—time wanted for so many other studies—is consumed in these ruinous occupations! Five hours have I buried this morning in 'Preston upon the Quantity of Estates,' and, when one has made due allowance for eating, sleeping, talking, walking, and visiting, five hours really constitute a very considerable majority of all that belong to me. I will take the subject into my serious consideration.

March 3.—What a glorious relief! I have thrown off the incubus of a profession, and henceforth shall find, as Solomon did, a time for all things. There is a glorious satisfaction in the sacrifice I have made. To strictly meditate the thankless muse, instead of labouring to get on in the world! How I despise—no, that is not the word—how I pity the poor slaves who are still toiling night and day in the service of Mammon, grinding at his mill, trembling at his frown, or quailing beneath his lash! And it is not the mere luxury of freedom either, though that were much—there are the solid, tangible advantages. What a host of hours have I now at my disposal, which will yield a miserable return, if I get less than cent. per cent. out of them in the increased length of days, which wisdom confers on us; for Crichton died an octogenarian at thirty, and Newton was an older man than Methusalem. All my day to myself! How shall I dispose of it? Political economy—By the way, it is very strange, that, perfect writer as Mr. Mill is, his book has made less impression upon me than any I ever read. It is strange that a logical grappling-iron should not keep as firm hold of the mind as metaphorical bird-time; but so it is, and, therefore, henceforth I will try Ricardo or some of the *Dii Minores* of the school—Metaphysicians—Locke, Reid, Berkely, Hume—then a course of Greek philosophy, down all through the later Platonists—then have at the Germans, Kant, Fichte, Schiller, and the rest of them,—for which purpose the language must be learnt, but that will be the work of a very short time. Then to history. I doubt whether history is of any use—however, it must be read; so it may as well be done thoroughly. I will read once more through Herodotus and Thucydides, then Diodorus Siculus, and the rest,—then all the Romans, reading Niebuhr to illustrate them—then the old Latin-English histories and the Chroniclers—then to France—the old history will not take long—Joinville to illustrate chivalry, Davila because every one reads him; and then Thierry will do the rest. But the Revolution! Heaven and earth! there are ninety-six volumes must be read through, or a friend of mine assures me I shall not know a word about the causes of it, or the actors in it. Well, be it so. Then Italian history, Macchiavelli, Guicciardini; and to cut the matter short, as I have time on my hands, I will read through Muratori. Then there's only Spain and Germany left, and these will be soon settled. Next comes the literature of the different countries.

But I am very sleepy: so this, with my for studying physical science, I will res another day.

April 1.—How very absurd a notion it is, that the mind can gain any thing by mere inhaling: of all useless habits, simple reading is the most utterly, absolutely useless. We gain more by half an hour's writing than by a whole day of book-worming. This is the most important practical truth I have yet found out: it has saved me a world of trouble that I had created for myself; by acting upon it, my mind has gained more quickness and energy than it was ever conscious of in any previous part of its existence. The exercise of thought acquired from writing has enabled me to discover the holes in my metaphysical science, the vagueness of my notions on morals, the incoherency of my critical dogmas. The light that has burst in upon me, through the crevice of this one discovery, is dazzling almost to painfulness. I must positively betake myself to some of my old reading habits, in order that I may have a shade against its excessive brilliancy. And what a difference there is in the actual effect of the two pursuits! To read for its own sake, every one who has read knows and feels to be absurd; whereas, writing, which is the expression of a man's own thoughts, is good simply because it is so. We write, because we have something to say, and all ultimate pleasure is quite needless.

Aug. 3.—A lady asked me yesterday to show her some of my compositions in prose or verse. Ha! ha! to suppose that anything could remain in my desk, or that any one would take the intolerable trouble of manufacturing compositions for any purpose except to influence the opinions of the fools called the public; or sell them to the knaves called Journalists! I have believed many delusions in my time; but that was one to which I never yielded—thanks to my good genius.

Sept. 1.—This day commenced a novel. It will certainly be completed in six weeks; till that time, I shall seclude myself entirely from society, remove into a small lodging in Austin Friars, rise punctually at three o'clock in the morning, and to prevent any disturbance from without, dispense with a servant, and order the knocker to be muffled. My diet will be, in the morning, dry toast, sopped in weak tea; at dinner, barley-broth, and, now and then, (but rarely,) a potatoe; in the evening, for the purpose of waking early; very strong coffee.

Afternoon.—Have written three chapters. Character of my heroine—blue eyes, pale complexion, (mem. 'Oh, call it fair,' &c.) capable of intense feeling, and rides a bay filly (given by her uncle, an old East Indian); does not understand Latin or keep an album. A glorious creature! I am quite in love with her myself. What delight there will be in writing about her!

Sept. 4.—Did not rise till ten this morning; for what use can there be in doing so till I remove into my new lodging? The numerous interruptions. * * * * * Have just finished an argument with D— upon the origin of ideas. I never met with a man so wedded to falsehood. Some of the remarks I made it was quite impossible for him to answer; and yet he would not allow that he was convinced. It is pitiable to see a man of some talent so obstinate and ignorant. I have pinned him down into my novel. It is always well to strike while the iron is hot; so, for a time, I have interrupted the series of my story to introduce him.

Sept. 12.—Dined out yesterday. Hateful necessity! Emily C— is a beautiful creature, and unquestionably very clever. There was scarcely an observation I made which did not seem to strike her in the same way as it did myself. This has considerably changed my conception of my heroine. Hazel eyes are decidedly

preferable to blue. Emily C— is fond of billiards, and maintains that ladies have a full right to play with a cue. My heroine shall play with a cue. I will not read Political Economy—that's fixed. I escaped by a miracle from tumbling into an argument after dinner, with old Sir John L—, about the Corn Laws; and if I had, then should I have gone with the Cain-mark of a young *doctrinaire* upon me for the rest of my life. The change in my plan has occupied me so entirely that I have added nothing to the work to-day; but my time has been well employed in thinking.

Sept. 8. Saturday.—I have been adding greatly to my stock of characters during the last few days. Have been at eight parties. Society is, after all, the proper field for observation. There is a very plausible theory about plotting, meditating on one's own heart, and so on; but what, after all, does it end in?—self-torment or sleep. I will venture to say, that the man who sits down to think, invariably is either lulled to slumber by the bee-like humming of his thoughts, or kept awake by their hornet stings. In society, on the other hand—[*Hiatus valde defendendus.*]

November 1.—If I had not heard the controversy which has just taken place between D— and M— upon the old subject of ideas, I could not have imagined that it was possible for a human being to be so utterly deficient in logic as the latter. The views adopted by the former, and the reasoning by which he supported them, were absolutely unanswerable, to one who knows any thing of the experience of his own mind; and yet the coolness with which his opponent contradicted him! The more one believes, the more one is a man. M— believes nothing; he is therefore not a man.

March 9.—And so Louisa Mordaunt is dead! How well I remember the cheek that I saw two months ago so very pale and transparent, covered all over with the rosiness of childhood. Good heavens! it is not ten years since the time when I used to cultivate her youthful ambition for climbing trees, and to tease her by pulling down her long tresses, till they almost reached her feet, when she was summoned to show off in the drawing-room, and to row about on the lake, taking care that she should be well splashed at landing, all which she paid off by a hundred girlish wiles, worth a thousand of mine for cunning and wit. Only ten years! and during that time I have read—no not much of that either, but changed the whole of my opinions at least six times. And what of that—what have I had ever to do with these loose gloves, that I have stripped off so easily whenever they pinched my hand or became wet, or went out of fashion? Nothing! nothing! If they had belonged to me, they would have adhered. I cannot throw a leg or an arm to the winds whenever I get dissatisfied with them; they are mine, and so were those hours of childhood! They have passed into my character, and they will not perish! Louisa! you were worth all the French and English and German philosophers that ever flung dirt into the well from which truth is never to be drawn up.

April 7.—L— says, he believes nothing but what is revealed to him through his senses: two months ago, I should have despised him for the assertion; now I envy him. Believe *only* what he perceives by his senses! Would to God I could believe as much! The paper on which I am writing, the ink which stains it, the hand which holds this pen, would to God that I could believe in them! I ask not for a faith in unseen realities; the things around me are too impalpable for my grasp. I remember once in a typhus fever, while I was lying awake at night in that exquisite torture of weakness which takes hold of every separate limb and of the entire frame, I saw a form walk into my room and seize the light, and place itself at the foot of my bed. And then

it put out the light,—for there was no need of it,—and gazed at me with two gory eyes that were bright enough to illuminate the whole room. And then with its long thin fingers with which it was pointing all the while at me, it plucked out those eyes and pelted me with them. And I looked, and for a moment there were merely the hollow open sockets; but soon I saw starting into them other eyes more gory and bloody than those which it had cast away, and again it hurled them at me, and again they grew up more red and horrible. Oh! that I could see the men and women about me with only one millionth part of the definiteness with which that scene presents itself to me in my sleeping and waking dreams!

Many leaves are torn out here: in a loose piece of paper, I found the following, written in a paler ink than the rest.

Leonatus Posthumus was a liar. The being who embodies all that is contradictory and false in creation; the being with whose nature all discords are in harmony, and every thing that is harmonious in discordance; that being is not a woman, but a young man, between the ages of nineteen and twenty-six. Note him well; inconsistency is his, and yet he is consistently selfish; mawkishness is his, and yet he endures the mawkishness of no one but himself; he is indifferent, yet not tolerant; he does not contemplate, yet he never acts; he hates every thing, and here is his solitary praise; because in that every thing is included the one thing that deserves to be hated—himself. Oh! that I were a lawyer again! The ruin of my mind, indeed! Ha! ha! ha! that joke will be the death of me.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

THIS delightful Exhibition, equally popular and fashionable, is not less attractive this season than it has been in any former year; on the contrary, the applause and encouragement which have rewarded the efforts of our water-colour painters seem to continue producing their due effect, and to have aroused them to fresh exertions. Excellence succeeds to excellence throughout the Gallery: led on from one brilliant production to another, we examine the numerous collection in detail, insensible of the labour, and unconscious of a single sensation of weariness; for, to the very last, specimens of taste and skill abound, and the attention is awakened, and the admiration excited, by an unceasing succession of interesting works. Mr. Robson, Mr. Prout, Mr. Dewint, Mr. Barrett, Mr. Gastineau, Mr. Christall, shine forth with their accustomed splendour; while the productions of Mr. Copley Fielding and Mr. Cox, although more numerous than in preceding years, are more than usually excellent. The former of these two artists, indeed, it must be allowed, bears away the palm from all his brother exhibitors. The success with which he has treated a variety of subjects in divers manners, all with consummate talent, and art, and effect, and with most discriminating propriety, is truly admirable. If his hand be recognisable in the several works he has produced, it is so to be known less by an identity of manner than by the spirited tone and artist-like style of the general treatment.

'The Vessels in Yarmouth Roads,' No. 11; the 'Telemachus going in search of Ulysses,' No. 103; the 'View over the Earl of Chichester's Park, from the Downs near Brighton,' No. 117; the 'View in the Isle of Ceylon,' No. 124; and the 'Shoreham Harbour,' No. 193, may be taken as examples of the various powers and of the extended range of taste and talent of this accomplished artist. Others aspire to excellence only in some single effect; having succeeded in making an impression, they think for the future but of how they shall turn to most profit, in a way least troublesome to themselves, the favour of the 'best of patrons,'—to use Mr. Burford's

courteous language,—'an enlightened public.' Reckless, therefore, of reputation, further than as it 'brings grist to the mill,' they go on, doing little more than copying from their own works—multiplying a hundred-fold a single effect, to the satiety, to the surfeit, even of the same enlightened public. They thus contribute their utmost to render the exhibition-room, which they crowd with their repetitions, a mere picture-bazaar. Mr. Fielding is not one of this class: he is no mannerist, as his 'Telemachus,' 'Brighton Downs,' and 'Shoreham' most amply testify. Every one of these is a master-piece in itself, and in a distinct manner. The 'Telemachus,' when first viewed, lies under the disadvantage—less, however, by comparison than by its succession in point of time,—of calling to mind the works of Turner: but when the feeling, hence arising, of want of originality in the general effect of the picture is overcome, the drawing appears truly admirable; the conception is poetical and classical, and the effect most golden and brilliant. The foreground, the figures, and the dark sea beyond, afford an example of richness and mellowness of tone in water-colours, not to be seen in the works of any other artist, and even in those of Mr. Fielding himself, rarely attained in so great a degree as in the picture before us. The view from Brighton Downs is the more to be admired on account of the poverty of the subject; yet what a delightful picture has the remarkable skill of this clever artist made of a landscape in itself so little interesting! The rich tone of the foreground, the brightness of the slanting downs going off into woods, in which the most harmonious variety of tints is intermingled, the termination of the prospect in a delightful blue distance, most artfully managed, produce effects as pleasing as they are powerful. 'In Shoreham Harbour' how complete is the gloaming effect of the passing storm-cloud! how ably is the delusive appearance of distance thrown before the church and vessels! and how rich and transparent is the foreground, with the reflection of the fisherman on the wet sand! And yet are all the effects we have admired in this and the other pictures wholly devoid of effort,—entirely free from every apparent artifice,—all appears perfectly unrestrained and natural. Of the other works of Mr. Fielding, 'The Vessels in Yarmouth Roads' deserves the preference, if, indeed, it be not equal to either of those we have dwelt on. It is full of spirit and skill; free, and bold, and natural. The remaining drawings are treasures, every one of them.

Mr. Cox has contributed a vast number of drawings of extraordinary merit. Many of his works, indeed, are placed side by side with those of Mr. Fielding, and stand the test of the comparison, to say the least, without disgrace. In one part of the room, we have four pictures by these two artists on similar subjects, in a juxtaposition, which much increases their interest. These are, if we remember rightly, 'Vessels off Gravesend,' 200; 'Coast of Folkestone,' 201; 'Dutch Hay-boats,' 209; 'Shore near Shanklin.' The first and third are by Cox, the second and fourth by Fielding: all four are small but delightful pictures. 'Calais Pier,' No. 212, by Cox, is one of his most important pictures; it is exceedingly clever, and the rich variety of colour in the costume of the throngs on the mole is delightful; yet, altogether, this is not one of the most sparkling and agreeable of the performances of our artist; nor are we quite satisfied that the scratching and hewing of the surface of the paper is a legitimate or commendable source of effect. To raise an objection to the employment of means so simple for producing a good and powerful result, may seem to contravene the principle which would look to the effect rather than to the mode pursued in attaining it; still it may be allowed us to suggest that knives and scissors are not brushes; that scraping, ploughing, and hacking the superficies of the material is not drawing in water-colour; and that, however successful the practice may have proved

in some instances, and in judicious hands, it is certainly one very liable to be carried to excess and to be abused. It will then degenerate into a trick, as that of scumbling has already done,—witness more than one striking instance in the present Gallery, afforded by the works of some of the most eminent among the exhibitors, and several other examples in the water-colour room of the Exhibition in Suffolk-street. Among the numerous works of Mr. Cox, we may distinguish as super-excellent, 'Pastoral Landscape,' 138; 'Interior of Maentreeog Church, North Wales,' 239, a simple, sketchy drawing, full of effect; 'Fish Market, Boulogne,' 296; and 'Gleaners—Afternoon,' a sunny and brilliant picture, 'Wandsworth Common,' 320, 'Boats on the Thames off Greenwich,' 321, and 'Coast Scene,' 337, are truly gems.

Mr. Dewint is much less universal in his subjects and style than Mr. Fielding and Mr. Cox. He has a manner somewhat hard, and his effects are more forced; yet have his productions a powerful charm. 'The Barley Field, Norfolk,' 95*, is a pleasing drawing, and one of considerable force. In the 'Elijah' No. 147, Mr. Dewint aspires to a higher character, and he has soared on no feeble pinion. The dryness and harshness in the trees in the corner of the picture may be objected to, but, throughout the rest of the drawing, the effect is delightful, and the composition is natural, picturesque, grand, and alpine.

Mr. Robson's drawings of mountain scenery excite general admiration; they are pictures certainly beautiful, but to us they appear too laboured and out of nature. A greater variety in manner would undeniably be desirable. Repetitions so frequent of similar effects, especially where those effects are so strong, never fail to tire and at last to offend. The architectural drawing in the Cathedral views of Mr. Robson is stiff and liny; 'Durham,' No. 204, forms a beautiful composition; but it may be questioned if there were no other mode of getting a morsel of favourite red into the corner, than by introducing the dandy portfolio and pencil-case.

Mr. Barrett appears even to more advantage than usual this year. His works, although a little too much bordering on mannerism, are delightful compositions, elegant, classical, and abounding in sentiment and poetry. The 'Ulysses on his return, with his old servant Umoëus,' No. 39, well merits applause in all these respects, as does also 'Sultry Evening,' No. 112. 'Sunset,' No. 273, 'Twilight,' 319, and 'Moonlight,' 376, are charming little drawings, and less pretending but scarcely less beautiful than the golden mid-day and evenings of Mr Barrett, and certainly more true and satisfactory, because more free from one overpowering and usurping effect.

Mr. Prout's works do not make so conspicuous a figure this year as they did last. They are fewer in number, and smaller in dimensions, however equal they may be in the display of talent. Of the architectural pictures 'At Venice,' a view of the Rialto, with the grand canal and boats and barges of the Continent in the foreground, is the largest: it is a splendid drawing; the water, boats and figures are richly coloured: the architecture, as usual, is most clear and effective. Of the other views of buildings, we should give the preference to 'Verona,' No. 79, (in the catalogue, by mistake, called Milan; a view of 'Milan,' at No. 70, being styled at 'Verona.') This is a most picturesque subject, replete with variety of outline and other ingredients of a powerful picture; and the skilful advantage taken of the variety of effects of light and shade, afforded by the nature of the view, has rendered it a most delightful production. The 'Place de la Pucelle, at Rouen,' where Joan of Arc was burnt, is not more interesting in its subject to those who delight in associations, than it is forcible and spirited as a picture. In No. 153, from 'The Lady of the Lake,' a vessel wrecked, Mr. Prout has treated a favourite subject with great success.

The tall and bulky vastness of the stranded hull, as it lies stripped of its equipments, and left exposed on the bare shore, is ably and feelingly pictured.

Mr. Gastineau's drawings breathe a remarkable grace and beauty; they do not excite admiration by forcible and powerful effect, but they charm by their simplicity, elegance and truth. We do not mention 'Brougham Castle,' and 'View in Biltane Burn, Scotland,' Nos. 202 and 203, with any desire to except the rest, but as two drawings which have left on us a strong impression of the qualities we have alluded to, as distinguishing the works of this artist.

Mr. Christall's wanderings in choice of subjects for his able pencil, have, during the past year, as it should seem, reached Scotland, where, in the simple style of head-dress and costume of the female peasantry, he has found models admirably suited to his classical taste. His principal drawing, 'Scotch Peasants, Loch Lomond,' 173, is an excellent specimen of grouping, and of grand and free design. The heads and the arrangement of the hair are perfectly classical; the former, perhaps, are even too refined for the occupation of the figures to which they belong; or rather as we should say, perhaps, that this apparent effect arises from a certain degree of discrepancy discernible in the drawings of Mr. Christall, and which consists in the greater display of pains and labour in the heads than in the other parts of the picture. This defect is sufficiently observable in the drawing now under consideration; but it is still more obvious in a picture otherwise truly simple and delightful, 'Scotch Peasants, Loch Achray,' 263, (unless we mistake the title and number.) In this drawing, a peasant girl of exquisite simplicity of form and drapery, and as to the head, exceedingly beautiful, is stepping into a brook, and has already one foot in the water. The head in this case, as in those we have mentioned, is more elaborate than the other parts of the drawing, and is, moreover, looking out of the picture, instead of down at the feet, as would be the natural attitude of a person in such a situation. In all the instances of this kind in Mr. Christall's drawings, the heads scarcely appear to belong to the picture. 'The Scotch Peasant,' Loch Lomond,' 303, 'A Girl sitting at needle-work, and the Scotch Spinner, Luss, N. B.' 368, are quite free from this objection, and are charming drawings. 'Fern Burners, Goodrich, Herefordshire,' is not one of the exceptions. The maiden, seated up in so bold and formal a manner, looks as if she were perched on a rickety waggon-load of fern, moving onwards, and appears endeavouring, by keeping herself erect, to preserve the equilibrium of the tottering mass. We were surprised, on examining the picture, to find her seated on *terra firma*.

The other numerous and interesting productions of the various clever and popular artists whose names and works figure in this exhibition, our want of space obliges us, however reluctantly, to dismiss with a more cursory notice. Mr. Hills' best work is No. 22, 'A Stag in Highland Landscape,' the landscape by Mr. Robson. The animal is most noble, and drawn with great life and spirit. He elevates his antlered crest, and snuffs the air as if endowed with life. The picture is altogether most masterly. 'Cedric showing to Richard and Ivanhoe the hier of Athelstane,' is a very clever drawing, by Mr. T. Fielding. There are several other pieces by the same artist, treating historical subjects with considerable effect and great simplicity. Mr. Hunt, in simple figures without number, is amazingly clever, but lamentably vulgar; and in a few landscapes, he is minute, harsh, and mannered. Mr. Byrne has several beautiful landscapes, but transgresses in attempting sunny effects, à la Turner, of which the town will soon grow nauseated even to the loathing of the prototype himself, unless he breaks the necks of some of his followers. Mr.

Austin's landscapes have a variety of powerful effects, but his pictures are not altogether agreeable and harmonious. The 'Interior of the Abbey St. Owen, at Rouen,' by F. Mackenzie, is an excellent architectural drawing. Mr. J. F. Lewis has seven or eight very clever sketchy pictures. His 'Oxford Bachelor' is capital; his 'Feeder and Dogs' is also excellent. The grouping of 'The Peasants of the Italian Tyrol at their devotions' is delightful; but the foliage is too massy and impenetrable. Mr. Evans, the drawing-master of Eton School, (as we understand,) proves himself fully competent to the important situation. He has a number of very clever drawings, principally river scenes in the neighbourhood of Eton. The 'Danish Merchant Ship off Yarmouth unloading Timber,' S. Coteman, is drawn with great boldness and clearness of effect, but the water is hard and muddy. 'Saul,' by G. Cattermole, 196, is a very clever sketch; the figure of the monarch is simply grand, and deserves to be treated on a larger scale. There is more composition and fancy in 'Morning,' by the same artist, but the contrasts in the colouring are more harsh and repulsive. The head of the female is pretty, although it has a too affected turn; that of the knight is very sketchy and spirited.

'The Corsair's Isle—the parting of Medora and Conrad—Evening,' No. 229, D. Harding, is a very classical and beautiful composition. The distance, the 'unclouded blaze of living light' over the dark blue sea, is not brilliant to excess, but is glowing, bright and natural. 'The Red Lion,' G. Pyne, No. 233, is remarkable among other merits for an exquisite effect of blue distant scenery, appearing beyond a natural avenue of umbrageous foliage. Mr. F. Nash has several very cleverly drawn landscapes, with the introduction of buildings or architectural ruins. The new discoveries near York are interesting, for the sake of the subject, independent of the merit displayed in the execution of the picture: but the view of the Gallery of the Louvre is the work in which Mr. Nash has displayed most taste and skill, and produced the most agreeable picture.

The skreens are as rich in pearls as Prince Esterhazy's hussar jacket. Some of the gems which adorn them we have noticed already: we regret that we cannot go through the list of those that remain, but must conclude with applauding the 'Roman woman of Subiaco' and the 'Gensano Peasants' of Mr. Penry Williams; both are exceedingly clever and delightful drawings. To our fair readers we are sure that the 'Wedding,' Miss L. Sharpe, will require no recommendation from us.

THE ROYAL ACADEMY EXHIBITION.

THE Royal Academy is a mean, avaricious, paltry, shabby, stingy, miserable society. We defy its best friends to gainsay our assertion. 'Tis true it gives a dinner once a-year to Dukes and Marquisses, and other Lords and patrons,—for such an ostentation of hospitality promotes the interest as much as it flatters the ambition and pride of its members,—and, once in a revolution of nine summers, it sends a painter, a sculptor, and an architect to Rome. It is as rich as Croesus, they say; yet look at the dirty, beggarly condition of its domicile, which cannot have experienced even the freshening effect of a new coat of paint these fifty years! How ill does the munificent donation of his Majesty, the splendid gilt bronze chandelier, assort with the miserable shabbiness of all that surrounds it! (in non-exhibition seasons, we mean, of course.) One would have thought that the very possession of so splendid an ornament would have shamed the Council into the expenditure of a few poor pounds in the cleaning and embellishment of a room in which to suspend it. No such thing! Nor even a few shreds of cloth, and the cost of an old woman's labour for an hour or two, will the directors of the concerns of the establishment afford towards the mending of Thornhill's tattered copies (and very

good and fair copies they are, although ragged from age and neglect) of the famous Cartoons. They employ their livery-servants to receive the public and their money, rather than incur the petty expense of a six weeks' stipend to some worthy old gentleman of respectable look and address to preside at their receipt of customs. But, above all, (and this is our great complaint, and has set us reflecting on these niggardly proceedings,) look at the catalogue, the poor, wretched catalogue, without a rag to cover its nakedness. On a calculation of the number of these books sold, and the price exacted for them, it will be found that the Academy might present them to the public as elegant annuals, illustrated and bound in gold and satin, and yet be no losers. The first three hundred they dispense clear them of all cost; and the receipts from the thousands remaining, are so much net profit to go to their overflowing coffers; yet have they not the grace to allow us half a sheet of stained paper, nor even a fly leaf, to preserve the title-page from dust and moisture, or the peach-blossom kid that covers the delicate fingers of our fair companions from the soil of the ill-savouring ink. It was but yesterday, that, hap-pening to take up the glove of as charming a maiden as ever entered the exhibition room, either to see or to be seen, and who to our knowledge had never before shown a single *blue* symptom, how great was our surprise, on finding the forefinger very legibly impressed with broken scraps of horrid Latin. *Virtus . . . impetus ex naturâ doctrinâ . . .* Deep was the suffusion of the lovely girl, all innocent as she was of learning, of Latin, or of secret understanding, when the rough old gentleman, good uncle Matt, exclaimed, 'Ah, ah, my sweet slyboots, who has been lecturing you on learning, and virtue, and natural impulses? and that in Latin too! Must we look to our clerks, to our scholars, to our printers, as well as to our Don Basilius, and our music and drawing masters?' Vain was every protestation—the joke was circulated with little mercy, until, unfolding a dog-leaved roll lying on the table, we read aloud, 'The Exhibition of the Royal Academy, MDCCCXXIX. The sixty-first. *Virtus, etiam quodam impetus ex naturâ sumit, tamen perficienda doctrinâ est.* QUINCT. 12.

To prevent the recurrence of such untoward accidents to our fair companions; out of respect for the dead—languages we mean; from regard to cleanliness, as respects the living, to say nothing of neatness, less of elegance; and, though last not least, for the sake of their own credit; we humbly implore their High Mightinesses the President and Council of the Royal and Opulent Academy, for the future to afford the visitors to their Exhibition a wrapper to their catalogue.

Of the pictures to which this catalogue refers, it is not our intention this week even to commence a detailed account. We have the months of May and June before us; and this is probably the last Exhibition of the season to which our attention will be called. It generally forms the army of reserve; and we conclude that the case will be the same with this as with former campaigns. We were present at the opening, and the rooms were soon crowded with visitors and artists, and the exclamations, 'What a splendid Exhibition!' were general. We ourselves joined in the general cry; but, on addressing ourselves to the task of giving a report of its contents, we find the impression they have left by no means so flattering. Mr. Newton's portrait of 'A Young Lady, in a Cauchoise Dress,' No. 114, is the only picture with which we remain perfectly satisfied. We do not pledge ourselves, however, to this general opinion, and shall be happy to give our suffrage in favour of the Exhibition, if, on the second reading, we shall be able to find sufficient grounds. We shall commence the examination of its contents, in detail, next week. The Water-Colour Exhibition well deserves to be left in possession of the field in the interim.

EXHIBITION OF PORTRAITS OF ILLUSTRIOUS PERSONS.

THE display at the rooms of MM. Harding and Lepard, in Pall Mall East, of the drawings made from original paintings, for Lodge's 'Portraits of Illustrious Persons,' is not the least interesting, even as regards the arts,—as a literary work, the 'Portraits' belong to another department of our Journal,—of the many exhibitions which accumulate in this gay month, for the gratification of the world of elegance and taste. Independently of the curiosity which we naturally feel to contemplate authentic resemblances of the personages of note, whose actions have acquired for them a conspicuous place in history, to form acquaintance, as it were, with illustrious dead, and to realise or correct the notions which the tale of their exploits has created, of their aspect and figure,—a curiosity which these drawings afford us an opportunity of indulging most satisfactorily,—the collection presents us, moreover, with a partial history of the art of painting. The several masters from whose works the drawings which constitute it have been made, form links, in an unbroken chain, which connects the revival of the art in this country with the state in which it flourishes at present,—from Holbein, and even a predecessor of his, the unknown limner of the fifteenth century who has left us the portrait of Elizabeth of York, down to the great Sir Joshua. Through the ages which have intervened, we may trace, even in the copies before us, the expressive but hard manner of the early German school; the free and masterly style of the luxuriant Rubens; the ease and spirit of the accomplished Vandyke; the elegance and elaborate beauty of Lely; the courtly air and spiritless style of Kneller; and the ease and life, and the genius-directed touch of Reynolds. In short, we have felt a real pleasure of various kinds in going over these portraits. The chimneys of the two principal rooms, more especially, are calculated to excite a high degree of interest. Over the first, are Henry VIII. and his family; of these, the *bloody* Queen Mary is not the least pleasing; the portrait is one of the most highly-finished of the set; and notwithstanding our present well-grounded dread of the stake, we cannot deny that the indications of an amiable and genial spirit are to be perceived in her likeness. The portrait of Queen Elizabeth, notwithstanding the endeavour to flatter her into beauty, has a cold and uninviting physiognomy; it is remarkable principally as an instance of the taste of the times as exemplified in the costume, which is elaborately figured with allegorical devices: while a coiling serpent, emblematic of her wisdom, is figured on the sleeve, the skirt of the gown is set with ears and eyes most nicely painted. In the cold and formal physiognomy of Queen Elizabeth we could well fancy a blue; but who would suspect the sweet Lady Jane Grey, as here portrayed, of being a learned dame? This head is really beautiful; the artist who executed it, we perceive, is not known, and, judging from the copy, we should conclude the picture to be of a later date, or to have been executed by an artist who had made greater progress than Holbein. The chimney of the next room is occupied by the works of Vandyke, and the portraits, principally, of the Royal House of Stuart. Among the exceptions is that of the Earl of Arundel, by Rubens, which is one of the most spirited pictures in the whole collection, and has been copied with great discrimination and fidelity to character by Mr. Hilton.

Many portraits have been added to the Gallery as exhibited last year. Among these are the Marquis of Granby and Admiral Rodney, (both after Sir Joshua Reynolds,) Sir Robert Walpole, Sir Isaac Newton, the Philosopher Boyle, and the great Earl of Peterborough, which is considered as having peculiar claims to attention, since the personage it represents is an example, unique

until within the last two years, of a person in whom the command of armies and the Premiership had been united. Among the portraits of this collection which derive a peculiar and additional interest from their rarity, we find several which have never before been engraved. Such are those of H. Grey, Duke of Suffolk; Blanch Somerset, Baroness Arundel of Wardour; Lord Treasurer Southampton; Charlotte Tremouille, Countess of Derby; Henry Spencer, Earl of Sunderland, (of which a private plate had been engraved for the heretofore Earl Spencer;) Henry Danvers, Earl Danby; and Robert Dormer, Earl of Caernarvon, of whom there is extant a head only. Besides these, the following may be mentioned as fresh portraits of persons previously engraved from other pictures, viz., Queen Elizabeth, Mary Queen of Scots, Sir Christopher Hatton, one of the handsomest men of his time, the favourite of Queen Elizabeth, the dashing Chancellor of his day; Sir Thomas Gresham, Lady Jane Grey, and Earl of Arundel and Surrey.

In quitting this Exhibition, we cannot refuse ourselves the satisfaction of offering a tribute of applause to the zeal and diligence with which the collection of drawings has been formed, and the liberal spirit with which the possessors of the several original paintings have lent them for the purposes of this splendid and popular work. Of the publication itself it may be said, that it is a laudable example of the adoption, for the classes of society blessed with opulence, and, as regards the elegancies of literature, of that principle happily, although too recently resorted to, which looks for reward and profit to an extensive sale rather than to costly price,—a principle by which the interests of the public and the publisher are equally promoted.

AN ITALIAN STORY.

A MOURNING maiden sat beside the tomb
Of one beloved, alone and silently;
Seeming amidst the elemental gloom

A creature of the elements to be;
So motionless and pale she was: her face
Was propped upon her elbow, and her knee
Supported this, while from her eyes apace
Two crystal streams were sent; her golden hair
Escaping from its bonds, with lawless grace
Swam on her ivory neck, which else were bare;
Or lifted by the west wind's amorous breath,
Floated abroad upon the midnight air,

Like a sweet meteor wantoning beneath
The cold moonbeams. Anon, the lady rose,
And from the tomb-stone took a faded wreath
Of amaranth and cypress, which her brows
Had garlanded at the sad funeral;
And bending over it, in deep repose

Stood fixed, like chiselled marble in the hall
Of a proud palace; with the dead leaves playing
Her fingers moved; yet 'twas unconscious all:

As o'er the chords of his beloved harp straying
A harper's hand makes fitful melody,
No impulse of triumphant song obeying,

But when inwrought in mingled memories, he,
Forgetful of his age and of mankind,
Sits on a cliff at sunset pensively,—
So strayed her fingers; but her absent mind
Was in the grave with the beloved dead,
Grudging to have been left alone behind

In a cold world, whence hope and joy were fled
With him that lay before her. They had been
Children together, in one mansion bred;

Together they had roamed through valleys green,
And stood upon the sea-cliff's dizzying peak,
Over the waters which might thence be seen,

Gazing delighted; too entranced to speak
The joy that either felt; and when soft tears
Stood in their eyes, and to her crimson cheek

The eloquent blood came rushing, when their ears
Were filled with sounds which air, and earth, and sea
Blend with the music of the eternal spheres

In one complex of mightiest harmony ;
 And when the gorgeous sun before them leapt
 Out of the night, whose dewy curtains he
 Putteth aside, and from the day-spring crept
 The lagging stars ;—in that most joyful hour
 They turned to one another and they wept,
 Feeling the presence of the awful power
 Who is the God of all created things,
 Whose shrine's the world, on which he down doth shower
 The fountains of deep joy, whose bubbling springs
 Are in man's soul ; that sick with passionate thought
 Each yearneth towards his like, and finding, clings
 To that firm stay. Thus with deep feeling fraught,
 Their hearts looked through the lovely universe,
 Then in each other found what'er they sought.
 And so they loved. Alas ! that e'er the curse
 Of Mammon fell upon the gentle earth !
 Or tyrannous gold, love's foe the most adverse,
 Broke from the hidden caverns of its birth !
 Young Cosmo's father was a stern old man,
 Loveless and cold ; him moved not any worth
 Of heart or mind, but ever pale and wan
 He brooded o'er his gains : with harsh delight,
 If in such dead hearts lively pleasure can
 Be ever found, toiling from day to night
 To cumber heap with heap : yet he was old
 And bent beneath his years, and never might
 Enjoy his store ! This man, athirst for gold,
 And careless of all else, his stern command
 Laid upon Cosmo, if he would behold
 His father's face again, to take the hand
 Of one he loved not ; proud, of high estate,
 The daughter of a magnate in the land.
 Alas ! that men should be so full of hate !
 Well knew the tyrant that his victim's heart
 Was to Rosina given : she, desolate,
 And scarce alive for grief, now walked apart
 Among the turfed valleys, where before
 She roamed with Cosmo ; so with tender art
 She hid her anguish, till the swift hours bore
 The wedding morn, and then with curious skill
 She drest herself, and a sweet sad smile wore
 Upon her lips ; so sweet, it bodied ill
 Mid such heart-breaking sorrow. The sun shone
 Gloriously, as up the church-crowned hill
 The rich procession moved ; and a glad tone
 Was in the pealing of the marriage bells ;
 Yet gloomy seemed the day to many a one,
 For sorrow, like a foul magician's spells,
 Darkened the beams, and jangling through the air,
 The music seemed to startle those still dells.
 Some knew Rosina's tale : so here and there
 It passed in stifled whispers, and the men
 Stole softly to the front, to see that fair
 And gentle dame ; but these rode back again
 Less like to wedding guests than a sad band
 Carrying the corpse of one untimely slain.
 The bridegroom rode not with them ; it was planned
 That he should meet them at the church, and all
 Might laugh to see upon the bride's right hand
 The crooked greybeard ride like a gallant tall,
 Had any heart to laugh ; but on they rode
 As sad and silent as a funeral
 To the church-door, and vainly there abode
 Till Cosmo should come forth ; so in they past ;
 They found him not ; nor seemed the church to bode
 A wedding, for the shutters were all fast,
 The dust lay on the floor, and round were hung
 A few black plumes, for on the Sunday last
 There was a burial : the dark hangings swung
 When the door opened. There was not a priest ;
 The font was dry, and here and there were flung
 The benches, from their Sunday rule released.
 But still they persevered ; a bridesman went
 To summon Cosmo ; and the fear increased
 When he returned not ; twice again they sent,
 And still no tidings ; then the sneering sire
 Rode back himself to speed him. Their intent
 Was baffled ; Cosmo, in his rich attire,
 Lay poisoned in his chamber ! Oh, how pale
 Came back the bridesmen ! And the chafing ire
 Of the old man was chilled ! How soon the tale
 Was whispered through the throng ; and she that came
 To be a bride rode in her wedding veil

From the sad house of woe ; self-scourging shame
 Gnawed at the old man's heart-strings, for he knew
 That he had slain the last who bore his name,
 And was alone. His tremulous looks he threw
 Upon Rosina, who in the church-yard knelt
 In prayerless agony ; then anguish due
 Convulsed him, for her broken heart he felt
 Had been his work ; so he was stricken sore !
 But she who saw that Heaven had justly dealt
 With him, drew near, and to upbraid forbore,
 But mixed her tears with his, and kissed his cheek,
 Trying to comfort him ; and when he tore
 The grey locks from his head, with counsel meek,
 Checking her sobs, she stilled his just despair,
 And from God bade him consolation seek,
 For earth had none. But when men came to bear
 The body to the grave, she went before
 Crowned with a garland, and she shed no tear ;
 Till after many nights she stole once more
 To sit beside her lover ; then her heart
 Gave way, and all its springs at once ran o'er ;
 And so from night to night with gentle art
 Deceiving those who watched her, she still came
 To weep upon his tomb, whose mortal part
 Was all that now remained, an empty name,—
 The memory of past joy, lifeless and tame !

THE DRAMA.

King's Theatre.

THE strange discouragement of the opera buffa, not merely in this country, but even under those more congenial skies where it had its origin, and where it would have every natural auxiliary from the temper and genius of the people, seems to be abandoned in one or two cases by convention ; and the 'Barbiere di Siviglia,' is chiefly proof against it. This opera, the freshest creation, as it has been called, of the Gran Maestro, endures through all vicissitudes, and rivalry, and popular fickleness : it was applauded as warmly, when Madame Malibran Garcia took the part of Rosina, as in the days of Camporese. Considering that this cannot be owing to our having hitherto imperfectly known its music, or to its having been performed in a less able style formerly, or to any other of those causes which lift a drama upon its repetition to an unprecedented popularity, there can be but one conclusion, that the opera in itself is not made of perishable stuff. In some respects it has received an augmentation of strength, and in some it has fallen off, since we last heard it. Bordogni, the representative of the Count Almaviva, is a scientific and florid singer ; but he has not the power even of Curioni. Much of his natural sweetness of tone is consequently lost under the uproar of accompaniment ; and, even in the soft music of 'Ecco ridente il cielo,' his weakness scarcely allowed him to make any impression. He has, however, a manly person, an experienced deportment on the stage, and contrives to throw in his voice during the gaps and intervals, so as to aid the general effect, by precisely the same means as William Knivett does in his quartetts. Signor Graziani, who took the part of Bartolo, is by far the best representative of the character we have seen. His humour is dry, temperate, and easy. His action and utterance go well together ; and it might be difficult to determine whether the one or the other give him a better title to our praise. It was the fashion in our vicinage of the pit, to compare Le Vasseur with Porto, in the part of Basello, the music-master, and with no advantage to the former. But this was done, perhaps, on the old principle, 'extinctus amabitur,'—for, though no voice can reach the 'depths profound' with such boldness and strength of intonation, yet the quality of Porto's singing cannot be otherwise praised, than as it showed a rather miraculous command of such gruff and refractory materials, and his acting in serious parts was heavy ; whilst in comic character, he has not the judgment to save himself from mere buffoonery. Sorry should we be to say any thing that would diminish the fair fame of so excellent a gentleman as Signor Zuchelli ; but, when we offer an objection to his personation of Figaro, we conceive that as he herein aspires to an *unfair* fame, our scruples may be spared. In the first place, then, he is too cumbrous a creature for the agile and vivacious 'factotum della città.' In the next place, his drollery keeps pace too much with his powers of locomotion, and does not succeed, and vary, and twist itself with sufficient versatility. Neither can his good-natured face

express adequately the roguishness of his calling, and especially as shown in its particular agency throughout this opera. Perhaps even his great taste and vocal excellence prevent his due fluency in the character which the styles of Ambrogetti, De Begnis, and Pellegrini are so well adapted to support. In the more quiet comic parts, such as that of Don Magnifico in 'La Cenerentola' which he is now about to perform, or if it were not beneath him, even that of Bartolo, in this very opera, he would be unrivalled. But *jam satis*. It is a species of self-injury to find fault with Zuchelli.

As to Madame Malibran Garcia, she is an admirable, an almost perfect Rosina. Her look, her gestures, her voice, and the style of her singing, give each its tributary aid to the excellent effect of the whole. To us it seemed that in this part she both sang and acted better than in Desdemona. Her singing, though scarcely of the highest order, was everywhere free from fault,—tempered, expressive, and clever. Her acting is arch in the extreme, running through all the varieties of mood and disposition, which Rosina herself announces in the 'Io sono docile,' &c. A simplicity half-assumed, a gentleness that is always on the verge of something more impassioned,—maiden modesty mixed with the cunning which love makes premature,—this and much more is represented by her with a fidelity not even equalled by Mademoiselle Sontag. The first scene in which she appears at the balcony, opening with the words 'Non è venuto ancora?' admirably exemplified these attributes of the character. The impatience and mock obedience to her guardian, and sly by-play with her lover, were capital ; and seemed rather so, because this scene is generally sacrificed to give the heroine an opportunity of a better *entrata* with the air of 'Una voce poco fa.' This well-known composition scarcely savoured of itself, as sung by Mad. Malibran. Avoiding any competition with those who rest their credit on the agility with which they run through the flowing and ornamented passages, she makes a substitution for the quick and hackneyed cadences, in a more staccato and original style, and particularly in the return to the words 'E cento trappole,' which she diversifies by a most ingenious deviation from the old text. Here, too, she infuses some of her dramatic cleverness ; and passes from the first stanza, which is all self-commendation, into the second, which contains a confession of her being a vixen, with such an expressive emphasis, by way of transition, on the words 'Ma se mi toccano,' as would suffice of itself to distinguish her Rosina from all her predecessors. This is not to be considered in disparagement of those predecessors, for even in this song she has been surpassed by others, though not exactly in the same style. Another instance of her discretion in avoiding a comparison with more accomplished singers, occurs in the music scene, where, instead of Rodé's variations, or any other show-piece, her master directs her to try a canzonet, 'del maestro Garcia ;' and accordingly she sings a Spanish air,—we suppose, by her father, the late accomplished tenor at this theatre,—and a most wild and singular composition it is.

Without pursuing the minutiae of her part any further, we shall only express a hope, contrary to our contemporaries, of seeing her in some other comic character ere long ; and as Cenerentola is already taken by Mademoiselle Sontag, let us look forward to Ninetta ; or, if it were not a presumptuous wish, we might whisper the words, 'Il matrimonio segreto,'—but we have done.

Drury-Lane, Monday.

MASSANIELLO FOR EVER ! 'Massaniello, ou le Pêcheur de Portici,' at the King's Theatre, 'Massaniello, or the Dumb Girl of Portici,' at Drury-lane and the Coburg ! If the barrel-organs haven't enough of this by and by, then is 'Der Freyschutz' no longer a precedent. The original opera was successful enough in Paris to give a good promise of becoming popular here ; but people were warned by the fate of 'La Dame Blanche,' and so the 'Muette de Portici' of Auber was first presented to us in the shape of a ballet. Thus travestied, it has led the way to other versions of the same story, ornamented by the same music, and supported by the same stage-expedients. That particular one which was represented at Drury-lane for a first time on Monday last, is entitled a melo-dramatic opera ; but this name, though for most purposes enough comprehensive, does not yet give an adequate idea of all the attributes of the performance in question. Certainly there is the music, vocal and instrumental, and a dumb girl ; but there are also the *spectacle* on a more enlarged scale, and the dancing and *ceteras* infinite. If the music were not already known to all, we

should be tempted to say a good deal in its praise; for it is composed in an unusual and bold style, generally expressive, and always full of spirit. To those who object to its constant turbulence and sound, we would answer by drawing from their objection one cause of praise; viz., that by any process of ingenuity the composer should have been able to diversify the character of the parts, without changing the tone of the whole; that the noise, though never softened, should, nevertheless, be varied sufficiently to relieve the composition without the usual alternatives of *piano* and *forte*. There could be no question about the success of such a performance, with so much good scenery, such groups of choruses,—so many *ballerini*, and such an eruption of Vesuvius—not to mention the labours of the vocalists and orchestra, which were also very felicitous. Braham was Massaniello the Fisherman, who revolts and is crowned, and is poisoned by one of his fellow-conspirators. Miss Betts personates the young spouse of Alphonso,—Mr. T. Cooke, who happens unfortunately to be in love with Massaniello's sister, Fenella. The other fishermen, &c. are represented by Messrs. Bedford, Yarnold, Bland, and their compeers; and a Mademoiselle Alexandrine plays a mute but conspicuous part as the deaf and dumb girl, Fenella. Some expectation appeared to have been aroused by the announcement of the nature of this character or its supporter; and, when the *débütante* from Paris made her appearance, she was greeted with a most rapturous welcome. In her attitudes, gestures, dress and general demeanour, she accords so closely with the model of Mademoiselle Pauline Leroux, that we cannot but consider one or the other a mere plagiarist. As the Fenella of M. Laporte is and must be incomparable, we shall only say that Mr. Price has done his best, and showed a gentlemanly taste in offering to us even a reflection of that sweet image. Massaniello himself acted better than usual, and sang rather less boisterously. Were it possible to fancy that his subdued tones were indicative of a gentler taste, rather than of a weakened organ, his singing would have been more than ordinarily pleasing; but the suspicion of infirmity is almost as harsh as the evidence of it, though in this case there were a few passages which, however slight and un-Brahmanical, could be attributed only to the good discretion of the singer, uninfluenced by his self-distrust, or any other sinister motive. Of these we would particularise one only, towards the end of the play, when, immediately before his sudden reanimation, he whispers forth a melancholy stanza of an old song, whose burthen has by that time become familiar to the audience, and in so low and pitiful a tone, it serves of itself to awaken a dramatic sympathy with his reverse and approaching death. The other singers, and Miss Betts pre-eminently, pronounced their music 'trippingly from the tongue,' which is saying a good deal for a first performance, and of such original music.

The dancers and the painters should not be forgotten. Of the former, Angelica and little Rosa Byrne were the most conspicuous. Each was engaged in a *pas de deux*, and the latter in a *bolero* with her father, (we believe,) which were executed with much more grace than we expected to find out of the jurisdiction of the true Terpsichore. Stanfield had an old subject or two to refresh,—the Bay and Market-place of Naples, and, finally, a view of Vesuvius, an eruption, and universal ruin! 'Johnson, the mechanist of former Drury,' would die of fright, could he be resuscitated only to view the desperate showers of lava, the red tides down the mountain, the illuminated buildings, the red sheet tossed up and down in the middle distance, and the people dying in pairs beneath the fire-bolts from the boiling crater!

Massaniello for ever! as we said before. It deserves to live a long while, and the people are not likely to interrupt its longevity.

The Adelphi.

On Wednesday, Mr. Mathews and Mr. Yates appeared for the first time in their new entertainment. We have always thought those critics mistaken who prophesied that the talents of these eminent actors, even in that department in which they are both most eminently 'At home,' would at all interfere with each other; and we are glad to find our judgment confirmed by the proof of fact. Nothing could be more strikingly different in kind, than were the exhibitions of the senior and junior partner in the Adelphi firm, on their last appearance. The talent of Mathews is doubtless of a higher order, for it implies a very exquisite discernment of every thing rare and grotesque which grows upon the surface of human nature; nay, we have sometimes been half inclined to believe, an insight

into some of its secret holes and caverns. In the keenness of this perception, notwithstanding what has been said to the contrary, we are convinced he improves day by day. We remarked more of those delicate touches which are not rewarded by a shout from the pit, last night, than on any former occasion; and this may well console him for what is sufficiently obvious,—his loss of many of those tricks of imitation which he once possessed. At present, Yates is not much more than a mere mimic; or, if he is, the extreme excellence of his mimicry prevents us from discovering it. This, indeed, may well be the case; for we do not believe there is living, or in tradition, any actor equal to him in this one quality. In taking off the voice, the manner, the attitude, the language; in changing one voice, attitude, and language, at a moment's notice, into that which is most exactly its opposite; in making us recognise an old friend again, by the most undiscoverable traits, which we thought that we only had observed in him; and in compelling us to acknowledge the likeness of a stranger whom we have never heard of before;—he is far beyond what Mr. Mathews was in his best estate. Should he ever drop any of these agreeable merits, we trust he will gain for them the same compensation which has been awarded to his master in the art.

'The Spring Meeting,' in which Mathews figured, and into which he introduced two songs, three portraits, the most striking of which is the late Dr. Kitchiner, and about 500 puns, is at least as good as 'The Home Circuit,' though inferior to the 'Trip to America.' It is written with considerable spirit, and evidently under the eye of the performer. Yates followed in an Irish trial, Lord Norbury, the Judge—the Counsel for the plaintiff, Witness for the plaintiff, (a woman,) Witness for the plaintiff, (a man,) and Counsel for the defendant, being all enacted by the same Proteus. Nothing could be more admirably characteristic than this performance. It was too good for laughter.

Mathews then performed the second act of 'The Spring Meeting,' which was inferior to its predecessor, except in one admirable character, a Northumberland farmer, whom Mr. Mathews encounters in a stage coach, and upon whom he passes himself off as Mr. Bruffum, to the delight and consternation of the worthy man. We should also except a splendid story about an Irishman shelling peas, if it be new, as we hope for the sake of our age it is.

We did not stay to witness Yates's last exhibition in about two characters; but we hear from competent authority, and we can well believe from the Irish trial, that it deserved all praise.

PHILHARMONIC SOCIETY.

DR. CROTCH presided at the piano-forte, and Mr. Loder (the respected Professor of Bath) led the fifth Concert, which was performed on Monday, April 27th, and which exhibited the usual selection of choice and various musical compositions.

It commenced with Haydn's *sinfonia* in G, (letter R,) and we must beg to repeat a few remarks and suggestions we offered in our review of the fourth Concert, (on p. 206 of this work,) to account for an arrangement with respect to this *sinfonia* which took place.

'Now we are so anxious that all Haydn's compositions should be well known, that we wish they (the omnipotent Philharmonic Directors) would begin by playing the *first sinfonia* or overture he ever wrote, and proceed regularly to the *last*; for very many beautiful and clever orchestral compositions which we remember to have heard during the days of Old Ranelagh, &c., are now totally obsolete, and lost to the musical world,—for why? Because they have not parts for flutes, bassoons, clarionets, trumpets and drums. Let Dr. Crotch, J. B. Cramer, Atwood, or some other talented musician, adopt these *excessant* parts, and let us enjoy some *ancient* novelty!'

Our hint was taken, our propositions attended to, and we feel flattered by the circumstance. One of the very able directors of the present season, Mr. T. Cooke, whose versatile talent, whether as a composer, performer, leader, or vocalist, renders him, as a whole, unrivalled, undertook the task of making the adaptation proposed, and his additional parts for clarionets, trumpets, trombones, and drums, were exceedingly effective, and truly *amended* even Haydn, particularly the introduction of an extreme sharp sixth in the clarionet parts of the allegro movements upon the return to *motivo*, and again their responses of the *thema* in the finale. These improvements were not generally known, and we feel a pleasure in giving

publicity to a circumstance which does Mr. Cooke infinite credit.

No. 2.—Recitativo and air, 'Now heaven in fullest glory shone,' from Haydn's *Creation*, was performed by Zuchelli. As he had twice before sung the same song in the same place, (June 10th, 1822, and March 5th, 1827,) we cannot but think he might have offered some greater novelty.

No. 3.—Hummel's concerto in B minor, (op. 89,) was well performed by Mr. Schlesinger, who has been a pupil of Ries, and certainly does credit to his preceptor. The middle movement (a *larghetto* in G 2-4 time) commences with a quartetto for four horns, without accompaniment for any other instrument, and it was well performed by Platt, Tully, Rac and Kielbach. The whole assimilated remarkably well, considering the difficulty of the composition: a few flat ninths were not quite well in tune, but if a writer will venture unusual and extraneous modulations upon such instruments, he must expect a little 'contrary wind' occasionally.

No. 4.—Duetto, *Madame Camporese* and Signor Curioni, 'Ricciardo! che veggio,' from Rossini's opera, 'Ricciardo e Zoraida,' was executed with spirit and taste, but Curioni (his usual fault) sung a little too flat.

No. 5.—Mozart's unrivalled, melodious, and scientific overture to 'Zauberflöte,' went magnificently, and was deservedly encored.

No. 6.—Beethoven's grand *sinfonia* in D, perhaps his most perfect instrumental composition, also succeeded well, and commenced the act with splendour. We were glad to notice that the *grandest* *sinfonia* of the two performed, was chosen to commence the second instead of the *first* act, a practice with which the Philharmonic Concerts commenced their career, but which of late years has been altered, owing to an indefensible complaint of fatigue on the part of the performers upon wind instruments.

No. 7.—Aria, *Madame Camporese*, 'Bel raggio,' from Rossini's 'Semiramide,' went well, but requires no comment.

No. 8.—Concertante, violin and violoncello obligato, Messrs. Weichsel and Lindley, composed by the latter valued Professor. This performance reminded us of old times, and our old friends succeeded as heretofore. Weichsel's violin playing, if not as surprising as some fiddling we have heard at the Philharmonic, was orthodox, sound, and good, especially as to tone. These highly valued artists presented an unrivalled exhibition, as to the English tone and style, and accordingly received enthusiastic applause. We lament to add, that the composition of the tutti parts was common-place and any thing but estimable.

No. 9.—Rossini's clever trio 'Cruda sorte,' (also from his 'Ricciardo,') was sung by the three vocalists, Camporese, Curioni, and Zuchelli; and certainly, to introduce three, out of four vocal pieces, so similar in style and manner, and all by Rossini, was not in good taste. Not any singers at present to be found together can give the brilliant and striking effect to this trio, that Garcia, Madame Colbran, and Vestris did in the opera, when it was performed under the direction of Rossini in the year 1824. The concert concluded with Beethoven's overture to 'Fidelio,' and the whole went off with éclat.

CONCERT AT GUILDHALL.

THE grand performance for the benefit of the Distressed Weavers of Spitalfields, took place last Saturday; and we think was more numerously attended than the concert given at the same place for the benefit of the Refugees, on Thursday the 2d of last month. Handel's sublime and unrivalled oratorio, 'The Messiah,' was admirably performed, led by Cramer, and conducted by Sir George Smart, assisted by all the principal English musical professors. Mozart's beautiful accompaniments were added, and, we believe, without any omissions. The vocalists were not very numerous, but they were generally very successful; and Mademoiselle Sontag most kindly sung, 'Gratias agimus tibi' (with Willman's unrivalled clarionet accompaniment) at the end of the first part. She was (as might be expected) encored; but we are sorry to add, that her performance was really not of that highly transcendent nature which her votaries might have expected. Her commencing note she sang twice as long as it ought to be, both times of performance, in spite of Sir G. Smart's striking hints (or hits) upon the pianoforte. She resembled Catalani only in singing frequently too flat; her shake was

not performed with a proper intonation, for we particularly noticed that in the double cadenza with Willman, she sang G flat, instead of G natural, in making the shake upon F before the final close; and, although these remarks may shock and offend some of our readers, we offer them in the pure spirit of honest criticism, and feel pledged for the truth!

But to the oratorio: the airs and concerted pieces were apportioned to the principal singers, Miss Paton, Messrs. Braham and Phillips, in the usual manner; and the other parts were filled by Mr. and Mrs. Knyvett, Miss Wilkinson, Messrs. E. Taylor, Horncastle, Terrail, and Master Smith.

Braham opened 'The Messiah' in his customary excellent style. Mr. E. Taylor sang 'But who may abide,' passably well, but sometimes made four quavers in a bar instead of three. As we entertain the highest respect for this gentleman's talent and knowledge of music, we are sorry to be forced to make these remarks; but if he, or any other singer, would now, for the first time, sing as critically exact in time, as the orchestral instrumental performers are forced to play, he would deserve and receive more applause than can well be imagined.

Miss Wilkinson sang 'O thou that tellest,' exceedingly well. Her natural voice is admirably adapted for counter-tenor songs, as they are technically termed. She sang the note B below the staff, up to the F on the fifth line, with an efficient, round, and good tone, and her whole performance was admirable. Phillips was successful in 'The people that walked in darkness,' and Mozart's scientific, characteristic, and delightful additions went beautifully. The grand chorus, 'For unto us a child is born,' was encored. The pastoral symphony, intended to convey the idea of the angels descending from heaven to the shepherds, was as usual insufferably tedious. Miss Paton's recitatives were given in excellent and perfect style, as was her song, 'Rejoice greatly,' excepting a little episode in her cadence, which was too florid, too long, and not quite in good taste. This song is very difficult to be sung well, and the principal vocalists dislike it generally; Madame Mara always refused to sing it, and said, 'Although I might give an audience satisfaction, yet I can never please myself in it.' Miss Wilkinson sang 'He shall feed his flock,' chastely and beautifully, and Mrs. W. Knyvett followed with the second part, (where it modulates into the sub-dominant,) also very well, excepting once or twice, adding a thirteenth quaver to the tedious twelve-eight time; this repetition of the air we have always considered superfluous, and as tedious as the pastoral symphony which it resembles.

The second and third parts, consisting chiefly of heavy choruses, require no particular comment; they are by far the most scientific, devotional, and beautiful parts of the oratorio, and went off quite well; but, owing to the encoring of the Hallelujah and other choruses, as well as Sontag's song, the performance (which commenced exactly at twelve) did not conclude till past four o'clock; and the audience, as well as the performers, were all quite fatigued.

FOREIGN VARIETIES.

GEOLOGICAL RESEARCHES.—It has long been known to naturalists, that several caverns in Hungary and Germany are the receptacles of immense collections of the bones of bears, hyenas, &c., though not one of these animals is an inhabitant of those countries at the present day. This circumstance has derived additional importance from the subsequent discovery of various caves in other regions of Europe, in which similar collections have been met with in still greater quantities. Professor Buckland, who has given an account of those existing in England in his 'Reliquiæ Diluvianæ,' has discovered caves of a like description in France. When he visited the grottoes Oiselles, near Besançon, he predicted that the beds of stalactytes formed a covering for similar bones; and his prediction was confirmed, for, as soon as they were removed, a considerable number of skulls and bones were found, which belonged to that species of the bear having an arched forehead, the race of which is now entirely extinct: it is deserving of remark, that the bones of no other animal were met with on this spot. Another cave at Echenoz, near Vesoul, has recently been explored by M. Thiriat: he found it to contain the bones of hyenas and other herbaceous animals. Several individuals of distinguished erudition, particularly Professor Marcel de Serres and Dubreil, are at this moment employed in drawing up a description of a cave, containing the bones of the

hyenas, which was discovered three or four years ago at Lunell-Vicil, in the department of the Hérault. Another has been found at Saint Macaire, in the department of the Gironde, in which there is a collection of the bones of hyenas and other animals; and a fourth is spoken of as existing in the department of the Aude. In short, those caves which contain grottoes, seem to constitute one general phenomenon, peculiar to all hills or mountains which assimilate in conformation to the chain of the Jura; and the extinction of the animals which inhabited them is blended with the remarkable events that lie hidden in the ancient records of the world, and towards the solution of which Geology is directing its inquiries.—*Cuvier in the 'Analyse des Travaux de l'Acad. Roy. de Sciences.'* Paris, 1828.

GOTTINGEN.—The number of students during the present winter session, (1828, 1829,) amounts to 1386, which gives an excess of 15 above the number who frequented this University in the preceding summer session. Of the former, were 759 natives, and 627 foreigners; namely, of theology, 377; of jurisprudence, 573; of medicine, 283; and of the arts and sciences in other branches, 153. The present number is, however, less by 174 than it was at Easter 1827, when it reached 1560.

BRESLAU.—No less than 112 young men had matriculated in this University during the hibernal half year, and up to the end of February last; independently of 106 pupils, who had entered the medico-chirurgical institution. The total amount of the students, therefore, was 1218. In the year preceding they did not exceed 1094; so that the increase this year has been 124.

MENDICITY, ETC., IN BERLIN.—We are indebted to M. Engelhardt, a privy councillor of his Prussian Majesty, for the subsequent details, which are extracted from official documents. Notwithstanding the vigilance which is applied to the suppression of mendicity in Berlin, it is an evil which seems to be constantly on the increase. This remark is justified by the return of beggars apprehended from 1822 to 1825, from which it appears that 359 were arrested in 1822, and 677 in 1825. Unfortunately, no general returns have been made up since the latter of these years. The police have probably been unwilling to record their latches. According to special Tables, drawn up by the Directors of the Poor, the following were the numbers of the poor relieved at their own dwellings, and the monies expended upon them:

	£	s.	d.
In 1822 relieved 2990 persons at a cost of	4252	7	0
1823	3028	4711	4 0
1824	3205	6739	4 0
1826	3475	7568	5 0

Since this period, the numbers of the poor, and the amount of monies expended upon them, have increased from year to year. The number of suicides, inclusive of the military, committed during the five years ending 1827, were, of male persons, 104, and of females, 20; forming an average of nearly 25 per annum out of a population of more than 220,000 souls.

LITERARY INTELLIGENCE.

The author of the new sacred poem, 'The Opening of the Sixth Seal,' is about to publish an essay on a more efficient mode of attaining a general and practical knowledge, including instructions for a course of study suited to gain that object. This work will, we understand, appear at such a price as will place it within the reach of all classes, and thus become the more extensively useful.

We are requested by Mr. Marshall, publisher and proprietor of 'The Gem,' to state, that the volume of that annual for 1830 will be published on the 1st of November, 1829. Mr. Cooper, of the Royal Academy, is engaged in superintending the engravings, which will be all of the highest class, and copied from original designs. The editorial department, which is no longer under the control of Mr. Hood, has been placed in the hands of a gentleman of competent ability, who will be supported by all the eminent writers whose names appeared as contributors to the last volume, with the addition of many others of great celebrity, who have never written for any annual.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Carpenter's School Speaker, 4th edit., 12mo., 2s. 6d.
Dix's Land Surveyor, 5th edit., royal 12mo., 7s.
Olney Hymns, with Essay by Montgomery, 12mo., 4s.
The Christian Defence against Unbelief, 12mo. 5s. 6d.
Elemens de la Grammaire Francoise de la Homond nas gros, 2s. 6d.
Tales of a Physician by Harrison, 1 vol. 8vo., 7s. 6d.
Dr. Good's Study of Medicine, 3rd edit., by S. Cooper, 5 vols. 8vo., 3l. 15s.
Pinnock's Grammar of Modern Geography and History, 2d edit., 18mo., 5s. 6d.
Sketches of Irish Character, by Mrs. Hall, 3 vols. 8vo., 12s.

Scenes in Africa and America, by Rev. J. Taylor, new edit., 2 vols. in 1, 12mo., 8s.
The Age, a Poem in Eight Books, 7s. 6d.
Burke's Dictionary of Peersage and Baronetage of the United Kingdom, 3rd edit., 8vo., 1l. 15s.
Stratton Hill, a Tale of the Civil Wars, by the Author of 'Letters from the East,' 3 vols. post 8vo., 1l. 11s. 6d.
The Sectarian, or the Church and the Meeting-house, a Novel, 3 vols. post 8vo., 1l. 7s.
Dr. Busby's Catechism of Music, 9d.
Wunderboon's German Grammar, 12mo., 8s.
The Beaver and Elephant, Stories for Children, 18mo., 2s. 6d.
Murray's Practical Remarks on Modern Rates, 12mo., 4s.
The Hope of Immortality, a Poem, 6s.
Chapters on Churchyards, 2 vols., 8s.
The Life of Francis I., King of France, with Portrait, 2 vols. 8vo., 28s.
Description of 300 Animals, 12mo., new edit. enlarged, 8s.
Southey's Colloquies, 2 vols. 8vo., 1l. 10s.
Southey's All for Love, 6s. 8vo., 7s. 6d.
Watts's Scripture History, 12mo., 4s.
Northcote's Fables, post 8vo., 14s.
Greenshaw's Memoirs of L. Richmond, 8vo., 8th edit., 10s.
Tydler's History of Scotland, vol. 2, 8vo., 12s.
Bacon on Syphilis, 8vo., 9s.
A Treatise on the Police and Crimes of the Metropolis, 8vo., 12s.
Faulkner's Historical and Topographical History of Chelsea and its Environs, 3 vols., 8vo., 3l. 2s.
A Commentary, Mythological, Historical, and Geographical, on Pope's Homer and Dryden's Æneid of Virgil, 8vo., 12s.
The Illustrated and Speaking French Grammar, with easy Exercises, by C. L. Lasque, 12mo., 5s. 6d.
Bowdler's Theological Essays, 18mo., 3s. 6d.
The First Part of Dr. Watts's Reputonum Theologicum, 5s.
Jones's (Wm.) Course of Lectures on the Apocalypse, Part I. 8s. 6d.
Curtis on Deaf and Dumb, 8vo., 10s. 6d.
Reay Modden, 3 vols., post 8vo., 24s.
D'Erline on the Cynic, 3 vols., 12mo., 24s.
Encyclopædia Metropolitana, 2d Division, History and Biography, vol. 1., 2l. 2s.
Library of Useful Knowledge: History of Greece, 8vo., 5s.
Calmet's Dictionary of Holy Bible, with the Fragments of the late Charles Taylor, 8th edit., with portrait, and additional maps, 6 vols., 4to., 10l. 10s.
Conway's Personal Narrative through Norway, Sweden, &c., 8s. 6d.
Baines's Companion to the Lakes, with map, 6s. 6d.; without map, 5s. 6d.
Thompson's Conspectus, 18mo., 8th edit., 5s. 6d.
Dr. Paris on Diet, 4th edit., 8vo., 10s. 6d.

WEEKLY METEOROLOGICAL JOURNAL.

Temperature registered at 9 A.M. and 8 P.M.	April.	Therm. A.M. P.M.	Barom. at Noon.	Winds.	Weather.	Prevailing Clouds.
Mon.	27	43	44	20. 50	S.W.	Rn. A.M. Cum. Nim.

Nights and mornings fair throughout the week. Tempestuous N.W. wind on Tuesday.

Highest temperature at noon, 61°.

Astronomical Observations.

The Moon in Perigee on Thursday.
The Moon and Venus in conj. on Saturday, at 11 h. 20m. P.M.
Venus's geocentric longitude on Sunday, 8° 7' in Taurus.
Mars's ditto ditto 16° 33' in Gemini.
Jupiter's ditto ditto 13° 42' in Sagitt.
Saturn's ditto ditto 25° 29' in Cancer.
Sun's ditto ditto 12° 44' in Taurus.
Length of day on Sunday, 14 h. 54 min. Increased 7 h. 10 m.
Sun's hor. motion on Sunday, 2' 25" plus. Logarithmic num. of distance, .003831.

FOR THE SKIN AND COMPLEXION.

ROWLAND'S KALYDOR, Patronised by the Royal Family, the Prince and Princess Esterhazy, the Prince and Princess Polignac, and the Nobility.

This valuable Specific is warranted perfectly innocuous, and possesses Balsamic Properties of surprising energy. It eradicates all Cutaneous Eruptions, Pimples, Spots, Redness, gradually producing a delicately clear soft Skin; transforms even the most Sallow Complexion into Radiant Whiteness; successfully renders harsh and rough Skin beautifully soft, smooth, and even; imparts to the Face, Neck, and Arms, a healthy and juvenile bloom, and removes inflammation.

ROWLAND'S KALYDOR is equally indispensable in the Nursery as at the Toilet. Perfectly innocuous, it is recommended by the first physicians to be used by the most delicate lady or infant, with the assurance of safety and efficacy, possessing softening and healing properties. It gives, in cases of incidental inflammation, immediate relief; cools the mouth of the infant, and enhances maternal pleasure in the act of administering alimentary nourishment.

To Gentlemen whose Faces are tender after Shaving, it will be found excellent beyond precedent in ameliorating and allaying that most unpleasant sensation, the irritability of the skin.

Sold in Half Pints, at 4s. 6d. each; and Pints, at 8s. 6d. each.

CAUTION.—To prevent Imposition, and by Authority of the Hon. Commissioners of Stamps, the Name and Address of the Proprietors is engraved on the Government Stamp, affixed on the Cork of each Genuine Bottle—

'A. ROWLAND AND SON, 20, HATTON GARDEN.'

GESTE NAVALI BRITANNICHE, (the Naval Feats of Great Britain), an Italian Poem, by S. E. PERRONI, Author of 'The New Italian and English Pronouncing Dictionary,' &c., &c., a new edition, in 2 vols. 8vo., price 25s.

For a high character of this work, see 'The Literary Gazette,' August 2, 1838, and all the Reviews.

Published by Treuttel, Wurtz, and Co., 30, Soho-square.

This day is published, Price Seven Shillings and Sixpence, No. VII. of the

FOREIGN QUARTERLY REVIEW.

CONTENTS: I. Sismondi's History of France.—II. Language and Literature of Holland.—III. Ancient National Poetry of Spain.—IV. Scandinavian Mythology.—V. French Criminal Trials.—VI. Mexico.—VII. Victor Hugo's Poems and Novels.—VIII. Von Hammer's History of the Ottoman Empire.—IX. Foreign Views of the Catholic Question.—X. CRITICAL SKETCHES.—X. Coquerel's History of English Literature.—XI. Bp. Munster's Account of a MS. of St. John's Gospel.—XII. Pictorial Treatise on Heat.—XIII. Martinez de la Rosa's Works.—XIV. Guerrazzi's Battle of Benevento, an Historical Romance.—XV. Annuaire of the Board of Longitude for 1839; M. Arago's Notice of the Steam Engine.—Miscellaneous Literary Notices, No. VII.—List of New Works published on the Continent, from January to March, 1839.

No. VIII. will be Published in July.

THE NEW MONTHLY MAGAZINE, for

MAY, contains: Commercial Relations of the Country—Progress of the London University—Sporting Scenes in India, No. I.; Leaving Cantonments in Hot Weather—Lines by Thos. Campbell, Esq.—Memoirs of the War in Spain, by Marshal Suchet, Duke d'Albufera—Provincial Sketches, No. II.; Rank—Convent of St. Bernard—The Wine of Blood—Portraits of the French Players, No. II.; Mademoiselle Jenny Colon—The Image of the Dead, by Mrs. Hemans—Continental Cities and Scenery, No. II.; Vienna—Basilia, a Tale of modern Athens—Passages from a Poet's Dream Book—The 'Bubble Refutation'—The Young Surgeon, No. II.—Sketches of Parisian Society, Literature, &c.—Henri III. et sa Cour—John Bullism—The Naval Officer and Tales of Military Life—The Religion of Politics—Lines written near Larissa, in Thessaly—Epigram—The usual Varieties in Art, Science, Criticism, Biography, &c.

Printed for Henry Colburn, 5, New Burlington-street.

On the 1st of May, No. 5; price 2s. 6d., of

THE UNITED SERVICE JOURNAL, and

NAVAL AND MILITARY MAGAZINE, containing among other interesting papers: the Campaign in Portugal, under Sir Arthur Wellesley, in 1809, by an Officer on the Staff—A Hussar's Life on Service—A Popular View of Meteorology and its Practical Uses to the Seaman—Sketch of the Battle of Athens, by an eye-witness—From Waterloo to Paris, in 1815—Encounter with the Arabs at Mocha, in the Red Sea—Recollections in Quarters; Burisma in India—Visit to General Jackson at his Cottage—Captain Owen's Plan for Rating Chronometers—Tales of Military Life—French Naval Schools—The Siege of Sawston, an Historical Legend, exhibiting the narrow Escape of the Princess Mary, (afterwards Queen), from Sawston Hall, when it was besieged by the 'Protestant Boys' of Cambridge—Memoir of the late Lieut.-Col. Kelly—Peace Campaigns of a Cornet—Naval Gunnery, by Sir Howard Douglas—Original Correspondence on a variety of subjects, interesting to the two Professions—The Yacht Club—Naval Register—Promotions and Appointments, General Orders, Circulars, Courts Martial, Distribution of the Army, Births, Marriages, and Deaths, Meteorological Register, &c., &c.

Printed for Henry Colburn, 5, New Burlington-street; Bell and Bradfute, Edinburgh; and John Cumming, Dublin.

ADVANTAGES BELONGING TO THE SOCIETY.

1. Reduced Rates of Premium calculated on the improved state of public health, and the increased duration of human life.
2. Extending the benefit of Life Assurance to all classes of persons, including Cases of Disease, Advanced Age, Delicate Health, Sea Risk, and Climate.
3. Taking no entrance money, nor fine for non-appearance.
4. Accepting the premiums at a single payment—annually for a limited term—or annually during life, as may best suit the convenience of the Assured.
5. Apportioning to the Assured the greatest part of the profits every five years, which, at their option, may be added to the policy, or taken in reduction of the payment of premium.
6. The Society grants Annuities and Endowments for Children.
7. Payment of Claims in Three Months after Death.
8. Purchasing of Policies on the most liberal terms, when the object of an Assurance has been effected.
9. No increase of Premiums is required for Military or Naval Officers, except when called into actual service.

Prospectuses and full information may be had at the Office (gratis), or by addressing a letter to the Secretary.

J. PINCKARD, Resident Secretary.

Office, No. 4, Southampton-street,
Bloomsbury-square, London.

THE GALLERY of the SOCIETY of PAINTERS IN WATER COLOURS, Pall-Mall East, is NOW OPEN, every day, from nine till seven.—Admission, 1s.; Catalogue, 6d.

CHARLES WILD, Secretary.

THE EXHIBITION of LODGE'S PORTRAITS of the MOST ILLUSTRIOUS PERSONAGES of GREAT BRITAIN, from the Galleries of his Majesty, the Nobility, and from Public Collections, is OPEN DAILY, from nine till six, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, corner of Suffolk-street.

Admission, by Tickets only, which may be had free of expense, on application to Messrs. Harding and Lepard.

EXHIBITION.

TAM O'SHANTER and SOUTER JOHNNY.

—These Statues, illustrative of Scottish Character, Costume, and the Poetry of Burns—Scotland's immortal Bard—executed by the self-taught Artist, Mr. THOM, will be exhibited for a few weeks, at No. 28, Old Bond-street. The Exhibition will commence on Wednesday the 22d instant.—Admission, 1s.; Season Tickets, 5s.

FINE ARTS.—MONTGOMERY GALLERY,

309, Regent-street.—Mr. J. RAWSON WALKER has the honour to submit to Public Inspection TEN PAINTINGS, to illustrate parts of Montgomery's celebrated Poem, 'The World before the Flood.'—Open from nine till dusk.—Admission, 1s.; Catalogues, 6d.

J. BROOKES, late of No. 4, Royal Arcade,

Pall-Mall, Bookseller, respectfully returns thanks to the Nobility, Gentry, the United Services, and liberal professions, for the support he has been honoured with, and takes this opportunity of announcing his REMOVAL to 9, NEW BOND-STREET, where he hopes, by his attention to business, to merit a continuance of their patronage.

On Saturday, May 16, 1839, will appear, No. I. of

THE EDINBURGH LITERARY GAZETTE.

To be published every Saturday morning.

The purpose and value of a Journal conducted on the excellent plan of 'The London Literary Gazette,' containing critical notices of new works, and forming a compend of general literature, are so universally understood, as to render exposition superfluous. For a periodical of this description, Edinburgh affords peculiar facilities. As the seat of a flourishing University, and of one of the great European Libraries, it has long held an eminent rank in the republic of letters; and with reference to the trade of literature, it is the second publishing market in the British empire. It is the residence, or at least the occasional resort, of all the nobility, learning, and wealth of the country; and it forms the common centre of attraction for connoisseurs, artists, and men of science; the national mart where alone their genius and their works can be adequately appreciated and rewarded. With all these advantages, it must be considered rather extraordinary, that in a city so distinguished, no work of the kind now projected should hitherto have existed. At this moment it is the subject both of surprise and reproach, that Edinburgh possesses nothing in the shape of an exclusively literary paper at all corresponding with her resources, or worthy of her literary fame. A register or journal of criticism, unmixt with politics, combining an ample review of the current literature of the country, with an account of the progress and improvements in science and the arts, must be regarded as a desideratum which the Scottish press has yet to supply.

Anxious to avail themselves of these local advantages, and to furnish the British public with a work that shall unite the copious and solid information of the more elaborate reviews with the interest and amusing varieties of a literary newspaper, the Projectors of 'The Edinburgh Literary Gazette' have determined to commence their labours, fully convinced, that with the resources at their command, nothing but publicity and perseverance are wanting to crown their efforts with success. With regard to the practical part of the work, they pledge themselves that neither exertion nor expense shall be spared. As for the nature and arrangement of the contents, a very few words will suffice. It were easy to frame a specious and imposing prospectus, which too frequently amounts to nothing more than an abstract theory of good intentions; a mere anticipation of ideal excellence, rather than a true index of the intended performance. Avoiding all such ostentatious display, the Conductors of 'The Edinburgh Literary Gazette' will make no promises on their part, and excite no expectations in the public which they are not amply prepared to realise.

The Projectors have only farther to add, that the most ample and efficient assistance has been secured. Each department will have its own appropriate contributors, on whose judgment and abilities the public may rely with confidence. Without affecting any boastful pretensions of ways and means, or making an empty parade of names, they may be permitted to state, that in their list of auxiliaries will be found names which already have done honour to modern literature; and when the Author of 'The Confessions of an Opium Eater,' Delta of 'Blackwood's Magazine,' and Mr. Crichton, the Translator of Koch's 'Revolutions of Europe,' are mentioned, it will be some guarantee of what the public have to expect. Finally, though the Projectors may not perhaps be able at once to develop their plan fully, and in all its parts, they feel assured that any primary obstacles will speedily be overcome. They will be content to peril the character and success of the whole undertaking on the first Six Numbers of the work.

'The Edinburgh Literary Gazette' will be printed on a sheet equal in size to the largest literary paper in Britain, and will be published at No. 10, Prince's-street, (the premises occupied by the late Mr. Constable,) where Subscriptions and Advertisements will be received. A list of Agents will be given in a future advertisement. In the mean time, Orders, &c. will be received and transmitted by all respectable Newsmen and Booksellers throughout the United Kingdom.

Price of each Number, 8d. unstamped, or 1s. stamped, sent free by post.

Books, &c., for reviewing, Communications, Orders, and Advertisements, are received by Messrs. Ebers and Co., Old Bond-street, London; who will publish 'The Edinburgh Literary Gazette' every Monday.

Edinburgh, No. 10, Prince's-street, March 2, 1839.

GREEN'S NUMISMATIC ATLAS OF ANCIENT HISTORY.

Dedicated, by Permission, to the Earl of ARBUTHNOT.

Just published, in a series of 31 Plates, price 2l. 7s.

NUMISMATIC ATLAS OF ANCIENT

HISTORY, comprising a Series of 360 Grecian Coins, arranged in the form of an Historical Chart, designed and executed on Stone, by BENJAMIN RICHARD GREEN. The Work is accompanied by a descriptive letter-press, and may be had, in boards, 2l. 12s.; mounted to fold up in a case, 2l. 17s.; and on a roller, varnished, 3l. 6s.

'The plan adopted for the arrangement of the medals in the chart, is, we think, excellent.'—*Athenæum*.

'Nothing of the kind has hitherto appeared in this country, and Mr. Green's work has, therefore, the merit of novelty as well as of accuracy and information.'—*Weekly Dispatch*. Published by Longman, Rees, Orme, Brown, and Green; of whom may also be had,

A LECTURE on the STUDY of ANCIENT COINS, as connected with History; illustrated with Plates, price 3s. 6d.

WEST LONDON FOREIGN CIRCULATING LIBRARY, 11, Berners-street, Oxford-street.

The lovers of Foreign Literature are respectfully informed that this establishment is exclusively devoted to the circulation of German, French, Italian, and Spanish Works, of which the Catalogues, upon inspection, will be found to embrace an extensive Collection in every department of Literature, by the most esteemed Authors.

In addition, Subscribers will have the privilege of perusing the principal Periodicals of the Continent, particularly those of Germany and France, immediately on their arrival.

Such Subscribers as may honour this establishment with their patronage, may rely upon the strictest attention being paid to their commands, whether in Town or Country.

Terms of Subscription.

First Class.—5l. 5s. per Year; 3l. 3s. per Half-year; 1l. 16s. per Quarter.—12 vols. in Town, 24 in the Country.

Second Class.—4l. 4s. per Year; 2l. 12s. 6d. per Half-year; 1l. 11s. 6d. per Quarter.—8 vols. in Town, 12 in the Country.

Third Class.—3l. 3s. per Year; 2l. 2s. per Half-year; 1l. 4s. per Quarter.—6 vols. in Town, 8 in the Country.

Fourth Class.—2l. 2s. per Year; 1l. 5s. per Half-year; 15s. per Quarter.—3 vols. in Town, 6 in the Country.

Catalogues, and Cards of Terms, may be had on application. J. D. HAAS, (from Messrs. Treuttel, Wurtz, and Co.) Librarian.

BARNETT'S SONGS of the MINSTRELS,

Vol. II. Price 18s.

'These compositions are entitled "Songs of the Minstrel," and do equal honour to the Poet and Musician. The Portuguese Minstrel, "The Spot where I was Born," is particularly beautiful; and the Russian "Maid of Tartary," highly striking and original. These two, with the Neapolitan and Turkish, are fully equal to the best of the first four of the twelve, are not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is the cleverest and most careful of English composers. The Poetry is by the late Harry Stoe Van Dyk.'—*Plebe Literary Gazette*.

Published by Mayhew and Co., 17, Old Bond-street, Where may be had the following New Songs:—

- 'Rise, gentle Moon,' sung by Miss Love, with the most enthusiastic applause, and nightly encored, in the historical drama of 'Charles XII.' composed by John Barnett, with a beautiful Lithographic Portrait of Miss Love.
- 'My sweet Guitar,' sung by Miss Love with distinguished applause; composed by John Barnett.
- 'Here's a Health to Merry England,' National Song; sung by Mr. Braham, composed by John Barnett.
- 'Listen to my Wild Guitar,' written as a companion to the celebrated Serenade, 'The Light Guitar,' composed by John Barnett.
- 'The Chimes of Zurich,' sung by Miss Love, written by Harry Stoe Van Dyk, composed by C. E. Horn.
- 'Sweet Evening Star,' answer to Barnett's celebrated song, 'Rise, gentle Moon,' composed by Joseph Hart.

ARTISTS' BENEVOLENT FUND, under the

Patronage of his Most Gracious MAJESTY. Instituted 1810, and incorporated 1827.

The Friends of the Arts and Subscribers to this Institution are respectfully informed, that the TWENTIETH ANNIVERSARY DINNER will take place in Freemasons' Hall, on SATURDAY, the 6th of May.

His Royal Highness Prince LEOPOLD in the Chair.

STEWARDS.

Price 8d.

PROGRESS AND PROSPECTS OF SOCIETY.

Sir Thomas More: or, Colloquies on the Progress and Prospects of Society, by Robert Southey, Esq., Poet Laureate. In 2 vols., 8vo. Murray. London, 1829.

WHEN a popular journal* recently noted, as an ominous sign of the times, the universal, unaccountable dislike to speaking truth on any subject of importance, it only gave with naïve fidelity the result of every thinking man's experience and consciousness. There would be little hope of social improvement if this now endemic indisposition were wholly ascribable to what at first sight might appear to be its only possible cause—a determined tacit withdrawal of all interest in the commonweal on the part of almost all its influential members. We fly for refuge from so desperate an hypothesis to a milder, though a scarcely less humiliating solution, by which the state of facts thus signalised may better be referred to intellectual than to moral inertness—to want of clearness than to positive obliquity in the social views and feelings of our countrymen. The superstitions of the infant age of nations—the individual ties which once attached the governed to their governors—even the strength of feeling (though often linked with rather obscure ideas) which the names of *constitution* or *liberty* have been wont to excite in Englishmen, have naturally decayed; nor has the social instinct—the *sapientia solgeris*†—of earlier times been as yet replaced by principles more suited to our more advanced progress; nor has the moral truth involved in many a fast-decaying prejudice as yet received its needful purification—its appropriate philosophical expression.

To those who view with anxiety the dangerous transition which our national mind and regimen has yet to complete, we may venture to suggest a ground of favourable anticipation, as a fair and legitimate counterpoise for those discouraging symptoms to which allusion has already been made. This is the increase of individual power in every branch of moral action and influence—a tenet which may meet with incredulity from many who first listen to its naked exposition. Mistakes are made, when, looking at the past with reference only to a few distinguished persons and occurrences, we declaim about the woe-ful diminution of energy which has happened from old times to the present. It is forgotten, that, in centuries of feudal pride and turbulence, the prominence of a few was only purchased by the moral annihilation of numbers; and when the later and nobler exploits of mental power in past ages are brought into comparison with those of the present, besides that the unfairness is not seldom committed of arraying on the one side the muster-roll of centuries—on the other, the poor handful of a single generation,—it is forgotten, that a higher range of mental cultivation is more equally diffused amongst more numerous partakers, although it should be granted that the qualities are more rarely combined which constitute the highest rank of genius.

From the tone of the foregoing observations, it will readily be understood that we cannot exactly sympathise with a vein which, more or less, runs through the whole of the work before us, and which is mingled and made up of a certain ill-

explained terror for the effects which are to follow from the fatal demolition of such bulwarks as the Test Act and exclusion of the Catholics, combined with an even more mysterious feeling of the delinquency which has been incurred by the Government of this country, in not extending, by some undefined means, its moral influence, and in not anticipating the pious zeal of Methodists and Dissenters, by infusing, through what agency *non liquet*, a commensurate enthusiasm into the Church. We have for some time back been so pleasingly accustomed to compare the frequent prophecies, ascribed to our author, in the pages of 'The Quarterly Review,' with the events which seemed to follow solely in order to their falsification, that we cannot help indulging in pleasing hopes of further blessings on the strength of his present Jeremiads. Hardly had the oracle announced, in plainer language than is prudent for oracles, that the duration of the Test and Corporation Acts would be identical with that of the Church, than this indispensable integrant of our ecclesiastical polity came down, like the walls of Jericho, without even a flourish of trumpets. Scarcely was the ink dry, or the types removed from their forms, which had announced a renewed lease of the Irish half of the House of Commons (the outside of it, namely) to the Catholics, than the proprietor and manager of St. Stephen's themselves open the door to their unqualified admission. We cannot but hope, that his dolorous animadversions on the want of stricter discipline, ecclesiastical and civil, are but (with reverence to their gravity) as cuckoo songs bespeaking summer, which augur the removal of remaining restrictions.

One more point we wish to settle with Mr. Southey, before we proceed directly to the work before us. This is his apprehension of an inordinate and mischievous increase of national wealth; a feeling in which we certainly cannot seriously participate, whatever we may think of some anomalies and abuses in the public distribution of riches. Indeed, we were for some time at a loss to account for the uneasiness of our author on this head, until at length we found a clue to it in a notion which, strange though it be, our author is not singular in holding, the notion that our national debt is a portion of our national wealth. That it *was* a portion of national wealth, we are ready to acknowledge; but we really wish we could pacify Mr. Southey's pious fears that it is, or ever will be again. We really think the mass of debt incurred in the late war has not augmented national wealth in that degree which should affect a patriotic mind with serious disquiet, as we are not aware of any items greatly more important than brick-bats, cuirasses, and helmets, imported by young ladies from the field of Waterloo; and sets of teeth, transmitted from the same cadaverous market by the agents of the London dentists. Nor, we think, need our author apprehend any private inconvenience from the vast excess of wealth under which he conceives the land to groan, nor need he anticipate the collector's domiciliary visit for the purpose, not, as wont, of exaction, but of restitution, of absolutely pressing him to participate in that dividend of our overflowing affluence, which the embarrassment of holding it must finally force upon Government: and of which, if we reckon the debt at 860,000,000, and the population, for the sake of round numbers, at 22,000,000; Mr. Southey's individual share, which we beg him to

believe there is no very imminent risque of being thrown on his hands, will amount to 39l. 2s. 6d.

We insert the following extract from the work before us as uniting most of its merits, as well as many of its peculiarities, and we adjourn a more detailed examination of both to the epoch of our next appearance:

‘MONTESINOS.

‘But how is this to be effected? Announce the speedy Restoration of the Jews, and you will find believers. Preach up the duty of converting the Turks, and you may form a society for that express purpose. But if you propose to render civilization complete by extending it to those classes who are brutalised by the institutions of society, half the persons whom you address will ask how this is to begin? and the other half, where it is to end? Undoubtedly both are grave questions. Owen of Lanark indeed would answer both: but because he promises too much, no trial is made of the good which his schemes might probably perform.

‘SIR THOMAS MORE.

‘In your opinion then he has shown how the beginning might be made.

‘MONTESINOS.

‘If I were his countryman, I would class him in a triad as one of the three men who have in this generation given an impulse to the moral world. Clarkson and Dr. Bell are the other two. They have seen the first fruits of their harvest. So I think would Owen ere this, if he had not alarmed the better part of the nation by proclaiming, upon the most momentous of all subjects, opinions which are alike fatal to individual happiness and to the general good. Yet I admire the man; and readily admit that his charity is a better plank than the faith of an intolerant and bitter-minded bigot, who, as Warburton says, “counterworks his Creator, makes God after man's image, and chuses the worst model he can find... himself!”

‘MR THOMAS MORE.

‘You must, however, acknowledge that the prejudice which he has thus excited against his political speculations, is not unfounded: for the connection between moral truth and political wisdom is close and indissoluble; and he who shows himself grievously erroneous upon one important point, must look to have his opinions properly distrusted upon others. To maintain that the state ought not to concern itself with the religion of the subjects is the greatest and most perilous of all political errors: and to regard religion with indifference is the most dangerous of all moral ones; if indeed in any case that may be called an error, which assuredly in most is less a mistake of the understanding than a sin of the will.

‘MONTESINOS.

‘A craniologist, I dare say, would pronounce that the organ of theopathy is wanting in Owen's head, that of benevolence being so large as to have left no room for it.

‘SIR THOMAS MORE.

‘Away with such systems! Where there is most love of God, there will there be the truest and most enlarged philanthropy. No other foundation is secure. There is no other means whereby nations can be reformed, than that by which alone individuals can be regenerated. In the laws of God conscience is made the basis of policy; and in proportion as human laws depart from that groundwork, error and evil are the sure result.

‘MONTESINOS.

‘So Lord Brooke teaches, the wisest man that ever uttered dark sayings in verse. National happiness must be produced through the influence of religious laws. There is nothing, however, in the practical part of Owen's polity to exclude them; and indeed so far as his scheme of society might easily and beneficially be put in execution, it would strengthen their influence; its purport and effect being

“That private hearts may unto public ends”

* ‘The Quarterly Review.’

† Vico, *Scienza Nuova*.

'A set of journeymen in London endeavoured to make the attempt. They were chiefly, printers. A committee was appointed to digest their plan, and the Report which they put forth upon the subject was worthy of more attention than it obtained. In this Report they declared themselves fully persuaded that by combining their industry, their skill and their mental faculties, they should not merely bid defiance to poverty, but secure a competency of the goods of life, a great accession of intellectual enjoyments and rational amusements, and, above all, the means of giving their children an education which would ensure them an adequate portion of useful knowledge, and confirm them in virtuous habits. Clubs and Friendly Societies, they said, had made them familiar with the blessed effects of union; and they were certain that by thus uniting they should obtain the power of creating new wealth for themselves, procure a larger quantity of the means of subsistence for the same money, and enable their wives to perform their domestic duties more skilfully and in half the time which those occupations now required. They calculated upon an average saving of one fourth per cent. by purchasing articles for the community in wholesale: upon a saving of time not less advantageous, by a proper distribution of domestic occupations, and upon the benefit of avoiding waste by having at hand all conveniences and facilities for economy. For the children, large school-rooms were to be provided, (appropriate to other purposes after school hours,) and a large playground, which would keep them from the accidents and temptations of the streets. Constant superintendence was to be exercised over them, by changing the teachers every three hours, and they hoped to unite the advantages of public and private education, the children being at all times accessible to their parents, and constantly with them at certain times of the day. For themselves, their dwellings would be more commodious, their food better, their habits cleaner; and their wives, not being worn down by over exertion, nor by the distraction of conflicting duties, would become better companions, and be better fitted to participate in innocent recreations. The Establishment would in reality be a College of useful arts: it would have its lectures, its library, its infirmary, and its medical practitioners.

'The result of their estimates was that a saving of 7,780 per annum might be effected by means of the proposed plan upon the expenditure of 250 families, averaging four persons in a family; and that if each adult male member paid one guinea per week to the general fund, the collective sum would provide the whole establishment with all the necessities and many of the comforts of life in abundance, besides furnishing a capital for the purposes of production and traffic. Some objections they anticipated, and first, the difficulty of making so many persons agree and act cordially together. To this they allowed little weight, the only condition which they required upon admission being a formal acknowledgement of this maxim, that while every member had a right to do separately for himself whatever he could, without trespassing upon others, it was his duty to do as much as he could, without injury to himself, for the benefit and comfort of the society. So plain a proposition, they thought, was not likely to be contravened: and if it were, every adult member might quit the society when he pleased; and the majority of course possessed the power of expelling any individual who disturbed its peace, either paying him the fair value of his share in the permanent stock, or allowing him to sell out. A second objection was, that under such a system, the poor, the indolent and inefficient would fare as well as the more wealthy, industrious and useful. But the answer to this was, that a community of goods was not what they proposed: their plan of association rather resembled that of regimental messes; and as the contributions were to be regulated according to the means of those who could afford least, such as could afford more indulgences might have them at their own expense. As for any misdirection or mal-administration of the funds, that must be provided against, as in other cases, by regular inspection. And for the injury which the small retail trade would suffer if such plans were generally adopted, it would be so gradual that it could hardly be called an evil: the general expenditure would be increased rather than diminished, and the retail dealer would find other modes of life. Lastly, the increase of population was objected, as a consequence which must follow from the success of such plans, and aggravate the miseries of posterity. But they repelled this argument with just indignation, and maintained that if a taste for comfort could be diffused over the whole community, it would constitute a much more effectual check upon excessive

population than the misery which results from blind improvidence ever has, or ever can be expected to do.

'SIR THOMAS MORE.

'Enough of the theory. Let us hear how it proved in practice.

'MONTESINOS.

'There was a difficulty in the way which was not so easily obviated as the theoretical objections. London, which furnishes facilities for most things, affords none for an experiment of this kind. Space was wanted, and buildings adapted for the intended manner of life. The speculators proposed to raise 12,000*l.* in shares of 100*l.* each, and with the money to erect a quadrangle according to Mr. Owen's designs; the property of the buildings was to be vested in the shareholders, and the society to pay a rental of 7½ per cent. The capital was not forthcoming. The experiment was commenced with insufficient means, and under circumstances every way inconvenient. Of necessity therefore it failed; and then the failure was imputed to the impracticability of the scheme, whereas, had it been fairly set in action, it could hardly have failed to work well.

'SIR THOMAS MORE.

'Still in Utopia! Would you think thus favourably of the scheme, if it did not in some degree accord with the dreams of your youth?

'MONTESINOS.

'That consideration is more likely to put me on my guard against illusion. But though Owen's views evidently tend to an entire community of goods, and these speculators looked to such a result of their experiment as possible, and as a consummation devoutly to be wished, they did not propose to go this length. What they aimed at was plainly practicable if it could have been fairly started, and the direct results must have been of unquestionable advantage to themselves, and utility to the commonwealth.

'SIR THOMAS MORE.

'A community of goods, you imply, then, would be productive of good to neither?

'MONTESINOS.

'Theory and experience are alike against it. The Jesuits are the only persons who ever made the experiment upon an adequate scale, and, well as they succeeded in Paraguay, the result did not induce them to establish their later missions upon the same foundation.

'SIR THOMAS MORE.

'Was the fault in the system, or in the Jesuits? Surely they set their standard so low that no inference against the principle of such a polity can be drawn from the result.

'MONTESINOS.

'The standard was the same in the Chiquito as in the Paraguay Reductions. They may more properly be said to have aimed at taming and domesticating the savages than at civilising them. But in the course of their experience they perceived that the disposition to have and to hold is the main spring of all improvements in society: and the desire of increasing their comforts and enjoyments called forth in the Chiquitos a degree of active and intelligent industry, to which the Guarani, notwithstanding the advantage of a much earlier settlement, never attained. But this is a wide excursion. Let us return from the Guapore and the Uruguay to the Thames.

'SIR THOMAS MORE.

'What then are the advantages, which, according to your view of the subject, might be expected from the Owenite plan, modified as you think it ought to be?

'MONTESINOS.

'To the individuals so associated, I am persuaded the benefit would not fall short of what these speculators proposed to themselves. And to society at large there would be the great and unequivocal good of exalting one whole class, and that a numerous one, . . . bettering their condition in every way, moral and physical, . . . increasing their respectability, their comforts, their means and their expenditure. This further advantage would arise, that, as no person would be admitted into such a community unless his character would bear inquiry, nor be allowed to continue in it if he deserved expulsion, the members would virtually be bound to their good behaviour: and the evil of a defective order would be remedied as far as such associations might extend. The effect even of the Saxon law, would thus in a great degree be brought about, and that without the slightest trenchment upon individual freedom, and in all respects unexceptionably.

'SIR THOMAS MORE.

'Something of this might be effected more easily by making your parochial government more efficient; that is, by making it what it ought to be, and indeed what it originally was.

'MONTESINOS.

'A parish is in itself a little commonwealth; but in these little governments, as in some great ones, though the machinery exists and is kept up, it no longer works according to its original design. What you have indicated is certainly one practicable means of producing great improvement where it is most needed; so it is perceived to be, and so it will one day be made. But the best parochial police must fall far short of effecting what these voluntary associations might accomplish. The difficulty is that which Archimedes felt: a place is wanted where to plant the machine; and in London this difficulty is almost insuperable. In a provincial town the experiment might more easily be made; but funds for the first outlay are not likely to be forthcoming. Large sums are sometimes bequeathed by humourists in strange ways, . . . to odd purposes more frequently than to useful ones. That such a chance may occur in this case is barely possible. It is somewhat less unlikely that capital may be embarked in it as a speculation, when no other means of employing it are at hand. And perhaps it is even probable that the principle may be taken up by some religious enthusiast, as the foundation for a new sect.

'SIR THOMAS MORE.

'In that case the evil would be greater than the good. The fanatics who should set out on such a principle would soon find themselves on the road to Munster.

'MONTESINOS.

'I think not. The Moravians on the continent carry it further than we are now contemplating; and yet they are an inoffensive, and even, in some respects, an exemplary people: so much so, that in spite of the obloquy which they provoked at their outset, no sect has ever in so great a degree enjoyed and deserved the good will and good opinion of all other Christian communities. There are more points of resemblance between Geneva and Rome, than between Hernhut and Munster. The danger in these days is not from religious fanaticism, but from the fanaticism of impiety.

'SIR THOMAS MORE.

'The one generates the other, and the state of things with you affords opportunity and encouragement for both. But therefore do you think that the Owenite scheme is likely to be carried into effect only by sectarian agency?

'MONTESINOS.

'Because a degree of generous and virtuous excitement is required for overcoming the first difficulties, which nothing but religious feeling can call forth. With all Owen's efforts and all his eloquence, (and there are few men who speak better, or who write so well,) he has not been able in ten years to raise funds for trying his experiment: while during that time the Bible Society has every year levied large contributions upon the public, and more than once a larger sum within the year than he has asked for. Had he connected his scheme with any system of belief, though it had been as visionary as Swedenborgianism, as fabulous as Pöpyery, as monstrous as Calvinism, as absurd as the dreams of Joanna Southcote, . . . or perhaps even as cold as Unitarianism, the money would have been forthcoming.

'SIR THOMAS MORE.

'And surely it is honourable to human nature that it should be so!

'MONTESINOS.

'How? honourable to human nature that we should be acted upon more powerfully by error and delusion, than by a reasonable prospect of direct and tangible benefit to ourselves and others?

'SIR THOMAS MORE.

'Say rather that what is spiritual affects men more than what is material; that they seek more ardently after ideal good than after palpable and perishable realities. This is honourable to your nature: and no man will ever be ranked among the great benefactors of his species unless he feels and understands this truth and acts upon it. Upon this ground it is that the moral Archimedes must take his stand. We must take wider views of the subject. For the present I leave you to your young companions, who are waiting you with expectation in their looks.'—Vol. i. pp. 132—145.

PICTURE-DEALING.

A Catalogue Raisonné of the Works of the most eminent Dutch, Flemish, and French Painters, in which is included a short Biographical Notice of the Artists, with a copious Description of their principal Pictures, and a Statement of the Prices at which such Pictures have been sold, &c. &c. By John Smith, Dealer in Pictures, late of Great Marlborough-street. Part I., 1 vol., large 8vo., pp. 412. Smith and Son. London, 1829.

Observations on the Arts, with Tables of the principal Painters of the various Italian, Spanish, French, Flemish, Dutch, and German Schools: their Scholars and Imitators, with Lives of the most celebrated Painters of those Schools. By T. Winstanley. 12mo., pp. 132. Jennings. London, 1829.

'Whereby, my little friends, we see,
That an original may sometimes be
No better than its fac-simile;
A useful truth, I trow,
Which picture-buyers won't believe,
But which picture-dealers know.
Southey's Pilgrimage to Compostella.

Of all the victims of knavery, the last, and the least, to be pitied are collectors of objects of virtù, on whom counterfeit works have been palmed for originals. In the first place, if they have been deceived by the excellence of the copy into a persuasion of its originality, they are not greatly sufferers: the injury they have sustained is more in imagination than in reality. As long, at any rate, as they remain under the happy delusion, they are in possession of a full and fair equivalent to the object sought for; and, even after the film which may have obscured their vision has been removed, they must continue for a time, at least, in a state much resembling that in which persons born blind find themselves when restored to the blessing of sight: they are unable to distinguish between one object and another. As, in the latter case, it is clear that the happiness of a person who begins thus late to exercise the faculty of seeing, could not be materially affected, if, for the rest of his life, he were to call a horse an ox, and, *vice versa*, an ox a horse, provided he continue to enjoy the paces of the easy-going animal in his airings, and be served at table with slices from the tender sirloin of the rougher galloper; so, no more need it interfere with the repose of the real lover of the art of painting, that to what he formerly denominated a Raphael he must henceforth give the name of a Del Sarto. The quality of the picture itself, its capability of affording intellectual gratification, is not in the least affected by this change of appellation; and, if the work ever deserved admiration, it will continue to do so still.

'If,' says Richardson, 'it is doubtful whether a picture or a drawing is a copy or an original, it is of little consequence which it is; and more or less in proportion as it is doubtful. If the case be exceeding difficult, or impossible to be determined, 'tis no matter whether it be determined or not. The picture, supposing it to be a copy, must be in a manner as good as the original; and, supposing that to be one of the best of the master, 'tis the greater curiosity that he could be so well imitated.' A case very much in point is the anecdote recorded of a copy of Raphael's celebrated portrait of Leo X. That picture was copied by Andrea del Sarto, for the Duke of Mantua, by order of the Grand Duke of Tuscany, and was imitated with such consummate skill, and the copy was in every respect so excellent a painting, that it deceived Giulio Romano himself, the favourite disciple of Raphael, and the one among all the pupils of that great master whom he most frequently employed in working upon and copying his drawings. While Giulio was engaged in his great works at Mantua, Andrea paid a visit to that city, and the two artists went together over the ducal gallery. As was natural, they tarried before the exquisite portrait of the celebrated Pope, painted, it was supposed, by the illustrious master of one of them. Giulio was at home, and, of course, was the Cicerone on the occasion. He performed his office *secundum artem*; he drew the attention of his companion

to the superb performance, enthusiastically pointed out its excellences, decanted most learnedly on its merits, distinguished the traits remaining of his own pencil, and when at length his brother artist, after indulging for some time in the amusement and gratification afforded by an error so flattering to himself, advertised him of the real truth, he would not be persuaded that the picture before them was a copy, until Andrea, by a particular sign, proved that the work was not that executed by Raphael. Now, if to possess a beautiful work of art, or a finely painted portrait of the illustrious John de' Medici, were the object which the Duke of Mantua had in view when he made the request which led to the employment of Del Sarto in imitating Raphael's picture, it is clear that the copy must have answered his purpose as well as the original could have done. It may be allowed, however, that if the application was made from the desire to have some work or other of the hand of 'the divine artist,' such a wish could only be satisfied by the original; but this would have been a wish not wholly inspired by a love of art.

This anecdote leads us to reflect on the motives by which amateur purchasers of pictures are commonly actuated, and which the author of the smaller of the two works of which the titles are placed at the head of this article, considers to be taste and caprice. To these we should be inclined to add a third, viz., ostentation. To the class of persons who are guided by taste, it can import but little, as we have already endeavoured to show, whether a work be rightly named or otherwise, whether it be a copy or an original: excellence in the one or the other is what they seek, and, finding that quality, they are satisfied. To the man who buys pictures from ostentation, it is of equally trifling consequence whether the acquisition he makes be that of an original or a counterfeit; but, if it be the latter, it is of infinite importance to his peace and self-complacency that he be by no means undeceived. In this case stood Richardson's 'very honest gentleman,' as he seems to have been himself aware. 'Some years since,' says the author of the 'Treatise on Painting,' 'a very honest gentleman (a rough man) came to me, and, amongst other discourse, with abundance of civility, invited me to his house. I have (says he) a picture of Rubens, 'tis a rare good one; Mr. — was to other day to see it, and says it is a copy, G—d d—n him; if any one says that picture is a copy, by G—d, I'll break his head; pray Mr. Richardson will you do me the favour to come and give me your opinion of it?' It may well be asked, what business has such a discriminating 'honest gentleman' as this with a painting? We could find it in our hearts to applaud the broker who, on being applied to procure pictures for such and other like numskulls, should put them off with forgeries as the only works of art they are worthy of possessing.

We may repeat then, that in our opinion little sympathy is to be felt in the complaints of picture-fanciers who have suffered by the impositions of 'picture-jockeys.' Persons who really understand in what the beauties of the art consist, will not, cannot be materially deceived, and such only deserve to possess real gems. In such as do not understand and feel the excellences of art, what is the motive for making collections of paintings but mere affectation? What, in fact, is your ignorant picture-fancier, in most instances, but a fop and a pretender? He sails under false colours—himself a deceiver, he almost deserves to be made the prey of the machinations of others more profoundly artful than himself. 'In most instances,' we say, however; for there is at any rate one exception. It is that of a young and opulent person, whose natural taste inclines him to intellectual elegancies, but who is necessarily inexperienced,—who has not yet enjoyed opportunities for that cultivation which even taste requires. The indignation is indeed excited on beholding such an one rendered by his enthusiasm the victim of the snares of the crafty picture-dealer.

To him, however, one single, simple lesson of prudence and common sense will suffice, if he be worth the trouble of saving. Let him not trust to the representations of others, and still less let him feel confident in the virtue of innate taste; but let him defer making acquisitions until his judgment be formed by observation and study, and until experience have taught him what the world possesses of works of real value. The proper, indeed the only effectual mode of arriving at this degree of cultivation of the taste is, by actual observation of the most excellent works, assisted by the study of books which treat of the principles of the art. The person who has gone through a due course of this kind with attention, and a sincere desire to form a sound taste, might safely trust, to his own opinion in the choice of productions of art, and protect himself effectually from the chicanery of picture-dealers. That collectors of articles of virtù are not in general thus qualified to decide and select for themselves, is to be ascribed to their negligence or their want of real taste. More than one instance might be named of a collector of paintings of noble birth, whose knowledge even of the niceties of the art would surpass that of the most proficient dealers. The latter, however, are a wily race, and it is well to be perfectly conversant with their tricks, and on guard against their manoeuvres; the more so as they have at all times much in their power on the score of the consideration to be given for a desired acquisition, however independent the purchaser may be of them in other respects. It is with this view of the subject, that we direct the attention of such of our readers as take an interest in the arts, to the two works which now lie on our table and have suggested the foregoing observations. The authors are gentlemen who have made the purchase and sale of pictures their profession: the reputation of both, for integrity and honest dealing, is above reproach: and the books with which they have favoured us, prove them to be actuated by that true and honourable commercial principle which prefers negotiating with a person who understands the nature and value of the object of treaty to dealing with one who is ignorant, and whom they have the power, if they possessed the desire, to deceive. They are aware, however, that this principle is by no means that followed by the community of their brethren, whose practices they make no scruple of denouncing. The disclosures they hazard are as amusing as they are instructive. Mr. Winstanley draws the following rather indulgent character of picture-dealers:

'They are at present a numerous community, greatly varied in the shades of their individual character, and may be compared with all the different grades of respectability that exist between the opulent merchant and Jew pedlar. I know several whose character for honest and upright intercourse with the world stands eminently high; and when I see the noble and wealthy ones of our country in familiar and confidential intercourse with them, my good opinion of them is confirmed; and I feel that I can rely upon their integrity as much as I can on that of any merchant or trader in the Empire. I also, as a lover of the Arts, feel myself indebted to their enterprise and spirit, which have, under circumstances of no ordinary difficulty, brought into our country the pictorial riches of Italy, of Spain, and of every part of civilized Europe. Let the most brilliant Collections of this country be stripped of those works of Art which have been placed there through the spirit and judgment of Picture Dealers, and it would be seen how far those Collections, thus "shorn of their beams," had a claim to the character which their possessors boast of. The Admirers of Art owe a debt of gratitude which I am proud to have an opportunity to acknowledge, to the eminent Dealers who brought into this country the riches which now adorn the princely Collections of the Marquis of Stafford, of Lord Grosvenor, of the Right Hon. Robert Peel, and many others, who have thus contributed to the elevation of this country to a high rank in the scale of nations, by their liberal and exalted patronage and protection of the Arts. The Dealers who move in a lower sphere are of as many different degrees in taste and judgment, and of integrity, as there are degrees of difference in the excellence and value of the works they deal in. They

look upon the Arts as a business only, nor can their benign influence affect these traffickers more than as relates to pounds, shillings and pence. With such men, a Collector must cautiously use his own judgment and experience, and it may be found difficult to establish a confidence with them. Yet I am well convinced that when such a confidence is placed in one of these men, he, as well as his more opulent fellow-trafficker, will rarely betray his trust. There are no doubt many individuals in this trade, like every other, who are unworthy of confidence; but I am induced to hope they are but few. Much also of what is attributed to the want of honesty in Picture Dealers, may be fairly attributed to their want of knowledge. I feel very often surprised when I reflect on what has been done and said both by myself and others respecting Pictures, from ignorance. It is a fruitful source of error; and when the intellectual qualifications and state of the understanding of some men who practise the calling of "Picture Dealers" are considered, it is not to be wondered at that both they and those who deal with them, suffer from the effects of ignorance as well as dishonesty. There is another source from which springs much of the chicanery and trick attributed to picture dealing—it is the consequence of gentlemen Collectors turning traffickers in Pictures. I have frequently found men professing to be Amateurs of the Arts, and who collect Pictures, endeavouring to over-reach a Dealer, by making deceptive, and to themselves, advantageous, terms of exchange, and by over-rating the price and value of their own Pictures, fancying that they improve their bargains to the prejudice of the Dealer. When men of opulence condescend to such transactions, they deserve to be the victims of a conduct of which they set the example, and to suffer by transactions in which they thus participate.—Pp. 41—43.

Mr. Smith is less lenient towards the tricks practised by the lower class of persons who profess the same calling as himself, than Mr. Winstanley; probably because he has had more experience of their knavish proceedings: and he exposes the manoeuvres they are in the habit of resorting to for the purposes of deception more in detail. The following evidence is worthy of a report in a House of Commons Committee:

'In exhibiting the various deceptions and manoeuvres of designing dealers, it will be proper to commence with that which is most common, namely, placing the name of a first-rate master upon a picture by an imitator, or on a copy which is frequently disguised by dirt or varnish, &c.; but a copy, if modern, may be easily detected by its newness, as on being pressed by the nail the colour will be found to be still soft. These fabricators disguise a copy by dirt and varnish, using especial care to have it painted on an old canvas or panel, to which seals and other documents are attached at the back, so that unguarded purchasers are often deceived by apparently the most authentic evidences of originality. Amateurs are frequently invited to look at cases of pictures, which are said to be just arrived from the continent. This imitation is accompanied by a plausible history of the collection from whence they are said to be derived, perhaps that of some "ancient family in Italy or Holland." These assurances are occasionally strengthened by invoices, letters, and other corroborative documents. . . .

'Another scheme is to place pictures in an auction, and to run them up to large sums, in order to give them a fictitious value, with the hope of entrapping some unwary bidder; should this fail, the picture is afterwards put up at some other auction, with an observation that it was formerly sold for the sum at which it had been knocked down at a previous sale, and the sacrifice of half or two-thirds of that apparent purchase money, is perhaps an inducement to an unsuspecting spectator to become the unfortunate buyer.

'Another plan, very extensively practised by certain dealers, and by which one or two apparently knowing ones have been duped, as well as less cautious gentlemen, who do not buy with a view to profit, is the placing of old, or purposely dirtied, pictures at brokers, or old clothes and other shops, where the vendors appear to know nothing whatever about them; but they tell some simple story of having bought them "at an old mansion in the country," or of "an antiquated lady, in whose family they are said to have been for the last two centuries."

The following paragraph exposes a system of cheating, and of evading the laws of the land, more villainous than any of those above-mentioned. Its parallel in effrontery and extortion

could hardly be furnished by the whole annals of roguery. But for the perusal of Mr. Smith's book, we might have continued, to the end of our lives, to consider the 'Avare' of the immortal Molière a highly coloured picture rather than a portraiture of real life:

'Before closing this unpleasant subject, it may not be considered altogether inappropriate to glance at a system of dealing in which a certain class of pictures is found to be a most convenient medium, on account of their indefinite value: the writer alludes to the traffic of bill discounting, and the purchase of *post obito*. The necessitous applicants to these unmerciful and ruinous accommodators are usually compelled to take a third, and sometimes one half, the amount of their bonds or bills in pictures, which, of course, are ascribed to the best masters, and valued accordingly at enormous prices. By this nefarious practice, some have enriched themselves, and are now living in affluence. An instance of this sort of dealing occurred very lately, in which a collection of pictures, valued to the needy gentleman at 5000*l.*, did not net, at auction, 500*l.*!

4,500*l.* extra procuration fee! A noble one truly! Such forced connoisseurship who shall counsel? Henceforth, we think, we must relent from our indifference to the lamentations of the victims of picture-jockeys.

A word or two, before we quit this subject, on the nature of the two books now under our consideration. Mr. Winstanley's, which we believe was prior in point of publication, is a small volume of 132 pages, duodecimo, and is well calculated to serve for a manual. Its contents may be summed up in a few lines, by giving the titles of its chapters, which are equally concise, judicious, and instructive. The following is a list of them: 'On the state of the arts in England as regards the works of Foreign Painters.' 'On purchasing Paintings.' 'On the means of acquiring the necessary knowledge of the works of Painters.' 'On copies.' 'On damaged pictures, and attempts at cleaning.' 'On the value of pictures, and on picture dealing.' 'On the Dutch and Flemish Schools.' 'On the German Schools.' 'On the French School.' 'On the Italian School.' These are accompanied by tables of the principal painters of the various schools and their imitators, arranged alphabetically, and by lists separately formed according to the subjects which the respective artists were in the habit of treating. The advantage of this distinct classification according to subject, is too obvious to need to be pointed out. The date of the period at which each artist flourished is set opposite to his name.

Mr. Smith's work is of a different and more elaborate kind. The introduction, from which the extracts already given have been taken, occupies only a few pages, and treats principally of the subject of picture-dealing. The rest of the volume is the commencement of a catalogue raisonné, (which the author, if he receive sufficient encouragement, proposes to carry through four more volumes) of the works of Dutch, Flemish, and French Painters. The artists whose works form the subject of the first volume, are Gerard Dow, Peter Van Slingelandt, (the limner who occupied three years in painting the portraits of the family Meerman, and who worked a whole month at a lace frill,) Francis and William Van Mieris, Adrian Ostade, Isaac Ostade, and Philip Wouwermans. Short but interesting biographical sketches of each artist are prefixed to the account of his works. We extract the first description in the book, not only as a specimen of the manner in which the catalogue is *raisonné*, but as an amusing sample in respect to *subject* of that style of painting, to which English taste gives so decided and obstinate a preference. The description is one of the principal pictures of Gerard Dow:

'I. Interior of a room with a ground ceiling and arched windows. An interesting old woman, habited in the costume of the time, stands in front, occupied in scraping carrots upon the top of a cask; at her right

is a boy with a mouse-trap in his hand, which he is holding up to the light of a large window, in order to see the little prisoner. This object appears to have drawn him from his studies, as he still holds a palette of colours in his hand. On the opposite side (or left of the picture) is a hen-coop with a bright brass can and a red cabbage on it, over which are a dead cock and some partridges and other objects hanging against the wall, and upon a shelf still higher, are some jugs and plates; various other objects are distributed about the room, and at the further end is seen an old man reading by candle-light. This is in every respect an admirable picture, both in composition and exquisite finish, and has, besides, the advantage of clearness throughout, it being illumined by two large windows.'

The history of each painting is traced through the different collections into which it has passed, in the following manner:

'Collection of M. Jan Van Orvielle, Amsterdam, 1705, 1100 florins, 179*l.*; — of M. A. Bout, 1793, 2605 florins, 186*l.*; — of the Widow Reuver Arnst, 1736; when it was sold, with the entire collection, to the Prince of Hesse, for 40,000 florins. From the latter gallery it was transferred, with many other fine pictures, by the chances of war, into the collection of Josephine, at Malmaison, at the distribution of which collection it was purchased by the present proprietor, M. Valdow, at Paris, and is now worth 1200 guineas.'

We beg leave to protest against the conclusion, from the manner in which we have introduced this description, that we are insensible to the merits of Gerard Dow. We have often dwelt on his exquisite works with true, but not exclusive, delight; and it is a satisfaction to us to find that Mr. Smith, whose elegant volume has inspired us with a sentiment of respect towards his person and character, although as a picture-dealer he has been obliged to cater for the public taste, and has been led to make the low school of art the object of his consideration and research, is far from being a *sinker* by nature, and insensible to the higher claims of the more elevated style of art. To prove this in his favour, we conclude our extracts and our article with the following significant passage from his introduction:

'Historic painting is acknowledged to be the brightest and noblest branch of the art: yet the difficulties opposed to its attainment appear to be too often overlooked, or not sufficiently understood; but it should be known, that the half of life is required to prepare the painter with the necessary knowledge and material, during which long period the artist must toil day and night, silently, and, it may be, totally unknown. Should he reflect during his arduous studies upon his future prospects, as to what are the rewards and honours that await him, and what are his hopes and support beyond the casual and uncertain orders of private individuals, —sources of support much too feeble and uncertain to keep alive the necessary energies of mind, and do justice to the merits of a first-rate historical painter. And what are the honours that await him? Perhaps an academical wreath; a poor encouragement to struggling genius, when the same reward may be obtained by the production of a few good portraits, and the suffrages of R. A.'s, too often acquired by obsequious solicitations. Let the munificent encouragement of the French Government be kept in mind; the rewards and honours it has bestowed upon artists in this branch, from the time of Louis XIII. to the present day, and more particularly under the reign of Napoleon, who well knew the value of great painters, as being one of the most effectual means of immortalising himself and his epoch.'

THE VISION OF NOUREDIN.

The Vision of Nouredin, and other Poems. By Sforza. Post 8vo., pp. 192. Hurst, Chance, and Co. London, 1829.

THE author of these poems is apparently a man of considerable fancy and cleverness; and we regret, therefore, that, not daring to be original, he should have chosen the very worst models from which it is possible for a man to copy. We are not anxious to agitate again the question which has been so many times discussed in our pages, whether Lord Byron or Mr. Moore are poets of the highest order; but it is an acknowledgment which we claim as much from their vehement admirers, as from those who agree in

our somewhat more moderate estimate of them, that it is impossible, in the whole hemisphere of poetry, to fix upon two stars whose light will be less brilliant when it is communicated to any surrounding satellites. To whatever cause this may be owing,—to their mighty genius, which defies imitation, or to the essentially unnatural quality of their style, which made it a monopoly in the hands of those who had first the skill to devise it,—such is the fact, ascertained beyond all doubt, by a thousand courageous experiments, and as many unfortunate failures.

Moreover, it is generally the fault of those imitators, that they draw indifferently from either of these two models; which, though both, in our opinion, decidedly faulty, are yet quite different in the quality of their offences. It was said of Milton, that the English language sunk under him, because he imparted to it a strength and coherency which his commentator did not understand. An admirer of Byron may be disposed to catch at the strange compliment which Milton did not want, and to maintain that the English language was insufficient also for him, seeing that he entirely discarded it from his compositions. The dialect which he substituted in its room, was, we must own, far better contrived to express his thoughts, for it is broken, incoherent, lawless,—a stream, not running onward with any steady deep current, but grating harshly against small pebbles which the foam that covers it prevents from being visible at the surface. Mr. Moore, on the other hand, is a very great master of English, the lower or conversational English; and that language, vastly superior for poetry to the language of almost any other country, and inferior only to the English of our old dramatists, and of one or two modern poets, he might have taught with infinite advantage to our young verse writers, and have been really a benefactor in his generation. But, afraid of enclosing his thoughts in such a very transparent case, through which, if they were faulty, their weakness must be at once discerned, he determined to change the nature of the entertainment altogether, and, instead of inviting his readers to look through the glass, to make them look at it,—for which purpose he painted it over with all the grotesque figures that a perverse Egyptian wit ever devised. Now the imitators blend both these strange poeticising schemes. They take, as a ground-work, Byron's knotty and opaque language, and upon this paint Moore's quaint devices: but this plan does not answer, the colours run; and, if there was much confusion in the original, there is not a distinct line in the copies.

We shall say no more of 'Noureddin and other poems,' than that we think they illustrate the opinions we have just expressed, and that, nevertheless, we believe the author to be a man of considerable talent. Nearly every young Englishman has a period of Mooreism and Byronism; but various circumstances, such as the want of solitude or the want of association with higher minds, or, worst of all, the habit of writing verse, and the praise he receives in exchange for it, may keep him there beyond the natural time. But still his mind is not to be judged by its exercises while in the cave of the sorcerers. He may yet be disenchanted, and become as sincere and natural as he is now (unconsciously) artificial and affected. That this consummation may speedily happen to Sforza, is our earnest wish for him; in the mean time, we commend the following extracts to our readers, begging them to take our critical word for it, that, with all their faults, they do indicate powers worthy of a cultivation which they have never enjoyed:

'The Nymphs upon the banks are dancing
Of the placid, speckled lake,
And now in festive groups advancing,
For the groves its shores forsake:
But who is he that keeps so near
Young Amadis, that cheerful maiden?
Noureddin 'tis—what doth he here?
Does he not see the day-light fading—

Does he not hear the anthem stealing
In a slow and holy strain?
Thinks he not of the minstrel kneeling?
He does, he does, but all in vain—
And who is she they Rhoda name?
Does he not know her gentle manner?
Oh what could tempt him to prefer
The lightsome Amadis to her?
But where's Rosalba? many an eve
Hath passed since that he should have met her,
Yet those who taught him to deceive,
Have not allured him to forget her;
Though gentle lips and radiant eyes
Sweet tones and looks of kindness bring him,
They cannot check the rising sighs,
Nor quell the inward griefs that sting him.
How gladly would he then have fled
To the appointed spot of meeting,
But vainly had he thither sped,
For no one stayed to give him greeting;—
Too oft in hope's reviving hour,
Already had he there resorted,
To feel despair with deeper power,
And thence return more desert-hearted.
But yet he could not wholly keep
Away, for some seducing power,
Preserving hope from utter sleep,
Still cheered him at the evening hour;—
That hour at length was come again
And he upon his search was gone,
Lamenting, as he wandered on,
How oft that search had been in vain.
The well-known grove was now in view,
And softened by that hallowed hue
Which the sun's glareless light imprints,
In pensive rays and fading tints,
Gave to his breast a holy glow
Too soothing to betoken woe.

'The lute Rosalba there had left
Was hanging in her jasmine bower,
Yet, though of her sweet touch bereft,
Had lost not its enchanting power,
But plaintively kept throbbing on,
So soft, that as they streamed along,
Its sounds, at that faint whispering hour,
Seemed like the wings of angels flying,
At intervals, about the air,—
Or voice of one from heaven sighing
For errors that had lost him there;—
But hush! Noureddin sweeps its strings,
Sad as the lay he sweetly sings.
The evening primrose has oped its leaf,
The sound of the vesper harp grows faint,
And the breeze seems whispering tales of grief,
As it goes thro' the air with a mournful plaint:
I know why sadness haunts this spot,
Rosalba hither cometh not.

'Float on, ye zephyrs, and tell her how
I linger here in music and sorrow,
In the grove of lutes, where I keep my vow
From dying day till dawning morrow.
Oh! hear me, though she hears me not,
And bid her seek the appointed spot.

'Tell her with tears these eyes are wet—
Say with what pangs this heart is aching—
That heart, which, she knows, adores her yet,
And the fonder burns as 'tis nearer breaking.
Oh! love me still, or love me not;
Rosalba, fly to this desert spot.

'He ceased: a figure flitted by,
When turning on a sudden round,
Kneeling before him on the ground,
The form of Rhoda met his eye.
And who is Rhoda, that she now
Should be so near Noureddin's side?
What makes her thus before him bow,
Can aught that she asks be denied?

'"Rhoda!" impatiently he cried,
"If thou hast tracked my footsteps here,
Whether or not with love sincere,
To try the magic of thy art
In aught that can seduce this heart,
Thy hopes are vain, thou may'st depart!"

'"Tis as I feared," the maiden sighed,
Leaving the spot where she had knelt,—
"Tis as I feared, I am denied,
But still my heart would less have felt
If there had been some softness thrown
Into thy all-refusing tone—
Language by which the heart is broken,
At least in pity might be spoken.

Perchance, had Amadis been nigh,
A kinder beam had lit thine eye;
No matter, I have learnt to brook
Ere this, the sternness of a look;
Sorrow and I too oft have met
For me to feel much new regret.
Ne'er did I cast a kindly eye
On any being that I loved,
That did not always frown or fly,
As if my look were disapproved:
Ne'er did I feel affection's glow,
But just as it appeared returned,
Another came to overthrow
The passion that for me had burned.
Ne'er did my features wear a smile,
Ne'er did my bosom heave a sigh,
But some one always seemed the while
To mock them as they flitted by—
As if it were my fate to be
Ne'er blest with others' sympathy.
But go, Noureddin! join the throng
Of those who will not feel for me:
Nay, look not so, I know ere long
I shall but be despised by thee.
It is my doom to suffer so:
I feel that I must live apart:
There's none will e'er consent to know
The fondness of poor Rhoda's heart."
"Rhoda!" Noureddin wildly sobbed,
"Madden no more this burning brow,"
Ne'er have before these heart-strings throbb'd
With such contending pangs as now!
Call me the demon that I seem,
Think me unfeeling as thou wilt,
Curse me with hate's most deep extreme;
For, strange as thou this truth may deem,
It only lures my soul to guilt
To hear thy gentle voice complain
In such a sad and tender strain.
There's one to whom my vows are plighted,
Too long already hath been slighted,
Whose voice and form resemble thine
So much that, could ye both be mine,
Around ye both my arm should twine.
Yes, there is one—nay do not start,
It is not Amadis, I swear,
Though one whose image from my heart
Hath Amadis oft strove to tear.
But thou whose melting accents creep
Like poisonous sweetness through my veins,
Hast lulled my memory to sleep,
And loosened so my bosom's chains,
That, were Rosalba here to stray
All beautiful as first she shone,
I could not turn my eyes away
To gaze on her, till thou wert gone.
Oh that I could, with neither loth,
Give this divided heart to both!"
"Be it so, then," the maiden cried.
"Now let thy heart resume its place,
Both are already at thy side,
Approach, and in these features trace
Thine own long sought Rosalba's face!"
Noureddin nearer to her came—
Rosalba—Rhoda—were the same!
'But scarcely had her lips met his,
Smiling in transport at her scheme,
When in an ecstasy of bliss
He woke—Bliss ever is a dream!"

The Garden of Silence.

'EVENING was dying, but seem'd loth to die;
Beams of the lingering sun, still shining on,
Languid and lulling as love's parting glance,
Shed light upon the beauty of the scene:
For all was beautiful, as all was still;
The breeze had sigh'd and faint'd, and the leaves
Lay on the air in placid, sleek repose,
Smooth as a silken eyelash when asleep!
'From verdant slopes, in ambient decline,
Came foamless waters gradually down,
Stealing without a murmur, soft and slow,
As tears down beauty's cheek, but pure and bright
As virtue's smiles, meandering o'er stones
Worn white as ivory by their kiss, until
The vales beneath shone surfaced with their flow
In streaks of liquid silver; whilst, from out
Founts in which angels might have bathed their lips,
Gushed falls of fragrant fluid, sparkling so,
And gliding down so mutely, that they seem'd
More like the melting of those lucent gems
Of which their vase was modelled, than the rich
Effusion of its waters.

'Here and there,
Mid groves of cypresses and olive trees,
The rose and lily were together twined,
Like lovers in each other's arms, as if
Beneath the shade they had embraced to die:
The sun-flower, gazing on his god so long,
Drooped down his head abashed, and gazed no more;
The primrose, that at eve expands its leaf,
Was loth to waken, and remained unopened;—
All, all was motionless, the trees, the flowers,
In deep serenity of sleep; but yet
So delicately, sensitively tranced,
A fairy's tongue had almost feared to speak,
Lest it should shake the foliage from their boughs,
Or breathe the blossoms from their stems:—a hymn,
A kiss from holy lips—the Muezzin's strain:
From Mecca's wall—the sigh of penitence—
The nightingale's sweet note—the lute's soft sound—
Even the voice of love had been untimely
In that all-slumbering hour!

TALES OF A PHYSICIAN.

Tales of a Physician. By W. H. Harrison. 12mo., pp. 248. Jennings. London, 1829.

THERE is no class of society which, of late years, has made more valuable contributions to literature, than our provincial physicians. The text of their works has been, for the most part, some professional theory or observation, but they have generally contrived to illustrate remarks which proved a general knowledge at least as extensive as falls to the lot of most professed litterateurs and men of science. Those who are acquainted with society in the great towns of England, well know that the favourable estimate which we form of them from their publications is not at all abated by personal intercourse. They furnish, we will say it boldly, almost the only specimens of the professional character which we can regard without disgust. They are free from the pedantry and *esprit du corps* of their own class in the metropolis; from the insolent ignorance and grossness of conversation which distinguish a large proportion of the gentlemen of the bar; from the *petit maître* pretension, or solemn dullness, which, alas the day! is too sadly characteristic of the body which once reckoned South and Butler among its members. They correspond more nearly than any other men to the curates in the novels of the last century—a class which, owing to the greater estrangement of the clergy in general from their flocks, and the assimilation of manners between those who still reside with them to those of ordinary guests, has ceased to exist. With a little dash of stiffness, just enough to be in harmony with their powder, and to preserve them a distinct caste, the provincial physicians constitute by far the most enlightened and enlightening men whom it is possible to encounter any where out of the metropolis, or, except rarely, in it.

That those who have given such proofs of the extent of their extensive acquirements and superiority of mind should not now and then have favoured us with the result of that experience of human nature which they must have gleaned during their visits to patients in such a variety of mental and bodily temperaments,—may well be regarded as a misfortune. A few, probably, have been deterred by extreme delicacy of feeling; a few, by a somewhat rigorous notion that their professional duties ought to leave them no time for such observations; and a few, from being materialists, and therefore incapable of perceiving any thing which was not the result of physical causes. But, as none of these restraints can operate upon the majority of this amiable and educated class, we trust they will soon add to our reasons of gratitude to them, that of having made us better acquainted with the habits and feelings of our fellow-men. The present volume is a fair beginning in this line, if it be really from the pen of a physician, and we welcome it with pleasure. The stories are not very striking in point of incident, but they are told in a pleasant style, and with great feeling. One of them, 'The Gossip,'

from which we shall make an extract, contains a striking account of the visits of Mr. Everton, the exemplary rector of the parish in which our physician resided, to a poor girl of the town who had come back to her native village to die; these visits, which had produced the most happy effects upon the feelings of the girl, gave rise to the following dialogue between two of his parishioners and a bustling, virtuous, church-going, heartless scandal-monger, called Mrs. Crowfoot:

'A Lady.—Well, Mrs. Crowfoot, what news have you for us? is there any thing stirring abroad this morning?

'Mrs. C.—News, indeed! what novelty is likely to find its way to a dull village like ours, and to me, of all others of its inhabitants, who trouble myself so little with matters which do not concern me?

'Miss M.—True, Mrs. Crowfoot, your domestic concerns, if properly attended to, as doubtless they are, must pretty fully occupy your time, and leave you little to throw away upon the affairs of others.

'Mrs. C.—By the by, Miss Meadowcroft, I have seen your servant walking about very frequently with a gay-looking fellow of a sailor.

'Miss M.—Poor girl! I don't wonder at it; she must find the house of an old maid dull enough, and I cannot blame her for picking up a beau if she can. I can only say that the maid is more fortunate than her mistress has ever been.

'Mrs. C.—But this man is a loose character, I am quite persuaded: I saw him with her but an hour ago, at the coach-office, and the fellow took her round the neck as familiarly as possible, and kissed her previously to his getting on the mail.

'Miss M.—Happy girl! how I envy her!

'Mrs. C.—Nay, madam, if you choose to wink at such gross improprieties on the part of your servant, I have certainly nothing to do with it; but I thought it proper that you should be informed of it.

'Miss M.—For which I am infinitely indebted to you, madam: but unless the "impropriety code" has been very recently amended by the Imperial House of Petticoats, I apprehend that a brother kissing his sister is no offence in law; for precisely in that relation do the sailor and my poor Patty stand to each other.

'A Lady.—So our rector's lady has presented him with a son?

'Mrs. C.—Ah, poor woman!

'A Lady.—Why, what is the matter? she is doing well, I hope.

'Mrs. C.—For aught I know to the contrary, she is

'Miss M.—Then, whence your pity, Mrs. Crowfoot?

'Mrs. C.—Poor woman!

'Miss M.—Poor, indeed! Now I think she is about the wealthiest woman I know of; she is rich in beauty, rich in graces, christian, moral, and personal; rich in health, a very monopolizer of the love of all around her; and, finally, rich in one of the kindest, most benevolent, and talented husbands in the world.

'Mrs. C.—Talented he is, no doubt; at least, so people say; but I am no judge in such matters.

'Miss M.—The breath of calumny has never rested upon his character either as a Christian or a man.

'Mrs. C.—Ah, madam! we are all frail mortals at the best.

'Miss M.—The maxim, coming from a lady of your experience, madam, cannot be doubted for a moment.

'Mrs. C.—A Christian minister too! Oh! I have heard a story of him that has made my heart ache.

'A Lady.—'Tis said, that, to unburden our bosoms of the cause of a heartache, is one remedy for its affliction.

'Miss M.—A consolation which will not be wanting to Mrs. Crowfoot upon the present occasion.

'Mrs. C.—I would not for the world that what I am about to mention should be repeated; but you most of you remember that impudent hussy, Hannah Clover, who thought so much of a pretty face that brought her to ruin. Well, do you know, she has had the assurance to return to her native place, and is actually residing, under a feigned name, in the Dark House?

'Miss M.—Poor deluded girl! I do well remember her, and my heart bled for her at the time. Her mother died, and her father, who had been educated as a gentleman, with ideas of expense above his means, became involved in difficulties. Someway he was hardly used; so, to avoid a prison, he fled to a foreign land, and left poor Hannah virtually an orphan, upon the

wide world, without a friend to help her. But what has this to do with our worthy pastor? You do not mean to say that he led her astray, do you?

'Mrs. C.—No, but I mean to say, that, several times since her return to the village, Mr. Everton has been seen entering that house, where no person who had a character to lose would venture. His horse has been seen tied to the door-post for hours together. What think you of that, madam?

'Miss M.—Think! why that it was ten chances to one the poor horse caught cold.

'Mrs. C.—It may be well for you to jest upon the matter, but I assure you it is a fact.

'Miss M.—May I presume to inquire what evidence you have of it?

'Mrs. C.—I had it, madam, be assured, from good authority.

'Miss M.—Then I must crave leave to doubt; for that same "good authority," to my certain knowledge, is a common liar.

'Mrs. C.—Well then, madam, if I must speak out, I have had the evidence of my own senses, I followed him down the lane in which the house is situated.

'Miss M.—I am heartily rejoiced to find that you tread so closely on the steps of your minister.

'Mrs. C.—Nay, but I saw him enter the door with my own eyes.

'Miss M.—Then, madam, I devoutly wish that your own eyes had followed him into the house; for, if they had, I am persuaded we should have heard little or nothing from you upon the subject.

'Mrs. C.—I follow him into such an abode of vice and iniquity! Upon my word, madam, you appear to have an exalted opinion of me.

'Miss M.—Why, upon your own showing, you were at the door; and there is an ugly proverb against those who venture on the threshold of vice.

'Mrs. C.—But let me ask you, madam, what motive but one, and that an evil one, could Mr. Everton have in visiting a girl of so notoriously abandoned a character?

'Miss M.—I grant you, that he could have had but one evil motive, but he might have had many good ones; of which, I presume, I have your permission to choose any, or all; and, yielding to you the undisputed possession of the bad one, I wish you a good morning. One word, however, before we part. This is not the first nor the second company in which you have sported versions of this story, with the benefit of your charitable inference. I warn you against a further repetition of it. Whatever purpose led Mr. Everton to that poor girl's dwelling, I will stake my life it was a charitable one; and, believe me, madam, they who report it otherwise will repent it in shame and degradation.

The conclusion is equally striking in another way.

'It happened, upon most occasions, that Mr. Everton visited Hannah alone, although he was more than once attended by Mr. Blandford or myself; but in one instance, unaccompanied by us, he went not alone; for a dark figure traced his steps, and glided after him unperceived into the sick one's apartment, where he retired into a recess, and the minister proceeded in his duty unobserved, as he thought, by any other eyes than those of God and the penitent.

'After some conversation, in which the seriousness and sincerity of his manner were not less conspicuous than its soothing kindness, he read, as usual, to her, from the Scriptures, and then knelt by her bed-side to pray. He concluded his devotional exercises with the Lord's prayer; and the "amen," which was pronounced at its close, was echoed in a voice hoarse and dissonant, which appeared to Mr. Everton to proceed from some person in the room. He turned his head, and beheld the dark figure of Black Barnabas kneeling beside him. "Ruthless man!" said the minister, "is not the chamber of death sacred from your intrusion? Stand up, and tell me wherefore you are come." Barnabas remained kneeling, but, crossing his arms upon his breast, exclaimed, "Pardon me, in that I so lately presumed to arrest the minister of God upon his errand of peace."

"Kneel not," was the reply, "to a fellow-sinner. May God Almighty forgive thee all thy sins as freely as I have long since forgiven thine offence to me! But rise, and I will teach you how to implore His forgiveness, which alone can avail you."

"Reverend sir," said the intruder, "I will not disguise from you that my object in following you into this chamber was the gratification of a curiosity ex-

cited by your frequent, and to me mysterious, visits to this house. I have been a witness of your pious labours. Believe me, the word of God was not always strange to my ears, nor foreign to my lips; but calamity (undeserved of men, though well merited of Heaven), which should have chastened my spirit, hardened my heart, and made me what you see, an outcast of the world, and an alien from my God.

"When you commenced the Lord's prayer, recollections of other days came upon me; my heart melted, and, yielding to an impulse mysterious but irresistible, I sunk upon my knees by your side."

"He had scarcely finished speaking, when the curtains were suddenly thrown aside, and Hannah, starting up in the bed, and fixing her eyes upon Barnabas, exclaimed, with a shriek, "My father! my father!" and sunk back, in a state of insensibility, upon her pillow. Barnabas rushed to the bed, and, parting the black locks which hung over his brow, he cried out, "My Hannah! my child!" and cast himself beside her. As soon as the father and daughter had recovered from the shock of this mutual recognition, Mr. Everton departed, promising to see them again on the following day.

"When Mr. Everton made the promised repetition of his visit to the Dark House, he found Barnabas sitting by the side of his daughter's bed. "Sir," said he, rising, "Hannah has been telling me all that you have done for her; that you have led her out of the dark labyrinth in which sin had involved her, making peaceful her last moments, and giving her a blessed hope of everlasting rest in that world whither she feels she is hastening. In all my wanderings, the misery of remorse which I have endured has been more on her account than on my own. I felt myself a devoted being; that my ruin was certain; but I could not endure the thought of my child's perdition. She will now be taken from me, and the eye which hath not wept for many a day will shed tears upon her early grave; but they will not now be bitter tears. And all this, Sir, I owe to you, and for this I am your bounden slave."

"You owe it to God," said the clergyman; "and to Him, and not to the frail instrument of His power, give the glory."

"He then approached the bed, and saw that nature, which had held out so long, was giving way at last, and, turning to her father, he said, "I should wish the physician to see your daughter; my horse is at the door, mount him, and go instantly for Dr. ****, and, if you find him not, bring Mr. Blandford." Barnabas departed on the instant. The clergyman then took the hand of the suffering girl, and inquired how she was. She replied, "Sir, I feel that I am going at last; but, blessed be God Almighty, who hath taken me 'out of the mire and clay, and set my feet upon a rock,' the prospect of death is not a gloomy one. I am going to that blessed country, whither you have directed my way, for which you have the dying thanks of a sinful, but, I trust, not ungrateful heart. May God bless you, Sir,—may He will surely bless you;—may he bless the way of your bosom, and the child of your hopes. Pray, Sir, if they come not before I go hence, convey my humble, yet deep acknowledgments to those kind gentlemen, whose attention to the diseases of my perishing frame has given me time to profit by your instructions and prayers, and to make my peace with Him whom I have so wickedly offended. One thing only presses on my spirit in the hour of its departure. Alas, my father! his life has been a wild and a fearful one! He will listen to your voice as to that of an angel from heaven. Oh, Sir! do for him what you have done for his once wretched daughter." The minister promised that his endeavours should not be wanting. "May the spirit of God," said the poor girl, "rest upon your holy labours!" and then, though we have been widely separated on earth, we shall meet again in heaven. But my breath is fast fleeing, and I would that it may depart from me in prayer." Mr. Everton read some sentences from the Bible appropriate to the solemn occasion, and then prayed fervently. Poor Hannah followed him with her lips, but her voice was not heard. There was a sudden lighting up of her countenance, as she raised her head a little; and uttering, in a low but distinct tone, "Into thy hands I commend my spirit, for thou hast redeemed me, O Lord God of truth!" fell back upon her pillow, and spoke not again. On that instant, there was a noise from without like the approach of a multitude, and, on the next, a loud thundering at the outer door of the building, accompanied by a cry from many voices of "Bring forth the hypocrite!" Mr. Everton rushed to the window in front of the house, and,

throwing up the sash, demanded the meaning of the tumult. He soon discovered, from the expressions which fell from the mob, (composed of the very dregs of the people,) that he was the object of their attack, and that his alleged offence was his frequent visits to poor Hannah. He said, "My friends, what have you ever seen in the conduct of your minister, that you should suspect him of so horrible a crime?" His voice was rendered inaudible by cries of "Unbar the door, or we will pull the house about your ears!"

"There was a struggle in Everton's bosom between his natural courage, which would prompt him to resist unlawful violence, and a feeling that a christian minister should, to maintain the influence so essential to the usefulness of his character, not only be, but appear to be, virtuous; and that, therefore, something should be yielded even to the prejudices of his parishioners. He walked deliberately from the window, and throwing open the door, he exclaimed, pointing to the room of the poor penitent: "There! you would not hear the living: let the dead speak for me!" The foremost of the rabble rushed into the apartment, where they found upon the bed their minister's hat, an open Bible, and a corpse. This appeared to have wrought conviction on the majority of the multitude, for many of them slunk from the spot, as if ashamed of the disgraceful part they had acted; but there were some who still gathered about Mr. Everton, crying out, "The dead tell no tales," and were proceeding to offer violence to his person. One of them, more audacious than the rest, advanced, and laid his hand upon the collar of the clergyman, who, disengaging himself, without a blow, threw his assailant at a considerable distance from him; an action which proved the signal for a general attack. The noise, however, of the trampling of hoofs, and the immediate appearance of three horsemen, for a moment, arrested the attention of the mob. The foremost of the three dashed his horse into the crowd, and, clearing the way up to the minister, cast himself from the saddle, and, with one blow of his fist, laid in the dust a ruffian who was in the act of striking Mr. Everton; another, and another, shared a similar fate. The rabble, whose numbers were somewhat thinned by desertion, now fell back as Mr. Blandford and myself rode up to the scene of action. He who had dealt about him such effective blows now advanced to the mob, who were gathered into a body within a few yards of the house. He cast off the slouched hat, which had thrown a deeper shade upon his dark brow, and exclaimed, "What would ye with this just man? Look upon my countenance! there are many among you who cannot have forgotten me; nay, I see that ye have not. Yes; I am indeed the father of that poor girl who has been plucked from ruin by the minister of whom this day has proved ye are not worthy. You know well, that, lawless as I have been, I am not a man to wink at the dishonour of my daughter, still less to defend the partner of her shame. Hence then, to your homes, for the first of you that shall raise his hand against the innocent object of your cowardly attack, I swear shall never lift it again."

"The rabble, finding that they were altogether in the wrong, and fearing the arrival of the magistracy, soon dispersed; and the minister, mounting his horse, immediately rode home, whither he arrived, providentially, before the tidings of the outrage which had been committed upon him.

"The circumstance, however, was soon generally known, and was taken up with much spirit by the neighbouring gentry; and the Earl of R**** came over to the village, for the purpose of aiding in bringing the offenders to punishment, and tracing the evil report to its source, which latter object was not difficult of attainment.

"Mrs. Crowfoot, to whom the circumstance of Mr. Everton's repeated visits to the Dark House had been casually mentioned, without a hint to his prejudice, and who, by her own confession, had taken the trouble on one occasion to follow him thither, had reasoned upon it after the manner of her tribe, and had published as a fact her own charitable inference on the subject. The respectable portion of those to whom the story was repeated, treated it with the contempt it deserved, and even the gossiping part of the community stood too much in awe of Mr. Everton's character to give currency to the report; but it had reached the ears of the lower classes, of whom there are, in every town or village, many who are eager to catch at the alleged delinquencies of their superiors. Hence, then, a result which had nearly proved of serious injury to Mr. Everton.

"The worthy minister, however, could not be prevailed upon to take any steps against the offending

party; but such and so general was the indignation excited against the authors of so scandalous a report, that Mrs. Crowfoot was compelled to quit the neighbourhood.

"Black Barnabas, as he was called, in consideration of the active part he had taken in defending Mr. Everton from the attack of the rioters, was given to understand, that, if he were willing to abandon the lawless course of life he had hitherto pursued, his past offences against the revenue should not be remembered to his prejudice."

THE HAMILTONIAN SYSTEM.

The History, Principles, Practice, and Results of the Hamiltonian System, &c. By J. Hamilton, author of 'The Hamiltonian System.' Sowler. Manchester, 1829.

In our last number we stated what we conceived to be the ultimate object of our ancestors in fixing upon language as the basis of education in our public schools. We now proceed, according to our promise, to examine whether the same object, viz., that of forming a manly character, is professed by Mr. Hamilton and the advocates of his system.

Strange as the assertion may sound, we are convinced that there never was a time when wise men had more temptation to publish one set of doctrines for the use of the public, and to retain another for their own, than in the present day, when all men are jumping at the fruit of the tree of knowledge. While the number of the disciples continues small, and they live together in joy and singleness of heart, that philosopher is a mean secretive Ananias who will not consent to hold his thoughts in common—who will keep back any portion for his solitary indulgence. But when thousands are crowding into the ranks without any temptation but the hope of bettering themselves by sharing in the general spoil,—swine who, he knows right well, infinitely prefer their husks to his pearls,—he is not to be accused of unpardonable selfishness, if he dispenses only among the crowd the less costly part of his viands, and keeps what is most strong and nourishing for the support of that life which is fainting, and well nigh perishing, under the heat, and pressure, and suffocation. And certainly, if there be any convictions of his mind of which he is at liberty to suppress the utterance, he may most lawfully conceal from the knowledge of the society around him that which refers to projects for its own improvement. For how the world may allow the possessor of ideas in which they are not partakers to go at large, because they consider his madness of a kind which will injure nobody but himself, most assuredly the moment they discover that he is busy with plots for disturbing their quietness, that moment will they call aloud for a dark room and a straight-waistcoat. Perhaps, therefore, he is reasonable, certainly he is pardonable, who, having in an honest and true heart projected such a scheme, points not to the ultimate end, which is ever present to his own imagination, but only to some of those more direct predicate consequences which the world may be able to discern with no stronger telescope, and may strive to reach with no loftier ambition, than its own. Suppose, then, Mr. Hamilton, having strongly present to his mind the conviction that his mode of education will be the means of strengthening and forming a manly character, but knowing also that the world cares nothing for this object, cares nothing for character at all, except so far as it tends to bring a direct return of its own commodities, we should not now blame him if he had not put this substantively forward as the motive of his undertaking, but had simply announced his intention of teaching languages in the best possible mode, and had trusted for the accomplishment of his nobler end to the sure working of the principle which he had discovered and revealed. We rest nothing, therefore, upon the fact of Mr. Hamilton's mode alluded to, nor to the possibility of his system, or

any system of teaching languages, conducting mainly to this end. We admit that he may have kept his counsel upon this matter from policy; and if this exoteric reason of his system nowise wars against and renders impossible this inward conviction, we shall cheerfully embrace all the assistance he can afford us in realising it. We will endeavour to gain what light we can upon this subject from Mr. Hamilton himself. In his lecture delivered at Liverpool on the 18th of March last, we find the following passage, which has been probably laboured more than any other passage Mr. Hamilton ever uttered or wrote:

'But how does the study of Greek and Latin cause all this mischief? By the most simple process that can be conceived: by taking up all the time of the student, and consequently preventing him from reading!—reading, whose effects mankind seem to be utterly unaware of;—reading, the only real—the only effectual source of instruction;—reading, the pure spring of nine-tenths of our intellectual enjoyments,—the only cure for all our ignorances;—reading, without which no man ever yet possessed extensive information;—reading, which alone constitutes the difference between the blockhead and the man of learning;—reading, the loss of which no knowledge of Greek particles, nor the most intimate acquaintance with the rules of syntax and prosody, will ever be able to compensate;—reading, the most valuable gift of the Divinity, has been sacrificed to the acquirement of what never constituted real learning, and which constitutes it now less than ever; and to the contemptible vanity of being supposed a classical scholar, often without the shadow of a title to it. That this picture is not charged, I would appeal to the experience of almost every man capable of understanding me,—to every man whose position in society has given him an opportunity of knowing those who compose it: I would appeal to the minister of the gospel, the physician, the lawyer, the gentleman. I would entreat every parent to inquire into its truth, before it be too late to prevent its baneful effects upon his offspring.

'Reading is, then, of ten thousand fold the importance of any other science, because it is the mother of them all; and, as it must not be sacrificed to Greek or Latin, so neither should it be sacrificed to any thing else.'

Again,

'As reading is the source of all real instruction, as is self-evident to any man who reflects on the subject, so it is also the sole—the only means by which the words of a language can be acquired. It is inconceivable that those persons whose business is the instruction of others in the languages, should not have found out this obvious truth, that to speak or write a language, we must know it by heart; and that so far as we know it in this manner, so far reaches the copiousness, harmony, and variety of our style in speaking or in writing, and no farther!'

We have made these extracts, because they are the only passages in this lecture which contain any exposition of Mr. Hamilton's objects. All the rest of the paper is occupied with an exposition of his system. And now let us compare them with the views of our ancestors upon this subject. Our ancestors thought that the difference between a blockhead and a man of learning, or any other kind of sense, was, that in the one the faculties were dead and dormant, and those of the other in a state of cultivation; Mr. Hamilton affirms the difference to consist in reading. Our ancestors believed that whatever tended to give life and expression to the mind, tended to cure it of its ignorance; Mr. Hamilton says, the only cure for ignorance is reading. Our ancestors thought the mother of all the sciences was that great science which contains them all—the science of our own natures: Mr. Hamilton says, the mother of all sciences is reading. Our ancestors thought that there was between thought and language a connection so vital, that, if the one were taught, the other would be called out: Mr. Hamilton makes reading, which he considers the omnipotent instrument as well as the self-sufficient object of education, the means of teaching the words of a language; that is to say, he considers the ultimate end of teaching languages to be the inculcation into the memory of the language, not con-

sidered as connected with any thoughts. Lastly, our ancestors believed that only by receiving into our heads the spirit of the language could we hope either to turn a language to the slightest account: or, what is more important, to obtain by means of it, the faculties which shall turn it to account. Mr. Hamilton, leaving the faculties entirely out of the question, says that all the objects which he contemplates from the study will accrue to those who learn its words by heart.

YET MR. HAMILTON IS TO ACCOMPLISH THE SAME ENDS AS ARE CONTEMPLATED BY THE PRESENT SYSTEM, WITH ONLY THE DIFFERENCE, THAT MONTHS INSTEAD OF YEARS WILL BE DEVOTED TO THE ATTAINMENT OF THEM.

But then 'The Westminster Review,' in an article written expressly to prove that this system is the masterpiece of human wisdom, asserts, that nevertheless the author of it is an exceedingly stupid man; so it is probable that Mr. Hamilton may have mistaken his own end altogether, and may be working, under the guidance of some divine instinct, in the straightest direction for it. This hypothesis is at once so precise, and so characteristic of a Westminster Reviewer, that we must take time to examine it. We will do so by quoting a passage from the review, which contains, not the views of the system which are entertained by its stupid author, but by its enlightened advocate:

'1. The fundamental principle of the Hamiltonian system is peculiar to it: it is, that it is the office of the instructor to teach, and not to assign the lesson to the pupil and to order him to learn it. Without doubt every instructor, whatever kind of knowledge he undertake to communicate, at some part or other of the course, teaches to a certain extent. The distinctive character of the Hamiltonian method is, that in the beginning especially, and up to the advanced section of the course, the teacher communicates every thing to the pupil; he does not leave him for a moment, and, least of all, does he leave him for the purpose of exciting his inventive faculty; he trusts nothing to his pupil's sagacity; he even affords him no opportunity to try it; every thing is mechanical. Supposing his scholar to be ignorant of every thing relating to the subject-matter to be studied, the Hamiltonian teacher tells his pupil whatever it is requisite that he should know. The teacher gives, the pupil receives; the teacher does nothing but communicate that which he has already learnt, the pupil does nothing but learn that of which he was hitherto ignorant. Extraordinary as it may appear, this mode of instruction is absolutely new: until Mr. Hamilton pointed it out, its peculiar importance and excellence was not perceived. We do not say that no idea of it had ever occurred to any reflecting man. There are proofs on record of its having been discerned by some philosophers who have studied and analysed with success the faculties of the human mind. But what we affirm is that no one had ever before perceived it with such clearness, or appreciated it with such justice, as to make it the all-important principle, which ought to be laid down as the foundation of every mode of instruction.'

This is manly, and we thank the reviewer for it. We ask nothing more. The Hamiltonian system is wholly MECHANICAL; in other words, the object of it is not in the least degree to call forth the faculties of the pupil. Now, the whole object of our ancestors was to call forth the faculties of the pupil.

YET MR. HAMILTON IS TO ACCOMPLISH THE SAME ENDS AS ARE CONTEMPLATED BY THE PRESENT SYSTEM, WITH ONLY THE DIFFERENCE, THAT MONTHS INSTEAD OF YEARS WILL BE DEVOTED TO THE ATTAINMENT OF THEM.

Before we proceed to the last part of our article, which we reserve for another number, we must notice a delicious argument of 'The Westminster Review,' to disprove the ordinary opinion, that the mere imposition of words upon the memory does not promote the true end of education. 'The fallacy of this notion,' says the Reviewer, 'when once pointed out, is so obvious, and even so startling, that it is astonishing it should have misled any one for a

moment. The error lies in the conception that in the process of instruction, the faculties of the teacher who communicates alone are active, while those of the pupil, who receives, because he only receives, are passive; AS IF ACTIVITY OF THE INTELLECTUAL FACULTIES WERE NOT, IN THE VERY NATURE OF THINGS, ESSENTIAL TO THE RECEPTION OF A NEW IDEA.'

Let us make use of this argument to expose a notion which has hitherto been very prevalent, not in morals but in physics, we mean that when food is crammed down the throat of a child or a man, his system does not receive so much advantage from the food, as when he swallows and masticates it for himself. The fallacy of this notion is so obvious and striking, that it is wonderful it should have misled any one beyond a moment; as if the activity of the digestive organs were not in the very nature of the thing essential to the reception of—nourishment! If our readers remark the two sentences, they will see that there is not the least more dishonesty in the use of the word 'nourishment' instead of 'food' in the last, than of 'idea' in the first in place of 'words.' However confused the Reviewer's notion may be of the nature of an 'idea,' (and we can give him credit for a very tolerable quantity of perplexity on this subject,) we do not apprehend that he meant 'idea' to be synonymous with 'words.' If he did, we are quite content, and the phrase will stand in its naked assumption, 'as if activity of the intellectual faculties were not essential to the reception of a new word!' But if he meant by idea, as we suppose he did, not a word, but that which results to the mind from a word, then in assuming that an idea is received at all by the imposition of words upon the memory, he will simply have begged the whole question. And these are the fallacy-exposers of the 19th century!

In our next number, which we hope will finish the subject, we shall consider the advantages supposed to result from the new system, in saving time for other studies, and the real principle upon which reforms in our public institutions for education ought to be conducted.

THE KING'S INTENDED PRESENT TO THE NATIONAL GALLERY.—It will be observed by the report of the proceedings of the Artists' Benevolent Fund Society, at the annual meeting and dinner, on Saturday, of which the daily papers have given a full account, that his Majesty has been pleased to exercise his munificence and to give a new proof of his anxiety to promote a general taste for the arts, by authorising the purchase of two of the best paintings of Sir Joshua Reynolds and Gainsborough, for the purpose of presenting them to the National Gallery. The speech of the President of the Royal Academy will be read with interest. The expressions of humility which it contains, afford a new illustration of the often-repeated axiom, that modesty is the constant attendant on genius. Had its tone been a little less courtly, the effect would have been more powerful. The President of the Royal Academy should bear in mind that mummery passed its perihelion when Mr. Brougham made his famous harangue at Liverpool in praise of Lord Eldon, and an evident reaction towards honesty has since taken place in all classes, except the strugglers for the *ancien régime*. It may be added, however, that as long as Sir Thomas sends to the exhibition such admirable portraits as those which now figure in the rooms of Somerset-house as the resemblances of the Duchess of Richmond and Mr. Soane, he has no occasion to anticipate a decline in his talents. To all but himself his powers appear undiminished.

ARACHNE—A MEDITATION.

Woe betide, and curses, the unnatural cleanliness of English cities! I have profited little by my idle and rustic life; but at least I have learned not to condemn a spider. Here I wander up and down the stairs as unhappy as the great Florentine poet, and cannot find from garret to cellar even one of the insects I delight in. I have been used to think them the companions, almost as it were the geni, of my old walks, my old trees, my old recollections, and daily thoughts. In this barren and mechanical metropolis I rejoiced, after many weeks, to discover among my shelves one small but genuine and living cobweb. I immediately proceeded to secure it as well as I might from the incursions of the enemy and the besom of destruction. I raised in front a huge rampart with the mighty and generous old folio of Raleigh, and strengthened the flanks with bastions of Don Quixote, the Greek Testament, and Wordsworth. Above the whole as a donjon keep, I exalted Mr. Bentham's last five volumes on the law of evidence, and to make sure against any casual approach, I took care that the name should be visible. I fondly believed that I had successfully fulfilled all the duties of a wise governor and friendly protector; and in the gladness of my heart, whenever I was sure that nobody was at hand, I removed a part of the fortifications, and contemplated the fairy palace which I had encircled with these bulwarks of such distant ages and various architecture. The elaborate construction and scientific form of the building inspired the housemaid with a salutary and holy terror. But my cousin Mary, (whose embroidery, by the way, almost equals that of Arachne), came into the room to superintend the hanging of one of her own drawings, of which she had made me a present, and was surprised at the aspect of my precious pile. She lifted in her delicate hands one or two of Mr. Bentham's volumes; their weight oppressed her, their name puzzled her, she let them fall on the magic web below, and my comfort was destroyed for ever.

Yes, for ever! I cannot hope that in this capital, which is the domain of house-maids and brooms, I shall be able to maintain near me even a single spider. Yet, O! blind and clownish generation! when will you construct a web so airy and regular? What be your engineering and your weavings,—what be your ground-plans and your diagrams, compared to the exact beauty of a cobweb? Look at those fine threads, those strengthening diagonals, those sharply-drawn and concentric circles, and then boast of the bare and meagre Roman castramentation, or of the clumsy art of Flemish engineering. When shall your bounties, or your prohibitions, or your free-trade, the mightiness of your machines, or the skill of your throwsters, draw out a line which would show finer than a cable beside this thin and silver thread? The labyrinths of your old gardens! The mazes of your modern cities! Bring Egypt and Crete, bring Le Notre and the seventeenth century, set London and Pekin beside a cobweb, and teach yourselves to be abashed by the art of the insect, and the mystery of its habitation! Learn from this how coarse the lace on a queen's bosom; how rude and inartificial the devices of human oresters and princely huntsmen; how irregularly knotted and ignorantly arranged the nets which catch in the blue Mediterranean and around the promontories of the north, the fish for the feasts of luxury, and the kettle of Domitian. Where is the Retiarian Gladiator who will weave his web out of his own bowels, and fight without a weapon? Or when was the golden hair of Euphrosyne bound with a net, the silk whereof was a living portion of the goddess?

What an agile tumbler is the spider! How boldly, and yet how surely, does he climb, and creep, and spring, among his lofty and tremulous rigging! See him dropping from some tall thin bough, as if he were descending from a star; and

when he has reached the ground, he swoons not, nor is bruised; he leaves it to the son of Jupiter to be maimed, to the son of Apollo to be slain, by a fall to earth: wise mechanist, he suspends himself as surely as if he were upheld by the golden chain that unites the worlds; rare dancer, he touches the sod as lightly as a butterfly or a breeze; aspiring vaulter, that will not live below his former home, with the airy nimbleness of a bird he mounts the moonbeam ladder that himself has made, draws after him the polished staircase of ductile crystal, that no crawling worm may follow him to his castle, and sits in state, where, from his breezy chambers and gossamer case-ments, he may look out with contempt on the deeds of the rude labourer and puzzled artist—MAN!

And in those dim and quiet recesses, wherein he often dwells, like Mahomet in his cave, or Luther at Wurtzburg, or Socrates in the shadow, how notably and profoundly doth he not meditate on the powers of nature, and the laws of existence! Speak of the cob-web brains of philosophers and poets! Where, I prithee, is the man whose brain deserves so honourable an epithet? Let us estimate the inward thought and pregnancy of speculation by the outward achievement which is its sign and type. What moralist, what man of fancy, hath ever figured and embodied his conception of the universe and the causes of things in so clear and complex a plan as a cobweb, and with a hand so plastic as the spider? Must not he be a genuine recipient and expositor of the principles of truth, who constructs out of his own blood and thoughts so complete, definite, and significant a symbol of the system of creation? How methodically are the great lines and main supports arranged, how carefully and strongly compacted; how minute, delicate, and suitable the small connections and details! How well is every part adapted to all the others! how bold and magnificent the general design! how perfect the execution! how full of intelligence and life! and how clear in the mind of the artist must needs be the view of all the moral and physical relations of the world; how strictly practical, and allied with the individual character; how dependent on his connection with all above him, and all below him! What philosopher has certainly discovered, and steadily maintained, any one law of the invisible, or, I might almost say, any one of the visible, universe? Leave these dreams to the young men, who are unfit even (as Hector quotes from Aristotle) to 'study moral philosophy, and therefore still more assuredly unfit to study the ways, and webs, and intellects of spiders. Happy man would he be whose mind should approach the method, and delicacy, and sensibility of a cobweb!

The age is unworthy of these contemplations, or else might it not fairly be urged that a cobweb is the evidence and badge of a calm and reverent antiquity? When the conqueror is a handful of dust no larger than has a thousand times been marked and stained by the bloody hoof of his charger, when his conquests have fallen to fragments, and his dynasty has passed away,—then in the silent halls of his splendour and about the mouldering pillars of his monuments, the spider weaves his glimmering web, the one true heir to the fame of Alexander and the empire of Darius. And when mighty armaments, moved by as many millions of men as were drowned in the deluge, have been shaking asunder or banding together kingdoms, when the thousand leaders have been feasting together in palaces, waited on by ten thousand captive princes, when the riches dug in many ages from many hundred mines have been heaped for a trophy into a mountain, and the sins of the triumphant are builded into a mountain taller than this, bloody and burning, when all this has endured for a space, then comes in to inherit the palaces and the trophies, and to write its moralising on the wealth and the iniquity, that small and grey phi-

losopher the spider, and runs to and fro over the banquet-table of Sardanapalus and Semiramis, and makes a roof in the entry of the pyramid, and spreads the mantle of his new possession on the throne of the Cæsars. For gladiator, and spectator, and emperor, what now has the circus but a spider? What now has Timur instead of his hundred diadems, but a cobweb? What fills the skull of Archimedes, but that one little diagram? That twilight web is wavering where the banners of monarchs and the veils of the lovely have passed away. That thin pale thread succeeds to all of brightest and most permanent on earth. That brief and significant inscription has marked the tombs of Adam and the Patriarchs, and it shall be written on the sepulchres of mankind, when the world shall not contain a living man.

A SECOND POETICAL EPISTLE.

FROM THE GERMAN OF GOETHE.

[The following epistle is a sequel to the one, a translation of which appeared in 'The Athenæum' of last week, and handles another branch of the same argument. It is much to be regretted that Goethe did not pursue it further, and that he has not given us any more compositions of the same class. In this instance, as in others, after showing that he could equal or surpass the greatest masters in their own peculiar province of the art, after exhibiting specimens that were models of perfection, he seems to have thought that this particular portion of his intellectual nature was now sufficiently developed, and has turned aside to cultivate some other. Thus it has happened that these two epistles stand alone among his works, as, indeed, they do in the whole field of modern literature; at least, where else is any thing to be found worthy of being compared with those most exquisite and delightful productions of the good sense and good breeding of the Romans, the satires and epistles of Horace? Other writers who have attempted to imitate Horace, not even excepting Pope, have expanded, and hardened, and stiffened, and embittered him. But Goethe's epistles have all Horace's playful gaiety and graceful lightness of touch, with more than all his Socratic irony and wisdom; and, like his, they breathe that spirit of universal kindness and philosophical indulgence towards all the waywardnesses of human nature, which, whatever the disciples of Chesterfield may assert to the contrary, is the soul of all good breeding, and without something of which, all good breeding is a hollow mask, cold and brittle, and not worth a straw.—It may be as well to remark, with reference to the latter part of this epistle, especially considering the tenfold velocity with which the wheel of fashion has been running round of late years, that it was first published in the year 1795.]

EXCELLENT friend! thou knittest thy brows; thou exclaimest, that jesting Here has been quite out of place; thy question was grave and momentous, And it required to be answered as gravely. I know not, by heaven, How it has happened that some pert demon of laughter possessed me; But I will now continue more seriously. Men, thou declarest, Men may look after themselves, and watch over their lives and their lessons: Choose they to go wrong, let them: but think of thy daughters at home, think How these pandaring poets are teaching them all that is evil.

This is a mischief, I answer, 'tis easy to remedy; more so Than many think perhaps. Girls are so good, and so glad to have something They may be busy about. Give the eldest the keys of the cellar, That she may see thy wines placed right whenever the merchant Or when the vintager sends in the barrels of generous liquor Here will be much for a damsel to look to: such numbers of vassels, Bottles, and emptied casks, to be kept all clean and in order. Oft, too, will she observe how the must keeps frothing and stirring, And she will pour in more when it falls short: so may the bubbles Easily float to the mouth of the vat; and the noblest of juices Ripen in delicate clearness, to gladden the years that are coming. Daily, moreover, she draws it unweariedly, filling the bottles Ever afresh, that its spirit may always enliven the table. Next, let another be queen of the kitchen; then, in good earnest, She will have work enough; dinners and suppers all summer and winter,

And they must always be savoury, yet without draining the strong box.
 When Spring opens its doors, she has motherly cares for the poultry,
 Feeding the ducklings betimes in the yard and the yellow-beaked chickens.
 All that the season produces she brings in its turn to the table,
 Happy if only before hand. Daily she changes the dishes,
 Tasking her wits to devise a variety. Soon as the summer
 Ripens the fruit, she stores for the winter. Down in the cool vault
 Cabbages lie fermenting, and vinegar mellows the gurkins,
 While, in the breeze-loving loft, she treasures the gifts of Pomona.
 Joyfully lists she to the praise from her father, brothers, and sisters;
 But if in aught she miscarry, alack! 'tis a greater misfortune,
 Than if thy debtor absconded and left thee his note for thy money.
 Thus will the maiden be ever more busy, and quietly grow up
 Full of all household virtues, and happy the man who shall wed her.
 Then, if she wishes to read, she will take up a treatise on cooking,
 Such as the restless presses have issued already by hundreds.
 Has she a sister? her care be the garden. Thou dost not condemn it,
 Surely, to girdle thy house with a belt of romantical dampness:
 But it is laid out neatly in beds, for the use of the kitchen,
 Bearing the wholesomest herbs, and the fruits that make children so happy.
 Thus, like a patriarch, let thy own house be a kingdom in little,
 And let thy offspring around thee be ever thy truest servants.
 If thou hast still more daughters who like sitting quiet and working
 Works such as women delight in, 'tis only the better: the needle
 Finds little leisure to rust in the year round: be they so homely
 While they are staying at home, when abroad they would willingly look like
 Ladies with nothing to do. How much, too, has sewing and darning,
 Washing and pleating increased! now that every damsel is wearing
 White Arcadian garments, with long-tailed petticoats trailing,
 Sweeping the streets and the garden, and stirring a dust in the ball-room.
 Verily, had I a whole round dozen of daughters to manage,
 I should be ne'er at a loss for employment; they get up employment
 All for themselves in abundance; and so not a volume the year through
 Should ever come from the book-lender's library over my threshold.

J. C. H.

THE INVITATION.

Rise, my love, the loud-voiced wind
 Leaps with shouting through the sky,
 And the myriad lamps of light
 Which bespeck an azure night,
 Dimly glimmer forth on high,
 As the blasts the folds unwind
 Which conceal them from the eye.
 O'er the top-cloud of the storm
 Doth the crescent-shaped queen
 High uplift one lustrous horn
 Glowing like red gold, unshorn
 Of one beam; meanwhile between
 Dark cloud-veils, its sister form
 Sleeps a quiet sleep unseen!
 And the undistinguished trees
 Whose dark outline meets the cloud,
 Their sad neighbourhood reveal
 Only by the awe we feel,
 When with whispers long and loud
 Flits among them the night breeze
 Like a ghost which leaves a shroud!

The smooth lake, whose waters lave
 Yon hill's base, is murky and dim;
 Neither moon, nor cloud, nor star,
 Darting through it from afar,
 Rise again in fashion trim
 On the pebbles which it pave:—
 Nature wears a semblance grim!

In the gale I mark a sound,
 Which to none but gifted ear
 Is revealed;—a sound of power!
 'Tis the spirit of the hour!
 He to men who dare to hear
 Will the secret spells expound
 Which uphold this earthly sphere!

While his sister spirit sits
 In the beamy moon above,
 And as on his shadow-wings
 O'er the joyous earth he springs,
 Greets him with her looks of love,
 Then he laughs and rocks by fits
 The tall hill and feathery grove.

My sweet girl, we fear him not!
 For high converse we have held
 With swarth forms, with satyrs rude,
 With all shapes that haunt the wood,
 The dark cave, the sunny field:
 In church-yards for ghosts we've sought
 By no human dread repelled!

He doth love! Love hath no fear!
 And the over-arching sky
 Be the storms athwart it thrown,
 Be the sun in glory shown,
 Must be ever to thine eye
 Love's eternal fane, a sphere
 Which no evil cometh nigh.

He doth love! And so do we!
 He fears not! How can we dread!
 Then come forth and let the wind
 All thy golden locks unbind,
 Toss thy arms above thy head
 Like a Maenad frantically
 In the forests wandered!

And his still deep voice shall fall
 Like sweet music on thy soul;
 For there's nought that joys and lives
 But to thee its pleasure gives
 From those orbs aloft that roll
 To the withered leaves which all
 The light winds at will control!

And I'll hear his whispers too,
 For the waves and skies by me
 Are beloved, and godlike man
 Nature's all-comprising plan;
 And while listening thus with thee
 All things seem more sweetly true
 To the primal harmony!

THE HUNGERFORDS—A FAMILY SKETCH.

I AM a very old quack, and it is quite time I should retire from the active duties of my profession. To you, my dear children,—dear for your own sakes, and dear because I see revive many of those traits which have distinguished the characters of both your parents,—to your hearts I commit the preservation of my memory, and to your heads the continuance of my traffic. Listen, darlings, while I utter in your ears the words of one anxious, deeply anxious, to see you as straightforward, high-minded, triumphant impostors as himself. Nay, why do I so limit the expression of my paternal hopes? You may be greater, wiser, mightier men than ever I have been. My empiricism, I confess, has been too discursive, too all-embracing. In the ambition of my boyish heart, fired as it was with recollections of the great men who had preceded me, and upheld by a consciousness of what I could myself achieve, I deemed that the whole world of trickery was within my grasp, and wept by anticipation, that there would in time be no more worlds to subdue. I was wrong, I acknowledge it; but you, dears, will profit by my experience. I apportion out among you the different provinces of my vast empire; hear and remember my instructions for their management:

FRANK! my first-born, you were always your mother's darling; and yet, I know not how it is,

you inherit but little of her wit. That dull, heavy look of your's would be worth a hundred thousand pounds to such a shrewd dog as your brother Adolphus. He, poor fellow, has got an unfortunate appearance of cleverness, which, I fear, will ruin him. How strangely the gifts of Providence are dispensed! But something might be done for you yet. Let me see, what is that log fit for? I have it. Frank, you shall be a poet.

A poet! But I can't make verses, Sir!

That did not occur to me. But, hang it, what can it signify? I will give you directions. In the top shelf of my library, close to the fire-place, you will find a row of books, on which you will see written 'Old Plays.' A little way off, you will see books labelled 'Paradise Lost' and 'Paradise Regained.'

What am I to do with them, Sir?

Why you may take as much from them as you like, and nobody will be the wiser. But that's not the thing. You do not suppose that you will have to write a great many poems in order to be a poet, do you?

Yes, Sir. What else am I to do?

Che! che! the child is quite hopeless. Why, Frank, if you can only start off with a poem of 400 lines, upon the Conversion of St. Paul, you are a made man; and, far from having to write any more, every review in the empire will be full of such phrases as these: 'Why does Mr. Frank Hungerford, who tuned his matin lyre so sweetly, never favour us with a noon-day song?' intimating, you perceive, that you would be a monstrous fool if you did. 'For our own parts, we admire this abstinence of Mr. Hungerford. True genius does not court opportunities of display.' This you say is a made reputation. You will be praised just because you don't write. How do you like that, Frank?

But how am I to live, if I do nothing else all my life?

How are you to live? Why, Frank, your ignorance of the world, for a young man of twenty-four, and my son, is really shocking. Are you not aware that you will dine out every day, that you will be paid all round by the annuals 100l. each not to write in the others, and that you have every possible chance of a plum?

But surely Frank's face will not pass for a poet's, Sir. He has not got his eye into a fine frenzy, or any thing of that sort.

My dear Adolphus, why will you be always setting up to be so much wiser than your father? Why, it was that desperate face of his that put me upon making him into a poet, which, in most cases, is not by any means a profession I should recommend. Don't you see how easy it will be to describe him as a man of a deeply meditative countenance, withdrawn from outward objects, and poring in silence over his own heart? Well, so much for you, and that is one good job over.

CHARLES! what are you doing there? Come, Sir, and attend to me: there is occupation enough in the world for your impudence. The only faults of all my dear children are excess in their peculiar virtues. Frank in stupidity, Ambrose in vulgarity, Adolphus in cunning, you in brazen-facedness; Charles, you must be the drawing-room quack.

Why the devil do you put me to such a business as that? There is not a person in the world hates men and women as I do.

My dear Charles, how very unworthy that is of you! I know you hate men and women, but ought that to prevent you from imposing upon them? Be sure, Charles, that to accomplish any great objects, to gratify any ultimate desire—we must put a curb upon all our inclinations. We must take, as Mr. Warren the Benthamite told you the other day, a distant and large view of our self-interest, instead of a narrow and neighbouring one.

But I am quite sure that my impudence will turn to no account in society. I dare say I shall be quite shamefaced and foolish in the presence of women.

And if you are, so much the better; it was just the course I meant to prescribe for you. A really shy man may just as well go hang himself; for there is not a person whom he converses with that does not hold him a bore and a curse, and he holds the same opinion himself much more strongly than any of them. But an impudent man cannot do a better thing than begin with an air of extreme bashfulness and constraint. Let me explain to you: that slouching, devil-may-care gait of yours must be converted, as it will without the least difficulty, upon your first entering your profession, into a student-like awkwardness. You must tumble into a room, thus, as if your legs and body, like two country footmen, were squabbling about whose place it was to support the other—your head must make an effort to stand up, but weighed down by your anxiety to conceal the blushes which cover it—must present the appearance which a clever critic on phrenology attributed to the man who should be so unfortunate as to have an organ of secretiveness, and one of self-esteem, battling with each other—then let your whole demeanour express the painful scepticism by which your mind is racked respecting the propriety of addressing yourself to the first person who comes forward to salute you, or of cutting your way under the hostile fire of some fifty Christian and turbaned heads into the presence of the lady of the house—then retire—not (need I mention it?) without knocking two hats out of the hands of the gentlemen holding the same, into the arms of the lovely being with whom they are conversing—retire, I say, into a remote corner to a table, which will afford you the opportunity of throwing a volume of engravings upon the fair ankle nearest you—then descending—

You need not go on, Sir; I can do all this, and a great deal more of the same kind, if it is necessary.

It is necessary, you may depend upon it, for what will follow? There is some compassionate person in every English company. Say a married lady, or a single one of a certain age. Well, she observes your confusion, and takes you from that day under her patronage. Be sure you throw yourself in the way of meeting her again and again. Whether she is worth anything herself or not, her descriptions of you to others as a young man in whom there is really a great deal more than appears, with other phrases of the same sort, will do you good. And then, attend to me, let there be no medium; do not let the shell of shyness scale off by degrees, but, all at once, when you have attracted the notice of a sufficient number of persons—some from pity for your sufferings, some from a wish to ascertain your genius,—start up before them at once in the panoply which the gods provided you with, the true, impudent, Charles Hungerford; and the world is your's, my lad, if you will only take it.

I have but one more caution before I dismiss you. When you have once assumed your character, let your conversation be free from all affectation. There is a trick among young men of the present day, who fancy themselves quacks, but have no right to the title of talking to women especially, in paradoxes—starting opinions just the reverse of what are true and generally believed, affecting to abhor virtue and admire crime—laughing at any thing great, and professing to worship littleness—with any thing else that is intended to earn from female mouths the remark, 'What a very odd person that is!'—Now that is vile and vulgar—what no real impostor would ever practise: depend upon it, women like honesty and truth, and plain speaking, let fools tell you what they will to the contrary; and every genuine quack must, at least with them, be as direct and straightforward as his nature will let him

AMBROSE! you are drunk, and therefore I will not settle your profession at present.

Shan't I do for the Church, Sir?

No, Sir, you will not do for the Church. 'You will drink nothing but salt water all your life, if you begin to drink before you get into the sea,' was the bitter paradox of a friend of mine, who knew its truth from experience; for he was one of those worthy fellows, who, though devoting all his health and talents to his profession, being drunk three nights in the week with his parishioners, and three with his patron, yet never obtained a living with more than four hundred pounds a year. Such a fact is a perfect scandal to the richest establishment in Europe. No, Ambrose, my present notion is, that you should start as a metaphysician, for which purpose I shall send you over to l'Ecole Normale, at Paris.

What is that, Sir?

It is a metaphysical parliament, where young men meet to pass laws of the human mind. At the commencement of every session, M. Cousin, the President, delivers a speech from the throne, recommending certain new sensations to their attention. They then resolve themselves into committees of the whole house, to consider of those sensations, and every member is at liberty to propose any new clause he pleases. The chairman then reports progress, and asks leave to sit again the next day. Now, if you attend these committees every night drunk, I am sure you will be able to suggest more sensations than all the Frenchmen have yet discovered; then you will establish a course of lectures; will hiccup about *la charte* and the nineteenth century; and will be voted the greatest philosopher and most tipsy man in Paris.

There's my own boy, ADOLPHUS. Ah! you fine skulking little dog, with that winking eye that never looks straight at any thing! In principle, I always thought you were the best of the brood. In action, however, you have sometimes come off badly; for you carry the mark of your knavishness too honestly about with you; and honesty, Adolphus, will not do in this bad world: however, do not be discouraged, my own pet. You will get on as well as any of them; only it goes to my heart that I must put a genius like yours to a more common-place trade than any of your brothers. I am sorry to say it, Adolphus; but you must be a lawyer.

My dear Sir, a lawyer! why surely that profession has a bad name enough in itself, without my adding to the opprobrium by the face upon which you have bestowed such gratifying compliments.

But a boy of your wit, Adolphus, ought to perceive that this very circumstance will be immensely in your favour. Just observe the way in which lawyers are generally spoken of: 'By Jove, that fellow is a cunning rascal, I would not willingly be in his clutches,' which means, being translated, I wish, my dear friend, that I had you in his clutches—and do you not in your conscience believe, that the very man whom the objector would pitch upon to conduct a cause for him, is that same cunning rascal. The truth is, as you know very well, that nothing can be more vulgar than the usual attacks upon lawyers. They are not worse knaves than those other men—only mankind wants them for its knavish purposes, and so they are voted knaves by convention. And this being the case, you see how very convenient it is that they should carry about with them some sign-board of their accomplishments, something which will set the world at ease about putting them to the uses for which it intends them.

I feel the truth of what you say, and yet one would like, now and then, to do a sly piece of knavery without being suspected of it.

One would certainly; but, as I have already told your brother, a quack must be a devoted, self-denying man, ready to lay his most cherished inclinations upon the altar of duty.

ELIZA, my little quean, who said that when I portioned out my kingdom to my children, you should have Cordelia's share? No such thing; but what I shall do with you requires some thought. Will you be a blue, Lizzy?

No, Sir, I won't.

That is very decisive; and yet I think those mahogany locks—I did not call them red; and that nose, a slight tendency to snub, you must allow; and those lips, a little beyond the average thickness; and that left shoulder, declining generously to rival its sister in height; I think, I say, that with these peculiarities, it might be well to open an Album, and take Greek into your consideration. *Qu'en dites vous, ma fille?*

I am determined; I will be a beauty, Papa.

There spoke thy father's spirit. You shall be a beauty, my love. I am getting old and feeble, or I should never have made so mean and compromising a speech as that which just escaped me. It is the business of vulgar men to follow nature; it is the glorious vocation of the quack to contend and master it. If nature has made him stupid, it is his right to say, I will have reputation for talent; if cowardly, I will be revered for my courage; if frightful, I will be adored for my loveliness. Decree to be beautiful, Eliza, and your nose shall be pronounced an exquisite improvement upon the Grecian model; your lips will be extolled for their fulness and richness; and the departure from uniformity in your shoulders will have the charm of a piquant innovation. Go forth, my children, in this spirit of compelling the world to think of you that which you know you are not; and you will, you must, prosper. The blessing of an aged quack go with you!

ROYAL ACADEMY EXHIBITION.

A SECOND visit to the Exhibition has satisfied us that it is a good, a superior one. It is creditable to the exhibitors; and, looking to the present state of the arts on the continent, it does honour to the country. It presents a vast and gratifying display of efforts of bold and unshackled talent, following original impulse, unincumbered by the trammels of example, school, or fashion, but employed in embodying fine ideas, spontaneously and naturally emanating, and expressed without labour or manner. This praise is well merited by the performances more especially of Mr. Wilkie, Mr. Etty, Mr. Calcott, and Mr. Turner.

Mr. Etty's picture, 'Benaiah slaying two lion-like men of Moab,' in regard to the attempt at least, is the principal work in the exhibition. It is a noble and courageous effort, and the ardour which has dictated it, and borne the artist through with it, deserves every encouragement. The painting also is a grand work of art: it is conceived with spirit, and executed with great vigour and power. It is quite in the terrible, or *fiero*, style; and, if it be not in the manner of the great founder of that school of art, we do not despair of beholding, at no very distant period, a production from the pencil of Mr. Etty which may rank him as a worthy follower of Michael Angelo. At present two attainments of opposite character are necessary to place him on the list of the accomplished disciples of so illustrious a master—elevation in sentiment, and a chastened hand. Refinement is the desideratum in Mr. Etty, whether he paints a Venus or a Samson. The picture now under consideration would have admitted of more of that quality without any sacrifice of energy. We have the man of strength, but not the hero; we contemplate the superiority of brute force, but not the victory of loftier courage and higher mind. We will not urge an objection obviously presenting itself to an undue degree of coarseness in the details of the drawing, because, in its present situation, the picture is not fairly seen. It is impossible to retire from it to a sufficient distance to obtain a proper point of view. Mr. Etty's second picture, 'Hero, having thrown

herself from the tower at the sight of Leander drowned, dies on his body,' (No. 31,) is a very masterly painting; the colouring is most rich and effective; the composition is extraordinary, but certainly not remarkable for its grace and beauty.

The produce of Mr. Wilkie's travels has naturally excited the curiosity, and formed points of attraction for the attention of all classes of visitors. His foreign works prove to be exactly such as might have been expected from Wilkie in Spain and Wilkie in Italy. He has caught the character of the country in each case: his subjects are consequently of a higher cast than those on which his pencil had before been employed, and he has adopted a manner of execution suited to his subjects. The principal of these works is 'The Defence of Saragossa,' No. 128. It is a noble and masterly production. The story is admirably told. Every thing bespeaks an obstinate struggle in a noble cause, in which all hearts and hands are enlisted. Men, women, and children, and laymen and priests, high-born and low-born, all perform their parts; and the crucifix itself,—no unworthy employment, since, the cause is that of country against the foreign invader,—while it directs the pointing of the artillery, seems to confer the blessing of religion on the aim. The figure of the heroine is full of ardour and enthusiasm; the activity of the groups about the piece of ordnance has a fine contrast in any occupation of a more quiet nature, but of an interest no less intense, and which is intimately allied with the main action, of the figures in any other part of the picture. Between the mighty wheels of the cannon, there is the sturdy mastiff; while in the part of the picture in which the employment of the figures breathes more repose and less of war, the carrier pigeon with outstretched wings awaits the completion of the despatch. We would not be critical over much, yet we cannot help observing what has appeared to us a defect common to most of the Spanish productions of Mr. Wilkie, and which in this picture more especially has an unpleasant effect: we allude to a want of variety in the heads; the features, with the exception of the boy, seem to be all taken from one model—the noses are absolutely the same.

No. 110, 'Cardinals, Priests, and Roman Citizens washing the Pilgrims' feet; a ceremony which takes place during the holy week in the convent of the Santa Trinità de Pelligrini, at Rome.' Might it be allowed us to express a preference where all is so excellent, we should select this picture as the best of those exhibited by Mr. Wilkie. As a whole, it is charmingly composed, and painted in a manner truly artist-like; it is full of feeling and character. The group on the left hand (of the picture), the Cardinal performing the last office of humility by kissing, after having washed, the feet of the pilgrim, is one of the most affecting incidents we remember to have seen in a painting. The humility is most expressive, profound, sincere, absorbing, free from every taint of ostentation. Nor can the emotion of the pilgrim be overlooked; it is most delightfully indicative of manly piety and modesty—the pain is all on his side; he cannot look on the act of humility of which he is the object, performed by a prelate, who, by the sanctity of his office, attested by the cardinal robes, is raised so far above him, and he conceals his face. The figures themselves are both fine; that of the pilgrim is noble, even beneath his modest bearing and garb of poverty. The group is one which we should never grow weary of contemplating. On the other side, the older pilgrim, with hands closed together on his knees, yet from age and duller nature less susceptible of lively emotion than his more youthful companion, abounds in character nicely discriminated in the conception, and well defined in the execution.

'The Spanish Posado,' No. 56, represents a guerilla council of war, at which a Dominican, a Monk of the Escorial, and a Jesuit, are delibe-

rating with an emissary in the costume of Valencia. This is also a masterly picture, although, perhaps, less stirring than either of the two before-mentioned. The Valencian emissary, resting his clenched hand on the board, is fine; and the group on the ground beneath the table, the old guitar-player, and the goatherd and his sister, is delightful.

We purpose noticing the rest of Mr. Wilkie's historical productions in the order of the rooms in which they are situated. We turn now to a picture of another description, in which a clever artist, abandoning his pencil to the guidance of nature, has produced a most enchanting work:

'The Fountain—Morning,' A. W. Calcott, R. A., No. 10.—This is one of the most delightful landscape compositions we have ever beheld: it is pure, simple, classical, and beautiful: the scene is lonely, yet perfectly natural; faithful to nature in her most pleasing combinations: it is Italian, and, although evidently a composition, calls to mind the character and many of the component parts of the scenery in the neighbourhood of the Formian Villa. We have the snowy summits of the Appennine chain, mountains thence gradually diminishing, and bounding the plain in the form of gentle hills, clothed with luxuriant fertility; a long line of country of this kind terminates in a promontory washed by the distant sea, which bounds the horizon. In the foreground and middle are a fountain and classical building, arcadian figures, a broad stream flowing through an aqueduct. The distance and sky are exquisite. The composition, from the description, may appear Claudelike: it is so in reality, but only because the ancient and modern artist have derived their inspiration from the same mistress: the treatment and effects are Mr. Calcott's own, they are perfectly free from charlatanism: the colouring, although appearing to disadvantage amid the glare which surrounds it, is glowing without extravagance, chaste without tameness.

'A Dutch Ferry,' No. 66, is another exquisite production by the same artist. That it is the representation of a scene of a tame description, may be allowed; but it possesses a character of interest and peculiarity in its very tameness. On first regarding the picture, the immense share of canvas unoccupied as it were, seems objectionable; but, when it is dwelt on, the effect of the distant line of flat land-hedging, the surface of the unruffled expanse of water, is so completely in the character of the country from which the scene is taken, that the whole becomes admirable. In the sky of this picture, as in all he has ever painted, Mr. Calcott is remarkably natural and happy; the sentiment of accordance between the lifeless calm of the water and that of the atmosphere is perfect. The figure of the market-woman, in a scarlet jacket, crossing the ferry in a boat, makes a most pleasing, effective, and natural diversion.

What a contrast to the paintings of Mr. Calcott is that of Mr. Turner, 'Ulysses deriding Polyphemus,' No. 42. Yet, much as we have praised the former, we feel no disposition to condemn the latter, however opposite in its kind and character. If sober reason will not allow us altogether to approve this wonderful display of Mr. Turner's power, yet can we not withhold from it our admiration. The colouring may be violent, and 'overstep the modesty of nature'; and, were that alone to be considered, the picture could not be justified: but the poetical feeling which pervades the whole composition, the ease and boldness with which the effects are produced, the hardihood which dared to make the attempt,—extort our wonder and applause. It should be borne in mind, moreover, that the subject is not drawn from the common realities of life. Nor do we see that the blood-red effects which accompany the mounting car of the God of day and light, tingling the scattered vapours with brightest amber, and burnishing the galley of the hero, protected by the Ægis-bearing Goddess, are at all

more out of nature than the Cyclops himself. How colossal and mysterious the form of the monster appears, as we view him writhing under the agonies of the recently-inflicted torture, and obscured by the vapours of Ætna!

We are warned to close our notice of the Exhibition for the present; we regret to be obliged to stop so early, as we had proposed to go through all the principal productions in the various branches of art in this our first account, in order to avoid every imputation of undue preference. We trust, however, that our readers will see, in the quality and subjects of the pictures to which we have drawn their attention, ample justification for the precedence yielded them. The painters, it will be observed, on whose works we have paid our tribute of applause, all artists of the first rank, are Academicians, and yet not portrait-painters; a fact which we notice by way of correcting a complaint put forth, certainly with too little reason, that the most influential members of the Academy are opposed to the admission amongst them of those who pursue the higher branches of the art. We are happy to have this occasion of doing merited justice to the Academy, as a set-off to the liberty we took with their administration of their Institution in our last Number. This we are the more desirous of doing, as the printer's mistake, in the change of a single syllable, gave a more serious tone to the character of the article than we had felt or contemplated in writing it.

THE ROYAL INSTITUTION.

THE lecture delivered at this Institution on Friday last, was one promised at the preceding meeting, on the ingenious and far-famed block machinery of Mr. Brunel. The models of this machinery were handsomely lent for the purpose by the Board of Admiralty, if we understood rightly, and were explained by Mr. Farraday in the clear, sensible, and intelligible manner usual in the lessons of that gentleman, which have ranked him as a lecturer so high in the estimation of all who have enjoyed the gratification of hearing him. It must be confessed, however, that the time devoted to the lecture at the meetings of the Royal Institution, is insufficient to do full justice to such a subject as the one which Mr. Farraday was engaged to elucidate: the time that was allowed, Mr. Farraday made the most of. The discourse would be unintelligible, without the accompanying experiments; and we shall not therefore attempt to report it. The models themselves were beautiful specimens of workmanship. Their exactness, as Mr. Farraday observed, was attested by the effect which the increase in the temperature of the theatre, occasioned by the concourse of company, had produced on them: it had so deranged them as to render the performance of several of the operations difficult.

After the lecture, the company was much gratified with the examination of the models.

Captain Waite of the Indian staff very obligingly took the opportunity of exhibiting to those who remained in the theatre, some very splendid Persian shawls of admirable workmanship. In the library, also, there were displayed a Persian carpet, and a rich show of arms from the kingdom of Cutch, all, we believe, the property of Captain Waite. Among the latter was a shield formed of rhinoceros hide and embossed with gold and jewellery, and several cups made from the horn of the same animal. The rich decorations on the handles and scabbards of the arms were elegant, and remarkable for their resemblance to the early style of Italian decoration.

GIBSON'S HISTORY.—A neat edition of this work is in course of publication at Leipzig in monthly parts: it will contain three hundred sheets, and be comprised in twelve volumes, at an expense not exceeding—*Eighteen Shillings!* for nearly five thousand pages!!

FRENCH CHARACTERS.

No. II.—THE COMMERCIAL TRAVELLER.

WHO is not acquainted with the industrious and spirited class of commercial travellers, the active representatives of the trade which annually circulates through all our provinces the products of the generous soil of Burgundy, of the olive-grounds of the Durance, the workshops of the Lyonnese, and the manufactories of Alsace? The commercial traveller usually commences his career at the desk. Long is he condemned to fathom the mysteries of double entry, and constrained to master the difficult calculations of 'The Cambist' and 'The Complete Merchant.' He sighs continually for that day of deliverance, when, shaking off the vulgar dust of the warehouse, he will see himself, like another Ganymede, carried off on the wings of the *Celerifère* or of the *Jumelles*, to make all France acquainted with his wonderful talents.

Five feet six inches, duly cast up, complete the stature of our Apollo Belvidere; the bellicose moustache juts fiercely out upon his upper lip, and ripening puberty has already clothed his chin with the small tuft which a recent Israelitish fashion has appended to the visages of our exquisites. The education of the commercial traveller has, therefore, received its last finish; but it should have been stated, that his tongue, by long practice, has attained a marvelous tact in rolling off mercantile periods, and distils its soft persuasions with an insinuation that goes directly to the hearts of his customers. Our hero is now ripe for his circuit, and it is time to bring him on the scene. Prepared for his departure, drunk with joy and hope, he rushes to the gate. With less impatience, with less pride, did Alexander set foot in the stirrup of Bucephalus, to fly to the conquest of the universe.

He throws off in the diligence with an act of gallantry. Securing his place behind, he immediately begins to pay his court to a young and pretty *voyageuse*, who is accompanied by a sort of bear, gouty, asthmatical, and octogenarian, whom she calls her husband, but who would better pass for her great-grandfather. Under the guardianship of his Antigone, the cripple is going to take the waters of Mont-d'or, that will not prevent him from very soon taking those of the Styx. Our Celadon takes care to separate the ill-assorted pair, and slyly slips in between them, but to play another part than that of the god Terminus. On the road, how obliging he is! what minute cares! what polite attention! If a slight jolt shakes the springs of the carriage, his protecting arm quickly encircles the waist of the alarmed fair, to shield her from the rebound; and ever and anon his restless touch interrogates a gracious and delicate hand to be assured that she does not suffer from the inclemency of the season. At the approach of night, amid the louder respirations of the other passengers, are heard mingling his tender sighs. But hush! we will imitate the discretion of our hero, who, though he is always successful among the women, never makes a boast of his intrigues.

Arrived at the inn, our traveller is known by his loudness and his petulance. 'Ho there! Somebody! garçon! chambermaid!' A score of valets are scarcely sufficient to wait on him. The meats are all insipid to the palate of this new Sardanapalus; the sauces he denounces in epigrams; the partridges he metamorphoses into crows; and the warren-bred rabbits learnt to run in hutches. Then of the wines, 'Infamous Surène! perfidious Piquette!' cries he, not recognising in the wines which he denounces the divine ambrosia, the ingenious mixture which he had himself compounded by regular chemical process in the great laboratory of Bercy. He is, however, an excellent paymaster, and as opposite as the Chancellor's budget to any thing like economy.

Hardly recovered from the fatigues of the pre-

ceding day, he rises to address himself to the business of his toilet, in which he is ever a model of exquism and good taste. For his calling is to be the ambassador of fashions, the missionary of novelties, to the provinces. There he undauntedly introduces the boldest innovations—those happy temerities, those strokes of policy in the empire of dress, which possess the merit of exciting the hootings of the profane vulgar towards their heroic authors, until they become generally adopted. He propagates and accelerates civilization wherever he goes; and, deprived of his importations, many a province would still abound with top-boots, three-caped coats, and hats à la Robinson.

Perfumed and pommatumed, he begins his morning round, eager to prevent the calls of a jealous competitor who has closely pursued him since his departure to divide his custom. No one knows better than he the secret of carrying a door by storm, or is more profoundly versed in the theory of blockading anti-rooms. 'Monsieur and Madame are not in.' What matter? These sophisms, the official fibs of the gouvernante, the ready evasions of the portress, and the halbert of the old Swiss, were not made to exclude him. He laughs at all such barriers; and some witty pleasantry, some ingenious stratagem, or, if need be, the irresistible talisman of a piece of money, speedily puts him in possession of the place. He darts, like an arrow, into the interior. He presents himself with the air of a man of the world and the finish of fine manners, commencing with an excuse for his indiscretion: 'To pay so early a visit to the ladies! It is transgressing all etiquette at one bound! But the hour-hand was too slow for his impatience! He was hungering and thirsting to salute the adorable lady of the house. 'Pon honour! she is a prodigy, and has discovered the secret of perpetual youth! A second Ninon, she is destined to inspire passions even in grey hairs!' All the young progeny become, by turns, the objects of his restless solicitude. Happy if in the multitude of questions that he puts, no grave anachronism, no gross mistake of sex or name, slips out to betray his entire ignorance of the genealogy of the interesting family. His next care is to make an abundant distribution among the young gormandizers of sugar-plums and other sweetmeats, in which even poor Azor is allowed to participate,—a pampered dog—a Sibarite quadruped—which he has the politeness to call charming, and to extol as the very model of shocks,—the very mirror of spaniels.

Nothing can be more racy and varied than the conversation of this amiable babblers. He knows every thing, has seen, has studied every thing. He is a perfect walking treatise on statistics, and with amazing sagacity contrasts the Germanic phlegm of the Alsatian female with the vivacity of the mettlesome Picard, the pyramidal coiffure of the Cauchois with the colinettes of the herb-women of the north. His memory is an inexhaustible source of bons-mots and anecdotes. Proteus-like, he can assume any shape for the amusement of his customers: he becomes successively, singer, quack, ventriloquist, mildord Anglais, polychinelli vampire; and, what is more, he mimicks to a miracle all the dramatic talents of the capital, Brunet, Odry, Potier, and even the great Talma. He is a man at once unique and universal. Has he to treat with some veteran soldier covered with wounds? It is a brother in arms whom he has the felicity of embracing. With a physiologist? He will discuss, without knowing a word of the matter, medicine or anatomy,—will speak of the principle of irritation, and unfold, organ after organ, the whole system of Dr. Gall. He will make speeches with the deputy, homilies with the country curate, ariettes with the composer, begrave with blue stockings; and on occasion you shall see him seize the needle, and with artistical skill put the last stitch in a flower on the tambour of a fair embroiderer.

When he has glanced at a thousand topics of conversation and assailed each person on his weak side, he turns insensibly to business, and introduces the subject—not by pressing entreaties or base solicitations. No: he will not even let his offers of service escape him, but with a playful and careless air; yet, without having received the slightest encouragement, he has already seized his portfolio, and the eager pen hastens officiously to take down the order to which he has acquired a claim. But stay! How I am detracting from the prestige of so much amiability! If perchance some morose and intractable customer take it into his head to protest against this summary method of doing business, the imperturbable traveller does not swerve. What! deface his order-book for the first time with an ignominious erasure! It were a scandalous disgrace! No! never! Better deliver the wine gratis! So he dispatches it at all risks; and the only favour he begs in return is, that of its being tasted on its arrival. The palate of Mahomet himself would not have resolution to send back to the entrepot the flower of Beaujolais, the nectar of Vignoble!

Thus by means of this clever intermediary are the products of our soil and manufactures annually poured forth and dispersed, and the affluent fortunes of great mercantile houses proportionately extended. The darling child of the Graces and of commerce, a hunter of adventures, the widow's cruse for anecdote, a far more amusing talker than your eternal prosers of the Tribune or the Court, a professed epicurean, an everlasting rattle and yet the prince of good fellows, a courtier but a useful and disinterested one,—such is the commercial traveller, whose physiognomy, together with his manœuvres and his attractions, forms a whole the most piquant and picturesque. But soon is the period of his peregrinations accomplished: the traveller, in his turn, falls into the bonds of matrimony. He now becomes head-man in the counting-house. The liting butterfly of the provinces, the cosmopolitish Lovelace, gives way to the grave and sententious financier. He no longer counts his amours but his millions, and already thinks no eyes so fair as those of his iron-chest. Happy if the gilded ceilings of the *Chaussée d'Antin* do not becloud that face in which smiles and pleasures used to play; substituting for his open manners and engaging wiles, the cold politeness of etiquette, the formal urbanity of the great world, and fixing every trait of aristocratic bearing on the sovereign of the strong-box. For, if he can but resist the intoxicating tendency of his new position, we shall see him devoting a portion of his treasures to the public good, to the encouragement of elementary instruction, to philanthropic institutions, and to the propagation of useful truths. He will sit with impartiality in the chair of consular justice; and, when his solid information, his high commercial rank, and the frankness and independence of his character, shall have recommended him to the confidence of his brother citizens, he will be raised to the legislative office, and take his seat by the side of Koulin, Lafitte, the Ternaux, and Casimir Perrier, in the midst of the national representatives. 'You all carry the field-marshal's baton in your cartridge-box,' said the founder of the Charter to his grenadiers: the commercial traveller also carries the caduceus of Mercury in his bag, and it only remains for him to take it out.

H. A. O. REICHARD.—There never was a writer, who enjoyed a more completely European reputation than this 'Palinurus' of modern tourists. Respected in his own country and among the literati of the Continent for the solid services he had rendered to geography and other natural sciences, and having for a long series of years enjoyed the confidence of his Sovereign, the Grand-Duke of Saxe Weimar, in his character of Secretary for the War department, the period of his useful career terminated at Gotha on the 17th of January last. He died in the seventy-eighth year of his age.

MISS WILKINSON'S CONCERT.

On Monday, the 4th inst., Miss Wilkinson's concert was held at the King's Concert Rooms, Hanover-square; and the combined influence of the very distinguished patronage under which it was announced, and the attractive list of pieces and performers, brought together one of the most crowded and fashionable audiences of the season.

The Concert opened with the magnificent overture, 'Der Freischütz,' in the performance of which, the sublime conceptions of Weber were embodied in the most perfect execution, combining precision, harmony, and expression, in an extraordinary degree.

The Duetto 'Io di tutto mi contento' from Mosca, which was sung by Madame Stockhausen and Signor De Begnis, was extremely well received. There is certainly no singer on the stage who combines the sly humour, rapid utterance, and comic expression necessary to the execution of *buffo* songs, in so high a degree as De Begnis. A duet of this description, between himself and his accomplished and beautiful wife, is one of the most agreeable things to hear imaginable, and produces, generally, an impression of unmixed delight on persons of the most opposite tastes in music. Madame Stockhausen is not so well qualified for performances of this description as the inimitable Madame Ronzi De Begnis; but, in her absence, she was, perhaps, the best available substitute, and acquitted herself with great accuracy and sweetness.

The familiar Cavatina 'Di piacer mi balza il cor' received new graces from Madame Camporese, who sang with the characteristic simplicity and chasteness of a perfect musician, what is too frequently, in the hands of less scientific singers, overlaid with meretricious and inappropriate ornament. It was the only song sung by this lady during the evening; but it was received with all the favour which its perfect execution deserved.

Of the Glee which followed, by Mrs. Knyvett, and Messrs Vaughan, Knyvett, and Phillips, little can be said in praise. The words and music are beneath mediocrity; but the harmony of the voices engaged was sufficiently attractive to draw forth an encore! though, to an ear of the least refinement, the preceding song was worth a hundred such as this.

Signor Puzzi's Concerto on the French horn was a performance of extraordinary ability, but, like Concertos in general, too long and too laboured, and calculated to excite sympathy for the exertions and sufferings of the performer, rather than delight in the auditor.

The Recitative and Air of Mercadante, 'Numi she intesi mai,' and 'Se m'abandoni, bella speranza,' were given to Madame Malibran Garcia, who did ample justice to the beautiful and expressive music of the composer. The touching exclamation in the former, 'Oh martir peggio di morte!' and the concluding lines of the latter:

'Di tradirmi il ben che adorno,
No capace il cor non ha,'

were given with the utmost feeling and tenderness, and portrayed a degree of sorrowful abandonment which bordered on reality.

Mr. Phillips sang the Irish melody of Moore, 'Oft in the stilly night,' with strict adherence to the characteristic sentiment of the song, for which the fine rich tones of his voice are well adapted.

The Aria of Nicolini, 'Il braccio mio loquise,' introduced Miss Wilkinson, who was received, on her appearance, with that general and cordial expression of welcome which indicated, in the strongest manner, the favourable opinion of the audience. Her execution of this fine composition was in the best style, and gave unequivocal satisfaction. Miss Wilkinson may be said to combine, in a greater degree than almost any English singer that we have heard, all the leading characteristics of Madame Pasta's style; and it is

impossible to hear her sing any of Madame Pasta's songs, without being strongly reminded of the great original from whom the pupil has caught the spirit, if not the genius, by which that queen of song may be truly said to be inspired. In the midst of this, there is also the same simple and unaffected modesty, which is equally characteristic of the teacher and the pupil; and, we believe, Madame Pasta herself considered Miss Wilkinson to be the most successful of her English *élèves*.

Mrs. Knyvett's ballad, 'Bid me not forget thy smile,' appeared to us a waste of agreeable sounds (for such they undoubtedly were) on silly words and common-place composition,—as tame, and void of invention or expression, as could be well imagined. Mori's fantasia on the violin, from Mayseder, was brilliant, and well performed; and Madame Stockhausen's Swiss air, accompanied by her husband on the harp, had novelty and nationality to recommend it; but each of the three preceding performances were of very inferior interest to the fine duetto, from Rossini, 'M'abbraccia, Argivio,' which was sung in excellent style by Miss Wilkinson and Signor Donzelli, and concluded the first part, with justly-merited applause.

The Overture to 'La Gazza Ladra' opened the second part; and this was followed by the ballad 'On the Banks of Allan Water,' which was sung by Miss Stephens, with her characteristic simplicity; but, as it appeared to us at least, with less sweetness of tone, and power of expression, than usual.

The Spanish air, 'Baselito nuevo,' by Madame De Vigo, accompanied on the harp by Mr. Holst, was a sort of musical *jeu d'esprit*, diverting from the singular arrangement of its parts, and the play on certain words, the effect of which was so marked, as to keep the audience in continued laughter, without either the words or the thoughts of the song being intelligible to the great majority. It was encored, as the liveliest joke of the evening, for it was nothing more.

Madame Malibran Garcia and Miss Wilkinson sang together the beautiful duetto 'Dunque mio ben' from Zingarelli, in the most exquisitely expressive and highly-finished style. The ladies were themselves occasionally drawn into a smile at the ardently amorous dialogue they had to sustain, in which the doubts of the suitor were propounded in impatient queries, and the vows of the innamorata were breathed forth in answer. It was, in short, as inappropriate as would be the balcony scene of 'Romeo and Juliet' sustained by two ladies, as the subjoined lines of the dialogue will show:

Dunque, mio ben, tu mia sarai?
— Si cara speme, io tua sarò.
Il tuo bel cuore?—
— Ti giura amore.
E la tua fede?—
— Sempre tua avrai.
E m'amerai?—
— Costante ognor.
O cari palpiti! soave accenti!
Dolce momenti! felice amor!

Every line, however, of this amorous dialogue was beautifully sung; and the rich mingled tones of the mutual felicitations were such as would become the bower of Jessica in the bright moonlight of an Italian evening.

The remaining pieces were exceedingly well executed, and well received. Donzelli's Aria, 'L'angeur per una bella' was, perhaps, sung with too much indifference. Neither his articulation nor expression betokened any thing like the feelings which the song itself expresses. Miss Wilkinson's song, 'O bid your faithful Ariel fly,' was as full of freshness, vigour, and animation as the former was deficient in these qualities; and Madame Malibran Garcia's 'Una voce poco fa' was a most brilliant and appropriate conclusion to one of the best concerts, on the whole, that we have for a long while enjoyed.

We were glad to hear that the crowded room (filled as it was in every part) did not indicate

the whole extent of the patronage extended to Miss Wilkinson on this occasion; but that, in addition to this, she received the most flattering testimonies to her acknowledged merits from other quarters. We know of no English singer whose talents, and constant readiness to afford her gratuitous aid to all charitable or patriotic purposes, more richly deserve support; and we are rejoiced to find that her modesty, which is as remarkable as any of her other qualities, does not prevent her from receiving it.

THE DRAMA.

King's Theatre.

THE first appearance of Mademoiselle Sontag on the boards of the King's theatre this season was an epoch sufficiently remarkable to gather together as large a concourse of spectators as we have witnessed on any except benefit nights. A reported dispute between herself and the manager, which seemed likely to prevent her from being engaged at all, contributed a little to the curiosity of the Public, and circumstances of a more peculiar nature, which have been made notorious, gave to the lady an interest, hardly less in degree, though perhaps not so legitimate in kind, as that with which she was invested when first she burst upon us in the blaze of her continental glory, and caused such excitement, according to the due operation of the *omne ignotum, &c.* Unfortunately, the opening scene of the opera in which she thus reappeared, was not one which favoured the display of huge applause on the part of the audience, inasmuch as the major part of that audience could not be aware of our heroine's presence until after the lapse of some time, and some of her own singing to boot. Cenerentola is placed in the extreme background as becoms her, whilst her two Goneril and Regan sisters are showing off their vile proportions at the front of the stage. Neither is it for the natives to conjecture that this German goddess would be found attired in so homely a garb, with unadorned hair falling carelessly upon her shoulder, and withdrawing from their observation, or exhibiting a mien so meek and unassuming. And this may account for the equivocal welcome which she received at our hands, and which certainly did not enough testify the strength of our grateful memory of all her past achievements.

The ballad which Cenerentola sings by snatches in the first scene, 'Una volta c'era un Re,' gave us an opportunity of ascertaining that her voice had lost no strength or sweetness since we heard it last in this theatre; but, as we have said on another occasion, it may have gained some additional fulness and mellowness. The slow character of the air is particularly adapted to show the extent of those attributes; and, as the opera proceeded, we had abundant proof that her other and more extraordinary faculties—the quickness, and flow, and rich ornament, and unerring precision of tone—were as vivid and wonderful as ever. The quintet and sextet were led with a spirit and vigour unusual in the present prolific days of *prime donne*; and the variations introduced in her last cavatina 'Non piu mesta accanto al fuoco,' were not surpassed by the most florid portions of her more celebrated performances.

In person Mademoiselle Sontag has suffered a change. Her face is no longer curved by those soft and flowing lines which belong to the freshness of youth: its outline is a little broken, it has become paler and much more aged; and her figure too—but this is most ungracious. It is not in our province to take cognizance of such things as these—would that it were no man's! Surely too, enough remains in the execution of her character of Cenerentola yet unnoticed to save us from such truant garrulity. In point of acting, she arrives at a critical time; for Madame Malibran, her compeer in so many respects, is transcendent in this one, and by means which are similar to her own. Each might be a Cenerentola, and the accomplishments of each are not sufficiently unlike in quality, to exempt them from a fair comparison. Whatever might be the result of such a trial, we will, in the mean time, say that Mademoiselle Sontag gives to her part that interest which she has never yet failed to infuse into whatever character she has supported. If it want the vivacity, and energy, and variety of which we can imagine it capable, still in her hands it is never dull, nor displeasing, nor imperfect to any sensible degree. Sometimes there is around it the fascination which Mademoiselle Sontag alone can command; and with the whole performance is interwoven that personal sympathy, which we suspect has been the ladder to her present fame.

The Don Magnifico of Zuchelli is admirable indeed. It is impossible that any thing should be more pious, silly, and entertaining. The air 'Thiei vampolli feminini' gave him scope for the exhibition of his voice to the extremes of its compass—no ordinary grasp for a bass singer; and the effect produced by this first effort was excellently followed up by the whole performance, which combines the highest musical taste and talent, with a liveliness of dramatic power not very often excelled. Unhappily, this success was at times neutralised by the insufficient acting of Le Vasseur, who supported the part of Dandini much against the grain; and the famous duet, 'Un segreto d'un portanza,' between the two, in the second act, had little of that effervescence and humour which resulted from the harmonious union of brother wits, when Pellegrini had the part of the Lying Valet. Signor Donzelli supplied the place of Torri, in the character of Don Ramiro, and this substitution almost made amends for that of which we have just complained; on the whole, this playful and most entertaining opera was represented, on Tuesday night, with a vast preponderance of excellence over defect; although, as we have said before, M. Le Vasseur must never attempt buffo parts, and poor Signora Specchi is as ridiculous a creature as ever scared crows.

Covent-Garden.

LAST night Miss Smithson made her first appearance in this country since she came to her reputation. We have seen several persons who positively avow that they discovered and admired the extraordinary talents of this lady long before they received the Parisian imprimatur. Alas! we can make no such boast. We believe it was our fortune to see her once in some character, on some boards; but where it was or where it happened, we cannot, after infinite pains, call to mind: we say it with shame and confusion of face, we always believed that her name was Smith. And now in what way shall we atone our error? Who shall prescribe the form of the recantation? By what subtle artifice shall we at once save our self-respect and exhibit our profound respect for Miss Smithson? We have taken thought, and thus will we do it: Illustrious Parisians! blame us not that we in our ignorance did not perceive the virtues of this all accomplished lady.

'We could not see the Spanish feet,
Because 'twas not in sight.'

You will not deny 'the soft impeachment,' that you educated talents which were lying dormant; you supplied whatever was wanting; you, in short, created the splendid *artiste* you have returned to us. Till the air of Paris has blown upon us, what are we, any of us? what is our philosophy, till that has given it life? what our criticism, till that has furnished it with profound and consistent laws? and what our religion, till—but, in that point, your services, like the tears of Mrs. Malaprop for the death of her husband, defy enumeration. And how then can we judge of actors and actresses, till they have passed through your moulding hands? We have only furnished the raw material; but it is for you to manufacture it into beauty and use. So much for our own vindication—now for Miss Smithson.

Miss Smithson has a handsome face, a good figure, rather *embonpoint*, and she acts Jane Shore infinitely better than we think Jane Shore deserves to be acted. This is all we shall say at present. It has been rather a favourite exercise with some of our first actresses to inform the dead carcasses of Rowe with life, and no doubt in doing so they gave the highest proof of their genius which it was possible to furnish. Still we must be permitted to question whether they had a right thus to exercise their powers, whether they were spending their time lawfully, in imitating that which is essentially worthless and which deserves to rot. But an *artiste*, who, far as she may be and is above the ordinary tribe of actresses, stands at a much greater distance below the mistresses of the art, we are quite sure, ought not to undertake the task. She cannot thoroughly imbue with spirit that which is in itself spiritless, and she may receive her own conceptions by pitching them at so necessarily low a level. Let Miss Smithson, therefore, give us an opportunity of judging her in some real character, and she may depend upon it that we shall see her, and study her performance with minds much prejudiced in her favour by this first performance, and anxious that she should attain the highest excellence which the warmest of her admirers believe to be within her reach. The other parts were well filled. The part of Hastings, though immeasurably more unworthy of Mr. Kemble than that of Jane Shore was of Miss Smithson, of course received all justice at his hands.

VARIETIES.

CHARACTER OF A GOOD PRINCE.—It cannot be said of the late Grand-Duke of Saxe-Weimar that his 'virtues were written in water'; or that their memory has faded with the moment which called them forth. It is no fleeting monument built upon the unstable sand, which a sovereign erects to his own fame, when he breaks the manacles that doom his subjects to the mental and physical slavery of feudal despotism; when he gives them free institutions and equal laws; and hallows his sacred office by that spirit of peace and goodwill, which acknowledges no distinction between the peasant in his homely frock and the noble in his rich attire. In an age, when liberality is a cloak for the most intolerant party spirit, and to wield a sceptre is become, in its malignant eyes, a title to obloquy and contempt, we should ill discharge our duty, did we omit any occasion of vindicating the princely character, and of adding one more name to the list of rulers who have conferred lustre on their times and country. And this name is not new to English ears; there are few amongst us who have forgotten that he was the first Sovereign who, in his native sphere, consummated the great conflict in which Europe had triumphantly wrestled for her liberties, by blessing his subjects with a free and well-ordered constitution. 'Never,' says a learned theologian, 'never can his people forget the anxiety with which he promoted their intellectual amelioration; inciting them by the animating example of his own devotion to the arts and sciences; fostering the improvements of the mind by institutions which his liberality endowed with means, and his benevolence with a befitting spirit; and affording shelter and protection to freedom of thought and education. Did he imagine that, by impeding the general enlightenment, by plunging his people in a deeper night of darkness, or encompassing them with a twilight of mental gloom, he should more effectually secure the power of the sovereign, the dignity of the throne, or the maintenance of public order and tranquillity? Never had such thoughts a habitation in the mind of our accomplished ruler; and well may we rank him among the most enlightened princes of the present age, when we behold him hailing every advancing step which his subjects made in the career of intellectual improvement, as a fresh source of blessing and happiness to the Sovereign and his people. No compulsion, no prohibition, which might shackle the aspirations of the mind, dared expect from him either favour or approval: whatever was ascertained to be reconcilable with rational considerations and conformable to an honest love of truth and justice, whether it concerned the relations between Prince and subject, or social regulations and institutions, or the most exalted objects of human existence, became endeared to his attention and regard, was recommended by him to earnest and conscientious investigation, and submitted to the free and unfettered discussion both of the tongue and pen.' 'What recollections,' says another writer, 'has not this excellent Prince left behind him! Can we forget his indefatigable activity? his unceasing ambition to acquire a better judgment? his lively concern for the interests of humanity, and his cordial desire to second their advancement? his patriotism and heroic intrepidity? his immovable justice and respect for public freedom? and that exalted love for his country and his people which rendered him ever watchful for their comfort and happiness? These are truly thoughts that breathe enviable incense, and words that glow with a grateful eloquence, over the grave of a Prince who justly 'plucked allegiance from men's hearts.'

RUSSIAN LIBRARIES.—The University of Dorpat (of recent formation) already contains 50,000 volumes; University of Wilna, 30,000 vols., mostly in the Polish language; Convent of Petchersky, about 10,000 vols.; Church of St. Nicholas, nearly 5,000 vols.; University of Charkow, nearly 21,000 vols.; University of Kasan, 16,000 vols. comprising many Mongol and Tartar MSS.; University of Astrachan, 7,000 vols.; Gymnasium of Irkutsk, 5,000 vols. (The Japanese tongue is taught in this college.)

THE COLOSSEUM.—The Committee of management of the affairs of the Colosseum are taking active steps towards the completion of this vast and spirited undertaking. Among other measures they have sent a circular to all the artists in town, proposing to them to send their works for exhibition in the rooms appropriated for the purpose. A permanent exhibition of this kind might be rendered a very interesting place of resort, especially if, as we understand, is likely to be the

* Prof. Schotte of Jena.

case, works of old masters, for which the owners are desirous of finding purchasers, shall be added to it. The admission of modern paintings should not be too indiscriminate. The estimation of works of art is as liable as that of the persons who execute them, to be affected by the character of the company in which they are seen.

UNIVERSAL CATALOGUE OF MSS.—We hasten to supply an important omission in our notice of this undertaking, in a former number (No. 79, 1st col. p. 249). Professor Haenel's Catalogue embraces a Summary of all MSS. relating to Roman and West-Gothic Laws and Jurisprudence in general: the materials for which are the result of personal researches in the most celebrated libraries of Switzerland, France, Spain, Portugal, Italy, Sicily, Holland, England, Scotland, and Ireland.

LITERARY INTELLIGENCE.

THE following subjects are discussed in the forthcoming No. (97) of 'The Edinburgh Review':—Census of the Population; Law of Mortality, &c.—Œuvres de Collier; Recent State of France—The Game Laws—Stewart's Planter's Guide—Interior of Africa—Library of Entertaining Knowledge—Mill's Essay on Government; Utilitarian Logic and Politics—Law of Legitimacy—The Last of the Catholic Question; its Principle, History, and Effects, &c., &c.

Mr. Peel having signified his desire that the Commissioners appointed to inquire into the practice of the several Courts of Law, should turn their attention to the subject of Arrests on Mesne Process, and Imprisonment for Debt, a work written by Mr. Northhouse will be published in a few days, dedicated, 'by permission,' to the Right Honourable the Secretary of State for the Home Department, abounding with information upon the subject, and which has been for a considerable period in preparation, entitled, 'The present State of the principal Debtors' Prisons of the Metropolis, comprising the King's Bench, the Fleet, Whitecross-street Prison, Horsemonger Lane Prison, the Marshalsea, and the Borough Compter; with a variety of anecdote, illustrative of the impolicy and inhumanity of imprisonment for Debt, and the opinions of Dr. Johnson, Lord Eldon, the late Lord Mansfield, Lord Coke, Sir James Scarlett, the Law Commissioners, and several eminent Barristers, Attorneys at Law, &c., upon the subject.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

The British Historical Intelligencer, 8vo., 12s.
Rev. P. Allwood's Key to the Revelation of St. John, 8vo., 3s. 6d.

Saturn's ditto ditto ditto 28° 58' in Cancer.
Sun's ditto ditto ditto 19° 30' in Taurus.
Length of day on Sunday, 15 h. 18 min. Increased 7 h. 23 m.
Sun's hor. motion on Sunday, 2' 24" plus. Logarithmic num. of distance, .004559.

In a few days will be published, price 7s. 6d.,
THE VISION OF NOUREDDIN, and other
 Poems. By SPORZA.
 London: Hurst, Chance, and Co., St. Paul's Church-yard.

This day is published, price SIX SHILLINGS,
THE FOREIGN REVIEW, No. VI.
 Contents: Art. I. Russia, Turkey, and India.—III. Kreuzer; Symbolism, and Mythology of the Greeks.—III. Klopstock's Life and Odes.—IV. Kosegarten, Arabian Literature.—V. Macielowski, History of Roman Law.—VI. Voltaire.—VII. The Dispute of Brunswick and Hanover.—VIII. Galsot, English Revolution of 1688.—IX. to XIV. Short Reviews of the newest Classical, German, Polish, French, Italian, and Spanish Publications.—XV. Necrology, Gioja, Hassel, Schlegel.

Black, Young, and Young, 2, Tavistock-street, Covent-Garden; and Bossange, Barthès, and Lowell, Great Marlborough-street.

No. VII. will appear in June.

This day is published, in 3 vols. post 8vo., price 24s. in boards,
REAY MORDEN; a Novel.—Dic mihi quid
 melius desideras?—*Marital.*

Published by G. A. Douglas, 19, Castle-street, Edinburgh; Simpkin and Marshall, London; and John Cumming, Dublin.
 'Reay Morden' is a clever and spirited work. The style is throughout at once energetic and lively; and, in many passages, we recognise a mind of intense power.—*Caledonian Mercury.*

'He (the author) is evidently a person of some ability, and his natural talents have been cultivated by a gentlemanly education. He has studied human nature to some purpose, and stored his mind with a great deal of general information.'—*Edinburgh Observer.*

This day is published, in 18mo., the fourth edition, newly arranged, and very materially improved, with an entirely new set of copper-plate engravings, price 8s., handsomely half-bound.

SYLLABIC SPELLING; or, a Summary Method of Teaching Children to Spell and Read with facility and pleasure. The fourth edition, with an entirely new set of Copper-plate Engravings, and an improved arrangement adapted to them. By Mrs. WILLIAMS, author of the 'Conversations on English Grammar.'

N.B. This edition contains a variety of testimonials in favour of the system, from some of the most respectable Professors of the English language, as well as from several parents, whose children (amused and interested by this novel mode of instruction) have learned in the course of a very few months to read correctly, and with perfect ease, the longest and most difficult words.

'The object of the useful little book before us is to reduce the difficulties of learning to read, and the author sets about it in a way that entitles her to the thanks of all mankind. Her book is a Primer; but the child will want no other book—for when this is properly thumbed, the pupil will be able to read the Encyclopedia through aloud.'—*Spectator of April 11.*

Boxes with appropriate Counters, for the amusement of young beginners, may be had, if required, of the publishers. Printed for Whittaker, Treacher, and Co., Ave Maria-lane.

This day is published,
PORTUGAL ILLUSTRATED; by the Rev. W. M. KINSEY, B.D., Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland. Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costumes, Landscape Scenery, &c. Second edition, with large additional matter, and several new embellishments. Handsomely printed in imperial 8vo., price two guineas, in boards.

'Few books of the present day have had a more attractive or imposing appearance than the work of Mr. Kinsey. It is well calculated to afford that kind of information which is precisely adapted to the actual wants of the greater number of readers. It gives distinct and very admirable descriptions of Portuguese scenery; not of its landscapes merely, but of that which is more interesting—that which is formed by the grouping of objects met in every day life—by the peopling of the scenes of Portugal with their proper inhabitants.'—*Athenæum.*

'The chief merit of "Portugal Illustrated" consists in the vast mass of information it contains upon every thing that concerns Portugal and the Portuguese; character, manners, religion, scenery, customs, costume, music, literature, &c., are all more or less ably described. The style is lively and pleasing; the sentiments are generally liberal; the remarks are frequently just and to the purpose. The Map and the Engravings are correctly and neatly executed, and add much to the value and interest of the work.'—*Weekly Review.*

'Mr. Kinsey's work is neither a Statistical Treatise, nor a regular Tour, but a piece of literary Mosaic, in which prose is garnished with poetry, and history, geography, and antiquity blended with personal anecdotes, sketches of character, descriptions of scenery and political discussions, forming on the whole a tolerably instructive and very amusing melange. But the greatest charm of the book lies in its embellishments, which consist of more than thirty engravings, and about twenty vignettes, executed in the first style of excellence. They are all, we believe, from original drawings. Some are landscapes, some views of cities, palaces, or ancient castles, one or two are portraits, &c.; and there are nine very beautiful coloured plates of the national costumes. Taste has presided over this department equally in the design and the execution. It is, in short, one of the finest specimens of an illustrated book which we have seen—a literary luxury, designed, one would suppose, exclusively for the unsolled fingers of the aristocracy, yet sold at a price which is remarkably moderate, considering the cost at which it must have been got up.'—*Scootman.*

Printed for Treuttel, Wurtz, and Co., 30, Soho-square.

No. VII., price 7s. 6d., of the
FOREIGN QUARTERLY REVIEW.

Contents: I. Blomond's History of France.—II. Language and Literature of Holland.—III. Ancient National Poetry of Spain.—IV. Scandinavian Mythology.—V. French Criminal Trials.—VI. Mexico.—VII. Victor Hugo's Poems and Novels.—VIII. Von Hammer's History of the Ottoman Empire.—IX. Foreign Views of the Catholic Question.—X. Carracci Sketches.—XI. Coquerel's History of English Literature.—XII. Bp. Munter's Account of a MS. of St. John's Gospel.—XIII. Pelet's Treatise on Heat.—XIV. Martinez de la Rosa's Works.—XV. Guerazzi's Battle of Benevento, an Historical Romance.—XVI. Annuaire of the Board of Longitude for 1829; M. Arago's Notice of the Steam Engine.—Miscellaneous Literary Notices, No. VII.—List of New Works published on the Continent from January to March, 1830.

No. VIII. will be Published in July.

Printed for Treuttel, Wurtz, and Co., 30, Soho-square; of whom may be had, just published, in 8vo., price 15s. in boards, Vol. II., of

HISTORIC SURVEY of GERMAN POETRY, interspersed with various translations. By W. TAYLOR, of Norwich.

THE EXHIBITION of LODGE'S PORTRAITS of the MOST ILLUSTRIOUS PERSONAGES of GREAT BRITAIN, from the Galleries of his Majesty, the Nobility, and from Public Collections, is OPEN DAILY, from nine till six, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, corner of Suffolk-street.

Admittance, by Tickets only, which may be had free of expense, on application to Messrs. Harding and Lepard.

FINE ARTS.—MONTGOMERY GALLERY, 309, Regent-street.—Mr. J. RAWSON WALKER has the honour to submit to Public Inspection TEN PAINTINGS, to illustrate parts of Montgomery's celebrated Poem, 'The World before the Flood.'—Open from nine till dusk.—Admission, 1s.; Catalogues, 6d.

A POLLONICON, a Grand Musical Instrument, under the immediate patronage of his Majesty, invented and constructed by FLIGHT and ROBSON, Organ Builders, is now OPEN to EXHIBITION daily, from One to Four, performing, by its self acting powers, Mozart's Overture to 'Idomeneus,' and Weber's celebrated Overture to 'Oberon,' which it executes with a grandeur and brilliancy of effect superior to any instrument in Europe, at the Rooms, 101, St. Martin's-lane.—Admittance, 1s.

This day is published,

HISTORY of RUSSIA, and of PETER THE GREAT. By GENERAL COUNT PHILIP DE SEGUI, Author of the 'History of Napoleon's Expedition to Russia.' Handsomely printed in one volume, 8vo. Price 10s. 6d. in boards; also, in French, 8s.

'Count Segur has here done for the general reader what the latter would scarcely have done for himself. He has gone over the lengthy volumes of Karamzin, Levesque, and others, and presents us with the essence of Russian history in a brief but spirited abridgement, which even a busy man may read during the snatches of leisure he can find in a single week. It is executed, we think, with care and judgment. The matter is well selected, and the reflections intermixed show penetration and good sense. The style displays vivacity and taste; but is not quite free of the false brilliancy into which the example of Montesquieu has seduced many French writers. We confess that a work like this gives us just as much information on the subject of Russian annals, as we desire, or have time to make use of; and we are well pleased to have it presented in so attractive a form. The translation seems to be upon the whole well executed.'—*Scotsman.*

'If the history of such a country, in all its details, were yet to be written, Count Segur is not exactly the person we should choose for that task. But when it is desirable to condense those details, to strip them of all that is obscure or doubtful, to pass lightly over that which lacks sufficient interest, and to present in strong and vivid colours, events likely to excite curiosity and rivet attention, the author of "The History of Napoleon, and of the Grand Army in 1812," and the skilful painter of that disastrous retreat to which nothing of its kind in ancient or modern times can be compared, is precisely the writer whom we should expect ably and successfully to execute so important an undertaking. In this sense, therefore, we are glad that Count Segur has written the history of Russia, and still more gratified are we that he has compressed in into a single volume.'—*Weekly Review.*

'Count Segur's candid and liberal "Narrative of Napoleon's Expedition to Russia in 1812," has made his name favourably known in the republic of letters. The work now before us, which is on a subject of far greater extent and difficulty, will not diminish his reputation.'—*Edinburgh Literary Journal.*

'Count Segur professes to give a rapid sketch of the rise and progress of Russia, of the characters of the men that conducted to her alternate debasement and elevation; he has redeemed his pledge, leaving those who would seek for a minutely description to consult the pages of more verbose authors. The style of Segur, as will readily be conceded by those who have read his History of the great Russian Campaign, is full of vigour and animation; his pen paints a character in a sentence, gives a scene, full of stir and bustle, breathing a reality and freshness, in half a page—then passes on to a new subject, casting abroad scintillations of a fervid, acute, and elastic spirit. The author's account of Peter is very beautifully written.'—*Weekly Times.*

'We state our impression, without asserting it as a fact, that M. Segur's is a good book; and we would add, with much more confidence, that it is a better book than, we think, nine out of ten clever men would have written on so very difficult a subject.'—*Athenæum.*

Printed for Treuttel, Wurtz, and Co., 30, Soho-square.

THE SERAPHONICON, a perfectly new Musical Wind Instrument, combining brilliancy and sweetness of tone with portability. It can be performed on with the greatest facility, and is capable of being rendered the most perfect wind instrument ever invented. It may be seen at Messrs. Wilkinson and Son's, 27, Pall Mall; or at the house of the manufacturer, Carlo Massi, 69, Rahere-street, Goswell-street-road.

SONTAG and VELLUTI.—Argyll Rooms.—The Nobility and Gentry are respectfully acquainted, that **THREE GRAND MORNING CONCERTS** will take place at the above Rooms, May 15. 22, and 30, for which are engaged Mademoiselle Sontag and Signor Velluti, Mademoiselle Blasis, Signor Curioni, Signor Torri, and Signor Pellegrini. Conductor, Sir George Smart.—Tickets, 10s. 6d. each, to be had at the Argyll Rooms, where boxes can be secured; and at the principal Music Warehouses. Doors to be opened at one o'clock, and the performance will commence at two.

HAMILTONIAN SYSTEM.

MR. HAMILTON respectfully informs the Public, that he has arranged with his Son-in-Law, Mr. UNDERWOOD, 41, Leicester-square, to give to Heads of Scholastic Institutions the fullest and plainest instructions for the introduction of the Hamiltonian System into their Establishments.—Mr. Hamilton has at present an Establishment in London; but Classes for the Greek, Latin, French, Italian, and German Languages, meet at Mr. Underwood's, 41, Leicester-square; where also his Books may be had; and at Mr. Joy's, St. Paul's Church-yard, and at Boosey and Son's, Broad-street.

BARNETT'S SONGS of the MINSTRELS;
 Vol. II. Price 15s.

'These compositions are entitled "Songs of the Minstrels," and do equal honour to the Poet and Musician. The Portuguese Minstrel, "The Spot where I was Born," is particularly beautiful; and the Russian "Maid of Tartary," highly striking and original. These two, with the Neapolitan and Turkish, four of the twelve, are fully equal to the best of the first volume; indeed, there is not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is the cleverest and most tasteful of English composers. The Poetry is by the late Harry Stoe Van Dyk.'—*Vide Literary Gazette.*

Published by Mayhew and Co., 17, Old Bond-street,

Where may be had the following New Songs:—

- 'Rise, gentle Moon,' sung by Miss Love, with the most enthusiastic applause, and nightly encored, in the historical drama of 'Charles XII.,' composed by John Barnett, with a beautiful Lithographic Portrait of Miss Love, 2 6
- 'My sweet Guitar,' sung by Miss Love with distinguished applause; composed by John Barnett, 2 0
- 'Here's a Health to Merry England,' National Song; sung by Mr. Braham, composed by John Barnett, 2 0
- 'Listen to my Wild Guitar,' written as a companion to the celebrated Serenade, 'The Light Guitar,' composed by John Barnett, 2 0
- 'The Chimes of Zurich,' sung by Miss Love, written by Harry Stoe Van Dyk, composed by C. E. Horn, 2 0
- 'Sweet Evening Star,' answer to Barnett's celebrated song, 'Rise, gentle Moon,' composed by Joseph Hart, 2 0

FOR THE SKIN AND COMPLEXION.

ROWLAND'S KALYDOR, Patronised by the Royal Family, the Prince and Princess Esterhazy, the Prince and Princess Polignac, and the Nobility.

This valuable Specific is warranted perfectly innocuous, and possesses Balsamic Properties of surprising energy. It eradicates all Cutaneous Eruptions, Pimples, Spots, Redness, gradually producing a delicately clear soft Skin; transforms even the most Sallow Complexion into Radiant Whiteness; successively renders harsh and rough Skin beautifully soft, smooth, and even; imparts to the Face, Neck, and Arms, a healthy and juvenile bloom, and removes inflammation.

ROWLAND'S KALYDOR is equally indispensable in the Nursery as at the Toilet. Perfectly innocuous, it is recommended by the first physicians to be used by the most delicate lady or infant, with the assurance of safety and efficacy, possessing softening and healing properties. It gives, in cases of incidental inflammation, immediate relief; cools the mouth of the infant, and enhances maternal pleasure in the act of administering alimentary nourishment.

To Gentlemen whose Faces are tender after Shaving, it will be found excellent beyond precedent in ameliorating and allaying that most unpleasant sensation, the irritability of the skin.

Sold in Half Pints, at 4s. 6d. each; and Pints, at 8s. 6d. each.

CAUTION.—To prevent imposition, and by Authority of the Hon. Commissioners of Stamps, the Name and Address of the Proprietors is engraved on the Government Stamp, affixed on the Cork of each Genuine Bottle—

'A. ROWLAND AND SON, 30, HATTON GARDEN.'

London: Printed and Published every Wednesday Morning, by WILLIAM LEWIS, at the Office, No. 4, Wellington-street, Strand.

THE ATHENÆUM

AND

LITERARY CHRONICLE.

No. 82.

LONDON, WEDNESDAY, MAY 20, 1829.

Price 8d.

ANOTHER MYSTERIOUS DIALOGUE.

[Since the publication of Mr. Southey's 'Colloquies on the Progress and Prospects of Society' several of our distinguished statesmen and authors have, we understand, been honoured with visits of the same questionable kind with that which was paid by the illustrious author of the 'Utopia' to the poet of Keswick. Several reports of the dialogues which ensued upon these occasions have reached us, from parties of such respectability as to leave us no doubt of their authenticity. We have selected one out of the number, which, however much it may disappoint the reader, if he has the unfairness to suppose that the conversation of ghosts is at all like what it was in the days of their earthly pilgrimage, or that living men can retain their usual spirit and self-possession in the presence of such companions, is, at least, interesting from the personages who took part in it, and from the subject which they discussed. We have been reluctantly compelled to abridge, and translate into our own language, Mr. Brougham's account of the circumstances which preceded the interview.—Ed.]

AFTER the adjournment of the House on Friday evening, Mr. Brougham retired to his chambers more than usually fatigued; for, though his speeches on the subject of Mr. O'Connell were short, he had been engaged in three heavy causes during the day. He took up one of the numerous briefs upon his desk, looked it over, found himself too sleepy to proceed, and commenced writing an article for 'The Edinburgh Review.' This being finished, in the course of three-quarters of an hour, Mr. Brougham prepared two speeches for the House of Commons, one upon the *Indian Question*, and the other upon the English Law of Real Property. He was proceeding to abridge the 'Mechanique Celeste,' for the Useful Knowledge Society; but, before this was half completed, he was overtaken by an unaccountable slumber, which must have continued, he thinks, nearly two hours. During this time, a stranger, it appears, entered the room, and when Mr. Brougham awoke, was sitting upon the chair opposite to him, reading part the first of 'A Familiar Account of Bacon's Novum Organum Scientiarum.'

Mr. BROUGHAM (awaking).—Now the China monopoly, Mr. Speaker.—The motion of the earth in that orbit.—Uses and trusts were the invention of an age—I beg your pardon, Sir, I—Oh! I remember, your name is Wilkins; I have been talking over your case with the junior counsel, Mr. Wilkins; and I certainly think we shall now suit them: you have got the evidence of the girl Myan, if it should be necessary?

Nae, nae, Harry Brougham; you hae na got it yet; that's na my cause.

Oh, that appeal before the Privy Council, to be sure. How could I be so forgetful? I hope your natural clemency will come in aid of me, Sir George; for really I have not found a moment to work at that brief. To-morrow, I hope—

Sir George! me Sir George! What will he say next—Dinna you know, Mr. Brougham, one Robert Burns whom ye never trappit into any o' your courts or session-houses, though, may be, he had enough troubles and sorrows of his ain for a' that?

Burns, Burns; upon my word, I am losing my Scotch shamefully. It is a very long time since I was at Edinburgh, and—

Well, I can speak English, lad, as well as you, if need be; however, I like now and then in my conversation as of old time in my verse:

'To turn the scythe aside
And spare the sybil dear.'

So that shall be no impediment to our conversing freely. I suppose you can spare a few minutes of your valuable time for a little quiet talk with the ghost of an old Scotchman, let alone a man and a poet, as some have been kind enough to call me.

A ghost, good heaven! did you say a ghost, Sir? Ha! ha! ha!—(a patient from St. Luke's; I dare say, I ought not to have laughed.) If I have the honour of really addressing that great poet, (he is wonderfully like the bust,) I should be glad—I think I am going mad myself—it must be the light falling on the retina—I have forgotten the explanation,—if I have the honour—

Ah! Harry Brougham, Harry Brougham! how much more do we poets cling to the real and the tangible than you philosophers! When I see a thing with my eyes, hear it with my ears, and touch it with my hands, I believe in it; but, when you have done all this, you must prove to yourselves that you have done so, otherwise you put no faith in the evidence of your senses. Come, come, be an honest and practical man, as you are; leave theories about the retina to those who have need of such fancies to conceal their ignorance; and do not be induced by a word—a prejudice—to travel miles round, for the purpose of avoiding a fact, when to acknowledge it is so much simpler and straighter.

A word! a prejudice! I certainly never saw it in that light before. I thought the prejudice was the other way. It would be very ridiculous to yield to such a delusion; but is it not something more ridiculous to lose any opportunity of gaining information, merely because we do not understand whence it comes? Well, there is not much danger of discovery: so I will let the lurking superstition that I brought with me from 'the land of cakes' have its way, as far as believing in the apparition goes, and keep my philosophy to prevent me from being frightened by it. Mr. Burns, though I do not exactly understand to what I am indebted for the honour of your visit—though I cannot perfectly satisfy myself if you were admitted at the door by my clerk, or if, imagining that you must contract some defilement from an entrance through which attorneys were passing continually to and fro, you preferred the less common route of the chimney; though I am totally at a loss to know why I, of all men in the world, whom most people know to be a lawyer, and some believe to be a statesman—a few nickname a philosopher, and, therefore, all deny to be a poet—should have been singled out from my species for this most unusual honour, in preference to so many of the fraternity of which, during your residence amongst us, you were *facile princeps*—in preference to my friend and countryman, Thomas Campbell—in preference to my neighbour, I forget his name, in the North, who wrote a quarto about a morning walk, and votes for Lord Lowther—in preference to Moore, like yourself, a writer of songs, and, like yourself, a friend of the aristocracy—(Ghost writhes and frowns, and ejaculates under his breath, 'God help him then!')—though I say I am perfectly in the dark on all these points, yet I shall be most happy to discourse an hour with you, provided you will prescribe the terms of our intercourse, with the nature of which I blush to say that I have hitherto been deplorably unacquainted.

The communion between us, Mr. Brougham,

will not be difficult on either side, since, if it be not easy for you to divest yourself of your fleshly nature, and to hold converse with spirits, yet it is by no means impossible for us to put on afresh the cloak of that ancient humanity which was once so native and necessary to us, that we could not even so entirely cast it off at death but that portions of it still cling about our departing souls. But whatever may be the condition of the existence of other spirits, of which I know, perhaps, as little as yourself, this I feel to be the law of mine, that it should not return into the world which it has quitted, except for the end either of repairing some ill committed by it during its sojourn there, or to perform some good which, from negligence or inability, it then left unaccomplished. And this will explain why I have sought you out rather than any of those men whom you have named, towards one of whom, at least, I feel drawn with the cords of a most close and brotherly affection.

If that be your object, we shall indeed converse familiarly. No scepticism about the supernatural of my visitor will diminish the pleasure I shall feel in being selected as his agent for conferring any practical benefit upon the human species.

So I hoped and believed. Nay, if I had not seen in so many acts of your life indications of a sincere love for mankind, I should yet have taken your words as cheering evidence; for the world must be altered since I knew it, if such avowals of sympathy conduce to the personal interest of him who utters them.

Not much, I believe. But in what way do you propose to make the philanthropy for which you are kind enough to give me credit available?

In no new way. I do not come to suggest any experiments in addition to those you have already originated or supported, for improving the condition of society. Enough mills are at work if they will only grind, and if there be grist to be put in them. And it is just about this same matter of the grist and the grinding, that an Ayrshire ploughman fancies he may furnish some hints to Mr. Brougham.

I think I understand you. Your practical experience of the lower classes may, you think, suggest some improvement in the methods which have been hitherto devised for educating them.

At any rate, I am desirous to hear what the methods are, as I have not yet very clear notions on the subject.

I will endeavour to explain. A person brought up like yourself in a country containing parish schools, will easily conjecture that, when a system of education at all efficient was put in operation, the elementary processes of reading and writing would soon become familiar to the largest portion of the subjects of this empire. The difficulty which had been in part foreseen by the enemies of education, though they drew a mischievous inference from it, was in the next step—to provide suitable books upon which the new-found talent could be exercised. In a very short time, through the vigilance of various bodies of religionists, chiefly sectarians, books enough and to spare were provided; but, as might have been expected, the quality of the provisions bore no assignable ratio to their quantity. The political tracts which were scattered over the land by the radicals were not much better; and, if they had been ever

so good, they were too vigorously and sternly denounced by the spiritual teachers of all communions, to make it possible that they should circulate among their submissive flocks. There was but one remaining experiment to be made. Science, physical and moral, was still an untilled field: to cultivate it, could awaken little jealousy in the interested, and not much suspicion in the timid. If treated rationally, it would excite interest without awakening the vehement passions of party politics, and give an energy and steadiness to the mind, almost sufficient to counteract the enfeebling influences of a fanatical religion. Upon this hint, we issued the tracts which compose the *Library of Useful Knowledge*,—tracts, the object of which has been to present the humbler classes with a popular view of the principal branches of physical science, in cheap and convenient forms.

Cheapness and convenience are great merits in books designed for the lower orders.

Is that the only part of our plan which meets your approbation?

Any scheme must be good, Mr. Brougham, as it appears to me, which tends to make those who were formerly brutes, men.

Exactly—that is my reason for supporting the Useful Knowledge Society, and exulting in its successes.

You think that it has made some into men, who were not so before.

I think that 20,000 copies of the tracts have been circulated.

May I venture without offending the dignity of our subject, or showing any conceit of my own weakness to state my own experience in this matter.

He must be a strange collector of evidence, who would not think the testimony of Robert Burns of weight in such a case.

Well then, Sir, if without presumption I may speak of the difference between that ploughman upon whom the world in its kindness has bestowed quite as much praise as he deserved, and his fellows, I should say that it consisted not in his being a much wiser man than they—for Heaven can testify that he knew as little as the dullest of them about the laws of mechanics, and what was the construction of the ploughs with which he turned up the sods, or how these sods were classified in the cabinets of the geologists;—but if he in any degree was other than they, it was on this account, that while they merely drove an instrument which they called the plough, and turned up from the ground what they named sods, and measured their course by the aspect of the heavens and the habitual instinct which taught them to fly from the rain or profit by the sunshine,—to him that plough, and those sods, and that sky, and the rain, and the sunshine, were all living things, which he knew, felt, and believed in; they were all distinct, all real; they became, I know not how, parts of himself, and then he became and knew himself to be a man. And every hour something new seemed added, not so much to what he saw as to what he was; a feeling so strong as even to overpower him of himself and of his own powers took possession of him, till that which had been life and consciousness became pride, and in the mad desire to make higher proof of his strength, by defying the conscience which restrained it—he threw away in the arms of some vain Dalilah, that moral dignity in which, as in the locks of Samson, lay the secret of his might; and then his perceptions waxed dimmer, and his belief became less strong, and the clouds became to him clouds of the valley merely, and the flowers lost their brilliancy, and the earth its greenness; and though nature might still look fresh in his verse, (for that she had consecrated to herself,) yet in his heart was she cold and dead. This, Sir, was the process of my education, and to the first part of that process, I believe,

must every mind be subjected which is to become a living and a true mind. To guard against that last stage of it which arose from the perverseness of the human will, should be the other object of your discipline.

But how would you apply this experience to the particular case before you? for it seems to me that our society proposes to itself exactly the two rules you mention, namely, that of teaching facts by means of physical science, and the regulation of life by means of moral science.

You speak of teaching facts, what kind of facts do you mean?

Such, for instance, to take the plainest instance, as the revolution of the earth round the sun, and the period of it.

Is this the simplest of your facts?

Why yes, one would think it is almost as elementary as any that one could pitch upon.

Alas! then, how I shall be laughed at when I mention a fact ten hundred thousand times more simple than this of which I believe that a large majority of our rustic population are ignorant!

What can you mean?

Why, that there is a sun, or an earth, or trees, or stars, or any thing that they behold daily with their eyes, and hear hourly with their ears, or touch momentarily with their hands. Do you believe that to nine-tenths of our free population, the whole of nature, to use the expression of one of your living poets, is more than a landscape to a blind man's eye? Do you believe that there is any thing really known to these ninety-nine hundredths, except the food and drink which they receive into their bellies?

Your assertions have a strange sound; but they savour of experience, and, I am inclined to believe, of truth. But what conclusion do you draw from them?

This conclusion, that you will do nothing towards improving the lower classes, unless you begin at the roots of their ignorance, unless you awaken their attention to the objects in the world around them, a world on which they move, a world to which they are slaves, but of which they are as practically ignorant as if it or they had no existence.

Perhaps there might be more in what you have been just saying, if the class of persons to whom the Society addressed itself were agricultural labourers. I can easily believe that the state of these people is what you describe it to be, that no objects but those which meet them in their every-day occupations, make any impression upon them, and that, consequently, they must be led through the study of them to what is more high and abstract. But the class among which our tracts circulates, is a very different one. They are not agricultural labourers, nor even mechanics, but shopkeepers, apprentices, and clerks in offices.

Fair creatures! is it for them that all these big words are intended?

Yes, and let me tell you that from the best information we are able to gather, these persons are fully able to comprehend the big words. You must remember that they have their wits sharpened by social intercourse, by occasional peeps at the life of a class above their own; and (more than both causes together) by their engagements bringing much more directly before their eyes the direct connection between business and the profits of business. All these circumstances, you perceive, completely take them out of the rule which you have laid down, and make it even necessary, if it were not desirable, to provide them with a stronger meat than might be fit for the babes and sucklings of the farm-yard.

There are two kinds of wit, Mr. Brougham, the one—

[To be concluded in our next.]

JOURNAL OF AN EMBASSY TO AVA.

Journal of an Embassy from the Governor-General of India to the Court of Ava, in the Year 1827. By John Crawford, Esq., F.R.S., F.L.S., F.G.S., &c., late Envoy. With an Appendix, containing a Description of Fossil Remains, by Professor Buckland and Mr. Clift. 4to., pp. 605. Colburn. London, 1829.

THE author of this work is advantageously known to the public by a History of the Indian Archipelago, and an account of his Embassy to the Courts of Siam and Cochin China. The present very handsome volume contains a narrative of the visit made by him, as envoy, at the close of the year 1826, to the Court of Ava. Before he proceeded on this mission, he had been residing, for several months, as Civil Commissioner at Rangoon, and thus had the benefit of carrying with him on his embassy much previously acquired knowledge as to the customs and institutions of the country. The purport of his journey, or rather voyage, up the Irrawadi to the Burman capital, was the negotiation of a commercial treaty, on terms of perfect reciprocity, with the ministers of the 'Golden Foot.' The chief advantages which the embassy in reality produced seem to have been the increase of information, both moral and scientific, with regard to the country, people, and government, and the impression of English firmness, candour, and good faith, which must have resulted from the negotiations. As to the ostensible objects of the mission, they were in a great degree frustrated by the unconquerable obstinacy, stupidity, and faithlessness of that barbarous despotism. Something, however, was doubtless gained by having the laws of commercial intercourse between the two countries, insufficient as they are, definitely recorded in a public document.

We shall not attempt to follow Mr. Crawford in his progress up the noble river, which was traversed by his steam-boat from Rangoon to Ava. He and his companions appear on all occasions to have made the most minute, extensive, and judicious observations which their circumstances admitted. And in one department alone, that of geology, the envoy, whose distinguished life has necessarily been devoted to other pursuits than those of physical science, has yet done more than all previous travellers to enlarge and sharpen our knowledge of the Eastern World; while the labours of Dr. Wallich, in botanical discovery, have scarcely been less successful.

The book is remarkably clear from affectation or pretension, and we have met with but few volumes of equal size and on similar subjects which were such agreeable reading. This arises chiefly, we apprehend, not from the freshness and singularity of the subject, but from the remarkably even and unwavering view, distinguished by uniform good sense and acuteness, and leaving no vagueness on which paradoxes might be built, which characterises Mr. Crawford's mode of regarding every thing around him. In every detail recorded on these pages, we discover the working of a lively but calm and steadfast intellect, a mind trained in the public affairs of large communities; and as to its scientific perceptions, far more cultivated than is usual in any but cloistered inquirers. There is throughout an unusual modesty as to the expression of individual feeling; and the keen relish of the author for picturesque and romantic beauty, and for the splendours of ancient architecture and the peculiarities of national tradition, which is never manifested in any elaborate displays of his tastes and emotions, can only be inferred from the fullness and clearness with which he describes what some more rhetorical travellers would content themselves with vaguely panegyricising. There is, however, among others, a description of a pageant of gilded war-boats, on the broad waters that surround the 'city of gems,' of which Milton would have known how to make a glorious use.

We will now give some extracts which must,

we think, be interesting to our readers. The first shall be a very striking instance of wild superstition :

'In reference to the actions now alluded to, a singular fact has been ascertained, which affords a curious specimen of the superstition, credulity, and folly of the Burmese and their Government. Finding that all their ordinary efforts to make head against the invaders were unavailing, they had recourse to magic; and among other projects of this nature, sent down to their army before Prome, all the women at Ava who had the reputation of having a familiar spirit, in order to put a spell on the foreigners, and, as it was said, *unman* them. These females, who rather labour under some mental derangement than are impostors, are called by the Burmans Nat-kadaw, or female nats. They profess to hold an intercourse with the demigods of that name, and to be inspired by them with supernatural powers. The presence of such persons was known to the British army; and among the wounded, after the action at Sim-bike, there was found a young girl about fifteen or sixteen years of age, dressed in male attire, believed to be one of them. Her sex was recognised, and attention was paid to her; but she expired in half an hour after being taken prisoner. Lieutenant Montmorency told me, that he had seen this poor creature; that she had received wounds in the neck and head, and held up both her hands, making a *shiko*, or Burman obeisance, to every one that from pity or curiosity came to see her.'—Pp. 41, 42.

A hint to gentlemen smokers :

'In my first interview with the Siamese Minister, on my mission to that country in 1822, the servile demeanour of his officers and followers towards him, forcibly struck my companions and myself as highly offensive. In the demeanour of his officers and retainers towards the Wungyi, upon the present occasion, there was in comparison very little to offend. The former sat on chairs, and, in the discussion which ensued, offered their opinions with perfect freedom; and the latter were seated on the floor, in the usual Oriental posture, without exhibiting any constraint or embarrassment. The only exception to this was the person charged with his Excellency's spit-box, and who, prostrate in the Siamese fashion, held the precious utensil over his head, without venturing to look upwards.'—Pp. 13, 14.

Important to Aldermen :

'By the construction which the Burmans put on the doctrine of the transmigration of souls, the lives of animals seem to be respected pretty much in proportion to their magnitude, under the belief, I imagine, that the larger the animal, the more advanced towards perfection is the soul of which it is the receptacle.'—P. 27.

The life of an actor :

'Pa-k'hok-ko, and the domain annexed to it, lately constituted the estate assigned to Maung-shu-nyan, a celebrated actor. This person, a native of Rangoon, gained the present King's favour by his professional talents, his quickness at repartee, and his accomplishments as a buffoon; and he received a title of nobility, with an estate, as marks of royal favour. During the war, he had a small command, but disgraced himself by a precipitate flight. He was in the stockade where Thongba Wungyi was killed, on the 7th of July, 1824. After this, he fell into disgrace, quarrelled with some of the principal courtiers, and was discovered to be an atrocious oppressor, having put several persons on his estate to death. The King discovered his mistake in promoting him, imprisoned him twice as a correctional punishment; but, finding him irreclaimable, he deprived him of his estate, and confiscated his personal property.'—P. 75.

The value of a white elephant :

'While we were at Ava, a report was brought that a white elephant had been seen; but it was stated, at the same time, that its capture and transport on a sledge over the cultivated country would be accompanied by the destruction of ten thousand baskets of rice. His Majesty is said to have exclaimed more with the enthusiasm of an amateur than the consideration of a patriot king, "What signifies the destruction of ten thousand baskets of rice, in comparison with the possession of a white elephant?" and the order was given for the hunt.'—Pp. 143, 144.

The veracity of Burmese historians :

'I learnt last night, from good authority, that the Court Historiographer had recorded in the National Chronicle his account of the war with the English. It was to the following purport:—In the years 1186 and 87, the Kula-pyu, or white strangers of the West, fas-

tened a quarrel upon the Lord of the Golden Palace. They landed at Rangoon, took that place and Prome, and were permitted to advance as far as Yandabo; for the King, from motives of piety and regard to life, made no effort whatever to oppose them. The strangers had spent vast sums of money in their enterprise; and by the time they reached Yandabo, their resources were exhausted, and they were in great distress. They petitioned the King, who, in his clemency and generosity, sent them large sums of money to pay their expenses back, and ordered them out of the country.'—P. 176.

The following short but comprehensive passage will give a good notion of the degree to which the Burmese are advanced in the finer departments of rascality :

'Mr. Judson informed me, that when he was in prison, he overheard two chiefs, who were subjected to a temporary confinement for some peccadillo, discouraging together on moral subjects. The elder of the two asked the other if he knew the proper definition of an "upright man." The younger professed his ignorance; when the senior added, "Then I will tell you: an upright man is exactly the same thing as a witless man, or a simpleton." Maongrit, the senior Atwen-wun, who gave in a formal note at the last conference, recommending to all parties loyalty, disinterestedness, and truth, was detected, in the course of the day, in what was little short of a forgery; and the following anecdote will prove with how ill a grace he appeared as the advocate of loyalty and disinterestedness:—As the British troops were advancing to Prome, he was entrusted, as a Privy Counsellor of the King, with putting that important post in a state of defence. He levied heavy contributions upon the inhabitants for this purpose, appropriated them all to his own use, neglected the fortifications, and Prome consequently fell without resistance into our hands. A superior officer, I believe the Prince of Sarawadi, discovered his notorious malversation and neglect of duty, degraded him from his office, forced him to refund, and placed him in two pair of fetters. In this state he continued for many months. He was at last restored to office through the influence of Kaulen Mengyi, and was now, of course, the devoted creature of this Minister.'—P. 227.

This illustrates the coarser class of peccadilloes as practised in Burma :

'The part of the country they passed through was much infested by robbers; and yesterday they saw the spot where a man had been a few hours before murdered, on account of a load of rice which he was carrying to Ava. A little of the rice was still scattered about; and the bamboo, on which the baskets were carried, was still lying on the ground.'—P. 235.

Our readers will see by the next extract, that the exportation of young ladies to the 'Golden Kingdom' is not likely to be profitable; and, in fact, Mr. Crawford has not provided for it in his commercial treaty :

'An old Siamese woman, who was taken prisoner in her youth, in one of the incursions into Siam, and whose prime cost was a flask of spirits, was pointed out to me at Rangoon. She was sold a second time, I was told, at the enhanced price of five ticals, or 12s. 6d.'—P. 246.

A Burman compliment :

'Turning round to me immediately before going away, the junior Atwen-wun congratulated himself upon his good fortune in having met "so valuable a friend: a true friend," he added, "is not to be met with above once in a creation or existence!" This piece of bombast was delivered with immoveable gravity.'—P. 266.

Burman diplomacy :

'Sir A. Campbell informed me, that one of the negotiations, which preceded the peace, and in which the Burmans had no object but that of putting off time and deceiving us until the force was collected, which was afterwards defeated near Prome, one of the chiefs, the Governor of the province of Sarawadi, a little shrewd old man, who was always counting his beads, was loud in his praise of all peace-makers, and assured the commander of the British army, that he in particular would be quite sure of meeting his reward in some distinguished and elevated transmigration, if through his means the British granted a favourable peace to the Burmans. I was present when Sir A. Campbell saw this person for the first time afterwards, and when he was reminded of the compliment in question: the old man was nothing abashed, but joined

very heartily in the laugh which the recollection of this circumstance created.'—Pp. 266, 267.

Burmese piety :

'The colour appropriated for the dress of the priesthood is yellow, and it would be deemed nothing less than sacrilege in any one else to use it: so peculiarly sacred is it held, that it is not uncommon to see one of the people pay his devotions, in due form, to the old garment of a priest on a bush, hung out to dry, or to one after being washed.'—P. 377.

When the steam-vessel, on its return, reached Rangoon, the town was besieged by the rebellious Talains :

'Lieutenant Rawlinson, who was left here by Sir A. Campbell to await our arrival, and all the English merchants, were standing on the public wharf, looking out for us, and immediately came on board, bringing along with them our letters and packets. They informed us that this day had been decided on by the Burmans, as a fortunate one, for making a *sortie*; and, indeed, they had scarcely given us the information, when the attack actually commenced. We were eye-witnesses to a considerable part of this action, and our friends, who returned to the stockade, and mounted the tops of the houses, had a full view of the whole. The courage and conduct of both parties were upon the very lowest scale. The Burmans crept out of the stockade, and came unawares upon their enemy, on the eastern or Tacklay side of the stockade. The Talains, who were cooking or sleeping, fled precipitately, and without offering any resistance, to their boats, which were soon seen crossing the river in numbers and in great haste, although not pursued. A few Talains were killed, and a few taken prisoners. The Burman attack in the direction of the Pagoda was not so fortunate: here they were repulsed, and sustained some loss. The total killed, wounded, and prisoners, was, after all, very trifling on either side. We received various and different accounts of the casualties; but so discordant, that none could be relied on. The Burmans admitted their own loss in wounded to be fourteen. We had the misfortune to be eye-witnesses to the capture of one petty Talain chief, and an act of more savage ferocity cannot well be imagined. He had attempted to escape by swimming across the river, and was pursued by two armed Burmans in a small canoe. He attempted to avoid capture by repeated diving, but was at last wounded by a spear and taken. He was tied to the canoe, and dragged down the river for a quarter of a mile, to the spot where we were anchored, and within five yards of us. He was landed by dragging him by the hair of the head, and one of the victors drew a sword, as if to decapitate him. We remonstrated against this act of brutality, as an insult to ourselves, and thus for a moment at least saved the life of the prisoner. Thirty ticals, it appears, are paid for every Talain's head. The prisoners are generally taken before the Wungyi, where some are executed and others reprieved. Some of our gentlemen who entered the town after the action had ceased, saw the prisoners brought in. The men were dragged by the hair of the head, and the women and children were scarcely better treated. Among the prisoners there were some Chinese, who were sold by the captors on the spot to the highest bidder. These had not joined the Talains, nor were they taken in arms: they had not, however, quitted the suburbs, where their dwellings were, when the Burmans retired to the stockade, and this, which was considered suspicious, was an offence which merited punishment.'—Pp. 337—339.

The work contains very full and amusing descriptions of a boat-race; the reception at Court; a man whose face, forehead, ears, and cheeks, inclusive, were overgrown with hair; of a village of lepers, which is even pleasant, so far as it reminds us of De Maistre's delightful tale, 'Le Lepreux de la Cité d'Aorte,' and a hundred other wonders and splendours.

The following comparison, which so few Europeans have had an opportunity of making, between Burmese and Siamese religion, is curious :

'Here, as in almost all the modern Burman temples I have seen, the fane containing the principal images of Buddha are of carved wood, gilt all over. Within the area was pointed out to us a circular fabric with a domed roof: this was the library of the temple, but the doors being shut, and none of the attendants at hand, we were unable to gain admission. Judging from this specimen of the Burman temples, and what I had before seen, I have no scruple in considering that they are ge-

nerally inferior to those of Siam, both in magnitude and splendour: the images especially are much fewer and smaller. I had not yet seen a single statue in brass, nor do I believe the art of casting them in metal is known to the Burmans, although daily practised by the Siamese. This, however, is accounted for by the abundance of fine white marble of which the Burmans are possessed, and of which their best statues are formed. The richly carved wood of the doors, windows, and roofs of the Siamese temples, constitutes their best ornament. In the Burman temples there is nothing comparable to it. While the Siamese are spacious buildings, open, diversified, and richly ornamented within, the majority of the modern temples of Ava are but solid masses of brick and mortar, presenting nothing but a mere exterior to gratify curiosity. I may take this opportunity of observing, that the Burman priests seem to be less numerous than those of Siam: it is not to be inferred from this, however, that the Burmans are less pious than their neighbours. This fact, and the inferiority of the temples, is to be accounted for by the religious charity of the two people being somewhat differently directed. For every temple in Siam there seemed to be twenty in Ava. None but the rich and powerful build temples in the first, and the inferior classes are satisfied with making contributions to the edifices constructed by their superiors. Here, therefore, large temples only are constructed. In Ava every petty chief builds his own temple, and deems this, and not the endowment of monasteries, the principal road to salvation. In Siam, a monastery is a necessary appendage to a temple. In Ava, the monasteries and temples are separate and distinct, and those who have power over the wealth of the country alone can endow the former. In Siam it is the fashion for every male inhabitant to enter the priesthood once in his life, however short the period. This custom does not exist among the Burmans.—Pp. 164, 165.

Burmese temples:

'Sept. 25.—We repeated our visit this morning to the ruins of Pagan. This place is stated, in Burman chronology, to have been founded by a King named Samud-da-raj in the year of the grand æra 799, of Gautama 651, of Salivana, called by the Burmans Sumundri, 29, corresponding with the year of Christ 107. It was destroyed in the year of Christ 1356, but appears to have ceased to be the seat of Government in favour of Chit-kaing thirty four years earlier. In this long interval of one thousand two hundred and fifteen years there reigned fifty-seven Kings, giving an average to each reign of more than twenty-one years. These reigns, long in a barbarous state of society, would seem to imply that order and tranquility generally prevailed while the seat of Government was at Pagan; and that this was the case may perhaps appear probable, from the frequent mention made in the chronological list of sons and grandsons succeeding fathers and grandfathers, and brothers succeeding brothers, while there were but few changes of dynasty.'

'The oldest of the temples pointed out to us, dated in the reign of King Pyan-byā, or from 846 to 864. Nine temples are ascribed by tradition to this prince; but all of them small, in a ruinous state, and without any interesting relics. The first temple which we visited had the appellation of Thapin-nyu, or "the Omniscient," which is an epithet of Gautama. It is one of the finest, has been restored, and is occasionally used as a place of worship. A short account of this will suffice to convey a notion of the style, character, and extent of all the large temples, for the whole of these are upon the same model. They are built of brick and lime; and the freestone, which is so abundant in the country, and apparently so easily worked, is generally to be seen only in the pavement of the ground-floor and court-yard, or in the construction of stairs. The bricks are well burnt, and commonly about fourteen or fifteen inches long, and eight broad. The form of the temple is an equilateral quadrangle, having on each side four large wings, also of a quadrangular form. In these last are the entrances, and they contain the principal images of Gautama. Each side of the temple measures about two hundred and thirty feet. The whole consists of four stages, or stories, diminishing in size as they ascend. The ground story only has wings. The centre of the building consists of a solid mass of masonry: over this, and rising from the last story of the building, is a steeple, in form not unlike a mitre, ending in a thin spire, which is crowned with an iron umbrella, as in the modern temples. Round each stage of the building is an arched corridor, and on one side a flight of stairs leads all the way to the last story. We ascended by this flight, and found it to consist of a hundred and sixty steps, giving

a height which may be estimated at eighty feet. The whole height of the building, including the spire, we were informed by our guides, was a hundred and thirty-five cubits, or about two hundred and ten feet. Round this temple, like all the rest, there is a court fenced by a brick wall, with gateways. Perhaps the most remarkable feature of this temple, as well as of almost all the other buildings of Pagan, is the prevalence of the arch. The gateways, the doors, the galleries, and the roofs of all smaller temples, are invariably formed by a well-turned Gothic arch. It had been alleged, that the art of turning an arch has been lost by the modern Burmans. There is no foundation for this opinion; for, in the vicinity of Rangoon, I have seen several very good arches in buildings of recent structure. The truth is, that their modern buildings, consisting generally of masses of solid masonry, or of wood, necessarily exclude the use of the arch. The temple of Thapin-nyu contains some modern images of Gautama, of an enormous size, composed of common brick and plaster, gilt over, but very rudely and clumsily executed. Its construction is ascribed to Alaum-chao-su, a prince of Pagan, whose reign commenced in 1081, and ended in 1151 of Christ.—Pp. 62—64.

We shall take another opportunity of noticing the important chapters in which Mr. Crawford gives a general view of all the points which are most remarkable in the social system of Burma.

THE HAMILTONIAN SYSTEM.

The History, Principles, Practice, and Results of the Hamiltonian System, &c. By J. Hamilton, author of 'The Hamiltonian System.' Sowler. Manchester, 1829.

HAVING ascertained the OBJECTS of Mr. Hamilton's system from his own statement, and from the statement of its advocate in 'The Westminster' having shown that these objects do not coincide with those which the present system undertakes to accomplish, and having thence inferred that Mr. Hamilton's promise of shortening the quantity of labour necessary to accomplish these ends is unfounded and deceitful,—we proceed to inquire in what sense a knowledge of language may be acquired upon this system, and what is the value of that knowledge. To understand this question, we invite our readers to the following document extracted from 'The Morning Chronicle' of November 16, 1825, upon which Mr. Hamilton places considerable reliance, and which, we believe, has been more effectual in recommending his scheme than all his own arguments together:

'Extract from the Morning Chronicle of Wednesday, November 16th, 1825.—Hamiltonian System.—We yesterday were present at an examination of eight lads who have been under Mr. Hamilton since some time in the month of May last, with a view to ascertain the efficacy of his system in communicating a knowledge of languages. These eight lads, all of them between the ages of twelve and fourteen, are the children of poor people, who, when they were first placed under Mr. Hamilton, possessed no other instruction than common reading and writing. They were obtained from a common country school, through the interposition of a Member of Parliament, who takes an active part in promoting charity schools throughout the country; and the choice was determined by the consent of the parents, and not by the cleverness of the boys.

'They had been employed in learning Latin, French, and latterly Italian; and yesterday they were examined by several distinguished individuals, among whom we recognised John Smith, Esq., M.P.; G. Smith, Esq., M.P.; Mr. J. Mill, the historian of British India; Major Camac; Major Thompson; Mr. Cowell, &c. &c. They first read different portions of the Gospel of St. John, in Latin, and of Cæsar's Commentaries, selected by the visitors. The translation was executed with an ease which it would be in vain to expect in any of the boys who attend our common schools, even in their third or fourth year; and proved, that the principle of exciting the attention of boys to the utmost, during the process by which the meaning of words is fixed in their memory, had given them a great familiarity with so much of the language as is contained in the books above alluded to. Their knowledge of the parts of speech was respectable, but not so remarkable; as the Hamiltonian System follows the natural

mode of acquiring language, and only employs the boys in analysing, when they have already attained a certain familiarity with any language.

'The same experiments were repeated in French and Italian with the same success; and, upon the whole, we cannot but think the success has been complete. It is impossible to conceive a more impartial mode of putting any system to the test, than to make such an experiment on the children of our peasantry.'

Now what possible objection can be made to this evidence? Are not the witnesses honest men?—Undoubtedly. Are they not intelligent men?—Undoubtedly. Would they prevaricate, then, wilfully in stating what they saw, or are they likely to have been deceived respecting what they saw? Both suppositions are incredible. Then does not this overturn, or at least overreach, all that you have been saying previously against the system? Not one word, or one letter of it, not even if, as Mr. Hamilton states, 'The Morning Chronicle' reports underrate the quantity of knowledge procured by the boys,—not even if the time spent in acquiring it was four days instead of four months. Taking the evidence in the largest sense, adding to it any thing which observers may have omitted to take note of, it will amount to this, that, in a certain extremely short space of time, it is possible for boys to learn by heart a considerable body—if it will serve your purpose, say the whole—of the words of a language. Mr. Hume, Mr. Mill, and the rest of the witnesses say this, and no more. On this point, we take their assertions to be gospel; for thus far they are founded upon the evidence of their senses. But on the conclusion which these gentlemen, or any of them, may ground upon these observations, we must take leave to hold ourselves perfectly independent. Our confidence in their veracity, which is unlimited, does not compel us to go the length of adapting our faith, which is obstinate, to their notions; and we should be unworthy of an honest reader, if we did not say, that, while there are not six men in London whose words we would admit more unreservedly in a point of evidence, there are not six whose notions we should be more cautious of taking as our guides in any question with which the spiritual faculties of man's nature are any wise concerned.

We assume, therefore, that Mr. Hamilton's education machine has the power of projecting a considerably larger number of words into the memory of a pupil than any one previously invented; that to effect this object is the end of Mr. Hamilton's system; that the effects of the process upon the mind of the pupil are not treated as worthy of any primary consideration; and that the only argument which has been brought forward to prove that the mind may possibly gain something by a scheme which has been formed without any reference to it, is that redoubted one of the fallacy-hating Westminster Reviewer which we exposed last week. But then the saving of time! Ah! the saving of time—we had forgotten that. For, say the advocates of the Hamiltonian System, all may be very true that you say about the necessity of educating the faculties and so forth; but then observe what an immense number of hours we redeem, which may, if it seems good, be given to that purpose. Thus, if an Eton boy is twelve thousand hours in learning two languages which an Hamiltonian boy can learn in twelve hundred, there will remain ten thousand eight hundred hours in which the latter may improve his faculties, or amuse himself in any other more advantageous manner. Happy young gentleman! but is there no scheme laid out by his tutors, or by you his tutors' tutors, for the employment of these useful hours? Oh! certainly, the time which he saves from that which your system consumes in Greek and Latin, will be devoted to Mathematics pure and mixed, metaphysics, mineralogy, geognosics, logic, mensuration, &c. &c. &c. &c. &c. So we expected; and pray in what measure are these studies to be pursued by the pupil? Are they to be taught in the shortest manner possible; that is,

to say, as you have defined it, in a way purely mechanical? If not, then we should like to know why just the one study which you have singled out to teach, without the least reference to the cultivation of thought, is just that one which of all knowledge has most connection with thought, being the study of that by which thought is expressed? If so, the selection is, to say the least, somewhat singular. But it is not a selection; you will conduct all other studies in the same manner, you will make them all purely MECHANICAL. 'The Westminster Review,' in the article to which we have alluded, confesses this intention, and even hints that more progress (in which opinion we agree with it) has been made in the process of mechanising the other branches of education than this one. Well then, seeing all studies are to be taught without reference to the cultivation of the faculties, and seeing the hours rescued from the study shortened, are to be devoted to those neglected, what precisely did you mean by telling us that you are saving time for the cultivation of the mind? In what corner have you husbanded from the important objects of education, the few moments that are destined for this comparatively trifling one?

Let 'The Westminster Review' make answer!

'We trust we cannot be supposed to mean that it is not a part of the duty of the teacher to cultivate the intellectual faculties of his pupil. That, without doubt, is one of the very highest and most important departments of education; but the preceding observations relate to the communication of knowledge—the statement of facts or phenomena, the materials on which the intellectual faculties are to operate.'

These lines were written by their author in perfect unconsciousness that he was expressing any sentiment at all extraordinary, and to nine-tenths of those who read 'The Westminster Review' they will appear as innocent and commonplace as they appeared to him! But, merciful Heaven! to what a state must we have come when they can be so written and so read? To what a state must that age have been reduced which could hear with coolness and indifference that the education of our souls, the end for which we are created, which God ordained to be the business of our whole lives, to which the magnificent frame of nature, though contrived, no doubt, for the accomplishment of other ends equally glorious, nevertheless condescends to minister, for promoting which our ancestors knew all studies to be framed, and therefore selected, as the one which should form the groundwork of their institutions for study, that one which they believed would tend most directly to secure it; lastly, alas! that we should be induced to place this argument last, from a conviction that the lowest step in the ladder should be that which the age will most readily reach at—without which it is impossible, with any effect, to comprehend and grasp even the material objects we prefer to it,—that this education of our souls is to be no longer the object of the one study hitherto consecrated to the accomplishment of it, no longer the object of any other which is to engage the attention of the child or the man—but to be the occupation of the few moments which can be stolen from the task of cramming the memory, an occupation which very soon, even if the scheme should not be already ripe, will be shortened by some device as 'purely mechanical' as the Hamiltonian system of teaching languages! We have said what must be that age which can listen to such sentiments with calmness and indifference. But let us speak more honestly. These are not words whispered into the ears of the men of our generation by some counsellor who knows that they are ripe for evil, but is afraid of venturing too far. No! the words are spoken boldly,—they are not new to the age for which they are intended: they are uttered by a man of the age, they are but the echo of its own hollow voice. And it is, therefore, that we cannot speak, as some in the halls and colleges speak, with contempt of those who come forward with

their quack nostrums in education. We know that those who advocate any scheme which has for its principle the denial of man's spiritual nature, which has for its effect the weakening it, will find eager and believing auditors. We know that the Pythoneses who counsel the people to desert the strength of their forefathers—if they be drunk, yet it is with the vapours which those who seek after them have inhaled as well as they; that, if the trembling tripod on which they exalt themselves gives no authority to their words, yet that they have skill to add such lying prophecies of the glory that is to descend upon these latter times, as may well flatter weak heads into acquiescence with their most hurtful suggestions. And we know, moreover, that the evil is even now partly accomplished; that the age has already thrown off more than half its spiritual armour; and that, while on this very account good men are the more painfully anxious to preserve for it what yet remains, it hopes that it may, in time, feel the necessity of resuming what is gone, the age is but too likely to lighten itself of a weight which it has contrived to render nearly useless.

It is no great subject for laughter, but one for trembling apprehension, to see a quack prescribing the medicine which is the best calculated to aggravate a patient's disorder, when we know that it is also just the medicine which, because he is in that disorder, the patient will love. The ignorance and the stupidity of the adviser* does not diminish, but rather increases, the grounds of alarm, for it puts him more nearly on a level with his dupe. If Achitophel had wished to ruin Absalom, he would not have succeeded so well as Hushai.

But be Mr. Hamilton and his assessors, 'The Edinburgh' and 'Westminster Reviews,' Hushais or Achitophels, we pray equally that the counsels of them, and of all who instruct the age how it can become more low-thinking and mechanical than it is at present, may be turned into foolishness. And since the succour which in the present day, as in every former one, we derive ultimately from Providence, must be expected to reach us through some earthly agent, where shall we look for the instrument by which we are to be protected against our own bad inclinations and rash movements? To whom can we turn so naturally as to those in whose hands are placed the keys of that true knowledge which our fathers deposited for our use in the ancient institutions of this land? It is not enough now-a-days that the guardians of our public schools and universities should go through their accustomed tasks, teach the set number of hours, and now and then put forth a pamphlet against innovations in the system under which they have grown up.—Other duties are required of them now, stricter in their nature, more troublesome in their fulfilment. That duty, say the hirelings of the age, and the timid counsellors who gave heed to them, is to watch the tremendous force of public opinion which is marching against their institutions, and, before it is too late, to secure an honourable capitulation: that duty, say we, is to take careful note from the watch-towers, of this fearful force, to understand its composition, to study what weakness in the garrison has tempted its ferocity, to examine why so many good and honourable men have enlisted on its side, and then to prepare for a stout and manly RESISTANCE.

Talk of resisting public opinion in the nineteenth century! How long is it since we have escaped from Warburton's lunatic asylum? If we are mad to talk so, we will at least show that our madness has a method in it; for we will point out the way in which we believe the resistance may be most effectual, not merely in preserving from destruction schools and colleges, those limbs of our

* 'The Westminster Review' very generously converts the folly and ignorance with which it charges Mr. Hamilton into an argument in favour of his system.

system in which, though themselves feeble and tottering, we firmly believe all the little life yet left in our system resides—but in imparting to the rest of the body, now conspiring against these its members, new influxes of health and vigour.

Our ancestors, if the principle be true which we have laid down and attempted to defend through the whole of this article, bequeathed to us this idea, that the object of education being the formation of a manly character, and the main* constituent of a manly character being activity of thought and feeling, that study which is most livingly connected with our thoughts and feelings, is the best instrument of education. That this study is language, and that the two languages most adapted to the purposes of education are the two classical languages, because in them the main end of teaching is not lost in the pursuit of inferior ends, we endeavoured to prove, are corollaries from the former propositions. We intimated further, that in devising machinery for realising these objects, our ancestors were likely enough to display great ignorance. To them this ignorance was of little moment; for so vivid and strong was their perception of the end after which they were labouring, that no torrents or Alps in their way would prevent their reaching it, but would only render their minds more nervous for fresh enterprise. But to us weak in conception and mechanical in our natures these obstructions are most mischievous: it does not strengthen our limbs to be obliged to climb over heaps of lumber, for we do not see, as the elder men did, whereto we are tending, and so the greater part of us (constituting that class to which the enemies of the public schools are always pointing, as men who know no more of Latin and Greek than when sent to them) lie down upon the chairs and boxes, by which we ought to mount, while the more resolute of us (constituting that class which are usually spoken of as men who can write excellent Latin verses, but are very dull persons in company, and of little use in their generation) jump about among those chairs and boxes *pour nous faire vifs*. The spiritual end for which this machinery was devised, being thus in great part frustrated, the heads of our public schools must not be surprised, if to their just charges against the quack schemes of the day, that they are merely mechanical, the advocates of these schemes should respond, 'But are not your plans mechanical also? Are not you busied with teaching the words of a language rather than the language itself? What more therefore do ye than others? And what reason can you assign for the immense portion of time you spend in a kind of instruction which we can accomplish in half the time? for its expense, when we can do the work at half the price?' And almost as little must they be surprised, though far more deeply grieved, if they hear a wise and honourable man exclaiming, 'True, all this quackery is disgusting enough: it is miserable indeed when men openly avow that they seek nothing but low and mechanical ends! But what is the alternative? Simply between honest men who avow such ends, and those who, with higher pretensions, accomplish no higher end. And when into the scale of honesty are thrown likewise cheapness and celerity, though I see all the miserable lightness of the new scheme, yet I am half inclined to make election in favour of it. The Hamiltonian system, for instance, I admit all that you can say against it, I admit

* We have stated this idea imperfectly, because we have left out, as not belonging directly to the present subject, the cultivation of the *will*, which language does not promote, but which our fathers provided for by the introduction of religious education into their seminaries. On a future occasion, we may, perhaps, apply the doctrine which we have been now advocating, to this part of the system also, and endeavour to show, that while the principle of our ancestors, of giving a religious education, ought to be stoutly maintained against all the theorizing of our age—a great deal of the machinery has become mischievous, and destructive of the spiritual end for which it was formed.

that the testimonies of its advocates do not prove that it is ever likely to form or improve a single mind. But they do prove, that, as a system of word-teaching, it is more expeditious than the ordinary ones, and unless you can show that something better than word-teaching goes on at Eton and Westminster, I certainly shall vote for Hamilton, seeing the sooner a boy gets through this hammering, deadening process the better.

Alas! that such words should be uttered and that there should be rational ground for their utterance. They are not all true, for there is—we know it, we feel it—there is a spirit in these ancient schools which is not yet burnt out. The flame is low and smouldering, but it is there still; the guardians who are intrusted with its preservation have not yet deserved to be buried alive in the cemeteries of those who gave them the charge; and at times, many who have been nursed in these venerable halls have profited by its light and warmth. But when we contrast the heavy impositions which are laid in these institutions upon the memory, with the little diligence which is showing in calling out the faculties of the mind; when we see how the schemes intended to foster the creative powers have been converted into the merest tool-work, and have become, as a great poet has remarked, some of the chief means of corrupting our poetical perceptions and destroying our feeling of the connection between thoughts and words; when we see how much more time is devoted to drilling and disciplining the man than to awakening the life and feelings of the man; when we see how little is done to awaken a love of knowledge, how much to excite bad motives in the pursuit of it; when we see how almost entirely the great end of creating a moral being has been lost sight of in these institutions, and what a hollow sound rings in the forms, which prove this object paramount to all others in the minds of those who founded them; when we see what cruel inventions of puerile tyranny are tolerated, even encouraged there, though acknowledged to be debasing to the character, because they are said to promote that learning of which the end is the formation of character; when we see all this, who shall deny that the demon of selfishness and materialism which has possessed all of us, has entered likewise into the institutions from which we should draw our virtue and spirituality, and that they are fitting themselves for the destruction which the age is preparing for them by having drunk of the wine-cup of its abominations? Whenever, then, they are summoned before the tribunal of public opinion to give an account of their stewardship, they will find many who will give a reluctant verdict against them,—of those who, if the conflict were between what is old, venerable, and spiritual, and what is upstart, mean, and mechanical, would be their staunchest allies. It will be with them as it was with the Templars in former days. The bad hated the spirit of the order, and longed for the wealth which it had amassed; the good were appalled at the crimes which had brought down to the low worldly level of the men who were to be their judges, the chosen Knights of Christ's Sepulchre. The numbers of godly men who had worn their double cross, the thousand trophies which in past times they had won from the infidel, were, in the eyes of the one, but so many reasons of hatred; in those of the other, but so many proofs of their degeneracy. And so they fell; not because they had defied men's opinions too proudly, but because they had bowed down before them too weakly; not because they had held themselves aloft in strict separation from the corruptions of the times, but because they had defiled themselves with all; not because they had not adapted their spirit (according to the pretty, honied, modern phrase) to the improved notions of the fourteenth century, but because they parted with every thing that was a reason for their existence.

Let those whom we are addressing ponder this

lesson deeply in their minds. We repeat it,—RESIST PUBLIC OPINION, and, like other devils, he will flee from you. But you must have the means, the will to resist him; you must be able to show that you are not amenable to his laws, that you belong to a country over which his jurisdiction does not extend. Meet him upon his own ground, and you fall. (The purposes to which they are framed, his plans are all-sufficient to accomplish. Nothing which you can devise will match them. Try as you will, you cannot cram boys with words more quickly than Mr. Hamilton, or make them swallow so much *swill* in the same time as the Chresto-mathics, or turn them into such thorough political urchins as pour from Mr. Thomas Campbell's school at Glasgow. If you determine to measure yourselves against these men in these experiments—abide the result! But frankly acknowledge yourselves unequal to such great achievements,—confess that it is your humble ambition to prepare your pupils for a class into which none of your rivals have ever thought it worth while to introduce them,—the class of MEN; show them that you understand what are the qualities required of this class, what is the mode of cultivating them; keep this, the primary end of your institutions, in view, and in conformity with it model your system, not caring what changes you make in it which will make it more efficient for this purpose, but not introducing one change merely to please the varying taste and fashions of man—not troubling yourself about the shortness or the length of the way to any of your more secondary ends, but remembering that no time is wasted which is employed in educating the mind and character, that every moment is useless which does not tend to that object—recall, in short, to yourselves and to us, the OBJECTS which our originating fathers conceived, and for accomplishing these and no others, use the MEANS which their mechanical descendants have invented, and then do not fear any attacks which can be directed against you. If there be still, as there will be, fierce opposers—let them come on! Let there be a gathering in every dark corner of the land—from every lane and alley, from every cabin and house where quacks and mountebanks have their thrones. Let their host be swelled with all the restless and factious spirits who find it for their comfort to charge institutions with all that is discordant and mischievous in their own nature, and who, believing this, call (and indeed upon most excellent grounds) for their overthrow. Let them find somewhere in one of the ragged regiments a place for those who cling to every establishment so long as it fails to fulfil the purpose for which it was formed, but who, the moment it becomes something better than a hive for indolence and selfishness, fly off, and desert to the enemy. Thus formed, let the troops be disciplined in the training schools of the age, where they may learn every ferocious and every mean accomplishment; let them march to the battle, waving their rag banners, fortunately reconverted from dirty newspapers and lying reviews, screeching voices yelping the war-cry of the nineteenth century in their rear, and their discordant band playing the dead march of intellect in the front, one and all, villains or dupes, mob chieftains or mob slaves—let them come. They will find opposed to them a sturdy phalanx of all that is wise and generous in the land, those who have loved the places in which they have been nourished, and rejoice to see them renovated; those who feel the want of that advantage, and thank God that it is reserved for their sons; the young, who find nothing to satisfy them in the husks which the quacks offer them; the middle-aged, who feel the pressure of maternal cares weighing them down, and the need of something spiritual to support the pressure; the aged, who prefer the true and permanent to the insincere and the vacillating. And every new year, as it withdraws some from the hostile ranks, by engaging them on some new scheme of vanity,

will supply the good cause with fresh recruits, sent forth to be the enthusiastic defenders of a system to the worth of which they bear living testimony, till these noble institutions shall find a consolation for the hatred of an age which they have defied in the love and veneration of an age which they have regenerated.

ROMANCES OF REAL LIFE.

Romances of Real Life. By the Author of 'Hungarian Tales.' 3 vols. 12mo. Colburn. London, 1829.

THE worst circumstance about this book, is the discrepancy between the name and the character of the work. A 'Romance of Real Life' can only be one of two things—the romance may be in the form or in the spirit. It may consist in a picture of the more ordinary tendencies and states of human nature, but clothed in some wild, barbaric, or fanciful costume; or it may exhibit the rarer, and more subtle, and more potent qualities of humanity, which, wherever they are developed, are sufficiently impressive to make of little importance the outward shapes in which they display themselves. But to a 'Romance of Real Life,' reality is above all necessary. It must contain nothing which is not proper to men as they are, or to man as in idea he is.

Now, Mr. Colburn's 'Romances of Real Life' are very clever stories, but utterly devoid of reality. They are in general, indeed, so peculiar in the incidents, that it is clear the writer has most sedulously sought for strange occurrences and situations, and has avoided all such as appeared to have in themselves the quality of reality. And to this, probably, the book is indebted for the title of 'Romances.' The phrase 'Real Life,' is, we suppose, designed to indicate that it contains neither fairies nor demons, and that its personages are all fleshy and featherless bipeds. This merit we do not deny. But we would suggest to the lady whose book is before us, that unreal personages are much less likely to pervert our conceptions of truth when they come with no pretence of representing human nature at all, or of being subjected to the same laws with ourselves, than when they appear in the form and with the name of man. The fiend takes a human shape when he would tempt us; it is when he is baffled and flying that he appears in his native deformity. Now we will venture to assert that among persons of equal talent with the writer before us, there is no one whose characters have less of reality than the personages in these volumes. They display fancy and eloquence, a vivid taste for the beautiful, and an active mastery over striking situations, and abundance of amiable and moral feeling. But the persons are not living men and women; and the motives by which they are actuated, are mixed in far other proportions in our bosoms. They are, in truth, mere creatures of the fancy. We amuse ourselves with their dances, and postures, and flutterings, and admire the scenery of the stage on which they appear; but we are disturbed and fretted by the aspect of beings professing to be human, with whom we feel it is impossible to sympathise. We do not deny that if we judge these tales with reference to the individual author, they then assume a relative value exactly in proportion to the worth of the mind from which they proceeded. But in relation to human nature, we fear they are utterly valueless. Neither do we mean to deny that judging the 'Romances of Real Life' with regard to the merit of ordinary novels and the taste of ordinary novel-readers, they are amusing, touching, and eloquent. We only wish our readers to remember in their admiration; that 'The Reign of Terror,' and the 'Lettre de Cachet' are different in kind as well as degree from 'Wilhelm Meister,' 'The Bride of Lammermuir,' and 'The Vicar of Wakefield.' Next to the 'Lettre de Cachet,' with which our readers are probably acquainted, nearly the most interesting is 'The Bride of Zante.' It is a sort of Greek version of

'Auld Robin Gray,' the conclusion will give a fair notion of our authoress's more impassioned manner.

'It was on one of my earliest days of convalescence, that the suffocating state of the atmosphere induced me to entreat permission to pass the morning in Athanasia's shadowy apartment; which, opening to a court refreshed by many fountains, and itself encrusted with marble, offered a most luxurious retreat for the sultry noon.

'I was reclining on a divan, the book over which I was dreaming gradually becoming too heavy for my languid hands, while Athanasia with her usual soft tranquillity of brow and listlessness of demeanour sat twisting her everlasting silken cord beside an opposite lattice; when old Irene the nurse, drawing mysteriously towards me, whispered significantly that a stranger—a young Zantiote peasant—importunately demanded an interview. "Shall she return, my son, or—"

"'Tis Zaphryne!" I exclaimed, interrupting her—

"admit her instantly."

"Nay, the damsel named herself Agostna."

"Will you," said I, turning towards Madama Gordeleni, "will you permit me to receive in your presence, and solicit your notice for a very fair and gentle countrywoman of your's, in whose fate I am warmly interested?"

Athanasia calmly consented, yet certainly her large dark inexpressive eyes wore a wider character of surprise and curiosity than I had ever yet seen them exhibit. In the mean time, my own astonishment was scarcely inferior. The infirm Agostna! what could have brought her to the city?

'She entered to determine my perplexity, and having bent her feeble way towards Athanasia, and pressed the hem of her garment respectfully to her lips, she turned unto my couch. Apparently startled by the spectacle of my wasted features and attenuated limbs, she paused abruptly, knelt down in her humbleness, crossed her hands devoutly over her bosom, and either wept or prayed—or both.

"Agostna," I exclaimed at length, touched by the continuance of her emotion, "speak, maiden! Thou art silent—thou dost tremble—tears are on thy face—some evil hath befallen Zaphryne!"

'Still she trembled, still wept, but answered not a word.

"She is no more!" I ejaculated. Agostna waved her head in denial. "In sorrow then, or in sickness? Perhaps Alexius hath perished on the seas?"

"Alas! no," replied Agostna, recovering her voice. "I could wish him with the dead; for no further joy awaits him among the living."

"Agostna!" I faltered, "thou seest that I am worn with disease, trifle not with my exhausted strength,—torment me not with suspense; but say on!—what has chanced?"

"Nought, save evil, gracious Sir!" replied the young Greek, in a clear, but very gentle voice; "and chiefest in thy grievous sickness; which, while it augmented our sorrow, deprived us of thine interposition. The Count Lengrazio's malice was but the more deeply aggravated by Zavò's unexpected release; he swore that his purpose should not be overmastered; and well has he kept his oath. Scarcely had he found himself compelled to resign his hold upon the lands of my kinsman, when Zavò—suddenly summoned before the Proveditor in council—was required to produce his hereditary titles to their possession. The old man answered—and he said it proudly—that the parchments were deposited among our island archives; but the Zantiote records were searched, and not a single deed allusive unto Zavò's possessions could be found!"

"Treachery!" I exclaimed, "base and manifest treachery!"

"Not one in the whole island doubts it," resumed Agostna; while Athanasia, now interested in the relation, drew near to listen. "Nay, so completely was the common voice upon our side, that he dared not follow the persuasions of the Barnabotto Lengrazio, to declare my kinsman's lands confiscate to the State. He gave him, indeed, a month of grace wherein to seek out the missing documents, or otherwise substantiate his claims."

"And he hath been unsuccessful—Agostna! I read it in thine eyes."

"Alas! alas! his hopes have been altogether thwarted; and, worse than all, a fierce emotion of resentment, and a resolution to meet in every extreme

the black machination of his enemy, have been enkindled within his heart."

"And what marvel?" I exclaimed. "Hath he not been persecuted—oppressed—hunted by a blood-bound!"

"No marvel; but the greater sorrow," replied Agostna, mournfully; "for Raolo, whose interest with my lord the Proveditor is known as far exceeding that of Lengrazio, has but too well profited by the strife in the old man's mind, stimulating his desire of vengeance, and enhancing the joy of triumph!"

"And has promised in requital for Zaphryne's hand, to circumvent the scheming of the Barnabotto?"

"Even so, gracious Sir," replied Agostna. "Tomorrow expires the month of reprieve—and—"

"Why have I not heard of this?" I exclaimed. "Why thus tardy, Agostna, in thine appeal?"

"Day after day, hour after hour, have we tarried by thy portal;—Zaphryne—Zavò—my very self—to implore thine aid or thy good counsel. But then, alas! death was in thy chamber;—and now—all were too late!"

"Nay!" interrupted Athanasia, touched by the deep feeling evinced by the young peasant; "tomorrow is a far hour;—we will speak this night with the noble Proveditor."

"Ere night," answered Agostna, faintly bending once more her fearful looks upon the ground, "Zaphryne will be the bride of Raolo."

"She shall not, if there be hope in Heaven," I exclaimed, rising from my couch.

"No—no!" faltered Agostna, laying her cold, trembling hand on my arm, "I pray thee, gracious Sir,—spare thyself all hurtful effort. By this hour,—yea! by this hour, their vows are breathed before the altar."

"The hazard," I exclaimed, about to leave the chamber, "is at least worth the attempt."

"Be it mine then," said Madama Gordeleni, with more decision than I had ever seen her assume. "I will myself unto the palace. Within there!" she exclaimed, clapping her hands;—"my veil, Irene!—thine own!—bid my attendants follow me with a *calesse*,—and thyself attend my going forth."

Again Agostna reverentially kissed the hem of her garment.

"Yet stay!" said Athanasia, turning towards me,—"one mode of certain success occurs to my thoughts,—to mine, who know well by what base means, our nation is compelled to propitiate its Venetian oppressors. The Proveditor has often expressed his admiration of thy favourite horse,—thine Arabian?"

"Often—often;—has even sought it in purchase at my hands."

"Resign it to him then."

"As a gift—as a *bribe*, willingly; but no traffic with such a reptile."

"As thou wilt;—he will not quarrel with the terms;" and with a kindly speed, Athanasia Gordeleni exerted herself to depart upon her errand.

The minutes of suspense, meanwhile, were grievous; and Agostna did but aggravate my impatience by relating to me that her especial errand in the city had been from Zaphryne unto myself. "Go to him!" she had said, "for unto none, save so kindly a heart, can I entrust the fulfilling of my thought. Tell him that—Alexius—that the returning vessel for which I have watched so long, is expected, hour by hour, within the harbour. Bid him look upon the face of the despairing man,—he will not despise it that it is a poor one, and a lowly—and comfort him, even with such vain comforting as words can convey. Bid him say that my heart was faithful, although my hand was submissive unto a father's prayer; and that the death I shall daily implore, will be the more tranquil, the more sweet, that I know my Alexius resigned to the decree of Heaven's high will. Bid the stranger confirm his early mercy to the miserable Zaphryne; and when he leaves the Zantiote shores, take from its poisoned atmosphere that wronged lover of her youth whom she dare not to look upon; and say, Agostna, for thou knowest well how faithful he is—and how full of trust;—that he was true to me, and will be true to him."

"It shall not need—it shall not need!" I exclaimed, interrupting the weeping girl;—"or Heaven knows I would have fulfilled her prayer."

Irene—poor decrepit soul!—now panted into the chamber, bringing me from the lips of her mistress an assurance, on the part of Count Michael, that Zavò's case should be favourably adjudged in the morrow's

council. I had no time to curse the venal wretch,—not even in my heart;—I prepared myself,—feeble as I was,—to mount my propitious Arabian for the last time;—fly to the valley,—and rescue Zaphryne from a destiny so abhorrent to her heart.

"Out on thee! for a madman," exclaimed old Irene. "Has thy path fallen under an evil eye?—Thou to ride in the fierce noonshine?—thou to brave an atmosphere which my sweet mistress, in the fulness of health, dared not to re-traverse on her homeward way?—Why myself, although inured to weather changes, I felt as I ran hither from the Proveditor's, even as a hart that panteth for the water-brooks."

Careless of her vehement expostulations, and far more regardless of Agostna's beseeching looks, I desisted not from my preparations.

"Go not,—oh! go not, my son!" said the aged crone, yet more importunately. "There is a stillness—an oppression—as of a coming storm; the breathlessness of nature pausing for the issue. Yesternight the fishers of Chieri beheld the waters of the great deep troubled,—although tideless, and breezeless,—as if by the concussion of some distant earthquake. Go not, my son."

I had her look to Agostna's evident distemperance, not to my contingent calamities. I told her plainly that I would go,—and go I did; climbing, rather than vaulting, as was my wont, upon my favourite horse—the Arabian—whose matchless speed I was determined should serve me even this one more time. It recognised the well-known hand, however feeble, which gave it the rein; and flew like wind,—where wind, Heaven knows, there was none. A terrific breathlessness seemed, indeed, to overspread the earth.

I reached the hill commanding the valley of the vines; I looked towards the grassy ascent terminating its correspondent limit;—I looked to the sea—"it was as unruddied as glass might be;" I looked towards the trees—the palm-trees—and lo! there remained but one solitary, widowed, desolate stem;—the other, and Zaphryne, were lost for ever to the eyes of their Alexius!

Still I went forward. Too late to save, I felt that I might yet console and re-assure;—I might promise to become the comforter of him she loved;—might cheer her upon her return from the ill-starred nuptial ceremony. I went forward,—passed the outskirts of the vineyards; and beheld, some few hundreds of yards before me,—just ascending the shrubby hill,—the bridal procession; two by two, garlanded, and in gorgeous array; and headed by the Ionian Zaphryne, and Raolo the Venetian!—beings whose union appeared forbidden by the voice of nature itself.

Was it the overpowering consciousness of disappointment, or was it the sulphureous oppression of the lurid atmosphere, which wrought so deadly a faintness in my heart, and caused me to lean so heavily upon my saddle?—My horse, my gallant horse, paused abruptly,—trembling in every limb,—as if appalled by some hideous vision. I urged him on—in vain!—the earth trembled and rocked beneath his rooted feet! I remembered that I was in Zante; and attempted to subdue my own shuddering consciousness, by a self-assurance of the frequency,—the innocuous frequency of the phenomenon. I observed that the bridal procession, which had nearly attained the brow of the hill, was halting in disorder,—but secure from all perilous vicinity to a dwelling made with hands. The Zantiote youths were supporting and striving to assure their gentle partners of the day—the fair bride-maidens of a fairer bride.—Yet the Venetian—as I distinctly saw—dared not even approach the wife so lately sworn his own!

Again the undulating earth quivered, as from some remote shock; and Raolo, no longer able to repress his feelings, turned towards Zaphryne, and attempted to fold her to his bosom. With what a gesture of loathing did she repel his arm!—with what strength did she burst from his detaining grasp,—defy his entreaties,—and, with the speed of a fawn, ascend the hill, and enter the frail cottage,—which already toppled with the force of the repeated concussion.

My heart grew sick!—in another moment the ground once more heaved like the billow of a swelling sea; and when I gained courage to look towards the summit of the hill, eddying clouds of dust obscured the ruins of Zavò's dwelling. All was over!—the victim had immolated herself upon the very altar, in the tenacious preservation of which her sacrifice had originated; and a gray-headed man was tearing his hair, and shrieking forth the name of—Zaphryne.—Vol. i. pp. 206—221.

ANECDOTES OF DOGS.

Biographical Sketches and Authentic Anecdotes of Dogs, &c., &c. By Captain Thomas Brown, F.R.S.E., F.L.S., M.R.P.S.E., M.W.S., &c. 12mo. pp. 570, with Engravings. Oliver and Boyd. Edinburgh, 1829.

Dogs! what a glorious subject! For an article? No; for an encyclopædia. Show us a man who has lived with dogs for thirty years, on terms, not of mere acquaintanceship, but of friendship and affection, and we will 'wear him in our heart of hearts,' as one whose conversation cannot be dull, for he has facts to tell more interesting than are to be found in all the fashionable novels,—whose mind cannot be uncultivated, or else his companions would have turned him off,—whose affections cannot be cold, or he could never have loved and been loved by the noblest and best of God's creatures. The present volume is a very fair collection of stories, though nearly as good could be furnished, perhaps, out of most persons' individual experience. The following is one of the best:

An astonishing Dandy.

'Mr. McIntyre, patent-mangle manufacturer, Regent Bridge, Edinburgh, has a dog of the Newfoundland breed, crossed with some other, named Dandie, whose sagacious qualifications are truly astonishing and almost incredible. As the animal continues daily to give the most striking proofs of his powers, he is well known in the neighbourhood, and any person may satisfy himself of the reality of those feats, many of which the writer has himself had the pleasure to witness.

'When Mr. M. is in company, how numerous soever it may be, if he but say to the dog, "Dandie, bring me my hat," he immediately picks out the hat from all the others, and puts it in his master's hand.

'Should every gentleman in company throw a pen-knife on the floor, the dog, when commanded, will select his master's knife from the heap, and bring it to him.

'A pack of cards being scattered in the room, if his master has previously selected one of them, the dog will find it out and bring it to him.

'A comb was hid on the top of a mantel-piece in the room, and the dog required to bring it, which he almost immediately did, although in the search he found a number of articles also belonging to his master, purposely strewed around, all which he passed over, and brought the identical comb which he was required to find, fully proving that he is not guided by the sense of smell, but that he perfectly understands whatever is spoken to him.

'One evening, some gentlemen being in company, one of them accidentally dropped a shilling on the floor, which, after the most careful search, could not be found. Mr. M., seeing his dog sitting in a corner, and looking as if quite unconscious of what was passing, said to him, "Dandie, find us the shilling, and you shall have a biscuit." The dog immediately jumped upon the table, and laid down the shilling, which he had previously picked up without having been perceived.

'One time, having been left in a room in the house of Mrs. Thomas, High-street, he remained quiet for a considerable time; but, as no one opened the door, he became impatient, and rang the bell; and when the servant opened the door, she was surprised to find the dog pulling the bell-rope. Since that period, which was the first time he was observed to do it, he pulls the bell whenever he is desired; and, what appears still more remarkable, if there is no bell-rope in the room, he will examine the table, and if he finds a hand-bell, he takes it in his mouth and rings it.

'Mr. M., having one evening supped with a friend, on his return home, as it was rather late, he found all the family in bed. He could not find his boot-jack in the place where it usually lay, nor could he find it any where in the room after the strictest search. He then said to his dog, "Dandie, I cannot find my boot-jack,—search for it." The faithful animal, quite sensible of what had been said to him, scratched at the room-door, which his master opened. Dandie proceeded to a very distant part of the house, and soon returned, carrying in his mouth the boot-jack, which Mr. M. now recollected to have left that morning under a sofa.

'A number of gentlemen, well acquainted with Dandie, are daily in the habit of giving him a penny, which he takes to a baker's shop and purchases bread for himself. One of these gentlemen, who lives in James's-square, when passing some time ago, was accosted by

Dandie, in expectation of his usual present. Mr. T. then said to him, "I have not a penny with me to-day, but I have one at home." Having returned to his house some time after, he heard a noise at the door, which was opened by the servant, when in sprang Dandie to receive his penny. In a frolic Mr. T. gave him a bad one, which he, as usual, carried to the baker, but was refused his bread, as the money was bad. He immediately returned to Mr. T.'s, knocked at the door, and, when the servant opened it, laid the penny down at her feet, and walked off, seemingly with the greatest contempt.

'Although Dandie, in general, makes an immediate purchase of bread with the money which he receives, yet the following circumstance clearly demonstrates that he possesses more prudent foresight than many who are reckoned rational beings:

'One Sunday, when it was very unlikely that he could have received a present of money, Dandie was observed to bring home a loaf. Mr. M., being somewhat surprised at this, desired the servant to search the room to see if any money could be found. While she was engaged in this task, the dog seemed quite unconcerned till she approached the bed, when he ran to her, and gently drew her back from it. Mr. M. then secured the dog, which kept struggling and growling, while the servant went under the bed, where she found sevenpence-halfpenny under a bit of cloth; but from that time he never could endure the girl, and was frequently observed to hide his money in a corner of a saw-pit, under the dust.

'When Mr. M. has company, if he desire the dog to see any one of the gentlemen home, it will walk with him till he reach his home, and then return to his master, how great soever the distance may be.

'A brother of Mr. M.'s and another gentleman went one day to Newhaven, and took Dandie along with them. After having bathed, they entered a garden in the town, and having taken some refreshment in one of the arbours, they took a walk around the garden, the gentleman leaving his hat and gloves in the place. In the mean time, some strangers came into the garden, and went into the arbour which the others had left. Dandie immediately, without being ordered, ran to the place and brought off the hat and gloves, which he presented to the owner. One of the gloves, however, had been left; but it was no sooner mentioned to the dog than he rushed to the place, jumped again into the midst of the astonished company, and brought off the glove in triumph.

'A gentleman living with Mr. M., going out to supper one evening, locked the garden-gate behind him, and laid the key on the top of the wall, which is about seven feet high. When he returned, expecting to let himself in the same way, to his great surprise the key could not be found, and he was obliged to go round to the front door, which was a considerable distance about. The next morning strict search was made for the key, but still no trace of it could be discovered. At last, perceiving that the dog followed him wherever he went, he said to him, "Dandie, you have the key,—go fetch it." Dandie immediately went into the garden, and scratched away the earth from the root of a cabbage, and produced the key, which he himself had undoubtedly hid in that place.

'If his master place him on a chair, and request him to sing, he will instantly commence a howling, which he gives high or low as signs are made to him with the finger.

'About three years ago, a mangle was sent by a cart from the warehouse, Regent Bridge, to Portobello, at which time the dog was not present. Afterwards, Mr. M. went to his own house, North Back of the Canon-gate, and took Dandie with him, to have the mangle delivered. When he had proceeded a little way, the dog ran off; and he lost sight of him. He still walked forward; and in a little time he found the cart in which the mangle was, turned towards Edinburgh, with Dandie holding fast by the reins, and the carter in the greatest perplexity, who now stated that the dog had overtaken him, jumped on his cart, and examined the mangle, and then had seized the reins of the horse and turned him fairly round, and would not let go his hold, although he had beaten him with a stick. On Mr. M.'s arrival, however, the dog quietly allowed the carter to proceed to his place of destination.—Pp. 218—223.

We have much more to say about these same dogs.

We reserve our notice of Miss Nina Sontag till next week, when we shall have had an opportunity of comparing her with her sister. They appear together to-night, Wednesday, at Mr. Kemble's benefit.

NEW MUSIC.

Second Volume, Songs of the Minstrels. The Poetry written by Harry Stoe Van Dyk, the Music composed by John Barnett. Mayhew and Co.

THE following Preface of the Composer will, perhaps, better commence our notice of this very agreeable work, than any thing else we could offer:

'The flattering success which attended the first volume of the "Songs of the Minstrels" has induced me to offer to the notice of the musical Public a second, containing imitations of the style of twelve other national airs.

'The lamented death of my talented friend, Harry Stoe Van Dyk, soon after the completion of the first volume, rendered it necessary for me to make a selection from his songs, not written with the view of forming part of this work. Should the present volume, therefore, be deemed inferior in character to the former, the connoisseur must remember that I have not had so wide a field to range in, which circumstance will, I think, entitle me to his indulgence.

'JOHN BARNETT.'

This second volume is, we think, quite as interesting as its predecessor, and we trust it will find a place in the musical library of every person of good taste. The author has evinced considerable ingenuity in the selection of so much variety, and we subjoin a list of the subjects offered.

- * No. 1. The Minstrel's Song of Love . . . Saxon Minstrel, Allegretto, F. 3-4.
- 2. The Hindoo Lover's Serenade . . . Hindoostanee, Andantino, G. 2-4.
- 3. Zephyr to Ray, or, The Persian Rose, Persian, Allegretto, E flat, 6-8.
- * 4. The Warrior's Dream . . . Moorish, Allegretto, A Minor, 6-8.
- 5. The Masquerade, or Juan and Lorenza, Castilian, Spirito, A. 6-8.
- * 6. The Spot where I was born . . . Portuguese, Andante, G. Common Time.
- 7. The Maid of Tartary . . . Russian, Simplice, C Minor, 2-4.
- * 8. The Canadian Barque . . . Canadian, Moderato, F. 6-8.
- 9. The Banner of the Cross . . . Greek, Pomposo, C. 2-4.
- 10. The Minstrel's Lament . . . Neapolitan, Affettuoso, E flat, Common Time.
- 11. 'Tis a very Dark Night . . . Turkish, Andantino, F. 2-4.
- * 12. The Tyrol Warrior Boy . . . Tyrolean, Allegretto, C. 3-8.

Those marked *, are also harmonised for two or three voices.

The whole presents so pleasing and clever an arrangement, that we forbear making any comparisons or selections, but again warmly recommend the whole as an unusually acceptable production.

The Cabinet. A Collection of favourite Melodies for the Flute, No. 1. Cocks and Co.

THIS is the commencing Number of a Periodical which promises to offer a desirable selection of airs, well-arranged for the flute, and published in a very neat form, at the moderate expense of 3s. each Number of 14 pages, containing between 20 and 30 pieces. This first book comprises the following variety, viz: Rondo, by Mozart; German Song, Beethoven; Romance and Polonaise, Mayseider; 'O mein lieber Augustin,' with variations by Camies; Romance, by Dressler and Haydn; Arietta, Mozart; Polonaise, Oginski; 'The Campbells are comin',' as a Rondo, by Bernard Lee; Aria, Berbiguier; Aria, Romberg; Petit Polonaise, Moscheles; Three Waltzes, by Herz; 'Roy's Wife,' by Dressler; Rondo and Minuetto, by Berbiguier; 'Nel cor pio,' Kuhlau; Two Ariettas, Mozart; 'Deh Calma,' from Rossini's 'Otello,' and 'Cara deh attendimi,' from his 'Zelmira'; Rondo, Berbiguier; Russian Air, Fecca; 'British Grenadier's March,' and Pastoralle, by Viotti. Thus is presented literally a scrap-book for the Flutist of the most useful description.

Duet. Myrtillo's Lament, from the 'Pastor Fido,' 'If words of Love offend thee,' a celebrated German Air; adapted by F. F. Mett. Ewer and Johanning.

AN easy trifle of only twenty bars, within the compass of but nine notes: very simple and quite German.

THE ATHENÆUM AND LITERARY CHRONICLE OF THIS DAY CONTAINS

ODD CHAPTER FROM A STORY WITH- OUT A NAME.

CHAPTER XIII.

WE have had occasion to allude to some lectures of Miss Corrie, on the subject of hoydenism. These admonitions were elicited by some symptoms of that vice which had appeared in Ellen, when she was hovering between her twelfth and fifteenth year. Some faults of this description Miss Corrie had allowed her to commit with impunity. She had not made severe remonstrances against Ellen, when she instructed her little pony to leap hurdles; she had only feebly objected to her playing bowls with her father, and she had even yielded, to her earnest intercession, (for fear of offending Mr. M'Kinnon,) that she might learn to swim, provided a bathing-woman could be found competent to undertake that branch of her education. But it was necessary, as she remarked, to draw a line. These pursuits, though certainly not befitting a lady, could not seriously injure her introduction into society. But when Ellen, instead of confining herself to these personal extravagances, began to use her tongue with prodigious volubility;—when, overstepping the modesty of nature in her conversation, and in defiance of all the rules of freemasonry, she took occasion to inform several gentlemen that Miss Eliza Nugent had called Mr. Courtney 'such a love;' when she narrated a delicate embarrassment, in which Miss Mordaunt had been detected; and one day, even went so far as to impeach the governess herself of wearing false curls,—it was high time to interfere. The two former offences occasioned a severe reprimand, the effect of which upon Ellen's mind was somewhat lessened by the great amusement which Miss Corrie seemed to take in dwelling upon embarrassments which the unfortunate disclosures had caused to the young ladies in question. But the last offence, the imputation of fictitious hair, Miss Corrie treated in the manner it deserved; because, as she rightly observed, that the two first were breaches of decorum, but an untruth was a moral crime. It caused Miss Corrie no little trouble to account for the extraordinary turn her pupil's mind seemed to have taken. Certainly, whatever defects might be discovered in her system of education, no one could charge it with a tendency to produce an undisciplined, or, as it was vulgarly called, a natural character. Some mothers had thought her plans too artificial; some fathers had complained that she had made their daughters merely show girls; but neither fathers nor mothers had as yet had reason to complain that those of their children who were under her care, grew up with an indifference or contempt for the world and the world's law.

Miss Corrie's adroitness generally enabled her to procure some compensation for any disappointment of her hopes. She was certainly mortified at finding that her education-machine did not manufacture the article in the style she had expected. Her vanity was touched in its most sensitive point; but then she soothed it by reflecting, that if her talents had failed in one point, they would be successful in another. She had not been able to make Ellen a lady at thirteen, but she could succeed in making her father believe that all his daughter's waywardness and wildness was the result of the discipline she had undergone, and persuading him also, which he was ready enough to believe, that this waywardness, instead of being a blemish, was a beauty; so that her reputation would be effectually vindicated, both in the eyes of others and her own. She found this task not difficult: a few pretty phrases, such as 'child of nature,' 'sweet unsophisticated little creature,' 'dear open-hearted child, little does she know what selfish beings there are in the world,' and so on; a few well-applied maxims, such as 'make a female honest when a child—she will be any thing else when she is a woman,' 'the greatest romp always makes the most perfect lady,' and the

like, somewhat modified by suitable remarks about the propriety, for the child's own sake, of checking this lovely disposition, were effectual in convincing M'Kinnon that the whole aim of Miss Corrie had been to make Ellen just what she was, which was just the best she could be. On this occasion, Miss Corrie's superficial views deceived herself as much as others. As she judged of character entirely by its outward indications, and never considered how much was due to education, and how much to circumstances, it never entered into her head to consider the motives or cause of Ellen's conduct. All her former trials had been made in London; and she expected that the effects of her system would have corresponded exactly in appearance as well as in reality with what she had observed in former pupils; but in this case, it happened, by a rare accident, that she underrated her own success. Had her views of character been less superficial, she would have found that she had much less cause for regret—could she have examined more deeply into the hoydenism of Ellen, she would not have detected in it any thing at variance with what it had been the object of her eight years' toils to cultivate. She would have seen none of that innocent glee of heart, which is indifferent to every thing without, because it is self-satisfied; none of that gaiety which moves at its own bidding, and will obey no bidding but its own; none of that self-independence which produces entire carelessness about the opinion of other creatures. She would have seen an object in all Ellen's excess, a method in all her madness. If she let her pony run away with her over hill and greensward, it was not because she liked the exercise, but because she liked the fame of exploit. She did not talk for the pleasure of talking, but for the pleasure of being listened to. She did not tell secrets because her heart was too open to conceal any thing, but because she knew that those who were not much interested in having them concealed, would like her infinitely the better for telling them.

Ellen M'Kinnon possessed, as we have said, an exquisite quickness of observation, and she instinctively caught the only method by which a female, between infancy and womanhood, can hope to gain distinction. She observed her little companions who were brought out to exhibit, and she saw, that of those who followed the directions of their governesses, and behaved like good girls, and sat upright in their chairs, instead of being rewarded, as they were promised, by every body's loving them, were called conceited 'pugs,' little old women, and other hard names, which she did not covet. Accordingly, leaving other little actresses to look demure, and be frightened at the number of spectators, she resolved to tread the stage boldly, play antics, and not to assume the decorous manner of a regular performer till she had attained the age when it was expected from her. Her success answered her expectations; her vanity found plentiful materials to feed upon; she was gratified by praises, and gratified by censures, which she could hardly distinguish from praises; gratified by being told by one person that she was the wretchedest little gipsy alive, and gratified by overhearing another remark, that she was the most artless of human beings.

And in truth, there were in Ellen Mackinnon gifts which were quite sufficient to account for any admiration which she received from the members of our sex.

[Here followeth an account of this young lady's person, which I take to be very like all other accounts of all other young ladies' persons, saving that the one here spoken of, being only fifteen years of age, fell necessarily somewhat short of the heroines of other novels in some of the perfections of face and form. Wherefore, I have thought it good to say merely that she had black eyes and was somewhat above the middle stature. Which three things, viz. her age, her height, and her eyes, being given, I have no doubt that any person with a

proper theory of the beautiful, and a sound knowledge of mathematics, will be able to describe the figure. After which, the author proceedeth to speak of a young gentleman, a cousin of the Miss Ellen Mackinnon hereinbefore named, whom he mentions to be the son of a very accomplished gentleman, and a much more accomplished lady, hight Montgomery, who, being, for reasons in his novel particularized, somewhat tired of the great world, had, within about four years before the date of this present chapter, taken up their residence in a very small village, situated on the sea-coast of Devonshire, about six miles from the great village of Melcove, and remarkable, as he most tiresomely explaineth through twelve pages, for some exceedingly wild scenery which the visitors of the watering-places, led astray by the delusive reports in the guide-books, which inform them that they may, at a trifling expense of time and trouble, see a miniature likeness of the Alps in Switzerland, most rashly frequent, to the no small detriment of the panels of their carriages, knees of their horses, and to the entire destruction of the wheels of such curricles, sociables, and dog-carts, as are hired for the day. He addeth, moreover, that, besides the said Mr. and Mrs. Montgomery, with their children, therein called Florence (a name, by the by, more properly appertaining to a woman, and here employed, abusively, of the other sex) and Maria, the other residents in the village were a drunken clergyman, two drunken and rival apothecaries, and sundry gentlemen of that class who, their occupation being the importation of French brandy, feel delicate scruples about occasioning trouble to the officers of his Majesty's customs. Having thus accounted for the reasons which may have given Mr. Montgomery a greater taste for the society of our worthy rector than he might elsewhere have felt, being a man somewhat squeamish in his disposition, and mentioned, moreover, that his visits were more long than frequent, because that there were no roads, he proceedeth with a rare knowledge of human nature, such as belongeth, in these later days, to few besides himself and the writers in 'The Court Journal,' (whereof, indeed, he boasteth that he is one,) to describe the kind of regard which subsisted between the two cousins, indicating the same principally by the fact of their riding together upon two ponies. He then goeth on as follows:]

Ellen was now about thirteen years of age, and Florence, who had thought considerably more than most youths of his time of life, (he was only senior to his cousin by a year,) began to entertain considerable fears that she would speedily acquire the cold manners of womanhood, and that their relation to each other must henceforth be much less intimate and agreeable. As this reflection was somewhat painful to our young hero, perhaps we ought not to think very hardly of him, when we confess that his youthful taste was not so utterly revolted as it ought, no doubt, to have been, at the development of hoydenish and unfeminine dispositions in his cousin. For, besides that along with these very strange habits Ellen likewise received about this time such an accession of girlish loveliness as might have been sufficient to make even an older logician than Florence fancy some mysterious connection between the two, the self-interest of the youth was so strangely promoted by a disposition which kept alive, and even increased, the freedom of that intercourse which he feared was about to be destroyed, that he must have been a very resolute moralist indeed, if his judgment on this point had not been something warped. Not that Florence could care for his cousin's public declaration of an intention to elope with him at the first convenient opportunity, for he partly understood that Ellen had studied a character, and that this was one of her ways of supporting it. But it was not in nature that he should think so lightly of their long sittings together, and their long walks together, and their long rides on

the Devonshire hills—the hills, I say—for in spite of the pretty matrimonial allegory drawn by a poet of the county, who wrote a panegyric on the lanes, Ellen and Florence, who had not learned the pleasures of connubial solitude, preferred a ground on which two could ride abreast.

All this was exceedingly proper in the opinion of the most prudent persons, and Ellen had entered her sixteenth year before they appeared to have occupied any part of the attention of the Secretary of State for the Home Department at Melcove. It was, I think, on a fine March day, in that year, that Miss Corrie first expressed an inclination to accompany the young people in one of their rides. If they did not like this proposal, they behaved very magnanimously under it; for Florence immediately offered his own horse for the service, and procured another from his father. Alas! that I should be called to narrate the particulars of that ride. Alas! that I should be obliged to allude to a difference of feeling which was but too soon manifested between Miss Corrie and the charger upon which she rode, to the various systems of coercion and conciliation which were from time to time resorted to by the lady, and which all proved ineffectual to quell the obstinate spirit of rebellion which had seized the other party, to the unpleasant consequences of such vehement discussions when they take place upon a hill-side in the teeth of a very high March wind, or, finally, to the necessity under which Meteor felt himself of parting with his female companion upon their reaching a small rivulet.

Yet this journey, so disastrous in its consequences, was undertaken with the worthiest intentions. For Miss Corrie had of late observed, that the intercourse between Ellen and Florence had been more shy and constrained than in former days, that they romped seldom, yet were not much less together, that Florence's public salutations at parting were by no means so tender as they had been, that their rides took a longer time, and she heard from competent authority were often performed at a walking pace instead of a full gallop—and lastly, she had received information from a quarter entitled to some dependence, that they had been seen seated together rather listlessly upon a hill-top, while their ponies were grazing,—not apparently engaged in conversation, but the fingers of Florence, as the deponent verily thought, were playing with Ellen's dark tresses. From all which circumstances, Miss Corrie, who knew of nothing between the first stage of a passion and its final catastrophe, concluded that they were already desperately in love—an opinion which with her usual profusion of sage maxims she mentioned to Mr. M'Kinnon. The worthy rector divulged the observation to Mr. Montgomery, accompanying the communication with some comments upon the extraordinary sagacity of his governess in drawing such decisive conclusions from such slight facts. The latter was not equally struck with this proof of wisdom, but nevertheless, he thought it a subject worthy of serious consideration. Florence's mother, with whom he discussed the question, and who happened to know considerably more of her son's character and feelings than all his other friends together, did not agree with him, that an attachment had already taken place, but thought that what was false as history, might be true as prophecy. On all accounts, therefore, it was thought wise that Florence should leave Devonshire. Mr. Montgomery hinted at Eton; but this was overruled by a remonstrance on the part of his lady, who represented the misery which a boy must suffer in having the whole scheme of his life changed without feeling that he had arrived at any new crisis of it. Florence's attainments would have fitted him for the University; but woe to the youth, though he be a Crichton, whose parents despatch him to an English University at sixteen. He either retains the diffidence of a boy and carries it forward into manhood and becomes a misery to himself; or he throws it aside with

every other quality which his education has given him, and becomes a misery to every one else.

From all these evils, that previous knowledge of society which is most agreeably and safely acquired by travelling, seemed to be a likely preservative. Accordingly at Mr. Montgomery's request, Mr. Melmoth consented nothing loath to start with his young pupil as soon as the arrangements for his departure could be completed.

I imagine that Florence's feelings, when he was apprised of their decision, were what most other boys who possess affectionate dispositions and great sensibility, joined to a lively disposition and imagination, would have experienced in similar circumstances. There was in them much of joy and much of sorrow: the latter, I dare say, seemed to him the larger ingredient, the former I should think really predominated.

He did not long delay a visit to the parsonage, in hopes that he should have been the first to inform Ellen of his intended departure; but in this he was disappointed. Miss Corrie had heard the fact upon credible authority, the night before, and she had too much thirst for finding out the state of her pupil's feelings to suffer any delay in making the experiment which was to confirm all she had conjectured. Accordingly, the next morning she came into Ellen's room, and, after a great deal of circumlocution, which Ellen knew very well was to introduce some subject on which Miss Corrie wished to know her feelings, said, with an air of indifference which Ellen understood equally well, was to throw her off her guard.

'Pray Miss M'Kinnon, did you see Mr. Florence Montgomery yesterday?'

'No ma'am.'

'Indeed; poor young man, he must be very much affected not to come near us.'

'Affected! I hope Meteor is not ill; he had a slight cold the day before yesterday. Would you like to send and inquire after your friend, Miss Corrie?'

'No, Miss M'Kinnon,' said the governess indignantly; 'I do not think you would exhibit so much unfeeling levity, if you knew to what I was alluding.'

'Oh, very likely not: I suppose you will think proper to tell me what it is presently; till then, I shall resume my work.' And she drew a little piece of muslin (upon which she was enacting some strange devices) out of a bag, and fixed her eyes intently upon it,—her usual resource, when she knew her governess meant to watch the movements of her face more closely than she thought proper.

'You have not heard, then, that he is to leave home so shortly.'

'Where is he going?' said Ellen, in rather a tremulous voice. 'Oh, I suppose to Exeter to dine with that ugly old Sir John Montgomery! Well, I pity him.'

'He is going to Italy, Miss M'Kinnon, for one and perhaps two years.'

'To Italy!' said Ellen, shaking her locks till they fell over her whole face, then fixing the eyes which she had taken such pains to conceal on some part of her work, and finally starting up. 'To Italy! Miss Corrie. Then he shall bring me some lava from Mount Vesuvius! Would not you like to have a piece for that collection of yours with the long name? Yes, I am sure you would; and there comes Florence down the walk, I will go, and ask him immediately;' and she ran out of the room to meet Florence with a laugh, which those who have felt the triumph of eluding the sagacity of a curious person, will not imagine was totally feigned to hide her real feelings.

In a few minutes Ellen was mounted on her pony by the side of Florence. Their ride that morning was unusually long and unusually silent. Florence had announced his departure in a few words, and Ellen's remarks upon the communi-

cation were very brief, and (probably owing to a slight cold she had caught) rather indistinctly uttered. Before the close of their ride they arrived at the top of their favourite cliff, and, according to their usual custom, dismounted, turned their ponies to graze upon the heath, and seated themselves side by side, on a spot which afforded them a view of little else than the dark waters which were against the base of the rock.

'You seem very fond of looking at that sea,' said Ellen, after they had been some time seated: 'I should think you would see enough of it in a few days to satisfy you.'

'I was not looking at it with much pleasure, I assure you, Ellen; indeed, I do not know why my eyes turned that way; but, when I am unhappy, I like the dashing of the waves better than any other sound one can listen to.'

'Oh! if that is the case, I should be sorry to prevent you from enjoying your favourite music, by talking or sitting near you. Mercury and I will retire if you please: I must get into the habit of riding alone; and so, fair Sir, good morning. Perhaps, when you return (here her voice trembled a little) three or four years hence from Italy, you will favour me with a call.'

'Now, Ellen, this is too bad: when I saw you every day and almost every hour, and never thought that a time was coming when we should be separated from each other, I did not think much of your waywardness; for I knew that when I met you next, you would have forgotten my offence, and be like yourself again. But now when we are so soon to be separated, I think you need not be very angry or pettish with me, even though I am not quite so gay on the day of our parting as on all the other days of the year—'

'And what should you have to be sorry for?' said the little coquette, resuming her place by his side. 'Why, are you not going to Italy, which we have both of us so often wished to see, where the sky is always blue, and where there are beautiful vineyards, and where the peasants are singing all day, and rowing in those pretty gondolas all night; and yet you pretend to be sorry!—and you expect me to be as good natured as you are, though I am to stay in this horrid Melcove with that detestable Miss Corrie, and without you!'

'Will that make any difference, Ellen?'

'Why, to be sure it will, a great difference. In the first place, who will ride with me? I am determined Miss Martnell shall not persuade me to go with her; and as for Papa, you know he never rides except to make calls upon his parishioners: and it will be very pleasant to stop and pass a long morning, whenever Mrs. Jenkins looked rather pale at church, or to settle about the christening of Mrs. Merriman's thirteenth, fourteenth, and fifteenth children. And then, you know, whenever we had a party, I always sent you over to Maria to desire her to be very poorly, and to want me particularly at Branston, to keep up her spirits; and now I shall have always to be present when Papa gives a tea-party, and I must sit up with my elbows, and looking as demure as possible, and listening with a grave face, whilst five old maids and their five companions give lectures on propriety. Oh! it makes me cry to think of it!'

'Well, I am glad that I have been able to do so much good in my time,' said Florence, rather hurt at Ellen's utilitarian reasons for regretting his absence; 'but my father's servant, Thomas, who has been chiefly employed about my horse, will have very little to do now, and I am sure he will be perfectly at your service to supply my place.'

'Thank you; but pray who is ill-natured now? I only mentioned what a good servant you had been to me, that I might show what a number of reasons I had to wish for your stay, and so you take it into your wise head that I shall not miss

you, as my very good friend and cousin. You are sadly capricious, my dear Florence."

"And so you will really think of me sometimes, when you do not want to ride, or to have an excuse for getting away from old ladies?"

"You had better not ask me that question too often, or you may tempt me to return it; and that, I am afraid, would lead you to tell very naughty stories."

"I do not care how often you ask it. I shall think of you at all times and in all places. If the skies look ever so bright, I shall think of the cloudy days we rode and walked together; and if the gondolas move ever so softly, I shall think of our tossing about in the little boats at Melcove; and, if the songs are sung ever so sweetly, I shall think of your 'Nanny wilt thou gang with me,' as sweeter and pleasanter than all of them. You do not believe me? Then I must take a security for my recollections; there, that lock is sadly in your eyes; I must relieve you of it."

"Any you please," said Ellen, leaning her head towards him to undergo the operation, till her cheek, by some accident, encountered his lips; "but I should have thought this flower, or this disagreeable nettle, that has stung me, whilst I was gathering its companions, will answer the purpose of recollecting our parting just as well."

"Our parting, perhaps, Ellen, if you gave it to me; but there are many other hours of our intercourse that I should like to remember much better than this last and saddest one; and this lock will not let me forget any moment that we have been together."

"At least, then, we must exchange tokens; for, though I am not much afraid that the good people of Melcove will drive you out of my head, I should like to have something which will always keep you present to my mind, as you are determined to run away from our sight."

"My dearest Ellen—"

"It is past five o'clock!" exclaimed Ellen, starting up, after a considerable interval; "I must positively return. But, before we go, promise me one thing."

"What is that?"

"That you will not let any Italian Signora call you 'Mio Ben,' as the ladies and gentlemen in Metastasio nickname each other. Now, in spite of my Italian master, I think Ben a very ugly name. Mr. Benjamin Montgomery! how shocking!"

"No one shall call me 'Mio Ben' but Ellen McKinnon. If she calls me so, I shall tell her, as I do now, that she is my own dear, sweet, little cousin."

"I shall never call you any thing but 'Mio Florence.'"

After a very affectionate conclusion of this tender interview, the children rose to depart. During their ride to the Rectory, they said something about a correspondence, gave each other yet one more adieu, and separated. When Ellen reached home, she found her father and Miss Corrie at dinner. She came in without changing her riding costume, in order to apologise for her delay; and, though she immediately withdrew, Miss Corrie had time to perceive that her eyes were unusually red. When she returned, however, she said something about the day proving very dusty, and being then very misty; which remarks, I suppose, were intended to account for the phenomenon that alarmed the acute perceptions of her vigilant Governess. At any rate, I, as her biographer, am not bound to suggest any other explanation than that which she vouchsafed to give.

Want of room necessarily compels us to omit three theatrical notices; one of 'Comus,' one of Miss Smithson in 'Juliet,' and one of Mademoiselle Vertpré, in her various characters.

ROYAL ACADEMY EXHIBITION.

(Continued from p. 283.)

WELL deserving of being classed with the paintings noticed in our last Number, and worthy in short to be ranked among the best works in the Exhibition, is Mr. Hilton's picture, 'The Meeting of Abraham's Servant and Rebekah,' No. 180. There is much beautiful painting and a considerable display of grand design in this performance: a fine rich, yet sober, tone of colour pervades the whole picture: the groups of male figures are well conceived, and painted with much effect; in those of the female attendants or companions of Rebekah, there is an evident *Raffaello* feeling. The idea and conduct of more than one of these forms is traceable in fact to the celebrated 'Incendio di Borgo,' of which the copy is now exhibiting in St. Martin's-lane. The principal figure, however—that of Rebekah—is not good: it is any thing but in the style of Raphael: it may be said rather to have the awkwardness and lifelessness of the Madonnas of the paintings of the Greek school before the commencement of the æra of revival. Mr. Hilton, while he was studying the forms, should have secured a little of the Promethean fire, of his illustrious master. As it is, this want of animation, and a too great lengthiness in the stature of the females in general, detract greatly from the effect of a picture which would otherwise be excellent.

Mr. Danby's picture, 'Subject from the Revelations,' the angel flying through the midst of Heaven, crying 'Woe, woe, woe to the inhabitants of the earth,' No. 4, is not equal to its argument, nor to the high reputation of the artist. There appears no sublimity in the design, and little effect in the treatment. The observation that the painting is beneath its subject, is still more applicable to another 'Subject from the Revelations,' No. 317, the mighty angel swearing by the Eternal, and by all created things, that there should be time no longer. The quotation of the sacred verses which have suggested the subjects of Mr. Danby's labours, impugns his want of success: they had better have been omitted from the catalogue.

Mr. Howard's 'Night,' No. 92, is a performance, about the merit of which we hesitate to come to a positive decision. The picture is in illustration of the following passage in the 'Paradise Lost':

Now glowed the firmament
With living sapphires: Hesperus that led
The starry host, rode brightest, till the moon
Rising in clouded majesty at length
Apparent Queen unveiled her peerless light,
And o'er the dark her silver mantle threw.

A countless bevy of sylph-like sisters, each bearing one bright star in her forehead, float about the invisible space: the Dioscuri, on their milk-white steeds, gallop up the arch of the firmament: Hesperus, of Herculean stature, and sedate in character, is seated on a cloud on one side; on the other, is the Moon, enthroned in earthly form, but unsubstantial, her head encircled with silvery glory, a mantle of mist unfolding itself before her; far below is the less brilliant abode of mortals, contrasting by the deep tints of its verdure with the hue of silver and sapphire of the celestial regions. The forms are light, and the faces pretty, while the powerful colouring in the right-hand corner of the picture, gives great effect to the mysterious character of the other parts.

Mr. H. P. Briggs is a very clever artist: his works ever possess some strong claims to admiration. This is the case with his painting of 'Queen Margaret of Anjou, who, after her defeat at the battle of Hexham, fleeing with her son into a forest, meets with robbers, and confides the young prince to their protection.' There is a vast deal of masterly effect about this picture; but the whole is spoiled by the too forced and apparent study in the details of the composition. The general idea,

both as to form and colour, and head of the principal robber, who arrests the violence of his accomplice with one hand while he puts the other behind him to conceal the weapon with which it is armed, is good; the action is so far sufficiently 'suited to the word,' and yet, by accident or mismanagement, has the attitude acquired such a fantastical air as to bear hard on the ridiculous. The child is the most *pleasing* part of the picture; yet even this figure does not appear to wear with perfect ease, and as if it belonged to him, his not unnatural position. No objection can be made as to the want of truth or propriety in the action of the little prince; it may be exactly such as the circumstances would have called forth; yet are the labour and placing of the artist in this arrangement, however natural, of the figure, far too obvious.

'The Landscape,' No. 9, is one of the most powerful, brilliant, and happy of Mr. Constable's productions. Nor is the *manner of the artist*, (the effect which Mr. Turner—but for the truth in attributing the saying to that gentleman we pretend not to vouch—is said to have likened to the splashing from a white-washing cieling,) so strong and objectionable in this picture as in many which Mr. Constable has heretofore exhibited.

The 'Greek Girl' of Mr. Pickersgill, No. 18, is a very prettily composed female figure, in rich costume, but wholly guiltless of any thing Greek in its character. The same objection is applicable to the 'Greek Girl' of Mr. Howard, and one or two other similar subjects in the Exhibition. The 'Study of a Greek Lady,' J. Hollins, No. 130, is the sole exception to this remark. In this picture, the head, costume, and attitude, are all in perfect unison of character, and truly *Hellenish*.

'Lord Byron's Dream,' No. 157, C. L. Eastlake, is more Oriental than Mr. Pickersgill's Greek. The landscape is noble and beautiful, and the air of quiet and repose which pervades the scene in the foreground, bespeaks no less the solitude of the desert when unintruded on by the passing stranger and his camel, than that deathly stillness in southern climes imposed on all nature by those noontide rays which, under a sky like ours, invite to activity, and animate to exertion.

The name of the artist, and style of the painting, in No. 1, 'Expulsion of Adam and Eve from Paradise,' Dubufe, are most decidedly French. We know not whether Mr. Dubufe be a native of France; but whether he be or not, we think many of our own painters might improve themselves, as to form and drawing, by attending to this picture. We cannot say that the style, either as to composition, expression, or colouring, is what we would wish to see prevalent in the British school.

We have hitherto confined our attention to the Great Room, and it may be as well to conclude our observations on its contents before proceeding to notice other pictures, the subjects of which would naturally class them with those already mentioned, but which are dispersed in the other apartments. We take a glance, therefore, at the portraits,—a mere glance however must it be,—for to follow them in their series, or to dwell on them, would only be productive of disgust, such a mass of trash does the aggregate present. We shall separate a few of the most striking, and most deserving of distinction, still confining ourselves to the Great Room. First and foremost of the artists of this class, in merit as in rank, is Sir Thomas Lawrence, of course, and among his productions 'The Duchess of Richmond' stands pre-eminent. This is a painting in the own true style of the artist; a lovely subject, designed with most courtly elegance, but with a slight dash of affectation. The treatment of the drapery is most masterly, and the head is absolutely living. Yet are we weary of Sir Thomas's red curtains, (in one sense so negligently, in another so laboriously introduced,) whatever be their effect

in throwing out the heads of his beauties. The manner or practice is absolutely inexcusable in a case like that of the portrait now in our contemplation, in which the artifice is so palpable, and in which the drapery is so obviously forced into the picture merely to place the head on. Beautiful and living as that head may be, its charm is not powerful enough to divert the attention from the shock it receives from the absurd employment of a slip—for it is a mere slip—of a red stuff of some description, hung between massive columns. The portraits of Miss Macdonald and Lord Durham, are also quite in Sir Thomas's style. As to the former, the very light of life and youth flashes from the sparkling eyes, while smiles sit in dimples on the cheeks; nor will the round and lovely arms pass unnoticed, relieved as they are with all their fineness of form, symmetry, and plumpness, by the black velvet which forms their background. It seems to be the universal opinion, that the 'portrait of the Marchioness of Salisbury,' No. 193, is unworthy of Sir Thomas Lawrence; nor, in justice to the President, are we disposed to dissent from this general judgment. And yet what we had heard of this picture, when in hand, raised our expectations of it very high. Alone in the air of life about the head, could we trace the work of this first of modern portrait-painters. The drapery appears like shreds of satin, and for the drawing, it may be asked, if even in a lay figure, the left leg could be placed, or remain in the position, in which that limb appears in this picture.

Mr. Jackson has, as usual, several very clever portraits. Dr. Wollaston's is a most pleasing one: the sentiment expressed in the whole figure, but in the head more especially and strongly, is delightful. Mr. Wilkie's 'portrait of the late Earl of Kellie,' has excited universal admiration. 'The portrait of Sir John Richardson,' by Mr. Phillips, is that of a pale subject; but the head is full of expression and character. Mr. Clint's 'portrait of Lord Spencer,' is also highly characteristic. Mr. Pickersgill's 'Jeremy Bentham,' is excellent both as a subject and a portrait.

'The portrait of the Dowager Countess of Dartmouth,' No. 199, is evidently hung in an unfavourable light. Although appearing to disadvantage as to colour, the expression of life and character thrown into the countenance are extraordinary, and bespeak it an admirable portrait.

POETRY.

Oh! would I were a bird! that I might fly,
Far, to some wave-embowered paradise,
From this hard iron world and all that in it be!
Some land which in another sphere doth lie,
Some blissful land of sunny hills and skies,
Some starry isle in yon blue sea,
A cloud-begirt Inare me,
Where spirits meek and wise
Might loftiest converse hold, my love, with thee and me!
Alas! this world! it is a weary weight
Crushing soft hearts, and then these only pine,
Consumed by their own fire away until they die!
While those whose very love is full of hate
Live on, e'en to the last, unweariedly!
But we have quaffed love's fiery wine,
Have prest the grapes incarnadine
Of lustrous poesy,
Then how should men not hate two spirits so divine!
Would we were in yon star! Joy's wreaths are
twined
Perchance of amaranth there; Death waves not
there,
Perchance, her filmy wings, but all is life and love!
There beauty is, unshaped and uncombined,
Bearing no seeds of dank and loveless care;
And the rich webs which Phansy strove,
To weave from waterfall and grove,
And every flow'et fair,
Live, dearest, in that orb which beams so far above!
Oh! that our bark was launched upon the sea
Which islands that calm sphere! How might we
sweep

Piloted by the breath of that divine command,
Which hung the suns in the immensity
Of trackless void: how might we cease to weep,
If with the plumed cherubic band,
Holding our watch o'er sea and land,
We climb the ethereal steep
Shouting, an armed host of brothers hand in hand!
Alas! we have no wings to soar away,
From this old earth, and o'er the dark abyss,
Which yawns between our hope and us, to bridge our
flight;
And shadowy death who hears not when we pray,
Flits here and there, grudging us her cold kiss;
Nor grants the cup of stern delight,
With liquid Lethe bubbling bright,
Quaffing whose fiery bliss
We'd seek the eternal realms of star-enthroned Night!
Then we'll live on, but not in this harsh world!
And if a bright creation of our own
Can give us love and hope, we'll seek them there and
find!
Following no wandering star through darkness
hurled,
No fabled Cyclad on her wave-built throne;
But from the wealth of our own mind,
Building a fame, that there enshrined
The god whom all disown,
May hold his glorious state, in two hearts so entwined!

THE ROYAL INSTITUTION.

THE subject of the Lecture at the Meeting on Friday last was the process and history of Wood Engraving. Mr. Mason, the Lecturer, commenced his discourse by explaining that the material altogether best adapted for the purposes of the wood-engraver was box-wood, which is preferred above all other sorts of wood, notwithstanding the small dimensions of the pieces in which alone it can be obtained. The inconvenience arising from this defect in size is remedied, it was showed, in some measure, by the union of several blocks, through the means of screws, as in the instance of an engraving about twelve inches square from Mr. Haydon's 'Dentatus,' a cut which was executed on four conjoined blocks. In procuring the material, Mr. Mason explained, it was formerly the custom to cut the tree crossways, or transversely to the grain; but this practice has been abandoned, and it is now the usage to work it downwards and according to the grain.

After exhibiting the various sorts of instruments employed in the process of wood-engraving, and illustrating, by actual operation, the manner of using them, Mr. Mason alluded to the different effects produced by the methods pursued in engraving on wood and copper; and explained that in engravings on copper the engraved parts represent the picture, while the contrary is the case with regard to wood, in which the impression is made by the raised parts, which operate much in the same manner as letter-press type. After these explanations, Mr. Mason took an impression from the cut made in the course of his illustrations, and thus completed his remarks on the process of the art.

The lecturer then proceeded to review the history of Wood Engraving, and, to illustrate this branch of his subject, produced, among several other of the earliest efforts of artists, a splendid work on the Apocalypse, by Albert Durer. The advances made by the art were then traced through its successive improvements, from the single wood-cut to the complicated process, in which several blocks are employed to produce various gradations of tint. One remarkable instance of this was referred to by the lecturer, in an engraving from a painting by Varley, in which no less than ten blocks had been used, and which in its effect nearly approached the depth and clearness of the original.

Mr. Mason paid a well-merited tribute to the memory of the lately-deceased Bewick. Before the time of that celebrated artist, he observed, the art of engraving on wood had made but little

progress in this country, as is sufficiently proved by the inferior character of illustrations of the kind to be found in old works. Honourable mention was made of the obligation under which the art lay to the Society of Arts, who, perceiving from the success of the efforts of Mr. Bewick the great value of which this mode of illustration might be rendered, rewarded him with a present of six guineas on the execution of a small cut, one of the series of his 'History of the Old Hound,' and which, whatever might have been its comparative merit at that period, would now be considered but an indifferent performance. After tracing the improvement effected in the art by Bewick, and enumerating his works, Mr. Mason congratulated his audience on the change that had taken place with regard to the successful practice of Wood Engraving in this country; remarking, that while we were formerly far behind the nations of the Continent in this branch of art, we now stood pre-eminent, and that we had attained a great superiority over the Germans, by whom it was now neglected.

The objects on the table of the Library, on this occasion, had reference to the subject of the lecture; among them, besides the illustrated Apocalypse of Albert Durer, already mentioned as having been alluded to and produced during the lecture, we noticed a curiously illustrated French missal, and several very interesting etcetera.

EVENING.

Up, my friend, and through the fields
We, in joy, will go,
Seeking all that Nature yields
To all who seek her so;
Over sunny vales and hills,
Bounding like a roe,
And by jewel-paven rills
From pure founts that flow.

Up, for now new leaves and flowers
In the fields are seen,
Nourished by the vernal showers
And the sky serene;
And throughout the lively hours,
'Neath the leavy screen,
Birds build up their slender bowers
In the new-sprung green.

And, some say, that at this time,
In the budding wood,
Dryads, to hear to hear the chime
Of their songs, have stood;
Joyous maids, a race sublime,
Beautiful, and good,
Goddesses in heavenly prime,
Hallowing solitude.

See, the clouds are all asleep
In the still blue sky;
Not a wave is on the deep,
Not a wind on high;
And the dews, which Heaven doth weep,
When the earth is dry,
All the hills in verdure steep,
Falling silently.

Then arise, and put to rest
Grief, and care, and pain!
All things, with the human breast,
Brotherhood maintain;
And the mountain's snowy crest,
River, lake, and plain,
Will the pure heart, grief-oppressed,
Soon make glad again!

OPINION OF M. GEOFFREY DE ST. HELAIRE, AS TO THE FACULTY OF SIGHT IN MOLES.—M. Geoffrey de St. Helaire has satisfied himself that notwithstanding the extreme minuteness of the organ of sight in the mole, that animal sees. Gales had acknowledged this fact, but Aristotle had denied it. M. Geoffrey reconciles the apparent contradiction by showing that there are two descriptions of moles, of which the one, the kind commonly known, has an eye disengaged from the eyelids, and sees; the other, smaller than the common mole, has eyes covered by the lids, and does not see.

THE DRAMA.

King's Theatre.

SINCE our last notice of the proceedings at this theatre, two operas have been produced with a success which would excuse a much longer critique than that for which we are able to find room. The first was 'La Gazza Ladra,' on Tuesday night, supported by Madame Malibran, Bordogni, Zuchelli, and Pelegrini; the second was, the 'Semiramide,' on Thursday night, represented for the benefit of Madame Pisoni, who combined on that occasion the talents of Mademoiselle Sontag, Zuchelli, Galli, and Bordogni, with her own, and thus threw a greater strength into the opera than could be fairly expected in ordinary times. But of its forerunner first, and with some reason, for it pleased us most. To be candid, then, and not to lure a dissident reader on through preliminary sentences of half confession, we say at once, that the Ninetta of Madame Malibran is not merely the most clever of her own performances, at least of those which we have witnessed, but by far the most vivid representation of the character itself which we have seen, or hope to see, or fancy that we can see. It is as impassioned a piece of acting as any that an English audience of this generation can remember. From the first note, look, or movement, to the very last in the drama, through all the vicissitudes of feeling, with every degree of gentleness or intensity, there is the same strength of conception, the same beautiful colouring, the same profusion of resource, but employed every where to bring out and realise the character within the true limits, those limits perhaps being wider than would be suggested to a common mind, but sufficiently definite not to destroy the effect of unity of conception. It is, perhaps, an unfair judgment into which men are betrayed upon beholding any work so varied, to discriminate in all its parts—they say it wants simplicity and truth. Simplicity it does want; but the performance is true so far as it expresses a character felt and conceived by the artist. Madame Malibran would animate every part she undertook with a lively and quick spirit that corresponds possibly with her own. If she had been born the real Ninetta, the manifestations of her temper would have been such as we now see them on the stage. If Madame Pasta had been the housemaid of Fabrizio, she would have undergone her destiny in a different mood; she would have loved her suitor and her father otherwise; she might have been condemned to death with a patient and sublime composure; she would have been restored to her family without any of the ecstasy and childlike multitude of devices for throwing off her happiness which are natural in one of a less lofty spirit. And this distinction we could wish to observe in all these matters: for the operatic heroes and heroines are not bound to adapt themselves to any fixed standard of the characters they support. Those characters are and must be modified as they wish them to be; for the trashy language which is put into their mouths will suit one personage as well as another, unless vivified with a fire which is the artist's own.

To enumerate the beauties of this particular performance is beyond our wish—beyond our power. They appeared at first modestly, and one by one, like stars coming out upon a fair evening; but their brightness and number increased as the opera proceeded, so that the last scenes were all splendour, and the curtain fell in the midst of an enthusiasm on the part of the audience, which seemed quite puzzled to express itself. The opening of the opera, though not languid, was certainly not so animated as it should be. Ninetta's 'Di Placer,' which introduces the heroine, had none of the brilliancy which we have known as its destruction; it was sung with effort, and yet without effect, though the singer, as usual with Madame Malibran, substituted for the difficult portions in which she might have failed, other embellishments, of which she felt herself mistress; and above all, though she exhibited at its close symptoms of fatigue, that could only have been expected after an effort that must be successful. The arrival of her lover, an event signalled by nothing in the music-writing of it,—was additionally weakened in effect by the want of voice on the part of Signor Bordogni, who could scarcely on this night employ enough tone to exhibit his taste and nice modulation. Zuchelli, as Fernando, was the means of enlivening this part of the opera; and from the time of his entrance to the close of the entire performance, scarcely one bar was without interest. Nothing could exceed the excellence of the singing between him and Pelegrini, during the scenes in which the latter is pressing his suit with Ninetta, in her father's presence, and receives his official instructions about the deserter. His situation is one which

has never failed to excite, and perhaps it may be one which requires no extraordinary dramatic power: if it be so, we will reserve our eulogies of Madame Malibran, until something comes which no one else can claim or not claim on a similar ground. The trio, 'Oh! nume magnifico,' was warmly and deservedly encored; the voices had subsided without a shade of false tone; and the charm which it had, left no reaction behind it, for it was succeeded by the interview between Ninetta and the Pedlar. This was one of the most delicious bits of quiet acting throughout the whole. The girl's fear of interruption,—her half-shame of her employment, mingled with her great anxiety to effect her purpose, the impatience which quivered to her finger's ends, which were restless for the money that the Jew delayed—then her hurried dismissal of the rogue, and the struggle between what remained of her embarrassment and the pleasure of having gained a probable relief for her father—all this was painted with the minuteness of the Flemish pencil, without its homeliness. From this point of the drama, the sentiments and action become tragic; and Madame Malibran so contrives it, that the strength of the interest is intensified at every step, till it reaches the *scène à part*. We will not particularise any intermediate part in the further process of the performance to this fine catastrophe, for the chain deserves to be unbroken, but repeat, that it is full of talent, both grand and minute, and that the heroine of the evening has raised herself by it, to a height which no previous display of her powers had led us to suppose within her reach.

In 'Semiramide,' we had an opportunity of seeing the part of Arsace supported by the singer for whom it was originally written, and who undoubtedly throws around it a lustre which the united faculties of Mesdames Vestris, Brambilla, and Schutz, would have failed to create. There is some division amongst the critics as to the pre-eminence of this character or that of Malcolm Graeme; but we cannot scruple to acknowledge that the Music of 'La Donna del Lago,' has a softness and fluency which are not so well calculated for the display of Madame Pisoni's bold and vigorous style, as the more chromatic passages of 'Semiramide.' These she executed with a vast power of intonation and expression; the former quality, from its very vastness, is perilous, and drives her notes to that critical boundary between music and mere noise, so that, according to a prejudice, or accident of judgment, they will be by some considered super-human, by others almost painful. Leaving this point alone, we are sure that the feeling of the vast majority may be taken as something almost rapturous in admiration of this particular performance. Few singers, if any, have, or have had, so discriminating a talent, so nice a power of managing the light and shade, the perspective of music. If a delicate organization has aided the intellectual management of her voice, yet the physical power must have been subordinate in the first instance to that fine susceptibility which guided and advanced it to its present excellence. There is no one who can compete with her as an artist, though it is said by many her beauties are mere refinements, which dazzle by a certain manner rather than by their essential charm. We would not be philosophical on such subjects, and the only test to which we could subject the doubted accomplishments, is the effect they produce on a hearer who has music in his soul. This is making the world—as worlds go now-a-days—the judges of Madame Pisoni; and we should be pleased, for her and their own sakes, if she were submitted to such an ordeal.

The votaries of Mademoiselle Sontag wish they had never seen her in the character of Semiramide. It has been judiciously observed that no freak, fondness, or folly, could tempt the most abandoned of Bedlamites to imagine her the mother of Madame Pisoni. There used to be a paradox in the papers of some man in York or Hanover, or that neighbourhood, who stood towards himself in the relation of a grandfather. When this idea has been realised by humankind in general, they may turn their thoughts, as a next step in the march of intellect, to the comprehension of the wild dream which M. Laporte has, in this instance, suggested. But dramatic illusion is rarely supposed to go a great way in these respects; and we will not even find fault with Mademoiselle Sontag's individual unfitness for the queenly state, her painful locomotion of the eyeball for tragic effect, the distortion of her pretty lip, the halting progress of her buoyant footstep; in short, the abandonment of all her true and absolute character, to assume one quite foreign to her: this we will forget; and then we shall have merely to remark, that the music itself is not delicate enough for her style; that Madame Pisoni and herself are antipa-

thetic, and cannot hope to find in one opera any room for a fair display of their respective characteristics. For this reason, all the earlier scenes of the play exhibited a struggle without complete success; and the singer did not breathe freely, or move in her own element, till the subject falls into a lighter vein, and the chorus of girls leads her among the hanging gardens, where she bursts forth into the exquisite melody which forms a theme of the overture. Here all is sunny and sweet; and the tones of her voice, 'musical as is Apollo's lute,' transport us into fairy land, with a dreamy troop of images before us, of Idalian nymphs, temples, and the honey of Hybla.

Signor Bordogni represented the tenor part with good effect. His voice appeared much stronger than usual, and allowed the audience to discover his very mastery use of it. Zuchelli and Galli had the other male characters. We cannot close our operatic notice of this week, without one word of reprobation with regard to a disgraceful interruption now frequently caused, if not in the progress of the opera, yet most certainly in the enjoyment of the audience, from sundry loud-tongued creatures, who insult every one but themselves, by a clamour of which the Coburg would be ashamed. No one, we dare say, would attempt to infuse into these people a love of that science whose perfection their neighbours have come to witness; or even to demonstrate to their absurd minds, that music now and then may be a thing well worth listening to. But some might attempt to make them blush for an indecorum which the menials around their table would try to avoid; and, if this weapon proves inoffensive to their steely impudence, a feeling of personal resentment on our own parts, for the inconvenience to which their clatter subjects us, will furnish, perhaps, another, against which they cannot be proof.

KING'S CONCERT ROOM.

WE have seldom been more highly gratified by music, than we were here on Friday. As lovers of concerts, and by no means objectors to the unconnectedness which they introduce between the different pieces of music, and especially as preferring all such music when presented to us free from the distractions of dramatic interest or decorations, we could not but receive the highest delight from the compositions which M. Laporte provided for our entertainment on this night and the Friday preceding. The principal part of the evening was occupied with selections from the works of Amara, a composer who, though very well known among continental musicians, has, we think, not received in England the attention which his noble genius merits; and we were more than once tempted by the 'Matrimonio Segreto,' into hazarding the remark, that much as our countrymen talk about composers and compositions, they are not very far removed from the state which Shakspeare describes, of 'men not having music in their souls.' Pisoni sang less at this concert than at the preceding one: a circumstance we regretted sincerely, from the delight we always experience in hearing her; she took a part with Mde. Monticelli and Sontag, in the famous terzetto 'Io faccio un incino,' with excellent effect; so much so as to produce an unanimous encore. But this was all. In recompence, however, Madame Malibran and Mademoiselle Sontag sang the duetto from Tancredi, 'Lascia mes,' &c., more brilliantly than we ever remember to have heard it executed before; we were particularly struck with the effect produced by the slowness with which they sang it, and exquisite taste in which all the introductions were made. Graziani and Zuchelli were excellent in a buffa duet from Cimarosa. The instrumental part of both these concerts was very inferior to the vocal; indeed, we have little scruple in saying that it was very bad; we observed frequently that all Signor Spagnoletti's skill could not keep his followers in time, and that very significant glances passed more than once between the singers and the orchestra; Pisoni herself, whose mastery over her orchestra marks her a consummate artist, darkened her brow more than once at their delinquency. Under these circumstances, we cannot approve of Weber's overtures forming any part of these concerts. From this censure we must except an excellent concerto on the trombone, on the first evening, on a theme from 'Tancredi'; and, on the second, another excellent performance, by two Italian brothers, on the trumpet, upon the 'Giorno d'orrore' of the 'Semiramide.' These were in excellent taste, and displayed admirable skill on the part of the artists. But why must Mr. Bishop be foisted into such company as he found himself in the other night? We really think that Cimarosa and Pacini are society too high for Mr. Bishop and his ballads, as we think it

neither wise for the lady's nor her auditors' sake that Miss Byfield should be sent to sing after Pizaroni, Sontag, and Malibran. We hope that M. Laporte will find these concerts receive the encouragement which they very richly deserve from our countrymen, especially as he appears inclined to introduce some of the finer works among us, which, in spite of our pretended musico-fanaticism, we never see produced on the boards of the Opera-House. The next concert, we believe, will principally consist of selections from the 'Zauberflöte' of Mozart; for the sake of the audience, as well as of the manager, we hope it will be well attended.

PHILHARMONIC SOCIETY.

THE Sixth Concert, led by Mori, and conducted by Potter, took place on Monday, May 11th, and was honoured by the presence of the Duchess of Kent. After some little delay, and discussion as to whether 'God save the King' should commence the Concert or not, the question was decided in the negative, and Beethoven's splendid and highly beautiful grand Sinfonia in B flat was performed for the commencing piece, in a more perfect and masterly manner than we ever remember. The dilettanti encored the slow movement, (rather too long a piece for the purpose we think,) but the Orchestral performers evinced such animation and care throughout, that they did not seem to think the repetition a fatigue.

No. 2—Aria 'Fra tantè angosere,' Signor Bordogni. This gentleman is perfectly a second edition of Signor Torri, a little newer and brighter, but not any great improvement. It is rather curious that (exhibiting this striking similarity) he should have chosen for his debut at the Philharmonic, the same song of Caraffa's, that Torri did upon his first appearance at the Opera: the resemblance did not arise out of this alone, but was perceivable in his whole exhibition.

No. 3—Concerto Piano-Forte, Mr. Cramer, composed by himself. As Cramer has been singularly felicitous in enjoying the very highest reputation as a performer upon the piano-forte, perhaps for an infinitely longer period than any other master, we (in common with all the audience) felt an unusual interest in this performance, and took especial and critical notice of it. The whole style of his writing, playing, and general demeanour, assimilated, and were all dignified, graceful, and elegant, if not so florid and surprising as the performances of some other professors. His first movement in D minor, and second (the andante in 3-8) in F, were from his opera 16, which he played four-and-twenty years since for the first time, the former much resembling the writing of Dussetz, (especially in the more airy and melodious parts,) and the latter quite in Cramer's own flowing and delicate style. The last movement was a very interesting and characteristic Allegro Spagnuolo (or Fandango) from his op. 70, in which the major and minor modes are interwoven in an unusually ingenious manner, and in the tutti parts, the accompaniments for flutes, clarionets, and horns, exhibited remarkable ability, and would have gone beautifully, but that the piano-forte was tuned too flat for them, and very injudiciously the violins were tuned to the piano-forte. This circumstance a little soured all the performances of the evening; for the heat of the room acting in direct opposition upon the stringed and wind instruments, it flattened the former, sharpened the latter, and, thus widening the breach, distressed all the performers. Cramer's Concerto was eminently successful, and received the acclamations of applause it merited.

No. 4—Aria, Madame Stockhausen, 'Deh! per questo' from Mozart's 'La Clemenza di Tito.' Great praise is due to this lady for the choice of the music she always chooses to sing at the Philharmonic, (the above beautiful song being taken as a specimen). She performed it in a neat, graceful, and pleasing manner, neither astonishing her audience by her execution, nor offending them by singing out of time and tune. Her chromatic descending scale in her cadence was delightfully exact.

No. 5—Romberg's very clever Overture in D concluded the Act, and went exceedingly well, as it deserves to do.

No. 6—The Act commenced with Mozart's fine old favourite Sinfonia in C, op 34, which must be above all praise, when performed at the Philharmonic, unless some accident happens. Upon this occasion, all was perfect.

No. 7—Recitative, Mr. Phillips, 'For behold,' and Song, 'The people that walked in darkness,' from Handel's 'Messiah,' with Mozart's accompaniments.

We have been accustomed to hear this song (man and boy) frequently every year, for two-and-thirty years past; but never did it excite the lively interest in our minds, and apparently in the minds of all the audience, as upon this occasion. By being detached from the Oratorio, and placed in juxtaposition with music of such a different age and style, it *shone out* in the most extraordinary and beautiful manner; and then Mozart's magnificent accompaniments so excellently performed! The tout ensemble was delightful, and Handel (in conjunction with Mozart) never before appeared to such advantage.

No. 8—Concerto, violin, Mr. Haumann, by Rode and Mayseder. Another new Violinist to be added to the quantity that already overwhelm us! Another conservatoire pupil to try and out-fiddle his predecessor! Mr. Haumann is a little swarthy German, possessed of the usual good opinion of himself and his talent, that generally characterises all the violin players that France has indulged us with; and, although the vigour of his performance was frequently surprising, yet he is by no means (upon the whole) equal to De Beriot, or Mori. His first movement was from Rode's old established and favourite concerto, and his last was Mayseder's interesting air in E op 40, dedicated to Paganini, and of which Mori has by frequent performance become a sort of proprietor: thus to exhibit it to Mori's leading was a bold attempt, it was during the lion at his very feet. Haumann's good qualities were, an extraordinary command of the finger-board, a still more marvellous agility of bow, accompanied by a fine sonorous quality of tone, and many of his skips exhibited the highest polish and extremest exactness, his flashes of fire and eccentricities occasionally reminding us of poor Kiesewetter; but all his expression was artificial, his style and execution the result of cool, deliberate, and sedulous practice, and as heartless as the violin upon which he played, and his time so erratic, as to make it impossible to accompany him with propriety. Such striking contrast as was perceivable between Mozart's Sinfonia, and Handel's Oratorio Song, was there also between the two concertos of Cramer and Haumann; yet all were excellent specimens in their way.

No. 9—Terzetto, Madame Stockhausen, Signor Bordogni, and Mr. Phillips, composed by Vaccai.

The arrangement of each Philharmonic Concert has at length become so fixed and uniform, so much a matter of course, that all the intention and spirit of the original institution has departed from it, and we are sorry to add, that this has been attended (for two or three seasons past) by a system of narrow policy, ever since the members passed a law to share the surplus funds to the exclusion of the associates, (an affair of the extremest injustice, and utterly at variance with the arrangements of the society when first established). Thus each Concert is composed of two sinfonias, two overtures, two concertos, (or concertante instrumental pieces,) and four vocal performances, for which two male, and one female singer are engaged; these vocal effusions consisting of two songs, a duet, and a trio. Now this trio is a difficult point, it should seem, to be chosen: we have had 'Tremate empi tremate,' 'Cosa sento,' 'Quel sembiante,' and 'Cruda sorte,' and at length we were on Monday indulged with a wretched imitation of 'Cruda sorte,' and 'Cielo il mio labbro,' in Vaccai's long, tedious, and rapid composition. The audience were tired of it, and began to remove before its conclusion.

Wretched as was the piece noticed above, still more so was the Finale, and yet it was an Overture of Beethoven's! He was applied to for an original composition by the Philharmonic members, during their liberal days, (a few years since,) and we believe they gave him eighty guineas for this deplorable piece of originality. He certainly procured some one to describe to him our national music, as performed at Lord Mayor's Show, and Bartholomew Fair; and in strict conformity with these our nationalities did he concoct his Overture. His trumpet and bassoon parts exactly resemble such as may be heard upon those occasions of festivity; and may they never again be heard any where else!

We see, by advertisement, that Madame Stockhausen's Concert takes place at the King's Theatre, on Wednesday next, the 27th inst., when will be repeated the celebrated terzetto by Cimarosa, for three ladies, sung by Madame Malibran, Madame Stockhausen, and Miss Wilkinson; some new Swiss Airs will be given by Madame Stockhausen; and the Tyrolese Duets, which have been performed at M. Mori's Concert, with the greatest applause, by Mesdames Malibran and Stockhausen.

* *Come Away!* a Ballad, the words by W. H. Esq., the Music composed and sung by Miss Wilkinson, Mori and Laveau.

This very light and agreeable melody is arranged with a simple accompaniment well suited to the subject, and made more characteristic by the addition of some serenade-lines far above the ordinary level to which such verses aspire. The prevailing mark of our present songs is, unquestionably, that of mere mawkishness. The more childish the words, the more vulgar the air, so, in proportion, will they be likely to become popular. It is gratifying, as in this instance, to meet with an example of a purer taste mixed up with a stronger power of composition; and with this praise we commend this song to our readers.

VARIETIES.

SUPPLEMENT TO BUFFON'S NATURAL HISTORY.—M. Lesson has published the second volume of his work on the Natural history of Mammiferous animals and birds discovered since 1788, intended as a supplement to the works of Buffon. This second volume is occupied with the natural history of man, with a description fully detailed of the varieties of the human race which have fallen under the observation of the author in the Indian Archipelago, New Holland, &c.

ATTEMPT TO DISCOVER THE PLACE OF EMIGRATION OF STORKS.—In the year 1813, the director Bornemann of Berlin fastened plates of brass under the breasts of young storks in several nests. None of these birds have re-appeared at Berlin, nor has any information been given of the direction they took, or of their ever having been seen. In 1828, the experiment was repeated with the addition of a coat of red colour to the plate.

MATERNAL SOLICITUDE OF MONKEYS.—The monkey, when young, is more intelligent than when he is old; and, by a singular contradiction, the more his physical force increases, the greater is the diminution of his power of intellect. Notwithstanding, however, the petulance, volatility, and uncertainty observable in the character of the monkey, the sentiment of maternity is most powerful in that animal. No occurrence in our menageries, observes M. Geoffrey St. Hilaire, in his recently published work on 'The Natural History of Mammifères,' excites more interest than the anxious cares which the female monkeys, when parents, show to their young. These cares are especially assiduous soon after birth. The mother carries her offspring always about with her, will not lose sight of it even for an instant, takes evident pleasure in gazing at it, becomes uneasy at the approach of strangers, and flies from them, either defying them with a grimace, or making a piteous look. 'The fair sex,' adds M. de Geoffrey, 'who visit our menageries, take great interest in this spectacle, to which they are especially attracted by discovering, through their maternal instinct, the manifestation of an actual participation in those lively feelings to which they are themselves subject.'

METEOROLOGICAL OBSERVATIONS AND PREDICTIONS.—M. Morin, in a Memoir on the Progress of the Correspondence for the Advancement of Meteorology, reiterates his prayer for assistance from the learned of Europe. He has taken the trouble, he says, of learning all the languages of Europe in order that he may be able to read in the original languages whatever papers and information may be addressed, either to himself at Mulhausen, where he at present resides, or to his Parisian correspondent, M. Carilian Grevy, Bookseller, Paris. In a preface to his memoir, the author gives a description of the hygrometer of Daniell, and a comparison of several barometers with the one of large sphere in the Observatory of Paris. The principal part of the memoir is occupied with the exposition of the theoretic views of the author. In this the exposition and explanation of phenomena are divided into two sections: the first is devoted to show the connection existing between what passes from one day to another; the second, that which exists between the great atmospheric changes in the same and different places from year to year. The former treats especially of the colour of the clouds, and of the atmosphere, and of evaporation. The memoir concludes with a succinct history of meteors since the 1st January, 1824, by an attempt at meteorological predictions to the end of 1830, for the whole surface of the globe: of these the following may be taken as a specimen:—"This year, (the author wrote at the beginning of 1828,) which presents itself as likely to be very humid, will probably have an autumn cold and rainy at the beginning, afterwards fine, and cold towards the end. In the year 1829, the spring may be rainy; but the summer and the commencement of the

autumn will, generally speaking, be very fine. The end of the year will be rather damp; the winter of 1829-30 will be very cold. The year 1830 will be a very dry one, with storms accompanied by hail, and the middle of the autumn will be damp."

FRENCH BOTANICAL RESEARCHES IN PERSIA AND INDIA.—In 1825, M. Belanger was sent by the French Government to Pondicherry, for the purpose of forming a botanic garden and making collections of the plants in India. In travelling to his destination, M. Belanger passed through Austria, Hungary, Transylvania, Moldavia, Little Tartary, Caucasus, Georgia, Armenia, Persia, and embarked at Bonchir, terminating his journey by sea. He quitted Paris in January, and it was not until the middle of March, among the snows of Caucasus, that he observed the first signs of the development of vegetation, and gathered among other plants the *Crocus reticulatus*. As he descended the mountains, the valleys and plains offered him a more abundant harvest: he collected hellebores, cyclamen, leucocum, cowslips, squills, and strikworts. In the beginning of April, he found the vegetation in the neighbourhood of Tiflis, but little advanced. In Georgia and Armenia, he collected not above a hundred plants. The family of the Cruciferae he found much more abundant and various than any other plant, a new proof that the saline effluences prevailing in that country, are more favourable to them than to other plants. At Teheran, M. Belanger collected above 300 specimens, although obliged, he complains, to herboreise galloping, with sword by his side and dirk in his girdle. He arrived at Pondicherry in the middle of April 1826. From Pondicherry he made excursions at various periods to Madras, and Calcutta, and Pegu. At Calcutta he received every attention and hospitality from Dr. Wallich. M. Belanger is now on his return to Paris to publish the details of his researches. The following is a summary of the results of his labours: 3,000 dried plants collected in Persia and the other countries visited by him; the laying out, and plantation of the botanic garden at Pondicherry, more than 1,000 living plants, and several hundred sorts of seed sowed in the same garden; from 60,000 to 80,000 slips of canes planted; minute journals of travels and operations; two collections of fish, of which one consists of the produce of the Ganges; five collections of seeds, and a zoological collection comprising several hundred birds, crustaceous animals, mollusca, &c., sent to the French Museum of Natural History; two small statues of Buddha in precious stone, from a temple in the Burmese country, and an Anglo-Burmese dictionary printed at Calcutta, in 1826, and not known in France, sent to the Société Asiatique, and to the King's Library. Two manuscripts in the Pali language, of which the more valuable is one of the sacred books of the Buddhists.

QUERIES TO OUR LEARNED READERS.—A foreign correspondent requests us to express how greatly he will feel indebted to such of our friends as will favour him with solutions to the following inquiries:

1. In 854, King Ethelwolf granted the clergy of Wessex a tenth part of all domains appertaining to him as Sovereign of Wessex. What is the date of the grant? And, if timed, in what work is it extant?

2. In 1258, the celebrated statutes of Oxford were brought to completion. Can the day and month when the Parliament confirmed them, be ascertained? In what collection are they to be met with? They are not comprized in Rymer's 'Foedera.'

3. In 1509, Henry the Eighth signified his approval of the famous Bill of the Six Articles. On what day did it receive his royal assent?

4. An Act of Parliament in 1549 conferred the right of marriage on the Clergy. On what day was the royal assent given to this Act?

5. A Synod was held in London in the year 1563. Is it possible to ascertain the exact period during which this Synod held its sittings? *

BIBLIOGRAPHY IN RUSSIA.—No bibliopolist of any standing can be unacquainted with the name of Count Th. Tolstoi as the fortunate possessor of a rare collection of Russian and Slavonian manuscripts and printed books. A catalogue of the former has been published by Kalaidowitch and Strojew; but it was unknown to the world, that the Count's library contained a variety of other treasures which have been enumerated and classed in a new publication, entitled, 'Comitis Theodorici de Tolstoi Bibliothecae Catalogus librorum antiquitatis et varietatis memorabilium.' This latter work contains bibliographical notices of one hundred and seventeen Latin and French books, printed in the fifteenth century, of which nine bear neither date nor

place of printing. Competent judges describe nearly the whole of this collection as being extremely rare and valuable, and portions of it as composed of very costly editions.

BIBLE SOCIETY, BERLIN.—The fourteenth anniversary of the 'Parent Bible Society' took place in October last, and was solemnly celebrated in the church of the Holy Trinity by public prayers and a sermon, preceded by sacred music and hymns. The report of this Society's proceedings, during the twelvemonth which had then elapsed, acquaints us that it had circulated 10,743 Bibles, and 3,283 New-Testaments, in that interval; whilst, during the fourteen years of its operation, the Parent Society had distributed 81,744 Bibles and 43,316 New-Testaments, and the auxiliary Societies, 275,011 of either description. This interesting scene was closed by the public presentation of one hundred copies of a Stereotype Bible to as many children, selected from the Charity schools of the Prussian capital.

Among the musical treats announced for this week, we know none which presents more promise than the Morning Concert of Signor De Begnis, which we observe is fixed to take place at the New Argyll Rooms, on Thursday next. The names of Malibran, Sontag, Pisoni, Camporese, Stockhausen, Wilkinson, De Vigo, Blasis, and the principal male singers of note, including De Begnis himself, with Sir George Smart for conductor, and Mori for leader, hold out the prospect of a gratification to the dilettanti difficult to be surpassed.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

DR. KITCHINER'S ZEST.—This incomparable Flavour for Soups, Gravies, Made Dishes, Game, Poultry, Fish, &c., the sole invention of the late Dr. Kitchiner, and repeatedly mentioned by him in 'The Cook's Oracle,' is now prepared from the Doctor's original recipe, and likewise sold by JAMES BUTLER, Herbalist and Seedman, Covent Garden Market, whose name is written on the direction for its use, without which none are Genuine. The Zest is particularly adapted for families travelling, imparting its delicious taste on immediate application. It will keep for any time, in any climate.—Sold also by Messrs. Knight and Sons, Italian Warehouse, 58, Gracechurch-street; and by Mr. Hickson, Italian Warehouse, 73, Welbeck-street, Cavendish-square; and Mr. Lazenby, 46, Lamb's Conduit-street; in bottles, 2s. 6d. each.

COLOSSEUM.

THE Public are respectfully invited to an inspection of this magnificent Exhibition, in its progress towards completion. It consists of the stupendous Panorama of London, taken from the summit of St. Paul's; a Saloon for the reception of Works of Art; a long range of Conservatories, stocked with the choicest Plants; and the Swiss Cottage.—Admission, 5s. each person; from ten till five o'clock.

THE EXHIBITION OF LODGE'S PORTRAITS OF THE MOST ILLUSTRIOUS PERSONAGES OF GREAT BRITAIN, from the Galleries of his Majesty, the Nobility, and from Public Collections, is OPEN DAILY, from nine till six, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, corner of Suffolk-street.

Admittance, by Tickets only, which may be had free of expense, on application to Messrs. Harding and Lepard.

A POLLONICON, a Grand Musical Instrument, under the immediate patronage of his Majesty, invented and constructed by FLIGHT and ROBSON, Organ Builders, is now OPEN to EXHIBITION daily, from One to Four, performing, by its self acting powers, Mozart's Overture to 'Idomene,' and Weber's celebrated Overture to 'Oberon,' which it executes with a grandeur and brilliancy of effect superior to any instrument in Europe, at the Rooms, 101, St. Martin's-lane.—Admittance, 1s.

EDUCATION AT BROUGH ACADEMY.

Westmoreland, conducted by Mr. ARROWSMITH and Experienced Teachers. Young Gentlemen are liberally boarded and expeditiously instructed in the English, Latin, and Greek Languages, Drawing, Arithmetic, Geography, with the use of the Globes, and the Mathematics, at from 18l. to 30 guineas per annum. No vacations. Cards, with full particulars relative to the School, may be had of Mr. Thompson, 62, New Bond-street; Mr. Coe, 27, Old Change; Mrs. Blydenstone, Harp-lane, Tower-street; but more particularly of Mr. Johnstone, Agent for the Academy, Burr-street, St. Katharine's Docks. Young Gentlemen from the East Indies particularly attended to, and reference given to the Parents and Guardians of Youth now at the Academy.

KING'S CONCERT ROOM, KING'S THEATRE.

MONS. and MADAME STOCKHAUSEN have the honour to announce that their MORNING CONCERT will take place at the above Room, on WEDNESDAY, 27th inst., at half-past one o'clock.

VOCAL PERFORMERS:—Mad. Malibran Garcia, Mad. Stockhausen, and Miss Wilkinson; Signori Donzelli, Begrez, and Curioni; Signori Zuchelli, Lavasseur, Pellegrini, and De Begnis.

SOLO PERFORMERS:—Piano-forte, Mrs. Anderson and Mr. J. B. Cramer; Harp, Mr. Stockhausen; and Violoncello, Mr. Lindley.

Madame Stockhausen will, in the course of the Concert, introduce some new Swiss Airs, and, for this occasion only, the most admired Tyrolean Airs, as Duettos, with Madlle. Malibran.

Leader, Mr. Mori.—Conductor, Sir G. Smart.
Tickets, 10s. 6d. each, to be had at the principal Music Shops, and of M. and Mad. Stockhausen, 14, Great Marlborough-street; where, also, Parties for Boxes may be accommodated, by an early Application, and at the Opera Box-office.

NEW ARGYLL ROOMS.

SIGNOR DE BEGNIS respectfully informs the Nobility, Gentry, and his Friends generally, that his MORNING CONCERT will take place at the above rooms, on Thursday, 21st of May, 1829.

PRINCIPAL VOCAL PERFORMERS.

Messdames Malibran, Sontag, Pisoni; Madame Camporese, Madame Stockhausen, Miss Wilkinson, Madame De Vigo, and Mademoiselle Blasis.

Signor Donzelli, Signor Bordogni, Signor Torri, Signor Begrez, and Signor Curioni. Signor Zuchelli, Mr. Lennox, (Pupil of Signor De Begnis,) Signor Giublet, and Signor De Begnis.

Grand Duo, Violin and Harp, M. De Beriot and M. Labarre. Grand Duo, two Trumpets, Signori Gambati. And Grand Fantasia, Piano-Forte, M. Moschelles.

Conductor, Sir George Smart. Leader, Mr. Mori.

The Grand Orchestra will comprise the first-rate talent in every department, selected from the Concerts of Ancient Music, the King's Theatre, Royal Academy of Music, &c. &c. Tickets, 10s. 6d. each, to be had of Signor De Begnis, 79, Quadrant; Mr. Szevin, Regent-street; and of the principal Music-sellers.

The Concert will commence at One o'clock precisely. Parties of six and upwards may be accommodated with Boxes, by an early application to Signor De Begnis.

TO NOBLEMEN AND FAMILIES.—DRAWING ROOM CARPETS.

WHITE and METCALF have the honour to announce that their new, and truly splendid patterns in Brussels Carpets, designed and manufactured exclusively by this Establishment, are now ready for inspection, in Qualities infinitely superior to any before offered, and suitable for either the Mansion or Cottage. Highest Price 4s. 3d. per yard. Navarino House, Lamb's Conduit street.

TERRA-METALLIC TEETH.

MR. A. JONES, Surgeon-Dentist, 43, New Bond-street, begs to acquaint the Nobility and Gentry, that, from many years' intense application, he has invented and brought to perfection, a New System of Fixing TERRA-METALLIC, NATURAL, and ARTIFICIAL TEETH, from one to a complete set, which are so accurately fitted as not to be distinguished from the original, and answer all the purposes of mastication, articulation, &c.—Mr. A. J. continues stopping decayed teeth with his unrivalled Anodyne Cement, which in one minute allays the most excruciating pain; and by this means carious teeth are wholly preserved and rendered useful, even if broken close to the gums. This being a metallic composition, it becomes hard as enamel in a few minutes, will not decompose with the heat of the stomach, and resists the effects of acids, atmospheric air, &c.—Cleaning, and every operation incidental to Dental Surgery.—At home from ten till five.

MR. MALCOLM'S NEW PROSE WORK.

In small 8vo., 7s. 6d. boards.

On Saturday, the 2nd of May, was published by Mr. Colburn, the First Number of a new Weekly Paper, called

THE COURT JOURNAL.—The leading and peculiar object of this Paper will be, to supply what has long been felt as a desideratum in the higher circles of the British Metropolis. Its pages will furnish a mingled Record and Review of all matters and events, (political subjects alone excepted,) which are calculated to interest that class of readers who come within what is understood by 'The Court Circle.' Such will be the peculiar, but by no means the sole, object of 'The Court Journal.' It will, in fact, embrace every feature which favourably distinguishes the most approved Literary Journals of the day.

'The Court Journal' is published every Saturday morning, handsomely printed on a quarto sheet of sixteen pages, containing forty-eight columns, price 8d.; or stamped for circulation in the country, free of postage, 1s.

Orders received by all Booksellers and News Vendors, and by the Clerks of the Roads.

Communications for the Editor may be addressed to the care of Mr. Colburn. Advertisements should be sent to the Office, No. 19, Catherine-street, Strand.

SOLO PERFORMERS:—Violin, Mr. Mori; Violoncello, Mr. Lindley and Mr. W. Lindley; Double Bass, Signor Dragonetti; Harp, Miss Loack; and Pianoforte, Mr. Mochelias.

LEADERS:—First Part, Mr. F. Cramer; Second Part, Mr. Mori; Conductor, Sir George Smart.

The Concert to begin at eight o'clock precisely.

Parties of six, or upwards, can be accommodated with Boxes by an early application at the Argyll Rooms.

Tickets, 10s. 6d. each, to be had of Mr. Lindley, No. 22, Percy-street, Bedford-square; and at all the principal Music Shops.

FRENCH PLAYS.—3000 French Plays, of every Description, and at the rate of 1s. per frame, with the Music of the New Operas, and that of 'Valentine, ou la Chôte des Feuilles,' vaudeville nouveau en deux actes; the Costumes of the French Performers, in their different characters; French songs for Harp, Piano-forte, and Guitar. 'Les Proverbes Dramatiques' de Th. Leclercq, seven for 5s., at Mr. Delaporte's, 75, Newman-street, Oxford-street, Professor of the French Language. French Evening Dramatic Conversations, now forming. Play-books supplied gratis to Subscribers. Private Parties attended at home.

This day is published, **HISTORY of RUSSIA, and of PETER THE GREAT.** By GENERAL COUNT PHILIP DE SEGUIR, Author of the 'History of Napoleon's Expedition to Russia,' Handsomely printed in one volume, 8vo. Price 15s. 6d. in boards; also, in French, 8s.

Count Segur has here done for the general reader what the latter would scarcely have done for himself. He has gone over the lengthy volumes of Karamsin, Levesque, and others, and presents us with the essence of Russian history in a brief but spirited abridgment, which even a busy man may read during the snatches of leisure he can find in a single week. It is executed, we think, with care and judgment. The matter is well selected, and the reflections interspersed show penetration and good sense. The style displays vivacity and taste; but is not quite free of the false brilliancy into which the example of Montesquieu has seduced many French writers. We confess that a work like this gives us just as much information on the subject of Russian annals, as we desire, or have time to make use of; and we are well pleased to have it presented in so attractive a form. The translation seems to be upon the whole well executed. —*Scotsman*.

Count Segur's candid and liberal 'Narrative of Napoleon's Expedition to Russia in 1812,' has made his name favourably known in the republic of letters. The work now before us, which is on a subject of far greater extent and difficulty, will not diminish his reputation. —*Edinburgh Literary Journal*.

Count Segur professes to give a rapid sketch of the life and progress of Russia, of the characters of the men that conducted to her alternate debasement and elevation; he has redeemed his pledge, leaving those who would seek for a minutest description to consult the pages of more verbose authors. The style of Segur, as will readily be conceded by those who have read his History of the great Russian Campaign, is full of vigour and animation; his pen paints a character in a sentence, gives a scene, full of stir and bustle, breathing a reality and freshness, in half a page—then passes on to a new subject, casting abroad scintillations of a vivid, acute, and elastic spirit. The author's account of Peter is very beautifully written. —*Weekly Times*.

We state our impression, without asserting it as a fact, that Mr. Segur's is a good book; and we would add, with much more confidence, that it is a better book than, we think, nine out of ten clever men would have written on so very difficult a subject. —*Athenæum*.

Printed for Treuttel, Wurtz, and Co., 30, Soho-square.

BARNETT'S SONGS of the MINSTRELS, Vol. II. Price 15s.

'These compositions are entitled "Songs of the Minstrels," and do equal honour to the Poet and Musician. The Portuguese Minstrel, "The Spot where I was Born," is particularly beautiful; and the Russian "Maid of Tartary," highly striking and original. These two, with the Neapolitan and Turkish, four of the twelve, are fully equal to the best of the first volume; indeed, there is not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is the cleverest and most tasteful of English composers. The Poetry is by the late Harry Stoe Van Dyk.' —*Vide Literary Gazette*.

Published by Mayhew and Co., 17, Old Bond-street, Where may be had the following New Songs:—

'Rise, gentle Moon,' sung by Miss Love, with the most enthusiastic applause, and nightly encored, in the historical drama of 'Charles XII.,' composed by John Barnett, with a beautiful Lithographic Portrait of Miss Love.

'My sweet Guitar,' sung by Miss Love with distinguished applause; composed by John Barnett.

'Here's a Health to Merry England,' National Song; sung by Mr. Braham, composed by John Barnett.

'Listen to my Wild Guitar,' written as a companion to the celebrated Serenade, 'The Light Guitar,' composed by John Barnett.

'The Chimes of Zurich,' sung by Miss Love, written by Harry Stoe Van Dyk, composed by C. E. Horn.

'Sweet Evening Star,' answer to Barnett's celebrated song, 'Rise, gentle Moon,' composed by Joseph Hart.

London: Printed and Published every Wednesday Morning, by WILLIAM LEWER, at the Office, No. 4, Wellington-street, Strand.

LONDON, WEDNESDAY, MAY 27, 1829.

Price 8d.

PROGRESS AND PROSPECTS OF SOCIETY.

Sir Thomas More: or, Colloquies on the Progress and Prospects of Society. By Robert Southey, Esq., Poet Laureate. 2 vols., 8vo. Murray. London, 1829.
(Concluded from p. 290.)

'POLITICAL Economy, a science of which a great deal is talked and written, and little understood,' says Mr. Southey, by way of preface to some curious speculations, statistical and social, of his own, which certainly need not furnish any exception to the lowness of his above-mentioned estimate of the state of economical science. Politics, a science of which a great deal is talked and written, and *nothing* understood, by some, at least, who talk and write with much effect and confidence,—is a sentence with which we feel inclined to fellow our author's. By a singular perversion of intellect, each of these important branches of study has been pursued on grounds and principles, as it were, transposed from the other, and has been subjected either to improper limitation or extension of its own peculiar province. Political economy, 'a science which must needs be,' in Lord Bacon's phrase, 'immersed in matter,' which is cognizant of blind material instruments and powers, and of such moral agencies alone of which the commonness and coarseness come nearest to these in mechanical regularity of effect and facility of estimation, is accused by its enemies of sordid devotion to those money-getting methods and propensities, to which if it did not in fact confine itself, it would cease to be a separate science; a fate to which its injudicious friends conspire to reduce it, who, with M. Say, seem anxious to extend its dominion over the whole constitution of society;—while politics, of which the main *ressorts* must be sought and found, if any where, in the moral nature of man, have been degraded, as it were, by common consent, into 'statecraft—the cleverness of an embarrassed spendthrift,'—while the only popular mode of discussing them is by supposing state-necessities and complex motives, of which those who publish them cannot be believed to know anything, while the grand unchanging principles are slurred or contemned, which to learn is in the power, and is the duty, of all.

The main ground of the quarrel with the promoters and encouragers of wealth and 'luxury,' which is laboured most strenuously by Mr. Southey, is such as we should previously have expected him to maintain, and is moreover taken up by so many worthy persons, with such a pious uniformity of logic and sentiment, that we do not feel ourselves called upon to look with any extraordinary strictness into the heresy of our author. It may be well enough gathered from the following question:

'How is it, said I, that every thing which is connected with *manufactures* presents such features of unqualified deformity? From the largest of Mammon's temples down to the poorest hovel in which his belotry are stalled, the edifices have all one character: time cannot mellow them; nature will neither clothe nor conceal them; and they remain always as offensive to the eye as to the mind.'

Now, without disputing the highly original thesis of our author, that a cottage is a more picturesque object than a cotton-mill, we would ask in what country agricultural industry has flourished unallied with manufactures and commerce? While Florence charged her barks with the produce of Egypt or of Hindoostan, her domestic manufactures flourished equally, and the fruits of

* Coleridge's 'Friend.'

rural industry, from the fields of her merchant princes, found purchasers at the doors of their palaces. A Tuscan cottage still attracts the glance of the traveller; but interior ease and happiness have fled from its walls. Again, is the squalid vice of manufacturing towns unbalanced by the scattered guilt and misery of rural districts? Is crime more prevalent in Lancashire or in Westmoreland? or has the swelling tide of pauper immigration broken in on us from a land of manufacture or of agriculture—Ireland? Is it not there, from the good custom of gavel-kind—the long-prevalent division and subdivision of the soil—the principle that every rood of ground maintain its man—that the ripe blessings of a chiefly agricultural and surely not excessively luxurious population are best realized, and stare us in the face?

With regard to the political absurdities of Mr. Southey, we have, on former occasions, looked upon them rather as excrescences from a morbid state of the logical part of his mind than as positive indications of a deep-seated defect or disease in his moral constitution. In this department also, as well as in his views of our productive and industrial powers, while there is much which we regard as erroneous, there is little (except of what redounds to his honour, or is harmless from the height of its extravagance) which we can fix on as peculiarly his own, or separate from the natural and usual result of those circumstances under which the social mind of England receives its popular bias and direction. On the continent, that mighty revolution (which now that its first ferment has had time to work off, begins to be conceived in its true character and effects among the starting points of social regeneration) has effected a grand *clearance* in the minds of men, has swept away the ruinous nests and hiding-places of prejudice, has torn up with a rude but wholesome violence the incumbent mass of antiquated systems which choked the original springs of individual and national energies, and has enabled men to throw the light of principle on the history and traditions of the past, without trucking for the obsolete contents of gothic armouries our instruments of modern cultivation and warfare. It may be doubted whether our partial and comparative exemption from the homefelt requisitions of the crisis, be much more than an adequate set-off for the instruction which has passed us by unconscious in our insular remoteness. A certain antiquarian rust and pedantry adheres to all our social speculations and actions, as remote from philosophic investigation as it is adverse to political improvement; nor are our statesmen less embarrassed how to deal with constitutional authorities and precedents, than are our authors how to draw a single rational deduction out of the heap of their unsorted and unmethodised materials.

We cannot conscientiously seek favour for the work before us on the score of super-eminence, in order and method, over the popular style of writing at the present day. Nor are we sure that such rare qualities would at all have conduced to its acceptance with the general herd of readers; and, when we have said that the grave topics which it treats are diversified by sallies of colloquial levity and bits of antiquarian curiosity and amusement, that its picturesque descriptions are illustrated by the pencil of Westall, and its reasonings rendered attractive by those colours of style which Mr. Southey throws so happily over all his productions,—we think our good report will not have been wanting to com-

mend it to the general reader. A sufficient claim to attention from the more serious student is the nature and importance of its principal subject; which to introduce and agitate is no mean praise, although no single work, and certainly not the present, can exhaust it.

In some of our former criticisms, the age in which we live has been distinguished by the epithet *mechanical*, which, we are sorry to hear, has hurt the feelings of some among its worshippers. It must be evident, that whatever slight inclination to asperity may have been detected in the invariably moderate language of our articles, there is nothing which can bear the slightest inference of insult in the description of our age as the *era* of improved and extended Mechanism. The processes are obvious which have stamped that special character on the present state of culture in Europe. In the period of its first remove from barbarism into the iron pens of feudal jurisdiction, the frame of society, which had fallen asunder, remained in separate masses; and so feeble were all but the *immediate* links of feudal connexion, that almost the only element of social coherence may be said to have been the laws under which the conflict and collision of those isolated masses were systematised; and the only general principle of government—the organization of material force. Thus the spiritual power, like every other, was materialized, in ~~order that~~ amidst the pretensions which admitted of no moral arbitrement. But these fleshly manifestations of an invisible authority (as Faith, Hope, and Charity were embodied in the mysteries) were not more useful in an ignorant age, than they soon appeared 'formal and odious and contemptible' in times of more advanced intelligence. The predilection of the priesthood for its secular arm; long after its warfare should have ceased to be carnal, the voluptuous abandonment of some of its members and the unforeseeing zeal of others in the diffusion of that light which was their order's worst enemy, all conduced to the decay of a body which had outlived its hour of vigour and utility. Then came the Reformation with its moral wants and energies, its sincerity of persuasions and its zeal for demolition. That *era*, too, has long passed away; and in remodelling states and overthrowing dynasties, religious views and impulses have yielded to political. The last, or we might better say the *present* era of social change has witnessed zeal unkindled by polemical straws, fanaticism disjoined from all religious belief. The distribution of the social powers and benefits, the claim of equal franchises and duties and rights, are questions which have fairly superseded the fanciful distinctions of religious sects, and the squabbles about ecclesiastical polity. The first period of which we spoke developed the material powers, and the second the moral energies, of nations. It remains for the present to construct that social mechanism which shall harmonise the one with the other, and to allot material wealth and physical labour as shall best conduce to moral well-being. We repeat our thanks to the author of the volumes before us for bringing forward this high argument in a popular form; and we conclude our observations with an extract which he has made from Kant's Idea of an universal History. 'The highest problem for the human species, to the solution of which it is irresistibly urged by natural impulses, is the establishment of an universal civil society, founded on the empire of Political Justice.'

RICHELIEU.

Richelieu, a Tale of France. In 3 vols., 12mo. Colburn. London, 1829.

THIS book reached us too late for a regular review. The following extract, which is very spirited, has the advantage of being comprehensible without any knowledge of the context:

"We must now return to the two worthy personages whom we left jogging on towards the Chateau of St. Loup, taking them up at the precise place where we set them down.

"*Bon gré mal gré va le prêtre au séné,*" grumbled the Norman. "Remember, Madame Louise, I take you with no good-will: you insist upon going; so now if you meet with any thing disagreeable, it is your own fault,—mark that, *ma poulx.*"

"I'm no more afraid of the Devil than yourself," answered Louise pertly; "and I suppose I shall meet with no one worse than he is."

"You may," replied the Norman; "but come on, it gets late, and we have no time to spare."

The tone of Marteville was not very encouraging; but Louise was resolved not to lose sight of her husband, and, being by nature as bold as a lion, she followed on without fear. True it is that she did not know the whole history of the Sorcerer's Grove, or perhaps she might have felt some of those imaginary terrors from which hardly a bosom in France was altogether free: although Louise, bred up by Madame de Beaumont, whose strong and masculine mind rejected most of the errors of that age, had perhaps less of the superstition of the day than any other person of her own class.

The first approach to the Sorcerer's Grove was any thing but terrifying. The road, winding gently down the slope of the hill, entered the forest between some fine tall trees, which rising out of a tract of scanty underwood and open ground, with considerable spaces between each of the boughs, afforded plenty of room for the rich sun to pour his rays between, and to checker the green shadows of the wood with intervals of golden light. Every here and there, also, the declining sunbeams caught upon the old knotted trunks, and on the angles of the broken ground on either side, enlivening the scene without taking from its repose; and at the bottom of the hill, seen through the arch of boughs which canopied the way, appeared a bright mass of sunshine, with a glimpse of the sky beyond, where a larger open space than ordinary gave free access to the day. From this spot, however, the road, entering the deeper part of the wood, took a direction towards the old Chateau of St. Loup; and here the trees, growing closer together, began to shut out the rays; gloom and darkness spread over the path, and the rocks rising up into high broken banks on each side, cut off even the scanty light which glided between the thick branches above. At the same time, the whole scenery assumed a wilder and more desolate character, and the windings of the road round the base of the hill prevented the eye from catching even a glimpse of the prospect beyond.

"What is that?" demanded Louise, upon whose mind a thousand undefined suspicions were crowding fast: "What noise is that in the wood?"

"It's only a *pivert*," replied the Norman with a grim smile, in the effort of which the scar upon his lip drew the corner of his mouth almost into his eye.

"A *pivert*!" replied Louise: "No, no, that is not the cry of a woodpecker—you are cheating me."

"Well, you will see," replied Marteville; "I'll make him come out." So saying, he repeated the same peculiar whistle, and then, drawing in his rein, shook himself in the saddle, loosened his sword in the sheath, and laid his hand on one of his holsters, as a man who prepares for an encounter, of the event of which he is not quite certain whether it will be for peace or war.

His whistle was again returned, and a moment after the form of a man was seen protruding itself through the trees that crowned the high bank under which they stood. His rusty iron morion, his still rustier cuirass, his weather-beaten countenance and dingy apparel, formed altogether an appearance so similar to the trunks of the trees amongst which he stood, that he would have been scarcely distinguishable, had it not been for the effort to push his way through the lower branches, the rustling of which, and a few falling stones forced over the edge of the rock at his approach, drew the eye more particularly to the spot where he appeared. In his hand he carried a firelock, which, by a natural impulse, was pointed at the Norman the moment he

perceived a doublet of blue velvet—as the fowling-piece of a sportsman is instinctively carried to his shoulder, on the rising of a partridge or a grouse. But Monsieur Marteville was prepared for all such circumstances, and drawing the pistol which hung at his saddle-bow, and which, if one might judge by length, would carry a mile at least, he pointed directly towards the rusty gentleman above described, crying out, "*Eh bien l'ami! Eh bien! Do you shoot your friends like woodcocks? or have you forgotten me?*"

"*Nom de Dieu!*" cried the man above: "*Je vous en demande mille pardons, et mille, Monsieur le Capitaine. I'll come down to you directly. Christi! I had nearly given you a ball! But I'll come down!*"

While the robber was putting this promise in execution, Marteville whispered a few words of consolation to Louise bidding her not be afraid, that they were *fort honnetes gens, très aimables* to their friends, *et cetera*; but seeing that these words produced no effect, and that the unfortunate girl, beginning to comprehend the nature of his character, had burst into tears of bitter regret, he muttered a curse or two, not loud, but deep; and without any farther effort to allay her fears, sat whistling on his horse, till the robber, half sliding, half running, managed to descend from the eminence on which he had first appeared.

"*Eh bien, Callot,*" said Monsieur Marteville to his former companion; "how goes it with the troop?"

"But badly," replied Callot: "What with one devilry or another, we have but half a dozen left."

"And where is Pierrepont Le Blanc?" demanded the Norman: "Could not he keep you together?"

"Oh! we have sent him to the kingdom of moles," answered the robber, twisting his face into a most horrible grin. "First he quarrelled with one, and then he quarrelled with another; and then, as he was captain, and had the purse, he bethought him of taking himself off with all the treasure. But we caught him on the road; and so, as I have said, we sent the buccaneer on an embassy to the kingdom of moles. After that, there were two of us shot near Epernay, by a party of the guard; and then six more went to see what could be gathered upon the road to Perpignan, and one was taken and hanged at Troyes; so that there are but myself and five others of the old band left."

The two sides of the hill next to the village of Meenil, and the ridge of rising ground on which it was situated, sloped easily into the valleys around, and were covered with a rich and glowing vegetation; but on the northern as well as the western side, which the Norman and his companions now approached, the rock offered a very different character, and one, indeed, extremely rare in that part of the country.

Wherever the eye turned, nothing presented itself but flat surfaces of cold grey stone, with the deep markings of the rifts and hollows which separated them from each other. Occasionally, indeed, a patch of thin vegetable earth, accumulating on any point that offered the means of support, yielded a slight gleam of verdure, so pure in hue, and so limited in extent, that it seemed alone to rival the lichens and stains of the rocks around, and to serve but as a mockery of the naked crag that bore it. Here and there too, a black antique pine, fixing its sturdy roots in the bleakest pinnacles, would be seen to start boldly out, as if to brave the tempests, that, sweeping over the oaks in the forest below, spent their full fury on its more ambitious head. The principal objects, however, that attracted attention, were the multitude of deep fissures and hollows which presented themselves at every point, and the immense blocks of stone which, scattered about round the base of the rock, offered plentiful means of concealment to any one who might there seek to baffle a pursuer.

Turning, as we have said, round the base of one of these large masses, the robber uttered three loud whistles, to give notice that it was a friend approached; and immediately after, from a cavern, the mouth of which was concealed in one of the fissures above-mentioned, came forth two figures, whose wild apparel corresponded very well with that of their companion.

Quitting the ecstasies of the Gros St. Nicolas at meeting once more with his friend, and the formalities of his introduction to Louise, we shall only say that, according to the request of the Norman, one of the freebooters led the way up a circular staircase in the rock, which soon brought them into the open air, through a small arch entering upon the court of the old castle. Here Marteville, having marked all the peculiar turns which they had taken with the accuracy which his

former life had taught, bade good day to their guide, promising to rejoin the party below by the time the venison was roasted; and, finding that more than an hour of daylight yet remained, he proceeded with Louise to explore the remains of the chateau.

The little attentions he had lately paid, had greatly conciliated his fair lady; and, though still somewhat disposed to pout, she suffered him to explain his views with a tolerable degree of placability. "You must know, *ma charmante Louise*," said he, "that there is a tremendous plot going on against the Government; and that Monsieur de Chavigni has intrusted me to discover it. You heard what Callot said, concerning a treaty with Spain. Now I have always understood, that when these secret treaties are formed, a copy is deposited in some uninhabited place for greater security. You see, I have traced Fonttrailles to this castle, and it is evident that here he met the other conspirators: now where, then, can they have secreted the treaty but somewhere about here? So now, Louise, help me to find this paper, if it is to be found; and then we will soon quit these men, of whom you seem so much afraid, and go and live like princes on the fortune that Chavigni has promised."

To this long speech of her husband, which he accompanied with sundry little caresses, Louise replied, in a tone still half sulky, that she was ready to seek the paper, but that she did not see how they could find it, with nothing to guide them in the search. But, nevertheless, when they did seriously begin their perquisitions, she displayed all that sagacity in discovering a secret which women instinctively possess. Of course, the first place to which they particularly directed their inquiries was the chamber in which, according to the account of Callot, the meeting of the conspirators had been held.

"*Pardie!*" cried the Norman, after having hunted for some time in vain: "it is not here, that is certain!"

"Yes, it is!" said Louise, very quietly continuing to beat time on the table; it is in this very room."

"*Nom de Dieu!* where is it then?" cried Monsieur Marteville.

"It is here, in the inside of this hollow piece of wood," answered Louise, tapping the table with her knuckles, which produced that sort of empty echoing sound that evinced it was not so solid as it appeared.

The Norman now approached; and, soon convincing himself that Louise was right, he took her in his arms and gave her a kiss that made the ruin echo. The next thing was to get into the drawer, or whatsoever it was, that occupied the interior of the table; but, this not proving very easy, the impatient Norman set it upright upon one end, and drawing his sword, soon contrived to cleave it through the middle; when, to the delight of the eyes that looked upon it, appeared a large cavity neatly wrought in the wood, containing a packet of vellum folded, and sealed at all corners in blue and yellow wax, with neat pieces of floss-silk to keep it all together. The Norman could have eaten it up; and Louise, with a degree of impatient curiosity peculiarly her own, was already fingering one of the seals, about to break it open, when Marteville stopped her with a tremendous oath. "What are you going to do?" cried he: "you know little what it is to pry into State secrets. If you had opened that seal, instead of having perhaps a reward of twenty thousand crowns, we should both have been sent to the Bastille for the rest of our lives." Louise dropped the packet in dismay; and the Norman continued, "Did you never hear of the Abbé de Laugy, who, happening to be left by Monsieur de Richelieu in his private cabinet only for five minutes, with some State papers on the table, was sent to the Bastille for twelve years, merely for fear he had read them? No, no; this must go to Monsieur Chavigni without so much as cracking the wax."

"Could not we just look in at the end?" demanded Louise, looking wistfully at the packet, which her husband had now picked up. But upon this he put a decided negative; and having now succeeded to his heart's content, the burly Norman, in the exuberance of his joy, began singing and capering till the old pile both echoed and shook with his gigantic gambols. "*Ma Louise,*" cried he at length, "*vous êtes fatiguée. Je vais vous porter;*" and catching her up in his arms, notwithstanding all remonstrances, he carried her like a feather into the court-yard, through the narrow arch, and threading all the intricacies of the vaults with the same sagacious facility with which a ferret glides through the windings of a warren, he bore her safely in triumph into the *salle à manger* of

the honourable fraternity below. This was not the mode of progression which Louise most admired, nor was she very much gratified at being exhibited to her husband's old friends in so ungraceful an attitude; and the consequences, of course, were, that she would willingly have torn his eyes out had she dared.

"However, Monsieur Callot, Le Gros St. Nicolas, and others, applied themselves successfully to soothe her ruffled spirits; and the venison being ready, and a long table laid, each person drew forth their knife, and soon committed infinite havoc on the plump haunch which was placed before them. The wine succeeded, and then that water of life which very often ends in death. All was hilarity and mirth, song, jest, and laughter. Gradually, one barrier after another fell, as cup succeeded cup. Each one told his own story, without regard to the rest; each one sang his own song; each one cracked his own joke. Louise had retired to a settle by the side of the fire, but still mingled in the conversation, when it could be called such; and Monsieur Callot, somewhat full of wine, and a good deal smitten with her charms, plied her with assiduous rather more, perhaps, than was necessary. In the mean time, the Gros St. Nicolas, running over with brandy and good spirits, kept jesting the Norman upon some passages of his former life, which might as well have been passed over and forgotten. "Madame!" cried he at length, turning round towards Louise, with an overflowing goblet in his hand, and his broad face full of glee, "I have the honour of drinking to your health, as the fifth spouse of our good friend Monsieur de Marteville; and let me assure you, that of the three that are living and the two that are dead, you are the most beautiful beyond compare!"

"Up started Louise in an agony of indignation, and forth she poured upon the Gros St. Nicholas a torrent of vituperation for jesting upon such a subject. But on his part he only shrugged his shoulders, and declared he did not jest at all. "*Mon Dieu*," said he, "it is very unreasonable to suppose that Monsieur Marteville, who is as big as five men, should be contented with one wife. Besides, it is *très agreeable* to have a wife in every province; I always do so myself."

"The thunder of Louise's ire, now increased in a seven-fold degree, was turned instantly upon her dearly beloved husband. Her eyes flashed, and her cheek flamed, and approaching him, where he sat laughing at the whole business, she demanded that he should exculpate himself from this charge of pentagamy, with a tone and manner that made the Norman, who had drunk quite enough, laugh still more. With an unheard-of exertion of self-command, Louise kept her fingers from his face; but she burst forth into reproaches so bitter and stinging, that Marteville's mirth was soon converted into rage, and he looked at her with a glance which would quickly have taught those who knew him well not to urge him farther. But Louise went on, and wound up by declaring, that she would live with him no longer—that she would quit him that very moment, and finding her way to Monsieur Chavigni, would tell him all—adding, that she would soon send the Guard to ferret out that nest of ruffians, and that she hoped to see him hanging at the head of them. With this expression of her intentions, Louise darted out of the vault; but the Norman, who, speechless with rage, had sat listening to her with his teeth clenched, and his nether lip quivering with suppressed passion, started suddenly up, cast the settle from him with such force that it was dashed to pieces against the wall, and strode after her with the awful cloud of determined wrath settled upon his brow.

"The mirth of the robbers, who knew the ungovernable nature of their companion's passions, was now over, and each looked in the face of the other with silent expectation. After a space, there was the murmur of angry voices heard for a moment at the farther end of the passage; then a loud piercing shriek rang through the vault; and then all was silence. A momentary sensation of horror ran through the bosoms of even the ferocious men whose habits rendered them familiar with almost every species of bloodshed. But this was new and strange amongst them, and they waited the return of the Norman with feelings near akin to awe."—Vol. iii., pp. 120—144.

WALTER SCOTT'S SOIRÉES IN PARIS.

Walter Scott's Soirées in Paris, Collected and Published by M. P. E. Jacob, Bibliophiliat, Member of all the Academies, &c. 8vo., pp. 401. Paris, 1829.

SUCH is the title of a new work which is just now fashionable in Paris, and is written with smartness and originality. The author, who is a

young man already favourably known as the editor of 'The Mercury of the 19th century,' is disguised under the name of a venerable Bibliomaniac. We have not yet read half of this charming volume; but we venture to say that the historical scenes it contains are not unworthy of the distinguished name it bears. These sketches explain many obscure points of history, and are at the same time highly instructive and amusing. Instead of making an analysis of the whole book, we shall translate one of the tales, doing our best to preserve in English the naïveté of the original style, and that crude diction by which the licentious morals of the 15th century are so well described,—without, however, giving any cause of offence to the chastest mind.

Printing.

"The 15th century was the age of discoveries and inventions, and gave rise, one after another, to oil-painting, copper-engraving, the compass, and printing.

"John Faust, or Faust according to some historians, when living at Haarlem with Laurent Coster, who, since 1420, had printed with blocks of graven wood, appropriated this wonderful secret, and fled to Mayence, with the characters, which he had abstracted during Christmas. In this city he went into partnership with his son-in-law, Peter Scheffer, and John Guttemberg, a rich citizen of Strasburg, with the view of perfecting the method of Laurent Coster. They cast the first metal types; and, after unheard-of efforts and labours carried almost to danger, they achieved an impression of the Bible, exactly according with the manuscript. The great letters and miniatures were gilt and painted by hand. Then these associates swore together to reveal to none an invention which was to enrich them; and, that they might not waken curiosity, they sold but a small number of copies in Mayence, which were passed off as manuscripts. John Faust betook himself to Paris, hoping that there he should get much money by his Bibles. A Bible, well written and coloured, fetched about 500 golden crowns. John Faust had arrived two days past in the place of his destination, with his mysterious stock of books. He had taken a small house in the city of three stories and with a pointed roof. He gave himself out as solely a writer seeking work, and, under this pretext, obtained purchasers for his books, without, however, availing himself of an index to the saintly, or even of the public crier. For the rest, his purse was but thinly lined in the meanwhile.

"John Faust was passing a little before ten, towards the meeting of the roads of La Grande and La Petite Triumverie, near the Well of Love, so called because Agnes Hellebri, a lady of the Court of Philip Augustus, threw herself into it in amorous despair. He perceived a female veiled; and, his heart being prompted to follow her graceful and engaging progress, he allowed himself to go where his heart went. As he approached her, still walking, she heard the sound of his breath and of his feet, turned round, lifted up her veil, and, understanding his errand, with her finger on her mouth, smiled most bewitchingly.

" "Sir" said she, to Faust, who listened motionless, "this is about the time appointed by our statutes, and I am now going to my *clavier*, which is in the Rue Champfleuri, very commodious, very alluring, well perfumed. Wont you go with me?"

" "Oh, yes!" replied the German, enchanted with her looks and voice.

"But he timely observed the lady's golden cincture, and her peaked bonnet, to which he saw attached the arms of the Roi des Ribauds, who, by royal ordonnance, was chief and grand Justicier of women of easy virtue. Their arms were a head of the god Priapus; and I believe it afforded an ample revenue to this King of the Ribauds, persons specially attached to the service of the Court. John Faust grew pale, and shame summoned him to stop, while love, on the contrary, entreated him to do nothing of the kind. However, like a good Christian as he was, he did not reckon without his conscience.

" "It is told me, by our Lady, that thou art an amorous woman by calling; which could not be guessed from thy fresh and not vermillioned colour, thy apparently firm bosom, and those costly ornaments, which we see usually worn by ladies of high rank. Thine eyes, all flaming, have made my breast a true Troy, besieged and burning."

" "I have no leisure to hear these pretty things: my affairs require me elsewhere. Decide, without more delay, what you want with me. If not, don't cross

my path again; and, if some day there should come to you from heaven or from hell a wish to see me again, bear in mind the name of Annette, called Bras d'or."

" "I have sworn to my patron saint, that I would never enter a brothel; but why should not you come to my house?"

" "Well-a-day! good Sir, do you incur so gaily the fine, to which, in my case, would be added remonstrance, and perhaps more? I would if I could. It is forbidden to us to receive men any where but in our *clapiers*, and also to men to receive us at their own dwellings. Are you so strangely ignorant of our customs?"

" "Certainly, yes; these are things unknown in Germany, whence I am newly come. Nevertheless, go with me, thou shalt have no reason to repent of it; and by that means I shall evade my oath touching places of perdition!"

"Annette did not require any longer pressing; and, allured by the promise of a liberal reward, she followed John Faust to his domicile, to the great astonishment of the people of Paris, which had seldom witnessed such *sorties* from the ten streets consecrated to the exercise of their privileges. She was, indeed, so beautiful, and so well clad, that every body envied the lot of her companion. On their way, she related to Faust how, on the entry of Louis XI. into Paris, in 1461, she was chosen, by M. the Prevost of the Merchants, to enact a naked syren at the Porte du Ponceau, and how she sang motets which were great favourites at court. Then she enumerated the friends she had had, closing the list with Faust himself, who was, undoubtedly, pleased with his companion; for he kept her till evening, treated her liberally, and sent her away with a present far beyond the usual price of her favours.

" "My darling," said he, kissing her on the mouth, "I thank my good angel who made me meet with thee: friendship should not cease so soon; a beginning supposes an end. We must meet again."

" "Oh! the precious books!" rejoined Annette at the sight of the Bibles covered with white parchment and gold; "the King himself has not as many in his library, in the large tower of the Louvre."

" "Take this book," said Faust, presenting one of them to her, "take it in remembrance of Jesus Christ and of me. It is very profitable reading, and will redeem I know not how many sins. Besides, it is entirely the work of my own hands. The King himself has not, I swear to thee, a copy of this wonderful writing."

" "Then your calling is that of a writer?"

" "Even so. Adieu! this manuscript will procure thee large sums, with which to buy necklaces, rings, and earrings in abundance; but show it to every corner, be he gentleman, soldier, or priest, and tell each one, that I, John Faust, of Mayence, now in Paris, sell similar ones, at a price that will scarcely pay for the vellum."

" "By the holy women of the Rue Froimontel! it shall be done for you. My friend, Father Maillard, who, for every good sermon, French or Latin, has ten large tournois of silver, adds to his livelihood by making books, which he does with a singular address; but two years would not suffice him to adorn one so richly as this, and I could never get from his hand even a missal with the image of my patroness, Madame St. Anne."

"Annette carried the bible to her house, and sat up part of the night to examine the coloured vignettes and arabesques which she found in it: however, she could not read. Day came, as it struck ten, she went to her *clavier* in the Rue Champfleuri, not forgetting the book, which she already esteemed as a treasure. She sat down in her chamber, which was richly perfumed, upon a mat, turning over the leaves of the precious volume, that she might wait without ennui the arrival of some itching Carmelite or friar grey. Olivier Maillard appeared.

"He was a fat short man, well furnished with shoulders, muscle, and the rest. His face large and thick, his cheeks round and ruddy, his eyes small and lively, his mouth naturally smiling; all about him was characteristic of the disciple of St. Francis, accustomed to enjoy all the good things of the earth, and not the less that the rules of his order interdicted them. His gown, his sandals, and his hempen girdle, made up, in some sort, the indispensable complement of his jolly physiognomy.

" "By my frock!" cried he, hastily opening the door, without Annette raising her head at the noise he made; "is this a day of fasting and penitence, that I see no cookery a-foot? My bowels, by God and devil, are striking the dinner hour."

" "Olivier!" said Annette, without replying to his gas-

tronic lamentations, "see what a wonderful book I've got!"

"*Où il!*" replied the father, fixing a covetous and admiring eye on the Bible, as it lay open on the floor; "tell me, Annette, who made thee this royal present? Might it happen to be Seigneur Villon, the poet, who has abstracted it from the library of my Lord the King, or rather from that of the fathers of St. Victor? I would give a great deal to be as good a writer as the man who made that copy of the Bible."

Annette then related to him, at full length, the occurrences of the day before, during which the Franciscan, planting his spectacles across his huge nose, contemplated the volume, page by page, and gave vent to his surprise in exclamations like the following: "That would certainly fetch a great price!" When the courtesan had finished her story, he closed the book, and, after a moment's reflection, said:

"By the beard of a Capuchin! this stranger is either a devil or a conjuror, if not a downright fool. Never was a book of such inestimable value made a clear gift. The fellow's no writer; for a work like this could not be done in a day, but would require years."

"The man, to my thinking, is cleverer than you, and not so idle; for he has commissioned me to publish through the city that he had a number of similar books to sell to the first customer who should come to buy them, purse in hand. The price, I believe, does not exceed sixty crowns."

"By the cut of my cowl! this is some rascally receiver of stolen goods, and I'll have him hung forthwith. Besides, if by magic or sorcery he comes by this rare work, the immense injury he is doing the writers of our city, requires that he should be sent out of it: the law will do it, if need be."

"Art thou so very glad to grieve me, by molesting so honest a man?"

"Pshaw! but let us trade together; to-morrow, which is Quasimodo Sunday, I shall deliver a sermon at St. Thomas-du-Louvre, before the Court. I have an appointment with a profound bibliophile. Now then, consent to part with this book, useless to thee who never readest; I will instantly count thee out 500 crowns, the contents of my pocket."

"Done, compeer: let's see the colour of your gold."

Olivier Maillard quickly produced the promised sum, and, without giving a moment to love, carried off his bible, as Potelin did his cloth, and set off to Master Jean de la Pierre, Prior of the Sorbonne, whom he knew to be very curious in manuscripts. So he spread his before the astonished eyes of the doctor, extolling it to the skies; and a sale was instantly effected for a considerable sum, to the satisfaction of both."

"Now," said Maillard, having deposited the money in his vest; "how would it please you, my lord, to gain a hundred times the interest of your cash?"

"How?" replied the Prior, puzzled by this attractive proposition; "hast thou the Philosopher's Stone?"

"Be it stone or aught else, I know the art of making gold, by buying for little and selling for much. How? Not by lands, rents, and houses, but by books in well-shaped writing; Bibles in all points like this one, by my girdle!"

"'Tis a capital trade; in this hey-day of devotion doth the very least copy cost as much as a reliquary, nay even more. Therefore, get me as many as you like, at a low price, and I'll not pay for them in indulgences."

Olivier Maillard, without being willing to give any indication of the source whence his Bibles were to be derived, agreed with Jean de la Pierre to share between them the profits of the transaction, for which the wealthy Prior consented to furnish the needful.

"The God of the Jews assist thee, my son," said he, laughing, to Maillard. "Give letters of credit on me to thy phantasy. I will be thy bail. Nevertheless, don't turn away thy mother-church in forgetfulness of her; and, though now become merchant for our greater wealth, preach to the people as before."

The quartern-ague seize me, if ever Father Maillard hold his tongue, till voice and breath fail him. To-morrow, at St. Thomas-du-Louvre, about noon, I shall hold forth full christianly on holy things, enlivened by lies and conceits. By the bye, 'tis time to be thinking of the sermon. Adieu, command me, Monsieur my treasurer."

The Franciscan, following the directions of Annette, had no difficulty in finding out the Bible-man. John Faust was employed in ranging his volumes, the number of which did not exceed two hundred; the remem-

brance of the fair courtesan still pursuing him amid the cares of his business. Maillard stood motionless and silent at the door; the sight of so many manuscripts had struck him with astonishment.

"My master," said he, at length, "nothing is talked of in Paris but Bibles, which you sell at loss; doubtless to merit Paradise in the next world—"

"Sir," interrupted Faust, "then you have been misinformed; as you suppose, I have no great profit in this enterprise; but it is false that I lose a single farthing by it. As to being a better Christian than my neighbours, I never dreamt of such a thing; and far be it from me to mix up heaven with my merchandise. I have spoken."

"Evil tongues pierce like a hedge-hog, and thrice happy he whom they have not reached! But to business; the price of each of your Bibles?"

"Sixty crowns."

"Sixty!" cried Maillard, scarcely suppressing a manifestation of surprise and doubt; "are you the maker of these books?"

"What is that to you? I or some one else, no doubt."

"God's head! Am I not a writer as well as you, and an expert judge of these matters? I laughed in my sleeve at my own strange demand; for I have a notion of the time it takes to rule, write, and illuminate a single volume."

"Nevertheless, learned Sir, at Mayence, from whence I came the other day, I can at will and with little trouble produce a thousand Bibles of the kind, and that in six months."

"By the soul of St. Francis! art thou not a sorcerer, who speakest thus unadvisedly?"

"Sorcerer! I know not who I am talking to, if I be. But wherefore all these questions? Find some one else to answer them, if he can; I have no leisure to use time, words, or spittle in doing it."

"I see how it is, and I pronounce you a damned sorcerer,—a heretic, and liable to be burnt in good human justice. Therefore of two things make your election."

"By the three kings of Cologne! will you treat me magisterially; you, of whom I know only the habit? I am ready to hear you, however."

"You must either deliver up for ready money all those Bibles, the work of Satan, and quit this place, without a word being heard of you, for a hundred leagues off, or prepare yourself for a violent charge in the Parliament as a worshipper of the devil and a conjurer, concluding with public pillory or with the stake on the Place de Grève."

"Many thanks for the choice, master; I have heard too much of it with my two ears. Take yourself off; and let us remain at peace, if you trust me."

"Most willingly; but hand me the manuscripts and come not back. Otherwise, I obtest all the saints, male and female, in Paradise, I will accuse you in the Court of Le Grand Chatelet, and your master, the devil will not save you from burning. Don't you already smell the fire?"

"Pugh! fair Sir, your threats do not concern me; and my spotless innocence will preserve me from you and all other evil men. I will sell my books to others; I will stay in Paris; and, if I go home alive and against my will, I will say many a paternoster for the purpose of increasing the wrath of Heaven against you, my fine father!"

"John Faust, don't think of it by halves: yes or no will decide thy happiness or misery; from what may happen, I wash my hands beforehand!"

"No! come, up, thou foxy friar, up and begone! and do what thou wilt, or rather what thou canst! Let us be honest enemies; and, before buying books another time, spare at least the seller who is not in the temple."

Olivier did not wait for John Faust to throw him into the street by door or window. He cast a furious look upon the printer, and went out with a blustering medley of oaths and imprecations. Thence, wholly occupied with thoughts of vengeance, he ran to Jean de la Pierre's, to whom he related the unfortunate issue of his expedition, and then brought a complaint before the Parliament against the German sorcerer. The news of the arrival of the unknown bookseller was spread through Paris, and the purchasers of Bibles presented themselves in such great numbers as to cause a scarcity of specie. The thing was attributed to miracle and magic.

The next day the crowd were pressing into the church of St. Thomas-du-Louvre, to hear the sermon of Father Maillard. The Court was not present as he had hoped; but his hearers, many of whom came from

far, attested the fame of the preacher. They were for the most part artisans, monks, and women of the town. Annette distinguished herself by the richness and good taste of her dress, and especially by the exceeding height of her head-dress, which, according to the fashion of the time, somewhat resembled that worn by the Canchoises now-a-days. Her eyes travelled with those of the congregation to the pulpit, where Father Maillard appeared with hands crossed upon his breast. A profound silence succeeded to the flattering hum which was raised at the sight of the holy man. The sermon began, and during its delivery Annette did not once take her eyes off the preacher. He had chosen for his text a verse from the Gospel according to St. Luke: "Jesus said unto him, what is thy name? And he said unto him, my name is Legion; for many devils had entered into this man." He repeated this verse in Latin; and the tenour of his discourse was half serious, half burlesque. After having finished his picture of hell, painted in the most dreadful colours, Olivier Maillard gave in his own fashion a most scandalous account of the Bible-seller, John Faust, who at the very instant had just sold a hundred copies to a chorister of Notre Dame, for the moderate sum of sixty crowns each. Olivier uttered so many lies, seasoned with pleasanties, oaths, and ribaldry, that the indignation of his hearers was roused against the unhappy printer, who knew nothing about it. But, if he had by chance been there, the furious mob would have stoned him without warning. "When is the execution of the German sorcerer?" asked everyone, as they came out from the sermon.

Meanwhile, the public accusation of the preacher made so much noise, that the Parliament of Paris appointed the cause for trial, in order to satisfy the popular clamour, which denounced John Faust of Mayence as an impious person in league with the devil. Olivier Maillard was subpoenaed, and his deposition determined the judges to pursue the cause. Warrants were given for the arrest of Faust, and for instituting a search in his house.

Annette was slumbering in her *clapier* about four o'clock, when came Maillard, overflowing with delight. After the business proper to the place, which was briefer than the friar wished it, he cried out, right Catholicly, "Sure enough, Messire the seller of Bibles is by this time in the hands of the police."

"What's that you say?" asked Annette, with a trembling voice.

"Nothing, except that our Lords of the Parliament wish, without delay, to imprison our master John Faust, until, on the conclusion of his trial, he shall go through earthly flames, to burn in those flames where are weeping, and wailing, and gnashing of teeth."

"Wretch! have you the heart to rejoice over the ills of your neighbour? But it is surely impossible. Who told you this sad news?"

"No one; I have just taken my oath in evidence against him."

"Poor man! and he will be taken to prison without any sorcerer appearing for his escape. If he be guilty—but no, so generous a host can have done nothing wrong—Olivier, wilt thou not taste my wine, which was given me by the Curé of St. Denis-de-la-Châtre?"

"Belly of monk! no blasphemy! Let us drink, however; when the wine is in the cup, one has no leisure to offend the good God with either words or thoughts. Blood of Noah! it is not so bad."

Civilities were briskly interchanged between Maillard and the bottle. Annette excited him to drink,—an exhortation he did not require: drunkenness, as the proverb goes, was born in a cloister. The Franciscan had fine doings of it, until he fell dead drunk from his chair, groaning out a psalm. Annette, delivered from this pest, who hindered her plans, stole out of the house, and made the best of her way to the house of Faust, who was astonished to see her pale and out of breath.

"What now, my beauty?" said he, kissing her forehead; "what saint must I thank for this visit?"

"All of them, perchance," answered she hurriedly, and looking anxiously towards the door; "set off hence instantly, or never. They will have no mercy on you."

"By the Bible, Annette, thou mockest me!"

"In God's name, begone! and God help you! You have been accused of sorcery before the Parliament, and the police will be here instantly to take you."

"Me! mercy—"

"To-morrow will be time enough for lamentation and weeping. Quick, get out of Paris; here you tempt the faggot. Go in peace; this service is in return for the Bible."

"Fly! yes; I have good legs, and a cordial desire to be far enough. But to leave my goods behind me, my books, to the bounds of justice, to calumniators—To the devil sooner! So, as I have sold plenty of them in this ungrateful and inhospitable city, I will burn the rest. I know how to make more."

"Instantly he seized from the hearth a lighted brand, and threw it among the books with which the floor was piled."

"Merciful God! don't do so," said Annette, endeavouring to prevent him; "they are worth gold."

"No; they shall not have the satisfaction of my spoils. A curse on Paris! I retire to Mayence; and may my secret die with me, before it be known and used by my persecutors! Woe! woe! Alas! alas!"

"With these words, he marched into the street, shutting the door after Annette, who followed him hand in hand: for some time he continued to proceed in silence, until the labyrinth of streets, and the approach of night, had put them out of reach of any troublesome encounter."

"Adieu, Annette, my dear!" said he to his companion, as they stood by the corner of a house; "I shall never be able to repay thee, to whom I owe the safety of my life. Adieu! were I in heaven, I would always pray for thee to our Lord Jesus, for I could do nothing better. In this purse is sufficient to place thee in an honourable condition, for money often begets virtue. Thanks ever, and good bye!"

"With tears in his eyes he embraced the poor girl,—who felt herself fainting,—and set off at full speed. Annette looked after him, as long as the fog permitted her to perceive him; and, when he had entirely disappeared, she was still looking, motionless, and in the same place."

"Meanwhile the police had arrived at Faust's house just as he left it. They knocked rudely at the door; but obtaining no answer, and observing a dense smoke issuing from the crevices, they forced an entrance. The fire, which had made great progress, drove them back; the flames rushed out at every opening, and the neighbourhood, which was principally built of wood, was threatened with a general conflagration. Terror had already circulated ridiculous stories, and the word sorcerer flew from mouth to mouth. But chance brought succour to the affrighted crowd. The Prior of the Sorbonne, Jean de la Pierre, happened to be passing; though he would gladly have been elsewhere, he affected a stern countenance, and summoned the people to pray for the extinction of the fire. The thing happened as he wished. As soon as the boobies were on their knees, and while the bells of the neighbouring churches were sounding the alarm, the fire was seen to abate as by a miracle; for, the books and furniture which fed it being consumed, its attacks on the stone walls were happily in vain. A little more, and the Prior would have been carried off in triumph and canonised without any bull from the Pope. The fire, and the useless search which was made for Faust, confirmed the suspicions against him: for the rest, the trial stopped short. Olivier Maillard exorcised from the pulpit the pretended unknown sorcerer, whom he had not been able to get burnt in the Place de Grève."

"The history of the Bibles, augmented by a host of marvellous details, which the ignorance of the time swallowed without proof, penetrated to Court. Louis XI., who loved miraculous stories, (as the hundred tales attributed to him sufficiently prove,) when it had been communicated to him by his confessor, exclaimed, as he took down the leaden virgin from his cap, "Good mother, let one of these sorcerers come to me, and write Bibles, and such books as I may wish, thus quickly, and I will grant him a part of my kingdom."

"Jean de la Pierre, who saw in this affair something more than sorcery, sent an intelligent clerk to Mayence, who, by dint of money and promises, seduced three of Faust's workmen, and brought them to France. Martin Crantz, Ulric Gering, and Michael Friburger, in 1469, printed at Paris, in a house of the Sorbonne, the "Letters of Gaspar Pergamensis."

LANDOR'S IMAGINARY CONVERSATIONS.

Landor's Imaginary Conversations. Second Series. 2 vols. 8vo. Colburn. London, 1829.

BRAVING the charge of betraying the interests of our craft, and the ridicule which may follow the discovery of the very simple principle upon which we think it may be conducted, we venture to propound the following rules as those which should guide the conscience of every sound critic. Whenever he meets with an author who is inco-

herent and purposeless in all that he thinks and writes,—who has evidently no meaning to express, and is not in search of any, but has merely betaken himself to this vocation, because he has heard from some foolish reporter, that writing is a profitable exercise and easy withal, on account of the numerous good models which lie within the reach of his imitation, it behoves the reviewer gently to inform such a person that there are other handicraft occupations which bring in a better return at less cost of time and capital—in which the mode of working is much more strictly prescribed, and in which, therefore, he would have every chance of attaining all needful excellence. Whenever he encounters a person who shows by his energy and zeal that he has an object which he is endeavouring to reach, but who shows, moreover, by the unsteadiness of his step and unconsciously treading in the steps of some predecessor, that what he seeks is before his eyes rather than within his mind, and consequently, that it does not supply the light by which he is to find it—the office of the critic is at once to increase the vividness of his perceptions, and to cure his taste for mere imitation, by revealing to him the real strength of the men after whom he is striving,—a strength which he can never catch by mimicking their actions and gestures, but a strength the counterpart of which he may find and cultivate within himself. And, lastly, if he should chance (a rare chance!) to stumble upon one who walks with a firm march, asserting that it is his right to lay down the law of his own motions, and vindicating that right before the world, let the critic by no means, as he values his reputation, as he does not wish to bring himself into a conflict which will end in his utter discomfiture, gainsay that right, or venture to set up any canons of his own as better than those to which the man of genius chooses to conform; but, if he is anxious to take vengeance for this independence on his authority, let him bind down the refractory autonomist to the strictest fulfilment of his own idea, and visit, with whatever penalties belong to him, every departure from it. From not attending to this last rule, it is that so many of our modern critics have made shipwreck, and that the planks upon which they have attempted to save themselves have always proved rotten. What said the Scotchman who undertook the rescue of Mr. Jeffrey's article on Wordsworth:—"after the tide had turned against the critic, and had covered him with the reflux of the foam which he had himself raised:—"What, should Wordsworth, who aspires to be the greatest of living poets, be tried by less severe laws than were put in exercise against Lord Thurlow or Lord Strangford?" The defence was utterly irrelevant. No one complained that the scrutiny to which Wordsworth's poems were subjected in 'The Edinburgh Review,' or elsewhere, was too strict. On the contrary, it was deficient in strictness, as every inquisition must be which is not conducted upon principles. But the charge was, that the poet had appealed to a definite and consistent law, and that the critic, overlooking that, had chosen to set his own loose, random, incoherent, vulgar notions of poetical right and wrong in place of them. And this must be the fault and the folly of every critic who is not modest enough to believe that his highest office is to discover and to execute the enactments which men of genius have passed for their own regulation.

No one who has read a page of Mr. Landor's writings can feel a moment's doubt that he belongs to the last class we have named. The readers of the 'Imaginary Conversations' laugh while we gravely remark, that he certainly is not a mere sentence artificer, nor a studious mimicker of any departed or living models. And that his originality, however it may occasionally appear obtrusive and violent, has the true warrant of reality, they can all testify, from the stir of pleasure or irritation which he has never failed to awaken in their minds. Mr. Landor, therefore,

has a right to be tried by his own rule, whatever that may be. Measured by the standard which other men of genius have prescribed to themselves, his standard may be high or low; and this comparison we have a right to make, since it may be owing to this difference that he has, more or less frequently than they have done, acted up to it; but, once having recognised his standard, we have no right to complain of his not deserting it, for the purpose of conforming it to any other which more nearly accords with our taste; for of this we ought to assure ourselves, that whoever has an idea, and satisfies it, must be a useful man, and a benefactor to his race.

Now, if our readers will examine along with us the impressions which have been produced by the perusal of Mr. Landor's former volumes, we think they will have no difficulty in perceiving what the idea is which he has endeavoured to realize in these dialogues—what relation it bears to the end which other men of genius in the present day have kept in view, and how they are severally connected with the feelings and spirit of the age. We apprehend, that their first and liveliest recollection will be of those passages which contain definite outward pictures. The extreme clearness and precision of the outline,—the rich and lively colouring, which speaks however to the eye rather than to the imagination,—the perfect harmony of all the parts,—the perfect composure with which the artist appears to regard his subject, as something which delights him extremely, but does not disturb him,—his consequent indifference whether he is describing God's nature or the works of human art, both being equally interesting to a mere contemplator, and neither, it would appear, furnishing topics of meditation to him,—must strike even the most careless of his readers. A peculiarity hardly separable from that just mentioned, is Mr. Landor's devotion to the antique, as manifested in the vast superiority of the dialogues in which Pagans are the interlocutors, in the great dramatical power with which he exhibits contrasts between the forms of life, and the little power with which he exhibits differences of individual character. His style will then recur to them—rich, full, satisfactory,—expressing exactly all that it seeks to express, but differing from the highest styles which we are wont to admire, in that it suggests almost nothing. Mr. Landor's politics, if they can have remained out of sight so long, will then force themselves into notice. These politics differ in their essence from those professed by any English sect, though in some of their outjutting points they impinge upon the opinions of several. The utilitarians fancy they have the greatest claim upon Mr. Landor, seeing that he sinks the individual being in the social almost as completely as themselves; but then he thinks liberty a thing of worth, independent of its consequences, and he speculates upon states of society, not merely upon the making constitutions, deduced from the doctrine of the greatest happiness of the greatest number; and, moreover, he looks for something to go on, besides money-getting, in his commonwealth; and he venerates antiquity, when he ought to pay unmingled homage to the nineteenth century, with other enormities which disqualify him for Benthamite co-operation and patronage. Along with the feelings excited by these reminiscences, the readers of Mr. Landor will recal others of a less pleasing character, which they dwell upon only that they may be better able to understand the good qualities, in the midst of which evil ones have grown up, and whereof they are the offshoots. It will occur to them, that they have observed in Mr. Landor's writings, an uneasiness at the present condition of society, not relieved, as has been the case with many of our great poets and thinkers, but, on the contrary, much aggravated, by his contemplation of a possible better one—an overweening attachment to certain forms of government, not springing, indeed, from a belief in the value of forms for their own sake, which is the case

with the Utilitarians, but from a dislike of the class of feelings to which these forms are not appropriate,—an apparent incapacity for understanding all minds which are not built upon the severe ancient model, and the attempt to fashion all the modern characters with whom he feels any sympathy upon it in spite of the resistance which their Christian flesh and blood make to the experiment, a dislike to whatever is intangible and mysterious, often expressing itself in declamatory denunciations of priestcraft and priesthood, but extending likewise to all philosophers who have penetrated below the surface, and lastly a tendency very frequently to sink into a coarseness and vulgarity of feeling which, till we have thought upon the subject, seems almost incompatible with such an exquisite perception of grace and beauty.

Another feeling which they will not be able to reduce under either head of approbation or dislike, is that produced by Mr. Landor's taste for paradox. In general, this is the most intolerable of all tastes, and the one which meets with least quarter either from the silly or the wise. But this is by no means true in the case of the author before us. Though few sin so flagrantly, there is almost none whom we feel so inclined to tolerate. And this not so much because there is a deeper root of truth in the excrescences of his mind than in those of other men, as because we feel that there is something in his position which renders them inevitable. They confront us with the most impudent stare in the world—they are at variance with what we most admire in the author; nay, are more in contradiction with his peculiar qualities, with his calm way of contemplating external objects, and his straightforward view of social relations, than they would be with the qualities which distinguish any other man; and yet we cannot find in our hearts to condemn them. May not this circumstance be one clue to the discovery of the principle of which we are in search?

If we have succeeded in analysing the impression which is left upon Mr. Landor's readers without destroying its life, we think they must by this time perceive what that impression indicates respecting the leading idea in Mr. Landor's mind—they will perceive, we think, in that calm Grecian feeling of the beautiful—in that love of antiquity—that complete style which grasps at nothing but what it is certain of accomplishing—in that view of society so exactly equi-distant from the idea which is formed of it, by him who looks at it as the creation of man's spiritual powers, and by him who considers it merely as a scheme adapted to the accomplishment of some directly personal end—in that dislike of mystery—that ignorance of modern character—and that tendency to become vulgar and grovelling,—an attempt to realise the highest form of mere ANIMAL LIFE; while that strange necessity of uttering dark oracles and strange paradoxes against the natural disposition of his own mind and to the annoyance of his readers, is occasioned by the struggle to frame this conception in a world, the atmosphere of which, ever since the introduction of Christianity, has been filled with spiritual atoms, flying about in all directions, and darkening the whole material universe to those who are not content to feel them as the only medium through which it can be contemplated. To the mere farmer or merchant-man, the economist or the calculator, it is a mighty easy task to purge the world of its spiritual elements; but hard is the work, mighty the achievement, to the man who makes his own mind the crucible, who seeks in his soul the ideal of a soulless world. If our theory of Mr. Landor's mind be correct, the level upon which he stands is very far lower than that which is occupied by those who are emphatically the great men of England. He does not belong to the same order of beings as our old dramatists, as Milton, as Jeremy Taylor, as Sir Thomas Brown, as Cudworth, as Henry More;

or, to take modern instances, as Coleridge or Wordsworth. Nay, in some sort, the words of scripture may be applicable to him, that the very least in the kingdom of heaven,—the man who has even an imperfect and unsatisfied longing after the inward and the spiritual,—is greater than he. But then we must take in the former part of the verse, and admit likewise that among mere men that are born of women, among them who draw their origin from the earth, and are of it, earthy, there has scarcely arisen a greater than Walter Savage Landor. We speak not merely of his genius, but of the benefit which it is calculated to confer upon the present age. There never was a time when men were more entirely given up to a pursuit of the vilest physical enjoyment,—when the lowest ends of existence were more generally felt to be the reasons for which we exist,—when, in short, animal life itself was so divested of all that fairness and symmetry which makes it fit to be the type of a higher life, and the link which connects our bodies with it. To persuade men thus given up to the world in its lowest, worst sense, that there is any thing within them which is more permanent than the passing shows around them—experience shows to be a vain toil. Why, then, should those who aim at this end, and feel they cannot achieve it, refuse the assistance of a man, who, levelling himself to the feelings of such beings, undertakes to teach them how they may convert their own dull monotonous earth into a green and flowery paradise? Who shall tell us that the conceptions of a vulgar, money-getting, eating, drinking, sleeping, scribbling, criticising monster of the nineteenth century would not be raised by the picture of exquisite luxury, which is contained in the following passage of a dialogue between Cæsar and Lucullus?

LUCULLUS.

'Then, Caius Julius, you groaned with reason, and I will pity rather than reprove you.

'On the ceiling, at which you are looking, there is no gilding, and little painting. . . a mere trellis of vines bearing grapes, and the heads, shoulders, and arms, rising from the cornice only, of boys and girls climbing up to steal them, and scrambling for them: nothing over-head: no giants tumbling down, no Jupiter thundering, no Mars and Venus caught at mid-day, no river-gods pouring out their urns upon us; for, as I think nothing so insipid as a flat ceiling, I think nothing so absurd as a storied one. Before I was aware, and without my participation, the painter had adorned that of my bedchamber with a golden shower, bursting from varied and irradiated clouds. On my expostulation, his excuse was, that he knew the Danae of Scopas, in a recumbent posture, was to occupy the centre of the room. The walls, behind the tapestry and pictures, are quite rough. In forty-three days the whole fabric was put together and habitable.

'The wine has probably lost its freshness: will you try some other?

CÆSAR.

'Its temperature is admirable; its flavour incomparable. Latterly I have never sat long after dinner, and am curious to pass thro' the other apartments, if you will trust me.

LUCULLUS.

'I attend you.

CÆSAR.

'Lucullus! who is here? what figure is that on the poop of the vessel? can it be . . .

LUCULLUS.

'The subject was dictated by myself; you gave it.

CÆSAR.

'Oh how beautifully is the water painted! how vividly the sun strikes against the snows on Taurus! the grey temples and pier-head of Tarsus catch it differently, and the monumental mound on the left is half in shade. In the countenance of those pirates I did not observe such diversity, nor that any boy pulled his father back: I did not indeed mark them or notice them at all.

LUCULLUS.

'The painter, in this fresco, the last work finished, had dissatisfied me in one particular. *That beautiful young face*, said I, *appears not to threaten death.*

'*Lucius*, he replied, *if one muscle were moved, it were not Cæsar's: besides, he said it jokingly, tho' resolved.*

'*I am contented with your apology, Antipho: but what are you doing now? for you never lay down or suspend your pencil, let who will talk and argue. The lines of that smaller face in the distance are the same.*

'*Not the same*, replied he, *nor very different: it smiles; as surely the goddess must have done, at the first heroic act of her descendent.*

CÆSAR.

'In her exultation and impatience to press forward, she seems to forget that she is standing at the extremity of the shell, which rises up behind out of the water; and she takes no notice of the terror on the countenance of this Cupid who would detain her, nor of this who is flying off and looking back. The reflexion of the shell has given a warmer hue below the knee: a long streak of yellow light in the horizon is on the level of her bosom; some of her hair is almost lost in it: above her head on every side is the pure azure of the heavens. I have read the picture; and thus it ends.

'Oh! and you would not have shewn me this? you, among whose primary studies is the most perfect satisfaction of your guests!

LUCULLUS.

'This is the only one in fresco; but in the next apartment are seven or eight other pictures from our history. . . There are no more: what do you look for?

CÆSAR.

'I find not among the rest any descriptive of your own exploits. Ah Lucullus! there is no surer way of making them remembered: the soul of them is here. . . This, I presume by the harps in the two corners, is the music-room.

LUCULLUS.

'No indeed; nor can I be said to have one here: for I love best the music of a single instrument, and listen to it willingly at all times, but most willingly while I am reading. At such seasons, a voice or even a whisper disturbs me; but music refreshes my brain when I have read long, and strengthens it from the beginning. I find also that if I write any thing in poetry (a youthful propensity still remaining) it gives rapidity and variety and brightness to my ideas. On ceasing, I command a fresh measure and instrument or another voice, which is to the mind like a change of posture or of air to the body. My health is benefited materially by the gentle play thus opened to the most delicate of the fibres.

CÆSAR.

'Let me augur that a disorder so tractable may be soon removed. What is it thought to be?

LUCULLUS.

'I am inclined to think, and my physician did not long attempt to persuade me of the contrary, that the ancient realms of Æetes have supplied me with some other plants than the cherry, and such as I should be sorry to see domesticated here in Italy.

CÆSAR.

'The Gods forbid! Hope better things. The reason of Lucullus is stronger than the medicaments of Mi-thridates; but why not use them too? Let nothing be neglected. You may reasonably hope for many years of life: your mother still enjoys it.

LUCULLUS.

'To stand upon one's guard against Death, exasperates his malice and protracts our sufferings.

CÆSAR.

'Rightly and gravely said: but your country at this time cannot do well without you.

LUCULLUS.

'The bowl of milk, which today is presented me, will shortly be presented to my Manes.

CÆSAR.

'Do you suspect the hand?

LUCULLUS.

'I will not suspect a Roman: let us converse no more about it.

CÆSAR.

'It is the only subject on which I am resolved never to think, as relates to myself. Life may concern us, death not. In death we neither can act nor reason, we neither can persuade nor command; and our statues are worth more than we are, let them be but wax. Lucius, I will not divine your thoughts: I will not penetrate into your suspicions, nor suggest mine. I am lost in admiration of your magnanimity and forbearance; that your only dissimulation should be upon the guilt of your assassin; that you should leave him power, and create him virtues. —Vol. i., pp. 42—47.

Tell us not that this is a Heathen mode of exalting men's minds. We are Heathens already, and the question is, whether we shall have the worst form of Heathenism or the best—the Heathenism of Sophocles or of Agathon, of Lucullus or Hellogabalus, of Savage Landor and John Keats, or—but, instead of yielding to one of the most abominable tendencies of the age by becoming personal, we will quote, in support of our opinion, a sonnet from the greatest and most spiritual poet of our day.

'The world is too much with us; late and soon,
Getting and spending, we lay waste our powers:
Little we see in Nature that is ours;
We have given our hearts away, a sordid boon!
This Sea that bares her bosom to the moon;
The Winds that will be howling at all hours
And are up-gathered now like sleeping flowers;
For this, for every thing, we are out of tune;
It moves us not.—Great God! I'd rather be
A Pagan suckled in a creed outworn;
So might I, standing on this pleasant lea
Have glimpses that would make me less forlorn:
Have sight of Proteus coming from the sea,
Or hear old Triton blow his wreathed horn.'

Next week we shall examine Mr. Landor's 'Dialogues' at length, and shall act up to our principle, of noticing only the parts of them as offences which are deviations from the principle upon which they all proceed, and of noticing them with greater scrutiny than we should think necessary, if the author were a man of less power and genius.

In the mean time, we quote one of the dialogues, which, though not in Mr. Landor's best spirit, is strongly characteristic, and, moreover, suits by its length the dimensions of our pages.

'ALEXANDER.

'To come at once to the point, I am ready to prove that neither Jason nor Bacchus, in their memorable expeditions, did greater service to mankind than I have done, and am about to do.

'PRIEST.

'Jason fleeced them, and Bacchus made them drunk: thou appearest a proper successor to these worthies.

'ALEXANDER.

'Such levity on heroes and Gods!

'PRIEST.

'Hark-ye, Alexander! we priests are privileged.

'ALEXANDER.

'I too am privileged to speak of my own great actions; if not as liberator of Greece, which thou didst deride most boisterously, at least as the benefactor of Egypt and of Jupiter.

'PRIEST.

'Here indeed it would be unseemly to laugh; for it is evident on the royal word that Jupiter is much indebted to thee; and equally evident, from the same authority, that thou wantest nothing from him but his blessing—unless it be a public acknowledgment that he has been guilty of another act of bastardy, more becoming his black curls than his grey decrepitude.

'ALEXANDER.

'Amazement! to talk thus of Jupiter!

'PRIEST.

'Only to those who are in his confidence: a mistress, for instance; or a son, as thou art.

'ALEXANDER.

'Yea, by my head and by my sceptre am I. Nothing is more certain.

'PRIEST.

'We will discourse upon that presently. Tell me first in what manner thou art or wilt ever be the benefactor of Egypt.

'ALEXANDER.

'The same exposition will demonstrate that I shall be likewise the benefactor of Jupiter. It is my intention to build a city, in a situation very advantageous for commerce: of course, the frequenters of such a mart will continually make offerings to Jupiter.

'PRIEST.

'For what?

'ALEXANDER.

'For prosperity.

'PRIEST.

'Alas! Alexander, the prosperous make few offerings; and Hermes has the dexterity to intercept the greater part of them. In Egypt there are cities snow already: I should say too many: for men prey upon one another when they are penned together close.

'ALEXANDER.

'There is then no glory in building a magnificent city.

'PRIEST.

'Great may be the glory—

'ALEXANDER.

'Here at least thou art disposed to do me justice.

'PRIEST.

'I never heard until this hour that among thy other attainments was architecture.

'ALEXANDER.

'Scornful and insolent man! dost thou take me for an architect?

'PRIEST.

'I was about to do so: and certainly not in scorn; but to assuage the feeling of it.

'ALEXANDER.

'How!

'PRIEST.

'He who devises the plan of a great city, of its streets, its squares, its palaces, its temples, must exercise much reflection and many kinds of knowledge: and yet those which strike most the vulgar, most even the scientific, require less care, less knowledge, less beneficence, than what are called the viler parts, and are most obscure and unobserved; the construction of the sewers; the method of exempting the aqueducts from the encroachments of their impurities; the conduct of the canals for fresh air in every part of the house, attenuating the summer heats; the exclusion of reptiles; and even the protection from insects. The conveniences and comforts of life in these countries, must depend on such matters.

'ALEXANDER.

'My architect, I doubt not, has considered them maturely.

'PRIEST.

'Who is he?

'ALEXANDER.

'I will not tell thee: the whole glory is mine: I gave the orders, and first conceived the idea.

'PRIEST.

'A bound upon a heap of dust may dream of a fine city, if he has ever seen one; and a madman in chains may dream of building it, and may even give directions about it.

'ALEXANDER.

'I will not bear this.

'PRIEST.

'Were it false, thou couldst bear it; thou wouldst call the bearing of it magnanimity; and wiser men would do the same for centuries. As such wisdom and such greatness are not what I bend my back to measure, do favour me with what thou wert about to say, when thou beganest, *nothing is more certain*: since I presume it must appertain to geometry, of which I am fond.

'ALEXANDER.

'I did not come hither to make figures upon the sand.

'PRIEST.

'Fortunate for thee, if the figure thou wilt leave behind thee could be as easily wiped out.

'ALEXANDER.

'What didst thou say?

'PRIEST.

'I was musing.

'ALEXANDER.

'Even the building of cities is in thy sight neither glorious nor commendable.

'PRIEST.

'Truly, to build them is not among the undertakings I the most applaud in the powerful; but to destroy them is the very foremost of the excesses I abhor. All the cities of the earth should rise up against the man who ruins one. Until this sentiment is predominant, the peaceful can have no protection, the virtuous no encouragement, the brave no countenance, the prosperous no security. We priests communicate one with another extensively; and even in these solitudes thy exploits against Thebes have reached and shocked us. What hearts must lie in the bosoms of those, who applaud thee for preserving the mansion of a deceased poet in the general ruin, while the relatives of the greatest patriot that ever drew breath under heaven, of the soldier at whose hospitable hearth thy father learned all that thou knowest and much more, of Epaminondas (dost thou hear me?) were murdered or enslaved. Now begin the demonstration than which *nothing is more certain*.

'ALEXANDER.

'Nothing is more certain, or what a greater number

of witnesses are ready to attest, than that my mother Olympias, who hated Philip, was pregnant of me by a serpent.

'PRIEST.

'Of what race?

'ALEXANDER.

'Dragon.

'PRIEST.

'Thy mother Olympias hated Philip, a well-made man, young, courageous, libidinous, witty; prodigal of splendour, indifferent to wealth, the greatest captain, the most jovial companion, and the most potent monarch, in Europe...

'ALEXANDER.

'My father Philip, I would have thee to know... I mean my reputed father... was also the greatest politician in the world.

'PRIEST.

'This indeed I am well aware of; but I did not number it among his excellencies in the eyes of a woman: it would have been almost the only reason why she should have preferred the serpent. We live here, O Alexander, in solitude; yet we are not the less curious, but on the contrary the more, to learn what passes in the world around; and, I assure you, neither our records nor those of our brothers in Egypt, ancient as they are, go far enough back, to show us an instance of any signal politician who was not also a signal cuckold. Thou hast unwittingly thrown in a strong argument in favour of thy divinity. Nevertheless we must ponder upon it.

'Olympias then did really fall in love with a serpent! And she was induced...

'ALEXANDER.

'Induced, fool! Do serpents induce people! They coil and climb and subdue them.

'PRIEST.

'The serpent must have been very dexterous...

'ALEXANDER.

'No doubt he was.

'PRIEST.

'But women have such an abhorrence of serpents, that Olympias would surely have rather run away.

'ALEXANDER.

'How could she?

'PRIEST.

'Or called out.

'ALEXANDER.

'Women never do that, lest somebody should hear them.

'PRIEST.

'All mortals seem to bear an innate antipathy to this reptile.

'ALEXANDER.

'Mind! mind what thou sayest, sirrah! do not call my father a reptile.

'PRIEST.

'Even thou, O Alexander, with all thy fortitude, wouldst experience a shuddering at the sight of a serpent in thy bed-clothes.

'ALEXANDER.

'Not at all. Besides, I do not hesitate in my belief that on this occasion it was Jupiter himself. The priests in Macedon were unanimous upon it.

'PRIEST.

'When it happened?

'ALEXANDER.

'When it happened no one mentioned it, for fear of Philip.

'PRIEST.

'What would he have done?

'ALEXANDER.

'He was choleric.

'PRIEST.

'Would he have made war upon Jupiter?

'ALEXANDER.

'By my soul! I know not; but I would have done so, in his place. As a son, I am dutiful: as a husband and a king, there is not a thunderbolt in heaven that should deter me from my rights.

'PRIEST.

'Did any of the priesthood see the dragon, as he was entering or retreating from the chamber?

'ALEXANDER.

'Many saw a great light in it.

'PRIEST.

'He would want one the first time.

'ALEXANDER.

'This seems like irony: sacred things do not admit it. What thousands saw nobody should doubt. The sky opened, lightnings flew athwart it, and strange voices were heard.

PRIEST.

'Juno's the loudest, I suspect.

ALEXANDER.

'Being a king, and the conqueror of kings, let me remind thee, surely I may be treated here with as much deference and solemnity as one priest shews toward another.

PRIEST.

'Certainly with no less, O king! Since thou hast insisted that I should devise the best means of persuading the world of this awful verity, thou wilt excuse me, in thy clemency, if my remarks and interrogatories should appear prolix.

ALEXANDER.

'Ask any thing; but do not press me: kings are not used to it. I will consign to thee every land from the centre to the extremities of Africa; and the Fortunate Isles will I also give to thee, adding those of the Hyperboreans: I wish only the consent of all who officiate in this temple, and their testimony to the world, in declaration of my parentage.

PRIEST.

'Many thanks! We have all we want.

ALEXANDER.

'I cannot think you are true priests then; and if your oath on the divinity of my descent were not my object, and therefore not to be abandoned, I should regret that I had offered so very much in advance, and should be provoked to deduct one half of the Fortunate Isles, and the greater part of the Hyperborean.

PRIEST.

'Those are exactly the regions, O king, which our moderation would induce us to resign. Africa, we know, is worth little. We are, nevertheless, as well contented with the almonds, the dates, the figs, the fresh butter, the antelopes, the kids, the young boars, the tortoises, and the quails about us, as we should be if they were brought to us after fifty days' journey through the desert.

ALEXANDER.

'Really now, is it possible that, in a matter so evident, you can find any obstacle or difficulty in proclaiming me what I am?

PRIEST.

'Our difficulty (slight it must be acknowledged) is this. Our Jupiter is horned.

ALEXANDER.

'So was my father . . . not, indeed, while he played the dragon, but before and after.

PRIEST.

'The children of Jupiter love one another; this we believe here in Libya.

ALEXANDER.

'And rightly: no affection was ever so strong as that of Castor and Pollux. I myself feel a genuine love for them, and greater still for Hercules.

PRIEST.

'If thou hadst a brother or sister on earth, Jove-born, thou wouldst embrace the same most ardently.

ALEXANDER.

'As becomes my birth and heart.

PRIEST.

'O Alexander! may thy godlike race never degenerate!

ALEXANDER.

'Now, indeed, the Powers above do inspire thee.

PRIEST.

'Jupiter, I am commanded by him to declare, is verily thy father.

ALEXANDER.]

'He owns me then! he owns me! What sacrifice worthy of this indulgence can I offer to him?

PRIEST.

'An obedient mind, and a camel-load of nard and amomum for his altar.

ALEXANDER.

'I smell here the exquisite perfume of benzoin.

PRIEST.

'It grows in our vicinity. The nostrils of Jupiter love changes: he is consistent in all parts, being Jupiter. He has other sons and daughters in the world, begotten by him under the same serpentine form, although unknown to common mortals.

ALEXANDER.

'Indeed!

PRIEST.

'I declare it unto thee.

ALEXANDER.

'I cannot doubt it then.

PRIEST.

'Not all indeed of thy comeliness in form and features, but awful and majestic. It is the will of

Jupiter, that, like the Persian monarchs, whose sceptre he hath transferred to thee, thou marryest thy sister.

ALEXANDER.

'Willingly. In what land upon earth liveth she whom thou designest for me?

PRIEST.

'The Destinies and Jupiter himself have conducted thee, O Alexander, to the place where thy nuptials shall be celebrated.

ALEXANDER.

'When did they so?

PRIEST.

'Now; at this very hour.

ALEXANDER.

'Let me see the bride, if it be lawful to lift up her veil.

PRIEST.

'Follow me.

ALEXANDER.

'The steps of this cavern are dark and slippery; but it terminates, no doubt, like the Eleusinian, in pure light and refreshing shades.

PRIEST.

'Wait here an instant: it will grow lighter.

ALEXANDER.

'What do I see yonder?

PRIEST.

'Where?

ALEXANDER.

'Close under the wall, rising and lowering, regularly and slowly, like a long weed on some still river.

PRIEST.

'Thou descriest, O Alexander, the daughter of Jupiter, the watchful virgin, the preserver of our treasures. Without her they would be carried away by the wanderers of the desert; but they fear, as they should do, the daughter of Jupiter.

ALEXANDER.

'Hell and Furies! what hast thou been saying? I heard nothing. Daughter of Jupiter!

PRIEST.

'Hast thou any fancy for the silent and shy maiden? I will leave you together . . .

ALEXANDER.

'Orcus and Erebus!

PRIEST.

'Be discreet! restrain your raptures until the rites are celebrated.

ALEXANDER.

'Rites! Infernal pest! O horror! abomination! a vast panting snake!

PRIEST.

'Say *dragon*, O king! and beware how thou callest horrid and abominable the truly-begotten of our lord thy father.

ALEXANDER.

'What means this? inhuman traitor! Open the door again: show me the way back. Are my conquests to terminate in the jaws of a reptile?

PRIEST.

'Do the kings of Macedon call their sisters such unworthy names?

ALEXANDER.

'Let me out, I say!

PRIEST.

'Inconstant man! I doubt even whether the marriage hath been consummated. Dost thou doubt her worthiness? prove her, prove her. We have certain signs and manifestations that Jupiter begat this powerful creature, thy elder sister. . . though her mother hid her shame and confusion in the desert, where she still wanders, and looks with an evil eye on every thing in the form of man. The poorest, vilest, most abject of the sex, holdeth her head no lower than she.

ALEXANDER.

'Impostor! liar!

PRIEST.

'Do not the sympathies of thy heart inform thee that this solitary queen is of the same lineage as thine?

ALEXANDER.

'What temerity! what impudence! what deceit!

PRIEST.

'Temerity! how so, Alexander! Surely man cannot claim too near an affinity to his Creator, if he will but obey him, as I know thou certainly wilt in this tender alliance. Impudence and deceit were thy other accusations: how little merited! I only traced the collateral branches of the genealogical tree thou pointedst out to me.

ALEXANDER.

'Draw back the bolt: let me pass: stand out of my way. Thy hand upon my shoulder! Were my sword beside me, this monster should lick thy blood.

PRIEST.

'Patience, O king! The iron portal is in my hand: if the hinges turn, thy godhead is extinct. No, Alexander, no! It must not be.

ALEXANDER.

'Lead me forth then. I swear to silence on this.

PRIEST.

'As thou wilt.

ALEXANDER.

'I swear to friendship: lead me but out.

PRIEST.

'Come; although I am much interested in the happiness of his two children whom I serve . . .

ALEXANDER.

'Persecute me no longer; in the name of Jupiter!

PRIEST.

'I can hardly give it up. To have been the maker of such a match! what felicity! what glory! Think once more upon it. There are many who could measure themselves with thee, head to head; let me see the man who will do it with your child at the end of the year, if thou embracest with good heart this daughter of deity.

ALEXANDER.

'Enough, my friend! I have deserved it; but we must deceive men, or they will either hate us or despise us.

PRIEST.

'Now thou talkest reasonably. I here pronounce thy divorce. Moreover, thou shalt be the son of Hammon in Libia, of Mithras in Persia, of Philip in Macedon, of Olympian Jove in Greece: but never for the future teach priests new creeds.

ALEXANDER.

'How my father Philip would have laughed over his cups at such a story as this!

PRIEST.

'Alexander, this shews thee thy folly.

ALEXANDER.

'If such is my folly, what is that of others? Thou wilt acknowledge and proclaim me the progeny of Jupiter.

PRIEST.

'Ay, ay.

ALEXANDER.

'People must believe it.

PRIEST.

'The only doubt will be, among the shrewder, whether, being so extremely old, and having left off his pilgrimages so many years, he could have given our unworthy world so spirited an offspring as thou art.

'Come and sacrifice.

ALEXANDER.

'Priest! I see thou art a man of courage: henceforward we are in confidence; take mine with my hand; give me thine. Confess to me, as the first proof of it, didst thou never shrink back from so voracious and intractable a monster as that accursed snake?

PRIEST.

'We caught her young, and fed her on goat's milk, as our Jupiter himself was fed in the caverns of Crete.

ALEXANDER.

'Your Jupiter! that was another.

PRIEST.

'Some people say so: but the same cradle serves for the whole family; the same story will do for them all. As for fearing this young personage in the treasury-vault, we fear her no more, son Alexander, than the priests of Egypt do his Holiness the Crocodile-god. The gods and their pedagogues, too, are manageable to the hand that feeds them.

ALEXANDER.

'Canst thou talk thus?

PRIEST.

'Of false gods, not of the true one.

ALEXANDER.

'One! are there not many? Some dozens? some hundreds?

PRIEST.

'Not in our neighbourhood; praised be Hammon And plainly to speak, there is nowhere another, let who will have begotten him, whether on cloud or meadow, feather-bed or barn-floor, worth a salt locust or a last year's date-fruit.

'These are our mysteries, if thou must needs know them; and those of other priesthoods are the like.

'Alexander, my boy, do not stand there, with thy arms and thy head aside, pondering. Jupiter the Ram for ever!

ALEXANDER.

'Glory to Jupiter the Ram!'—Vol. i. pp. 279—298

SIR WALTER SCOTT AND GOETHE.

We might easily have found excuses for writing an article on the new novel by the Author of 'Waverley'; but we suspect that the public will be so much interested in Sir Walter Scott's view of the character of Anne of Geierstein, that they will not be likely to pay much attention to ours. We have no hope of our present number being read by any human being, except during the intervals of their perusing the scraps of this marvellous romance. When papa takes up the first volume, his daughter will boldly and impatiently plunge into the second, and, having rambled through both this and the third, before the first has fallen from the paternal hands, may, probably, turn to 'The Athenæum' while she is in waiting. Now, to a young lady in these circumstances, we can conceive no catastrophe so horrible as that of encountering an elaborate article in small type and long paragraphs, doubting, discussing, inquiring, judging, condemning, and, as far as lies in periodical criticism, dispersing into air and phantoms of the night, the 'gay creatures' of that glorious element of genius, against which examining chaplains, lords of the treasury, and weekly journalists, have so bitter an antipathy. On the other hand, when these resplendent beings have sunk into the mass of shadows which fill the minds of almost all men, we may attempt to cope with them more boldly; and we trust that we shall then be permitted, without offence, to converse with our dear readers on a subject so interesting to all of us.

But, although we do not propose to treat, at present, of 'Anne of Geierstein,' we may say something of Sir Walter Scott, whom nine Englishmen in every ten would proclaim to be the greatest author of our age, as surely as most Germans would assign the same pre-eminence to Goëthe. The latter is mentioned, with due honour, in this very novel now before us; and it is curious that Sir Walter Scott, in the fulness of his fame, and after his long career of literature, should have come back to that old ground of feudal Germany which he trod in his noviciate, under the guidance of the author of 'Goetz Von Berlichingen.*' A comparison between the minds of these two remarkable men, if any one living were sufficient to make it, would be extremely valuable, and might probably do lasting service both to England and Germany. We have no pretensions to attempt such an enterprise, which would require the long meditation of a deep mind. But we may throw a few random glances over a region which we do not undertake to conquer; and if, by these, we discover any prospect which can interest our readers, we shall be amply satisfied.

Sir Walter Scott has probably thought less about his own mind, what it has, and what it wants, and in what way it could best be cultivated, than almost any distinguished writer in Europe. He has accumulated, arranged, and wrought immense masses of materials; but he seems never to have paid much attention to the improvement of the machinery which he employs in these labours. He derives from nature wit, not deep like that of Swift and Cervantes, nor fine like that of Pope and Voltaire, but strong, copious, and lively; eloquence, neither very solemn nor very impassioned, but fit for business, clear, sonorous, manly, and abundant; and above all, a fancy which delights in broad and vivid pictures, and has an almost unrivalled facility in composing them. He might have all this; and yet not reach to be a man of genius, which we think that he is. His genius consists in the power of filling his conceptions with a spirit drawn from the form of ordinary human nature, and intelligible and interesting to all. It connects itself most closely with the simplicity and uprightness of his personal character, his keen and unperverted sensibilities,

* The first play (except 'Werter,' the first work) of Goëthe. A translation of it was, we believe, the earliest published production of Sir Walter Scott.

the energy of his moral feelings, and the freshness of his social sympathies. On the other hand, there have been few men of equal ability with so little capacity of reflection. There is the shrewdness of the world, and sometimes delicate taste in his view of individual character; but not a trace of that philosophic insight which can only be gained by long and calm meditation. In his earlier manhood, he showed no tendency to muse on the mysterious and infinite, nor did he plunge with the energy of Shakspeare into the world of the senses. A thoughtful observer might have inferred even then, that he would never rise to a mastery over complicated states of mind, that many tendencies of human emotion must remain unknown to him. And so it is that the inward eddyings and struggles of the soul which proceed from its own unmethodised energy, are never exhibited in his writings, any more than the calm and self-supporting strength which sometimes is the offspring of those convulsions. His reflections, when they are brought at all to his own mind, are never any thing more than acute maxims drawn from experience; and never touch what is most complicated and embarrassing in our thoughts, what is unconnected with outward activity, and is not suggested by outward circumstances.

His boundless popularity arises chiefly from this, that all the thoughts and emotions which he exhibits are borrowed from the common stock of the world, from the treasury into which every man puts something, and the contents of which are known to all. He never seems to suspect, that there are persons who possess a secret hoard, dearer to them, yea infinitely more precious, than their public contributions, and often, indeed, of a coinage which would be rejected by the vulgar. True, the author who should address himself chiefly to the deeper and more sacred portions of our minds, would be misunderstood by some, and by the greater number would be pronounced completely unintelligible. But it is true, also, that only by comprehending and expressing that kernel within the breast which is never used as a plaything before the crowd, can an author make his thoughts an integral part of ours; and can gain for himself that inner and solemn seat in our affections which is held by Shakspeare, Schiller, and Wordsworth. This is never done, never attempted, by the Author of 'Waverley.' His are the various costumes, and expressive manners, of different centuries, and a hundred classes of society; the flowing style, the bright description, the rapid succession of prospect and personage, stirring incident and wild adventure; the youthful eye that glances through the shadow of the warrior's plume, and the stately step of noble and monarch. But the interest which binds together the elements of his power, and displays its spell-words on his glittering banners, is but the idle curiosity whereby the eye is chained to the march of events, while the mind remains comparatively indifferent to the characters of those who take part in them. And, in reading even the choicest of these narratives, the greater part of the pleasure of most men depends on the very principle which gathers together a crowd to the excitement of a contest between prize-fighters and bull-dogs, and which assembles the midnight watchers around a gaming-table,—anxiety, namely, as to the issue of warring circumstances. The gay colouring, the historic recollections, and admirable kindness of feeling, which distinguish all the writings of Sir Walter Scott, tend, of course, to elevate and ennoble the interest felt in his romances; but they are insufficient to alter its essential character.

In Goëthe, on the contrary, the most wonderful phenomenon is his clear and all-embracing intelligence. He seems to have made it the business of his life to direct every faculty with the utmost possible energy upon its proper objects, and thus to bring into its appropriate place within the circle of his philosophy, whatever there is in all existence whereof man may aspire to be cogni-

sant; and it is his great error, if one master error there be in his life, that he has not sufficiently attended to the cultivating for himself an individual and proper character as the centre of that mighty sphere of knowledge. For who is there who has not felt the danger, that in seeking to understand every thing, we may grow to be nothing; nothing, that is, except with reference to something beyond ourselves. Goëthe seeks in all he writes to embody distinctly and scientifically particular modes of existence. He disdains to keep up a fretful and passionate curiosity by the changes of any gorgeous historic pageant, except when this feeling can be made entirely subservient to deep sympathy and pervading intelligence. In Scott we find the more direct, simple, and ordinary manifestations of the old heroic, straightforward humanity, brought together by the mere force of observation. In Goëthe, nothing is presented to us without having obviously undergone the reflection of a powerful mind. He never embalms a corpse till he has dissected it; and displays a skill which never has been equalled in re-uniting the separated portions. We can never sufficiently admire the genius which has studied and understood varieties of the mind so innumerable. But the sage, in the midst of his labours, is himself calm and unmoved, and there gradually grows on us a feeling of something repulsive and preternatural, while we stand in the presence of a being who sees into all our emotions, and seems himself to be endued with none. Great indignation has been expressed by great authorities at those who, agonising for something higher than the daily life we live, complain that they find in Goëthe no glimpses of an ideal nature. Yet, to how few is it given to find consolation in the discovery of the quiet method, the coherence and subordination of all around us. When it is our grief that the sense of harmony has departed from us, it is insolence, not philosophy, to tell us, that if we had music in our souls, we should perceive a magic tune in every air that blows. Accustomed to discover in all the influences of the world and society only discordance and pain, we must be restored, not by recurring to those resources from which we are used to derive nothing but wretchedness; we must look out of ourselves, and afar off, and seek to renovate the capacity of enjoyment by other means than those from which, though originally sufficient, we have been miserably habituated to shrink. Nor is it certain that even a mind so elevated, tranquil, and intelligent as Goëthe's, would not be in a healthier state, were it accustomed to leave some of its own movements unexplained; to acquiesce in the existence of mysteries which it cannot fathom; to let its emotions sometimes be a law to it, instead of constituting its own intellect, however bright and imperial, the despot of all its feelings.

Our readers, we trust, will take these remarks for what we design them to be,—hints; that is, made with the utmost diffidence, and exceeding doubt in ourselves as to their accuracy. With regard to Goëthe especially, who is almost universally recognised as the greatest living mind of the Continent, we are far from fancying that we, foreigners and empirics, have a right to judge. But, above all, we are anxious not to let it be supposed that we imagine all which is wonderful in Goëthe, and all which is delightful in Scott, cannot be united in a single man. The best qualities of both were so united in Shakspeare; and, if we but cling fast to the study of him, the deepest and the simplest spirit that ever moved on earth, we shall gain so much of strength and refreshment as to make the influences of more recent literature of comparatively little importance.

Mademoiselle Sontag and her sister Nina receive thirty guineas for singing at Miss Paton's benefit, on Friday; the proportion, of course, is a matter of arrangement between themselves.

THE CURATE.—A TALE.

THERE is an inbred power which men may feel,
Such men as list to what their hearts reveal,
In streams and copses : else it could not be
That with such deeply-loved solemnity
Their woven murmurs should our minds impress
Till even gushing tears are powerless
To still the emotion. But above all skill,
All conscious working of our human will,
Are those affections which we sometimes trace
In absence ; when some long familiar place,
Some curious nook, some rude uncultured spot,
Wakes in us thoughts which cannot be forgot,
And void of all that other spots commend,
Still haunts us like the memory of a friend.
There was a little knoll of rising ground,
With a few dark-leaved oak trees girdled round,
In a far vale : I know not why I love
That rustic place all other spots above,
For it had little but my love to make
It seem so precious : yet its sight can wake
More harmonies within me, seen in dreams,
Noonday or midnight, than the twined beams
Of forest-wandered light, the whispering flood
Expostulating in its frolic mood
With the sweet banks that gird it, or the sky
With all its golden lamps hung forth on high ;
And now it is more dear, because I know
That it has been much changed since long ago
I lay within its verdant diadem,
Gazing upon the stars, and wooing them
To sink within its circuit : now, they say,
'Tis open to the sun's importune ray,
The trees are felled, and in their place there grows
A leafy screen of the fresh briar-rose,
And smoothest turf o'er all the place is spread,
And that the poppies, purple, blue, and red,
Have vanished all.

Therefore is it enshrined
Not without some religion in my mind,
And all the innocent hopes and childish fears
I can recal from the dull grave of years,
And all the aspirations of the hours
When life was but a garden of sweet flowers,
One springing as its elder sister past,
And still the very sweetest seemed the last,
Whenever, like a gentle breeze, they come
Upon my soul, have this spot for their home.
Four lingering years are past since last I sat
Beneath the old oaks, in different mood from that
Which moved me first my boyish pleasure dome
To make of the rough hill : for cares had come
And wrinkled the smooth cheek ; and twelve long
years

Had opened oft the sluices of my tears ;
The world and all its pains had done their part,
And I that once was light as is the hart
On the Tyrolean hills, whose days went by
Uncounted, for they flew so speedily,—
I now returned with a slow step to sit
Beneath the oaks : and that I was to quit
Them soon for ever, made our meeting sad ;
Though thou wert there, dear Ellen, thou most glad,
Most laughter-loving creature ; but the charm
Was then on both alike, and on my arm
Thou hungest in silence. What thy thoughts might be
I cannot guess ; but sweet perplexity,
The struggle of the present and the past
Within me, held my spirit prisoned fast,
And shapeless as a golden evening mist,
Which with her beams the gentle moon has kist,
My thought was spread abroad ; all then we viewed,
All I remembered, by one joy subdued,
Filled me with harmony. A little space
We sat, and spoke no word ; then from the place
Descending, stood to watch the setting sun
With purple flames light up the clouddlets dun
Which o'er all the west their legions rolled,
Clad in barbaric splendour, glorious to behold !
At length, I said, ' There stood a cottage near
This spot some twelve years since, and now I fear
To seek if still it stand. 'Twas the retreat
Of an old friend whom my heart yearns to greet :
Let us go down into the vale.' We turned
Once more to watch the sinking sun who burned
Among the glowing waters ; then I said,
' If my old friend be in his coffin laid,
'Twill be a sad delight to see the spot
In which he rests.' And my love answered not,
But turning on me her sweet eyes suffused
With happy tears, stood silent while I mused :
At length, I said, ' We'll seek my kind old friend,
This visit will make glad a sad life's end,

When he shall see the boy he loved so well
Returned after long exile : he will tell
You some strange tales of my wild youth.' We went
By the wood-side, following a rill which sent
Its murmuring waters o'er a pebbled bed ;
Till twilight her grey mantle now had spread
O'er wood and stream, and poured a mellow hue
On the autumnal leaves ; thy arm I drew
Closer to mine, dear Ellen, and returned
Thy finger's eloquent pressure. ' I have learned,'
Said I, ' harsh lessons since I last pursued
This streamlet's windings ; many sights have viewed
Which strove to wrench its memory from my heart,
And sometimes with a cold and thankless art
Have steeled myself against the thoughts which spring
Like founts of living waters, nourishing
The visions of my boyhood. 'Tis in vain
That armed with pride we labour to restrain
These lovely recollections ! Swathed round
With philosophic lore, and iron bound,
Among the race of men we may prevail
Some few short hours to walk ; but all our mail,
Our linked mail of selfishness and pride,
Melts in a moment from our naked side,
If one sweet thought revisit us from those
Uncounted stores our gracious childhood owes !
So hath it been with me ; this humble rill
Hath been a monitor in good and ill
To strengthen or restrain, ere thou wert mine
To give me strength, with feelings more divine !
And grudge not, if sometimes a thought I twine
Of these dim shades with the sublimer sense,
My love, of thy unstained excellence,
Or that my heart, still open to the joy,
The exultation of a happy boy,
Sees thee in all its dreams of rills and skies,
And in these loves its childish memories !'
Thou answeredst with thy tears :—a gentle bend
In the stream brought us to our journey's end ;
Before us lay a broken bridge ; the rail
Had fallen into the water ; and the frail
Time-mouldered planks scarce promised a safe stay
To thy light foot-fall. On the far bank lay
The fragments of a gate, and then there rose
The cottage sleeping in a sad repose.
The moonlight, which makes all things soft, was
strewing

Phantastic splendours over all the ruin—
For 'twas a ruin—lighting here and there
Strange glow-worm gleams upon the rafters bare,
On which the dewy trees their soft drops shed.
' We are too late, then,' Ellen gently said,
He sleeps in peace : and my love turned aside,
Her starting tears striving in vain to hide,
Till I said, ' Do not weep, for he is blest !'
The weary man rejoiceth in his rest,
When his long journey draweth to an end,
And so will it have been with my poor friend.
He was sore travelled.' Not a human sound,
Save our two voices, broke the calm profound ;
So when we ceased, the ripples and the wood,
Which murmured ever in that solitude,
And the deep voice of the still night, spake on,
E'en to our hearts sending their solemn tone,
And an eternal requiem for the dead
Breathed, which our hearts in silence answered !

Without a word we to the town returned,
And I next morn, whose very heart-strings yearned
To visit my poor friend's lone burial place,
Proposed to Ellen that we should retrace
Our evening's walk ; for just beyond the cot
A modest church arose, by many a plot
Of solemn yew trees shaded. Oft to me
He said that there his home of rest should be,
And hoped that when the hour should come, his head
Might sink in peace upon that grassy bed,
Among the flock whom he had trained, and find
The quiet which he found not with mankind.
Yet oftener far a solemn feeling swayed
His melancholy mind, till it arrayed
The gloomy spot with splendours which might seem
To colder men shades from a realm of dream,
But were to him most strong reality !
And then for hours together he would lie,
Unless by duty summoned, in the shade,
Joying in sadness ; nor did aught invade
His peaceful contemplation, for the place
Is filled with hardy farmers, a strong race
Who toil all day with thrifful honesty ;
And but that some in rustic sympathy
Felt for the hidden sorrow that oppress
Their pastor, scarce they would disturb his rest
E'en with a word : but sometimes their rough care

Would with keen pangs his gentle bosom tear ;
But these he hid, that none his pain might share ;
Perhaps few knew it ; for his heart was light,
And his keen eyes with happiness were bright,
Whenever, on some work of good, he went
Among them, Heaven's appointed instrument,
To bring the tidings of great joy revealed
To men in Bethlehem,—both in cot or field
The peasant's friend, to comfort or reprove,
Unwearied ever in his work of love.
Such had his life been, ere I bent my way
To distant lands, determined if the day
Should be vouchsafed when I might once more see
This old friend, that my careful love should be
The stay of his old age, as he had been
My youth's revered companion.

The sun had reached his height, and all things wore
His radiance like a garment, when once more
We stood beside the cot. Alas ! the light
Which the stars shed throughout an azure night,
Hath a deceitful beauty : we had stood
Beneath them the last eve in solitude,
Till even desolation seemed to be
A lovely thing, with star, and stream, and tree
Blending a glory of its own, and sight
Became in love with ruin. Now the bright
Truth-loving splendour of the garish day
Swept all the pleasing dreams of eve away !
The walls were rent and black, as if the rage
Of fire into a premature old age
Had shrunk their goodly form ; the graceful vine
Which o'er the roof its shoots was wont to twine,
Drooped, scorched, and seared, and like a maimed
snake

Crawled slowly o'er the spot it once did make
More fair with its fresh beauty. We drew near,
And gazed on the remains with many a tear ;
The showers of spring, the summer suns, had been
With lively influence there ; for mosses green
And brown o'er all the unsightly heaps were spread,
A life in death ; and a sweet moss-rose shed
Its scents unheeded. Oh, how beautiful
It seemed ! But then our hearts with grief were full,
And though it were a sacrilege to tear
That meek flower from the cradle it found there,
Yet for a sad memorial of his fate
Whose pleasant home we found so desolate,
I placed it in my bosom, nor looked back,
But went in silence onward in the track
Which led to the church-yard. At length we stayed
Our steps ; an open grave, a late-used spade,
Arrested us. ' Is death so busy here ?'
Said Ellen, when a grey old man drew near
The village sexton : salutation short,
Yet stately, the old man made, in courteous sort
Welcoming us to his domain, like one
Receiving honoured guests : his greetings done,
He stopped awhile, waiting if we might say
Of business aught—then turned to move away,
And gathering up the tools which strewed the place,
Looked gently down into the grave with face
Of deep concern. Then I, who burned to know
The ill I feared, said quickly, ' Do not go !'
And with a strange surprise, not void of mirth
Suppress, the old man from the grave earth
Lifted his eyes to mine, as he would read
My thoughts, and then drawing near me, said, ' In-
deed,

'Tis hard such young and gentle things must die !
A lovelier child I never knew, and I
Am now nigh seventy ! Well, it is the end
We must all come to.' Of my gentle friend
I thought and said in haste, ' You long have been
The sexton of this place, and must have seen
Too many such ; I had a friend who made
His home here, till he died. If he is laid
Within this churchyard, I would see his grave ;
Alas ! 'tis the only rest the earth ere gave !
You know, perhaps, where Walter Harding lies ?'
' Now God forbid,' said he, ' in quick surprise ;
He ever was the poor man's friend ; you have told
Sad news, Sir, for this village, young and old,
Were sad enough when he went hence ; and then
We little thought to hear of him again,
A dead man !—Though the weight had past away
With these words from my soul, what I might say
I knew not, for the tidings made me dumb,
And pleasure did the effect of grief. Thoughts come
In crowds at times like these, so intertwined,
That like a haze they gather o'er the mind,
And then the man has no relief but tears ;
But my sweet Ellen, who my hopes and fears

Had shared, still questioned the old man, while I
 Could only weep. And he told joyfully
 How my good friend had left his cure to dwell
 With one who, like myself, had loved him well,
 In London; and that full four years had fled
 Since last he came among them. He had said
 More, for he loved of that good man to tell,
 But that from far along the quiet dell,
 And by the ruined cot, and up the hill,
 The funeral pomp wound slowly; through the still
 And genial noon with solemn harmony
 Conveying to her grave the maiden. We
 Stood still, expecting, till they nearer drew;
 Arrayed in their best garb of virgin hue,
 Her sisters came, and sobbed a psalm of joy,
 'I am the life!' With them a gentle boy,
 Smiling at the strange pomp; and then the dead
 Drest in a wedding-robe! The coffin-head
 Her father held, and wept not, for his grief
 Lay deep, too deep, for weeping's soft relief!
 And silently they laid her in the mould,
 Sadly and silently; then the bell tolled,
 And not till then tears ran from every eye,
 As they went slowly from the cemetery;
 And the old father in a mournful tone,
 Said only, 'God! thy gracious will be done!'
 The day's events had made us sad; our way
 We slowly bent where at short distance lay
 My oak-crowned knoll; and as we walked, our theme
 Was my old friend: I said, a man might deem
 Strangely of life, could he believe that all
 Had its completion here, and that this ball
 Of land and sea were our eternal bound,
 Our term of being; for there scarce is found
 One man with goodness armed, but all of life
 Is straightway with his righteousness at strife!
 The world's contempt, poverty, hate, and scorn,
 Hang on his track, while onward still, upborne
 By inward light and power, he moves.

To be continued.

ROYAL ACADEMY EXHIBITION.

(Continued from p. 299.)

We have not even yet, we find, quite done with the Great Room. The catalogue, on being referred to, calls many pictures to mind which must not be passed over in silence. Sir Thomas Lawrence's 'Duke of Clarence,' No. 57, is certainly one of these. It is a portrait painted, as to the head more especially, with admirable ease, simplicity, and natural effect: the hat and handkerchief, it is true, are introduced too fantastically and artificially; but 'let that pass,' in grace to the many and great merits which the painting possesses in other respects.

The Portrait of Sir Thomas Strange, by Mr. Shee, No. 47, is another performance which deserves to be distinguished: the head has much animation, and an agreeable tone of colour pervades the whole picture. The 'Lady in St. Swithin's Chair,' from the first volume of Waverley, No. 43, Sir William Beechey, attracts more by the design than by its colouring: the former displays much intelligence, and strong and appropriate expression.

'Sir Roger de Coverley and the Gypsies,' No. 134, C. P. Leslie, is a charming little picture, full of expression and sentiment. The character of the old bachelor, the benevolent squire, and the country gentleman of the past age, is exquisitely conceived, and represented with great spirit and feeling. The archness of the idle baggages, in whom it evidently requires no recourse to magic to be able to let the worthy innamorato into the secret of his own intentions, is keen and pleasant. The picture, too, is most agreeably painted; the sitting group in the corner, the prolific hussey and her twins, is delightful.

We have seen paintings, by Mr. Collins, more attractive by the force of particular effects than 'The Morning after a Storm,' No. 166, the principal work of this academician in the present collection; but we cannot call to mind any one of his productions which shows a more masterly pencil, and the hand of an artist of truer taste, or in which power is more successfully combined

with simplicity, and rendered consistent with the absence of display, than in this picture.

'The study of an Ass,' No. 191, W. Barraud, we regret to say, escaped our notice: and it is not in our power, therefore, to report to our readers what the title signifies, or with what skill and effect the subject is treated. The name of the artist warns us against lauding the picture at a venture; for we have not the honour of his acquaintance. We feel no incumbency to back him at all hazards; nor, if our conscience would reconcile itself to the playing of such a trick on our readers, would prudence consent to the impudent imposition, lest we should treat the pedant in his library, the artist in his painting-room, the alchymist at his crucible, or the incipient mathematician at his *pomp*, as a jackeyburm in his stall. The catalogue of the British Institution has taught us to mistrust the waggery of our knights of the pallet; to hesitate before we form a notion of the nature of a picture from the denomination by which they, in their exquisite humour, may be pleased to designate it; so, for this turn, 'The Ass's Study,' or 'The Study of an Ass,' must go without a comment, even should the excellence of the portrait be calculated to provoke the quotation of the proverb, not for the first time so applied:—

'A fellow-feeling makes us wondrous kind.'

No. 207 is 'Milton's Reconciliation with his Wife,' M. Boxall, with the passage,—

'Soon his heart relented

Towards her, his wife so late, and sole desire,
 Now at his feet, submissive in distress.'

This is a very pleasing sketchy picture, well and feelingly conceived, simply grouped, and touching and expressive in sentiment.

'The Taj Mahal, at Agra; Mausoleum of white marble, erected by Shah Jehan, for his favourite queen, Miuntanza Zemam,' No. 210, W. Daniel, presents a splendid view of a building from the opposite side of the river Jumna. The architecture is of superb and picturesque character, and is most skilfully drawn: the foreground is rich in figures and colour, and the whole has a most brilliant effect. But for a work of unobtrusive merit and delightful quality, give us 'The Return, a Cottage Scene in the Campagna di Roma,' No. 30, P. Williams. What a charming little picture is here! How natural the groups! how rich, and warm, and Italian the colouring! and the little girl holding forth her apron to receive the fruit from her mounted brother; how true! how expressive of the grace of childhood and innocence! And for a study of a donkey, here is one quite alive, and fit for a Sterne to commune with.

We have not overlooked Mr. Landseer's 'Illicit Whiskey Still in the Highlands,' No. 20; nor Mr. Turner's 'The Banks of the Loire,' No. 19. The latter is a gem of the first water, brilliant and beautiful. The former, also, is a masterpiece of the pencil of the clever artist by whom it is executed, and of the nature of the excellence of Edwin Landseer's *chef-d'œuvre* who is there that is ignorant? Powerful effect of colour, clever handling, ingenuity of thought, characteristic delineation, and high finish, are conspicuous in this, as they invariably prove to be in every production of the same pencil which admits of those qualities. 'Bashaw, the property of the Earl of Dudley,' No. 291, is a subject not susceptible of the display of these various qualities; yet is it in its way an exquisite picture, full of spirit, and life, and natural freedom.

And now that we have at last turned our backs on the many attractions of the Great Room, and are fairly advanced into the School of Painting, following the plan heretofore pursued, and without attention to the order of the numbering, we shall give precedence to those pictures which, by their conspicuous situation or merits, first call for notice.

We shall not be guilty of any singularity in hastening to place ourselves before the 'Camilla

introduced to Gil Blas at the Inn,' No. 246, G. S. Newton. This is one of the best and most finished pictures that that artist has ever produced. Perhaps we do not go at all too far in expressing the opinion, that it surpasses any thing he has heretofore accomplished. The subject, with one exception, is well conceived and skilfully conducted; the painting is executed in a most masterly and artist-like style. The figure of Camilla, except that it is somewhat lengthy, is excellent. The head is beautiful, and full of animation: nor is the 'ruby of the Philippine Isles' wanting to her delicate finger. The novice-like air of her dupe, and the general sentiment which runs through the picture, are no less excellent. But the conductor of one of the best hotels in Valladolid receiving a lady of apparent quality, and with flambeau in hand conducting her to the presence of a supposed distinguished guest, should certainly have had the costume and style of the Hidalgo, and not the air of the keeper of a common *venta*. Such a figure as Mr. Newton has here represented the landlord, would have been sufficiently in keeping with the Spanish Posada of Mr. Wilkie, but is by no means a characteristic delineation of the proprietor of a *fonda* in a provincial capital.

The portrait of Mr. Soane, by Sir Thomas Lawrence, is truly exquisite. How like, and how living! How flexible the muscles of the face! What ease and freedom in the execution! How full of substance and cloth-like are the habiliments! In this respect, Mr. H. P. Briggs should contrast with it his portrait, No. 264. Not that we mean anything invidious to Mr. Briggs—the portrait we allude to, we consider a very successful one; nor, we are sure, would the artist himself object to our referring him to the example of Sir Thomas Lawrence, for a lesson in the treatment of a coat, since portraits cannot be painted without that very important article in the dress of a gentleman. In Mr. Briggs' performance, in fact, the costume is the only objectionable part of an otherwise excellent picture. On first glancing at the portrait, it is difficult, certainly, to reconcile the character of the principal subject, with the cuirass by his side: the personage, indeed, is sufficiently swarthy to have followed many campaigns under various climes; he is, moreover, duly and darkly bewhiskered, yet is there nothing martial, nothing heroic, in the air and bearing of the man. The pen, too, holds the place of the sword, and seems to bespeak some mystery;—it may be then, after all, that Mr. Briggs is right. So, indeed, it proves—the gentleman before us is no soldier, but a man of peace, an antiquary—he is Samuel Lush Meyrick, LL.D., of Goodrich Court, Herefordshire, according to the catalogue, but probably more known to most of our readers, certainly to those of a contemporary monthly periodical,* as of the Tower of London.

In 'The Confessional,—Pilgrims confessing in St. Peter's,' No. 293, and 'The Pifferari Calabrian shepherds playing their hymns to the Madonna when arriving with the pilgrims in Rome,' No. 298,—we have two pictures, by Mr. Wilkie, less finished than those noticed in former numbers, but still most clever, artistlike, and delightful productions. In respect to the beauty of the grouping, the Pifferari has seldom, if ever, been surpassed.

'Hadleigh Castle, the mouth of the Thames, Morning after a stormy Night,' 322, I. Constable, is a picture which convicts the artist who executed it, of being a dangerous subject. The merits and beauties of this performance are such that it almost recommends a manner which the judgment pronounces to be faulty. But for this manner, indeed, the picture before us would be perfect,—so grand and picturesque, so free and so bold, is it,—so full of power and effect.

Portrait of Mrs. Bolton King, No. 325, I. Partridge, is a charming picture, replete with grace and sweetness, and lady-like delicacy: the

* Vide 'London Magazine,' for Jan. and Feb.

drapery is excellently managed—simple, and at the same time of a rich effect. The other accessories are in perfect keeping with the elegance of the figure and of the attire. The painting is highly and carefully finished.

'The Loretto Necklace,' No. 337, I. M. W. Turner.—Hereby, we presume, hangs a tale; and more, we conclude, is meant than meets the eye. Yet, although in Mr. Turner's most splendid Polyphemus we could penetrate into things veiled to eyes profane—could discern the fiery steeds of the god of day, even distinguishing Pyrois from Eöus, and Æthon from Phlegon,—although, through the dazzling brilliancy of that gorgeous composition, we could perceive the Naiads, and the Tritons, and the Dolphins, as they wanted in the waves,—nay, although even the ensign wrought with the story of the Wooden Horse, and of the catastrophe thereby brought on Ilion, escaped us not unheeded,—yet have we not been profound enough to discover the secret of the Loretto Necklace. That rosaries, which we, heretics profane, are too apt to confound with necklaces, and use and wear as such, receive consecration in the most holy pap-boat religiously preserved in the sacred house of the Virgin, which the angels brought from Palestine, and deposited in the woods of Loretto, we are perfectly aware; nor are we ignorant that articles, however insignificant their intrinsic value, when once they have undergone this hallowing benediction, are held in high veneration, and form most acceptable and efficacious presents if borne to a distance, and laid at the feet of some pious donna, whom a rigid parent, or a spouse too little indulgent, has debarred from visiting in *propriâ personâ* the miracle-working shrine; yet never did we dream, that, under the very walls which encircle the treasure of Catholic Christendom, a Loretto Necklace would plead with any great effect the cause of an innamorato. We confess, therefore, that, although we have made the circuit of the Santa Casa on our knees, we are as ignorant as if we never had wandered beyond the sound of the bells of Bow, of the meaning of the Loretto Necklace, and are provoked to be obliged to avow this our ignorance to the number of inquirers who have done us the vexatious honour of demanding explanation at our hands. Mr. Turner should certainly have told his story more explicitly, and saved his critics this mortification. At least he might have afforded some clue for the guidance or assistance of the invention; but no, he has left us in the dark as to the adventure of the Necklace, and has put us off with a landscape, delightful and brilliant it must be owned, and considerably, although by no means entirely, taken from the luxuriant scenery for which the vicinity of Loretto is well nigh as much distinguished as for the possession of the Santa Casa. The composition of this picture is in truth delightful: that the colour is extravagant, cannot be denied; nor can such extravagance be justified in the representation of a natural scene, as in the imaginary one of the Ulysses and Polyphemus; yet is it impossible to regard the painting even in respect to its colour without gratification and admiration. The effect of the gleam which crosses and illumines the scene, is most happy; and indeed, were the tree in the foreground less gorgeous, the rest of the picture might be allowed to pass without any qualification to the highest eulogium.

Before next week, perhaps we may be so fortunate as to solve the enigma of the Loretto Necklace. We will pause to make the attempt. In the mean time, we beg Mr. Simpson, Mr. Lee, and Mr. Howard, with several other exhibitors, whose works we have now in our mind's eye as worthy companions to those already mentioned as adorning the Painting Room to excuse our postponing for this turn the notice of their meritorious productions.

Sir Walter Scott's new novel, subscribed upwards of 4,000 copies; and Lockhart's 'Life of Napoleon Buonaparte,' upwards of 6,000.

MAY-TIME:—A WORD IN SEASON.

MAY! how strange have been, at different times, the notions connected with this name! To us, alas! in London, it suggests little more than tinselled chimney-sweepers and gilded revels. Who is there who, in his weariness and dissatisfaction, has not sighed over the loss of the customs which made the May a thing of flowers and gladness, when the heavy tread of labour was lightened into a dance, and the formalities of life burst out with a flush of rose-red and milk-white blossoms? All of us who would ridicule in society the wildness and simplicity of such a lamentation for the silenced laughter and withered honours of the Spring, yet keep behind the veil, with which we hide the sanctuary of our thoughts, an enduring regret for the departure from the land of those blithe May-triumphs. Who is the man that, at one moment or other of existence, has not longed to turn aside from the path made dry and hard by his own footsteps, and to wander, were it only for an hour, were it but for the space of a brief Spring sun-burst, in the green meadows, and among the maiden-sprites of antique visions, with whom poets, five hundred years ago translated to the stars, dreamed themselves singing amid the forest nooks, in love and pure devotion? If such a man there be, for him the May was not ordained; for him the year is despoiled of its young heart and its primrose coronal. Or is there a lady whose bosom heaves under lace and pearls, that has never fancied herself untyrannised by the slavery to which she is doomed; who has never imagined that she might have been seen by fond and reverential eyes among the morrice-troops, in those old mysteries of seasonable rejoicing; who so distrusts herself as not to have sighed for the blameless freedom of the woods and dells; whose dreams have never shown her any of nature's pageants; whose breast nourishes no flowers for herself, though it wears them for the eyes of others? No; this is not a lady. To all alike descend from heaven the revelations of an Eden life; and they see the stags couching beneath the oak, and the rout of children under the hawthorn hedge, and the shadows of clouds on the sunny meadow, and the train, glad in each other's gladness, who dance and laugh around the May-pole. But then, even beneath the bright blue sky of May, and with the breezes around us, comes over us the custom, and the shudder; and we look away from the vista which led along the clouds into that rich kingdom of romance; and we bow our heads and groan.

A thousand gay and significant observances have chased each other over the brink of the world, and perished. Every nation has had national rejoicing in the train of national religion; and the victim was adorned with flowers, and the temple was encircled with its domain of field and forest; and Pan and Bacchus were names to wake the village, and heal the palsy; and Hanuman gathered for this triumph the wise Brahmins and the multitude of shouting followers. Us too the fairies have visited. And Christendom has had its innocent revels; nor was May from the beginning a bare and empty time.

And wherefore should it be so now? Why is it that in this later age we seem to enjoy only by recollection; and that with the freshest music of the world is mingled a faint but continuous requiem for the past? Can it be that this is the condition of humanity? Was it thus when the young Earth listened to the singing of the stars? And was there this note of sadness in the melody of Eve's virgin voice? No: the primal generation must have had strength to hope, while our weakness can only fear. They had not our bitter and full experience, which opposes to any vague and twilight expectation the long roll inscribed with the definite evils of so many thousand years. To them the spring must, indeed, have appeared an awakening, and a regeneration; and they tuned their minds to harmony with the glorious season.

We live amid the sepulchres of various centuries, and make our hearts after the model of the grave. We read the epitaphs, which tell us that those ages had pulses and springs of joy, and remembering that the pulses ceased to beat and the springs to flow for them, we forget that they still live and move for us. We are but melancholy mourners at the funeral of the past, and do not live for ourselves the brave life which might gain to us also an honourable and devout interment.

This need not be so. None but a pitiful and punctilious sorrow will spend itself in lamentation for the hearty rites and gorgeous triumphs which illuminated other centuries, which have had their time and passed away. There is, indeed, an iron and encircling law of necessity which forbids us weak slaves of our day and destiny to adorn the earth with the pageants of our forefathers. They are buried in their festal robes; with their wine-cups beside them, and the garlands, which they wore, are withered on their brows. It were a comedian's trick to rob the tomb, and mask ourselves in its spoils. But rightly thought of, they lived for the future, as well as for their native hour. We are downward and clod-bound souls, and, dedicating ourselves to the narrow circle of the world's dust, within which our tether confines us, we forget that we are visited by the airs from distant kingdoms, and sunny seas, breezes rich with odours of other times, and fresh from that fairy-land of the clouds. The earth is but the dregs and poor remains of the living and glowing past. Yet we need but faith to know that all past exists for us; and that all its rejoicings may be celebrated anew in our hearts. The thought and finer spirit of all foregone gladness and virtue lives in our atmosphere. It is but the material dross which stays to be trodden underfoot, and find an infamous burial in the contempt of successors. Wherever in old time was any mystery of rejoicing, there was sown a seed which flowers for us. And to those who will it, though the shapes and emblems of old May-time have departed, in the mind there is a subtle and bright renewal of those green festivities, and they hail the leafiness of the forest, and the joy of the world's aged heart, with processions of the fancy and music audible to the purged brain. The true, the genial, admits not of destruction. If in any land has ever been a hearty manifestation of religion, if any where a festivity which recognised the life that is in the changing year, if any where a word of poetry has charmed with a spell the apathy of daily existence, we, late-born, and unknowing, as it is thought, to rejoice, have yet within us the power to reproduce whatever of real and concordant good has been among mankind, and to make ourselves the rich inheritors of whatever gladness, and faith, and hope, has had strength to lift men from the sod. Believe this, and the freshness of old religions is ever with us, and the loveliness of Paganism has not departed from Christian temples; and not only now when every bush seems burning heavenward with a placid and verdant flame, and the winds of the morning are messengers of glad tidings to us from a whole creation of happy beings, not only in these merry hovers of May, but amid the dark and icy dens of December, shall we be able to keep May-time in our hearts.

ROYAL INSTITUTION.

[In the report, in our last number, of Mr. Mason's lecture on Wood-engraving, it was erroneously stated to be the ancient practice to cut the material transversely. The contrary is, in fact, the case, and was represented to be so by the lecturer: in other words, it was the ancient mode to work the wood vertically; the modern usage is to cut it horizontally.]

On Friday, May 22, a lecture which made half-hours appear minutes, was delivered by Mr. Faraday on the subject of the operation of vibration on the surfaces of elastic substances. After stating that he derived the information he was about

to impart to his audience from Mr. Wheatstone, whose discoveries in Acoustics or Phonetics promised to open a new era in our knowledge of the action of sound, Mr. Faraday announced that the particular object of his lecture was the display of a very curious set of phenomena which attend vibration, as they show themselves in the forms taken up by surfaces when vibrating.

In the first place, he addressed himself to explain the meaning of the term 'nodal points or lines' which had been adopted to express a particular effect to which vibrating bodies are subject from contact with other objects. Such contact, it is well known, arrests the vibration: this is exemplified in the constant and simple practice of putting a finger to a glass that has been struck, to stop the jingling noise. The contact operates on surfaces so as to form points, which remain in a state of repose, while the other parts of the body are in action; hence the name of knots or nodal points, which were first discovered by Messrs. Noble and Pigott, pupils of Dr. Wallace, at Oxford. After this statement, Mr. Faraday proceeded to afford ocular demonstration of the nodal effect, by touching a strained wire, fastened at its extremities. Every part was evidently thrown into a state of vibration; there were no points of rest except the ends. The wire having been allowed to resume its state of repose, three pieces of paper were placed near to it, and it was again thrown into a state of vibration: on this occasion, an additional point of rest had been given to it, by contact with one hand of the lecturer, while the other communicated to it the vibratory motion: in this case two of the pieces of paper were cast to a distance from the wire; the third, which was near the point of rest, remained motionless. To carry the simple illustration of the nodal effect still further, Mr. Faraday strained the wire from hooks fastened on the wall; then, having held it between his fingers at one point, while with the other hand he set it in motion, he retired, that the audience might see the effect: both the vibratory motion, and the point at which the wire was at rest, were distinctly perceptible. Another illustration of the same effect was produced by the holding a long cane in the hand, and shaking it.

On surfaces, Mr. Faraday went on to say, these nodal points are so numerous, that they become lines. Galileo, it seems, was aware of the effect which formed the subject of the lecture: he had observed that, if bristles were spread on a sounding board, some danced about while others remained still. The Florentine philosopher had also remarked that, on giving the vibratory motion to the edges of a glass which contained water, a portion of the element would remain still while the rest was in motion. A step towards further progress in this discovery was made, in 1785, by Cladé, who applied the violin-bow to plates of glass; and, by so doing, acquired various sounds. Liechtenberg, in the course of his philosophical experiments, had strewed some powder on a plate of glass, and brought the knob of a leaden jar to the plate, when the powder arranged itself in various forms on the plate. Cladé hoped to produce a similar effect by strewing sand on a round plate of glass, the edge of which he then scraped with a violin bow; the sand, to his satisfaction and surprise, immediately took the form of a star, with twelve rays, or of a wheel with twelve spokes, or six diameters: he repeated his experiments, and, as he produced higher sounds from the plate and bow, he found the sand thrown into a variety of beautiful configurations. Mr. Faraday pointed to diagrams illustrative of these experiments, several of which he, moreover, performed very successfully himself, to the satisfaction and delight of his audience.

He then explained that these effects were produced by the contact of the body on which the vibration operated, with other objects; the fingers or tongue, for instance, by which they were held, the props on which they rest, &c.; and that on

the communication of vibratory action, the sand was thrown from the vibrating parts to the portions at rest: at this stage of his observations and experiments, Mr. Faraday remarked on the excellent test afforded by this effect for showing the regularity of surfaces in the structure of bodies, a more accurate one, he affirmed, than even the polarization of light; for, if the surface have the least inequality, or the plate be of irregular thickness, the forms taken by the sand or powder strewed on it will be distorted.

The lecturer, resuming his plates, observed, that every sound on the same surface had a particular corresponding form; but that, in different plates similar form does not imply similar sounds. He then drew attention to the curious fact, that the simplest forms were produced by the lowest sounds; and that in proportion as the latter were higher, the configuration communicated to objects on the surface of the plates became more complicated. A few experiments were made in the presence of the audience in proof of this fact; but the greater number were illustrated by numerous diagrams, and plates of glass, previously arranged on the table: as to these, the time obliged Mr. Faraday to content himself with showing his auditors the way to produce them, assuring them that any elastic substance, a piece of coin for instance, was as susceptible of the effect as glass. In proof of this assertion, taking a half-crown between his fingers with the left hand, he strewed sand on it with the right: with that, he then drew the violin-bow down the edge of the coin, and the sand assumed the same form as he had before shown that it would take on the surfaces of glass plates.

Mr. Faraday proceeded to show various modes of preventing the existence of positive diameters formed by the lines which the experiments he had before made had produced; and one of these methods he explained to be, to draw the bow down the edge of the plate immediately behind the point of rest,—another to support the plate at its centre by a glass rod, and, instead of vibrating the edge, to communicate the motion to the supporting rod: a third was, to make a hole through the centre of the plate, and on the edges there to perform the operation. In these instances, it was shown that the sand on the surface might be made to arrange itself in waving and curved and circular lines.

The next division of Mr. Faraday's lecture was no less interesting than that of which we have given this imperfect account. It related to the reciprocation of the vibratory motion, or the communication through the air from the originally excited body to another. Savard's experiments on this point were explained and tried; he had sprinkled sand on a plate communicating by means of a bridge, such as that of a violin, with a string: the string was the object excited; the plate was found to receive the same sound as the string, and various forms were assumed by the sand. Savard was the first who made known the observation that membranes extended over frames would receive impressions from vibrations near them. This Mr. Faraday exemplified to his audience by experiments with drums formed of tracing-paper: instruments of extreme sensibility, as was shown by the effect produced on them by merely breathing, an operation by which the sound became as effectually changed as it would be in the case of a blow on a slackened drum-head. It was observed, that the forms received by membranes by reciprocation, are in accordance with the particular part vibrating in the plate from which the reciprocation is communicated; but that, as the tension changes, the form changes, and the matter on the surface will pass from one form to another. The former fact was shown by the following experiment: Mr. Faraday strewed sand on a drum made of tracing-paper, as above described; near to the surface of the drum, he held a round plate of glass, down the edges of which he drew the violin-bow.

The sand on the drum experienced the same effect which would have been produced on it had it been strewed on the plate of glass itself: it assumed a variety of forms, similar to those which it had been shown to take when the experiment was made simply with the glass. Mr. Faraday hinted at the utility of which these discoveries might be made, and of their capability of application to the purposes of the arts and manufactures. He showed that already an experiment, similar to that he had tried with the drum, was resorted to in mining districts, where it is the custom to ascertain by filings spread on a drum whether other workings are near, and which way they are approaching: according to the forms in which the filings become arranged, the workmen draw their conclusions of the direction in which the other workings are advancing, and are thus guided in their own operations. In conclusion, Mr. Faraday observed that no satisfactory explanation of the causes of the phenomena which he had been engaged in producing had as yet been offered; but that, the attention of mathematicians being now occupied in the enquiry, much was to be expected from the results of their labours. He even hinted at the probability that in the course of the next season he might have matter of importance on this view of the subject to communicate from Mr. Wheatstone.

The objects of curiosity placed on the table of the library on this occasion were three small bronze statues, being authentic figures of Buddha, according with the proportions laid down in the sacred books of Ceylon; a candle made of vegetable wax, (Rhus,) from Japan; a very extraordinary specimen of chrysalis; and a cork model of the tomb found near Pæstum, chiefly remarkable for a fresco painting on one of the side-walls, representing two figures in combat, a third looking on; the figures in colour red, on a white ground.

ATHENIAN SCENE.

SCENE.—A Room in the House of Alcibiades.

Alcibiades, Cleinias, Aristophanes, Chæra, Philenis, Timandra, Speusippus, Glycerium.

Alcib.—Thanks to the Gods! Here we, at least, are removed from the toils and vexations of politics. By thy own bright eyes, my Philenis, how gladly would I leave this hydra-headed mob, and all its powers, and all my popularity, to live a life of soft enjoyment with thee! You are not cheerful, my poor girl. By Venus, I think thou art infected with the Nician plague, and lookest but coldly on me. Some wine there! Wilt thou not drink to me, Philenis? Nay, then I care not. Aristophanes, I pledge thee! To our loves.

Aristoph.—Thou mayest drink to thy loves as thou wilt, though may Bacchus choke me an it make not a void in thy cellar, do thou but drink a cyathus to each. Come, find me a long-named girl, a girl who hath all the letters of the alphabet in her name; such a girl as I might drink a cask to and not break through the rules of good-fellowship! Come, whom dost thou name? Timandra? Or Glaucæ, or the little Cretan Leucippe, or—

Timand.—(Half aside.)—Disgusting monster!

Alcib.—Nay, Timandra, calm yourself. Philenis! Averting gods, how pale she is! Nay, my sweet girl, he does but jest. Thou knowest his privilege.

Timand.—(Half aside.)—A forward minx, to make herself conspicuous before a large party!

Clein.—What says the fair Timandra?

Timand.—Oh, nothing, Sir; nothing at all, I assure you. I can bear it, Sir; and I can revenge it, Sir.

Clein.—In the name of friendship, be quiet. Do not irritate Alcibiades. You know his temper.

Arist.—Here's to my flaggon! 'Tis the only toast. Right Chian, by my gods! Well, well, Jove grant thee no lack of such liquor, while there are warm hearts in Athens that can prize it!—A traitor, gentlemen; a Boeotian traitor!

Alcib.—How now, good Aristophanes? Such words were fitter from the mouth of Nicias than from a friend of Alcibiades!

Arist.—Tush! man; hast thou not Coptic eels and anchovies from the Asopus, (the which, nevertheless,

are but as dung to the Phaleran,) and dost thou say thou art not in open communication with the Boeotians!

Alcib.—And dost thou forget the ten days' truce! Fie on thee, for a shallow politician.

Arist.—Dost thou infringe upon an orator's privilege? Thou hast not heard the punishment I inscribe. By the goddess of the lake, thou shalt not taste of her Boeotian store! It is not well for young men to have any dealings with contraband goods; therefore will I convert them into mine own exchequer. Behold, I confiscate them unto myself for the good of the city. What sayest thou, Cleinias? Thou wilt not grudge me my prize! Well, thou shalt have thy share, an thou wilt send me the thrush that lies so invitingly before thee.

Speus.—Is it true, Chærea, that Nicander, the Cretan, was thrown this morning in the palaestra, by a young Athenian?

Cher.—I was not there. I will ask Cleinias for you. Cleinias!

Clein.—A flask of wine!

Cher.—Nay, that was not my object in calling thee, though I will pledge thee willingly. Was the big Cretan wrestler thrown this morning?

Clein.—Yes, a good back fall.

Cher.—By whom?

Clein.—Thou knowest the man.

Cher.—Stay, let me guess.

Clein.—I will wager thee my ring to thy sword-belt that thou dost not name him in three trials.

Cher.—And Glycerium shall hold the stakes. 'Twas Lamachus. No? Oh, then it was Niceratus. Wrong again? You say it was a nobleman?

Clein.—Ay, a nobleman.

Cher.—Yet they are reckoned the best wrestlers in Athens. Stay, let me see. It was Cymon.

Clein.—By Mercury, you have lost. 'Twas Alcibiades.

Speus.—Alcibiades! Art thou serious?

Clein.—By Pollux, as a Dicast. Didst thou not know how much he practised when he was in Crete? Hush! he hath asked Timandra to dance.

Speus.—I'll wager that she refuses.

Timand.—Nay, I pray you, let your Lesbian dance. 'Faith, I have tired myself with wandering up and down to find thee in the Ceramicus.

Speus.—Said I not?

Cher.—She is as jealous as Juno herself.

Clein.—She would be little cared of it by aught she saw in the Ceramicus. I read on the wall this very morning, 'Alcibiades loves Philænis, and Philænis loves the son of Cleinias. Weep, maidens of Athens, for the deserted Timandra.'

Timand.—This is too much, by Jove! Will it not satisfy thee, barbarian, that your names are chalked together on every wall in Athens: that you are the theme of every tongue, but you must bring me to be a witness of your felicity—your odious endearments!

Philan. (Aside.)—My felicity! Oh Alcibiades!

Alcib.—Fear not, my love. How now, what brawl is this? Dost thou disturb my guests with thy jealousy? Is it my fault, if fools will blab, and talk of what they know not? What ho there! a song. Bid the minstrels give the rhapsody they wot of.

Clein.—What rhapsody does he mean?

Alcib.—Hephestus's advice to Juno, at her husband's table, not to disturb his banquet.

Clein.—Nay, be calm, I beseech thee. Stay, stay, Timandra. By Heaven, she will not hear me.

Alcib.—Let her begone, an she list, a troubler of my peace! Tremble not so, my Philænis, thy Alcibiades is near thee. I love thee only.

Philan.—Would I could believe thee, fickle Alcibiades!

Alcib.—Nay, if thou weepest, I must e'en follow Timandra. I doubt not thou mayest find comfort here; Athens hath many gallants, besides Alcibiades, to whisper soft nonsense in a willing ear.

Philan.—Unkind, unkind! Didst thou but know—

Alcib.—Weep not, sweet Philænis, I did but jest with thee. See, I drink to thee; love sparkles round my goblet's brim, and pleasure crowns the cup!

Philan.—To be forgotten with the emptying—Nay, for shame!

Arist.—Fie, Alcibiades, kissing before strangers! But how's this? we have lost our songstress.

Clein.—Philænis shall supply her loss, far better.

Alcib.—Wilt thou not, my soul? Wilt thou not sing me the Lesbian song I have loved to hear, when be-

neath one of the broad planes of thy native woods thou hast poured soft slumbers on eyes long oppressed with care. Well, an thou wilt not sing that, e'en sing what pleases thee.

Philan.—I did not think to have wept again this evening. These tears are not worthy of my mother's daughter.—My harp!

Oh! say not Lesbian hearts are cold,

That Lesbian maids to love disdain!

Couldst thou my secret soul behold,

Thou wouldst not say I scorned his chain.

Oh no, my country, not in thee

Blame we Insensibility!

Oh! say not that for aye are fled

The triumphs of the Lesbian lyre;

Still doth the Muse her spirit shed

On chords that thrill with holier fire;

Yes, Sappho's passion lives again

In strains that rival Sappho's strain.

And think'st thou, that I loved not thee?

It e'ft my country and my home;

I left my mother, o'er the sea;

Won by thy witching tongue to roam;

I love thee dearly still, and yet

How oft thou provest thou canst forget!

I will not shed the ignoble tear!

Hither the rosy goblet bring;

Once more my locks the chaplet wear,

That blooms with every gift of spring;

Lightly they twine my youthful brow,

Yet, ah what anguish lies below!

The rose my dark soft locks may bind,

The violet may be wreathed with art;

But can they soothe the anxious mind

Or peace, when peace is lost, impart?

Away, away the chaplet throw

It blooms in mockery of my woe!

Philan.—I can sing no more.

Alcib.—Nay, sweet Philænis, thou art too sad.—How now? (*A slave enters.*)

Slave.—A deputation from the Prytaneum wait on your Lordship, and beg a few moments of your leisure.

Alcib.—Say you so? Are they Athenians?

Slave.—I think the chief of the Ambassadors from Sparta are of the number, and my Lord Nicias is certainly one.

Alcib.—Stay, gentlemen. Sooner than Nicias and myself shall meet in friendship beneath this roof, may its pillars fall and crush me!—Unmannered slave, to break thus upon my moments of festivity. Sit, gentlemen, I beseech you. To the mill with him. No words! To the mill! Yet, stay; go back and tell the deputation that I and Sparta are two deadly opposites! Tell Callicratidas, if he be there, that he will find me in the Agora to-morrow. If he come for Athens' good, there I will hear his propositions; if to bribe me, tell him that all the wealth our broad walls encircle could not make me a friend to Lacedæmon. Some wine within! and music in the hall! Shall we hear this Rhodian's song? Come, gentlemen.

FOREIGN QUARTERLY REVIEW.—No. 7.

THE subjects treated of in the present Number of this well-established and improving work, are unusually interesting. 'Sismond's Histoire des Français,' holds the first place, and furnishes the text to a very able article. Then follows one on 'The Language and Literature of Holland,' we suppose by Mr. Bowring. 'The Ancient National Poetry of Spain' is a hackneyed theme, but one which will bear much working; and the present labourer is an able and experienced one. The writer on 'Scandinavian Mythology' has written a long preface to defend the propriety of writing on such a topic; the article itself is the best defence, though certainly it will not convince the reader, who could be idle enough to complain of the selection. We have not time to comment on the next article; and its title is a sufficient motive for reading it—it is 'On Mexico.' The article on 'Victor Hugo's Poems' is the weakest in the Number, and that on 'The Foreign Views of the Catholic Question,' the best. That on 'Von Hammer's History,' we have not read. Taking into consideration the choice of subjects, as well as the merit of the articles, we are inclined to think, that scarcely any better Number of this work has yet appeared.

NEW MUSIC.

Wilt thou meet me there, Love? Written by the Author of 'Softly o'er the Summer Sea.' Composed, and dedicated to John Sinclair, Esq., by B. Hime. Latour.

A VERY gay and sportive ballad, conceived and executed in good style, very easy of performance, and quite acceptable. The accompaniment is written above the voice part occasionally, similar to the well-known piano-forte part to 'Oh Lady Fair,' and produces quite as pleasing and playful an effect.

The admired Quartett from Winter's Opera, 'Das Unterbrochene Opferfest,' arranged with Variations for two performers on the piano-forte, and inscribed to Miss Emma and Miss Harriett Wells, by George F. Harris. Boosey and Co.

THIS is a well-arranged duet, fitted for performers of moderate acquirements, and yet written with taste and brilliancy. After a short introduction and the theme, six variations, including the varieties of 1, Scherzando; 2, Legato; 3, Brillante; 4, Più Adagio, (exhibiting some ingenious modulations); 5, Vivace; and 6, Pastorale; which is expanded to form a Rondo finale. The whole exhibits skill and good style.

Deck not with Gems; or, I must have loved Thee, hadst thou not been Fair. A Ballad sung by Mr. H. Phillips. The words by F. H. Bayly, the Music by W. Turnbull. Published by Willis and Co.

AN expressive morceau, well conceived, and adapted with considerable judgment. The highest note being only E flat in the fourth space, the piece may be performed by one possessing but a very limited compass of voice. The language is of superior character also, breathing estimable sentiment and the *tout ensemble* is excellent.

'Ah che Forse,' a celebrated Air, as sung by Signor Velluti, with an Introduction for the Piano-forte, and dedicated to Miss Mary Stephenson, by G. F. Kiallmark. Clementi and Co.

THIS admired air is an especial favourite with most of our principal vocalists, Madame Pasta particularly; she first introduced it in one of Rossini's operas, and was at that time said to be the composer of it; but Bonfichi is the name affixed to it, as its author, in most editions. The arrangement now offered (as a piece for the piano-forte) is very judiciously made by Kiallmark, jun.; the Introduction is very appropriate, and the general adaptation is pleasing, graceful, and in excellent taste.

'T'rip it, trip it, gentle Mary.' Sung with unbounded applause by Madame Feron. The Words by J. Cowen, the Music by Charles Salaman. Willis and Co.

A PLEASING trifle, but too insignificant and commonplace to require or deserve much notice.

Donna Maria da Gloria, the Queen of Portugal's Waltz, with Variations for the Piano-forte, composed and dedicated to Miss Mary Ann Barry, by George F. Harris. Monro and May.

THIS is not the Queen of Portugal's waltz, so well known, with variations by Gelinck, but an original air composed by Harris, with six very ingenious and characteristic variations, comprising the subjoined varieties: No. 1, Legato; No. 2, A Tempo giusto, (in triplets); No. 3, Maestro; No. 4, Brillante; No. 5, Con Grazia; and No. 6, An Allegro and Coda. The whole forms a very desirable piano-forte piece, highly useful for teachers, and pleasing for their pupils.

No. 3. The Beauties of Rossini, for the Flute and Piano-forte, containing 'Bel raggio lusinghier,' from Semiramide, arranged by W. Card, published by Hinckley.

MR. CARD'S arrangement exhibits good taste, and he evinces in this publication as well as in the one we noticed in 'The Athenæum,' (No. 79, page 270,) an intimate acquaintance with his instrument, the flute. The first and second numbers of this work, were similar adaptations of the admired airs 'Una Voce poco fa' and 'Elena o tu;' and as concertante pieces for the flute and piano-forte, they must be unusually acceptable, for they are so very well adapted to the respective instruments.

'Canst thou Forget me?' Canzonett, written by Mrs. Leoni Lee, composed by John Barnett. Mayhew and Co.

A LARGHETTO espasionato in D, written in a very beautiful, expressive, and impassioned style; and admirably adapted to the language, which is also of a superior description. Considerable ingenuity is evinced

in writing the voice part, within the compass of a few notes, (easy to be performed by most vocalists,) at the same time contriving to adapt harmonies of a very choice and scientific character in accompaniment to it. Barnett has taken infinite pains with this subject, and has been eminently successful.

No. II. of *Twelve Italian Fantasias Concertante, for the Flute and Piano-forte, containing Meyerbeer's 'Nel silenzio,' in 'Il Crociato in Egitto,' and Rossini's 'Non più mesta,' in 'La Cenerentola,' arranged by Raphael Dressler.* Cocks and Co.

DRESSLER is indefatigable in his exertions to form a library for the flutist, and his success is proved by the quantity of his arrangements published. This second number is quite equal to the first, (noticed at page 104 of this work,) and presents a brilliant and showy divertimento. It is published as op. 73, and dedicated to Tulon.

Hers's celebrated *Quadrilles of 35, arranged for two Performers on the Piano-forte, with an Accompaniment for the Harp; by N. B. Challoner.* Birchall and Co.

THESE beautiful, elegant, and unrivalled *Quadrilles* (which are at this moment in the highest fashion) are placed in the most useful possible form by Challoner in the present arrangement. His adaptations for the harp are well known, as being more particularly under the finger for that instrument than those of any other writer; and in the work now noticed, he has been particularly successful in rendering the parts for all the performers clear, perspicuous, and interesting, and much less difficult than in the original edition.

NEW ENGRAVINGS.

Hanoverian and Saxon Scenery, from Drawings, by Captain Batty, of the Grenadier Guards, F. R. S., Member of the Imperial Russian Order of St. Anne. Part X., 12s. 6d. Jennings. London.

A PENCIL which already has made prize from the Continent of so many vivid lineaments of picturesque beauty, which, like

'O'Rourke's noble feat,
Will ne'er be forgot
By those who were there,
And by those who were not;

and which must afford equal pleasure in the recalling or supplying the impressions of scenery,—needs but little introduction, at our hands, to the renewed occupation of all drawing-room and sofa-tables. The views, of which the gallant artist's present number consists, are each characterised by some peculiar charm of its own, as well in the happy selection of subjects as in the admirable truth to the most delicate and evanescent aspects of nature. The little town of Trendelburg with its towers, its wooded slopes, and the cool and clouded ripple of its waters,—the more imposing natural fortresses of Saxon Switzerland, broken apart by deep chasms, and climbed by forests of pine,—the sunny bosom of the Weser, decked with the masts and spires of Bremen,—the massive piles of Copenhagen, and the fanciful old English gables and cupolas of Fredericksborg, form the *carte* of this most exquisite entertainment. We must not forget the pretty woodcuts which accompany the letter-press department of the work, which, however, do not offer any features so remarkable as to call for individual notice.

Draught Horses; engraved by W. Giller from a painting by A. Cooper, Esq., R.A.

A MOST appropriate employment of Mezzotint! for surely this style of the art can never be more suitably or more effectively employed than in the representation of grey horses. This plate is a very spirited one, and in the form of the animals, which are fine, characteristic, and animated, Mr. Giller has done ample justice to Mr. Cooper: more for him we could not say.

Elizabeth, Duchess of Devonshire; engraved by C. F. Lewis, from a drawing by Sir Thos. Lawrence.

WE do not remember to have seen an engraved portrait of this estimable patroness of the arts. The present is but a sketch: but it is a sketch by Sir Thomas.

Scaramouch's Last Pinch; engraved by Daniel Allon from a Painting by Thomas Stothard, R. A.; the explanatory motto from the Spectator. 'He one day took such an unreasonable pinch out of the box of a Swiss officer as engaged him in a quarrel and obliged him to quit this ingenious way of life.

THIS is all over a work of the good old school. The humour is pleasant, the expression forcible, the com-

position simple, and some of the figures call Bunbury to mind, while the two females are Stothard's own, pure, naïve, true, and elegant: the plate is clear and spirited.

LODGE'S CANZONETS.

WE regret that the space which we allot to our musical criticism has been so far occupied as necessarily to exclude a long notice of some Canzonets, by John Lodge, Esq., which reached us late in the week. Were we willing to abbreviate our correspondent's remarks, they might be admitted in our present number; but, as we are always anxious to pay particular attention to those compositions which stand out from the common herd so conspicuously as these do, we shall reserve his observations upon them until our next publication.

VARIETIES.

Poet-Haters.—Truly, I note, not only in these *μυροποδοι*, poet-haters, but in all that kind of people, who seek a praise by disparaging others, that they do prodigally spend a great many wandering words in quips and scoffs, carping and taunting at each thing, which, by stirring the spleen, may stay the brain from a thorough beholding the worthiness of the subject. Those kind of objections, as they are full of a very idle easiness, (since there is nothing of so sacred a majesty but that an itching tongue may risk itself upon it,) so deserve they no other answer, but instead of laughing at the jest to laugh at the jester. We know a playing wit can praise the destructive discretion of an ass, the comfortableness of being in debt, and the jolly commodities of being sick of the plague: so, of the contrary side, if we will turn Ovid's verse:

'Ut lateat virtus proximitate mali:
'That good lies hid in nearness of evil,'

Agrippa will be as merry in the showing the vanity of science, as Erasmus was in the commending of folly; neither shall any man or matter escape some touch of these smiling railers. But, for Erasmus and Agrippa, they had another foundation than the superficial part would promise. Marry, these other pleasant fault-finders, who will correct the verb before they understand the noun, and confute others' knowledge before they confirm their own: I would have them only remember, that scoffing cometh not of wisdom; so as the best title, in true English, they get with their merriments, is to be called good fools; for so have our grave forefathers ever termed that humorous kind of jesters.—*Sir Philip Sidney.*

French Critique on Milton.—Milton is a tedious barbarian, who writes a commentary in ten books of rumbling verse on the first chapter of Genesis. He is a slovenly imitator of the Greeks: he disfigures creation, and instead of producing the world by the fiat of God like Moses, sets the Messias to bungle at tracing out with a pair of compasses of celestial manufacture. He spoils Tasso's hell and devils; and makes Satan a casuist in divinity. Upon the whole, the 'Paradise Lost' is obscure, whimsical, and disagreeable.

Pastoral Life.—The shepherd's life had some goodness in it, because it borrowed of the country quietness something like ours; but that is not all; for ours, besides that quiet part, doth both strengthen the bodies, and raise up the mind with this gallant sort of activity. O sweet contentation! to see the long life of the hurtless trees! to see how in straight growing up, though never so high, they hinder not their fellows! they only enviously trouble which are crookedly bent. What life is to be compared to ours, where the very growing things are ensamples of goodness; we have no hopes, but we may quickly go about them, and going about them, we soon obtain them; not like those that have long followed one, in troth, most excellent chase, do now at length perceive she could never be taken, but that, if she staid at any time near the pursuers, it was never meant to tarry with them, but only to take breath to fly farther from them. He, therefore, that doubts that our life doth not so far excel all others, let him also doubt that the well-deserving and painful Therion is not to be preferred before the idle Epulus; which is even as much as to say, as that the roes are not swifter than sheep, nor the stags more goodly than goats.—*The Lady of May, a Masque, p. 228.*

WE are requested to point attention to the Concert of Mr. and Madame Schütz, which is advertised in another page. In addition to the first rate foreign and native talent already known to the English public, they have engaged several foreign vocalists of great eminence, who have never yet appeared in this country.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Landon's Imaginary Conversations, Second Series, 2 vols. 8vo., 28s.

TO NOBLEMEN AND FAMILIES.—DRAWING ROOM CARPETS.

WHITE and METCALF have the honour to announce that their new, and truly splendid patterns in Brussels Carpets, designed and manufactured exclusively by this Establishment, are now ready for inspection, in Quality infinitely superior to any before offered, and suitable for either the Mansion or Cottage. Highest Price 4s. 3d. per yard. Navarino House, Lamb's Conduit-street.

MENTAL ALIENATION.—The Medical Profession, as also the Parents and Guardians of Patients labouring under Imbecility of Mind, are respectfully informed there are now vacancies in an establishment recently founded, and of a very superior and peculiar description. Only six cases are admitted, each patient may (if required) have a separate apartment and attendant, and the modern continental plans of moral management are carefully pursued, under the personal superintendence of the proprietor, who resides in the house with his wife and family. Cards of address, and full particulars, to be obtained from Mr. Balieu, Foreign Medical Bookseller, Bedford-street, Bedford-square. Terms moderate, considering the superior accommodation and advantages.

POTTEEN WHISKEY.—C. DONOVAN, Wine and Spirit Merchant, 6, Howard-street, Norfolk-street, Strand, whose house was the first established in London for the sale of Whiskey, at full strength, has for sale remarkably fine

Potteen : : : 18s.
Parliament : : : 14s. to 18s. Scotch and Irish.
Currant and Raspberry 18s. Ditto Ditto.
C. DONOVAN has a few dozens of rich Red Mountain in pints, and Burgundy in quarts, which he will sell at a moderate price. These Wines were part of the stock imported by the late Spanish Ambassador, and having been seized by the Excise were sold to the Advertiser.

DR. KITCHINER'S ZEST.—This incomparable Flavour for Soups, Gravies, Made Dishes, Game, Poultry, Fish, &c., the sole invention of the late Dr. Kitchiner, and repeatedly mentioned by him in 'The Cook's Oracle,' is now prepared from the Doctor's original recipe, and likewise sold by JAMES BUTLER, Herbalist and Seedsman, Covent-Garden Market, whose name is written on the direction for its use, without which none are Genuine. The Zest is particularly adapted for families travelling, imparting its delicious taste on immediate application. It will keep for any time, in any climate.—Sold also by Messrs. Knight and Sons, Italian Warehouse, 83, Gracechurch-street; and by Mr. Hickson, Italian Warehouse, 73, Welbeck-street, Cavendish-square; and Mr. Lazenby, 46, Lamb's Conduit-street; in bottles, 2s. 6d. each.

LIBRARY OF ENTERTAINING KNOWLEDGE.

THE Publication of the Third Part of this Work, being the Second of the MENAGERIES, is unavoidably POSTPONED to the 1st July, to provide for the admission of some Original Communications, which will add to the interest of the work.

May 3rd. CHARLES KNIGHT, Pall-Mall-East.

MEMOIRS OF VIDOCQ, Principal Agent of the French Police until 1827.—Written by Himself.
Vol. III. forming the 27th Volume of AUTOBIOGRAPHY, a Collection of the most instructive and amusing Lives ever published, any volume of which may now be had, bound in a neat and uniform manner.

Printed for Whitaker, Treacher, and Co., Ave-Maria-lane.

ENCYCLOPEDIA METROPOLITANA.

THE Subscribers are respectfully informed, that the TWENTY-SIXTH PART will be published on the 30th instant.

London: printed for Baldwin and Cradock, Paternoster-row; C. J. G. and F. Rivington; J. Duncan; B. Fellowes; Sutcliff, Fox, and Sutcliff; E. Hodgson; J. Dowling; H. T. Hodgson; G. Lawford; Laycock and Son; and for J. Parker, Oxford; and J. and J. Deighton, Cambridge.

A republication of this Work has been commenced in perfect Volumes, and in four grand divisions, viz., Pure Sciences; Mixed and Applied Sciences; History with Biography; and Miscellaneous with Lexicographical.

The first of Pure Sciences, and the first of History have already appeared, and the volumes will be continued in this manner every three months.

On the 21st instant was published, embellished with eighteen superior Engravings, in quarto, with Proof Impressions of the Plates on India paper, price 34s.; in royal octavo, with the plates accurately coloured, price 34s.; in royal octavo, with the plates plain, price 18s.; and in demy octavo, price 12s., Part XII., the Sixth of the Class Aves, of

THE ANIMAL KINGDOM, described and arranged in conformity with its Organisation, by the Baron GUVIER, Member of the Institute of France, &c., &c., &c. With additional descriptions of all the Species hitherto named, and of many not before noticed; with other Original Matter. By EDWARD GRIFFITHS, F.L.S., A.S., and Others. Printed for Whitaker, Treacher, and Co., Ave-Maria-lane; of whom may be had,

The CLASS MAMMALIA, complete in Twelve Parts, with upwards of Two Hundred Engravings, forming Five Volumes, price in extra cloth boards:

Demy Octavo	7 4 0
Royal Octavo	10 16 0
Ditto coloured	14 8 0
Demy Quarto, India Paper	14 8 0

The Thirtieth Part contains an account of the Fossil Mammalia, which, with a subsequent Part to be devoted to other Organic Remains, is intended to form a distinct Volume on the Fossil Genera and Species.

The Class of Birds will occupy about Nine Parts; the Fishes and Insects will form about Eight Parts each; and the whole, it is computed, will comprise about Forty Parts. It will be so arranged, for the convenience of those who may confine their Zoological studies to either of the Classes, that each Class will make a distinct work, as well as one of the Series of 'The Animal Kingdom.' The Conclusion will contain a Tabular View of the System, a copious Index, and a general Terminology of the Science. The Illustrations will be from Original Drawings, and will be confined to new or very rare Species.

King's Great Concert Rooms, Italian Opera.

MR. BUCKINGHAM has the honour to announce that, in compliance with the wish of several distinguished Families, he will, previous to resuming his Tour through the Provinces, REPEAT once more in Town, his COURSE of LECTURES, or Extempore Descriptions of the following Countries of the Eastern World, in the order named:

1. EGYPT
2. ARABIA
3. PALESTINE
4. MESOPOTAMIA
5. PERSIA
6. INDIA

These Lectures will be delivered at the KING'S CONCERT ROOMS, in the Italian Opera House, Haymarket, on the Mornings of TUESDAY, THURSDAY, and SATURDAY, the 2d, 4th, 6th, 10th, 12th, and 20th of JUNE. They will commence precisely at Three o'clock; and the description of each Country will be rendered so complete in itself as to be perfectly independent of all the others. The Supplementary Address will be delivered on the 33d. June.

Admission to any Single Lecture, 5s.; Tickets for the Course of Six Lectures, One Guinea; to be had at the Box Office of the Opera House, where Private Boxes for Parties may also be taken.

City Concert Rooms, Bloomfield-street, Finsbury Circus.

For the convenience of a large class of Residents in the Eastern Division of the Metropolis, the same Course will be delivered at the CITY CONCERT ROOMS, near the London Institution, on MONDAY, WEDNESDAY, and FRIDAY EVENINGS, the 1st, 3d, 5th, 8th, 10th, 12th, and 15th of JUNE, precisely at Eight o'clock.

Single Admissions and Tickets, on the same Terms, to be had at the Rooms named above, and at each place a descriptive Pamphlet, which is recommended for previous perusal.

Dedicated, by special permission, to the KING.

This day is published, in imperial folio, containing four Plates, with Letter-press Descriptions in English, French, Italian, and German, Part the First, of

ENGRAVINGS of the most superb SPECIMENS of the CATHEDRALS, HOTELS DE VILLE, TOWN HALLS, and other Public Buildings of celebrity in France, Holland, Germany, and Italy. The Drawings and Engravings executed by MR. JOHN CONEY, with accompanying descriptive and illustrative Letter-press, by C. H. TATHAM, Esq.
The present Part contains:—1. Antwerp Cathedral.—2. Hotel de Ville, Ghent.—3. Beauvais Cathedral.—4. Brussels Cathedral. Size of each Plate, 16 inches by 20 high. The work will be completed in 12 Parts, to be published every alternate month. Price of Prints, 11. 5s.; and Proofs, on India paper, 14. 15s. each Part.

London: Moon, Boys, and Graves, Printers to the King, 6, Pall-Mall.

Specimens of the above Work may be seen on application to any Book or Printseller in the Kingdom.

INDIA AND CHINA.

Now Publishing, by RIDGWAY, 159, Piccadilly.

A VIEW of the PRESENT STATE and FUTURE PROSPECTS of the FREE TRADE and COLONIZATION of INDIA. Second Edition, greatly enlarged.

'It is evidently from the hand of one who is extensively, as well as minutely, informed on the subject of which he treats; and be it from whose hands it may, we cannot but think, that no man, who has ever turned his thoughts to that subject, should grudge the small labour of reading this clear and compendious statement, and no man presume to speak or to vote in regard to it, till he has thoroughly meditated its contents, and inquired diligently into the accuracy of its premises and conclusions.'—*Edinburgh Review*, No. 96.

SUBSTANCE of the SPEECH of W. W. WHITMORE, Esq., in the House of Commons, May 14, 1829, on the subject of the Trade with the East Indies and China. 1s. 6d.

MEMOIRS and CORRESPONDENCE of Admiral LORD COLLINGWOOD. Fourth Edition, in 8vo., Portraits, Plans, &c. 16s. boards.

Also preparing for the Press:

AN EXAMINATION of the MONOPOLIES of the EAST INDIA COMPANY. By the Author of 'Free Trade and Colonization of India.'

To be had, by order, of the Booksellers of Liverpool, Bristol, Edinburgh, and Dublin; as well as every other in the United Kingdom.

ARGYLE ROOMS.

MR. and Madame SCHUTZ have the honour to acquaint the Nobility, Gentry, and their Friends, that their CONCERT will take place at the above Rooms on MONDAY EVENING, JUNE 1, 1829.

Mr. SCHUTZ most respectfully announces, that he has lately returned from Germany with the following distinguished Artists, who will perform for the first time in this Country:—Mademoiselle Schweitzer, (First Soprano at the Theatre of the Grand Duke of Hesse-Cassel); Madame Rosner, (First Soprano at the Theatre of the Duke of Brunswick); and Mr. Vellanor, also Mr. Rosner, (First Tenor at the Theatre of the Duke of Brunswick), whose performance at the Concert in the Argyle Rooms, on Friday last, was received with great applause.

In addition, the following eminent performers have kindly promised their assistance:—Mademoiselle Sontag, Signor Velutti, Signor Carloni, Signor Pellegrini, and Signor De Begalis.

PRINCIPAL INSTRUMENTAL PRAPROFORMERS:—Mr. Moschelles, Piano-forte; Mr. Nicholson, Flute; Mr. William, Clarinet; and Signori Gambatti, Trumpets.

LEADERS OF THE BAND:—Messrs. Spagnoletti and Mori.

CONDUCTOR:—Sir George Smart.

Full particulars will be duly announced.—The Concert will commence at eight o'clock.

Tickets, Half a Guinea each, can be had of Mr. and Madame Schutz, No. 108, Regent-street; also at the following Music Shops: the Royal Harmonic Institution; Cramer and Co.'s, Regent-street; Birchall's, Chappell's, Latour's, New Bond-street; Whitt's, Egyptian Hall, Piccadilly; and Clement's, Cheapside.—Boxes can be secured by an early application to Mr. and Madame Schutz, or at the Argyle Rooms.

MR. TORRI has the honour respectfully to inform the Nobility and Gentry, that his ANNUAL CONCERT will take place on FRIDAY EVENING, the 29th inst., at the residence of Mrs. F. Farnia, No. 26, Brynstone-square, who has kindly granted the use of her mansion on this occasion. All the Principal Artists have obligingly promised him their assistance.

Subscription Tickets, to be had at Mr. Torr's, No. 26, Golden-square, One Guinea each.

COLOSSEUM.

THE Public are respectfully invited to an inspection of this magnificent Exhibition, in its progress towards completion. It consists of the stupendous Panorama of London, taken from the summit of St. Paul's; a Saloon for the reception of Works of Art; a long range of Conservatories, stocked with the choicest Plants; and the Swiss Cottage.—Admission, 5s. each person; from ten till five o'clock.

SCULPTURE.

TAM O'SHANTER and SOUTER JOHNNY.

—These Statues, illustrative of Scottish Character, Costume, and the Poetry of Burns—Scotland's immortal Bard—executed by the self-taught Artist, Mr. THOM, are now exhibiting at 96, Old Bond-street. Since their arrival in Town, (23d. April), they have been visited by upwards of 10,000 persons, all of whom have expressed their admiration of them as works of art.—Admission, 1s.; Books with Observations, 6d. Cobler.

A POLLONICON, a Grand Musical Instrument, under the immediate patronage of his Majesty, invented and constructed by FLIGHT and ROBSON, Organ Builders, is now OPEN to EXHIBITION daily, from One to Four, performing, by its self acting powers, Mozart's Overture to 'Idomeneus,' and Weber's celebrated Overture to 'Oberon,' which it executes with a grandeur and brilliancy of effect superior to any instrument in Europe, at the Rooms, 101, St. Martin's-lane.—Admittance, 1s.

THE EXHIBITION OF LODGE'S POR-

TRAITS of the MOST ILLUSTRIOUS PERSONAGES of GREAT BRITAIN, from the Galleries of his Majesty, the Nobility, and from Public Collections, is OPEN DAILY, from nine till six, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, corner of Suffolk-street.

Admittance, by Tickets only, which may be had free of expense, on application to Messrs. Harding and Lepard.

PANORAMAS.—PANDEMONTUM.

NOW OPEN, at the Panorama, Leicester-Square, a VIEW of PANDEMONTUM, as described by Milton, in the First Book of 'Paradise Lost,' including the Legends of Fallen Angels, Burning Lakes, its Tributary Streams, &c., &c.; the whole forming a most sublime and striking Panorama.

The VIEW of SYDNEY is now exhibiting. VIEWS of PARIS and the BATTLE of NAVARINO are open at the Panorama, Strand.—The latter View is about to close.

TERRO-METALLIC TEETH.

MR. A. JONES, Surgeon-Dentist, 43, New Bond-street, begs to acquaint the Nobility and Gentry, that, from many years' intense application, he has invented and brought to perfection, a New System of Fixing THERMO-METALLIC, NATURAL, and ARTIFICIAL TEETH, from one to a complete set, which are so accurately fitted as not to be distinguished from the original, and answer all the purposes of mastication, articulation, &c.—Mr. A. J. continues stopping decayed teeth with his unrivalled Anodyne Cement, which in one minute allays the most excruciating pain; and by this means carious teeth are wholly preserved and rendered useful, even if broken close to the gums. This being a metallic composition, it becomes hard as enamel in a few minutes, will not decompose with the heat of the stomach, and resists the effects of acids, atmospheric air, &c.—Cleaning, and every operation incidental to Dental Surgery.—At home from ten till five.

BARNETT'S SONGS of the MINSTRELS,

Vol. II. Price 15s.

These compositions are entitled "Songs of the Minstrels," and do equal honour to the Poet and Musicians. The Portuguese Minstrel, "The Spot where I was Born," is particularly beautiful; and the Russian "Maid of Tartary," highly striking and original. These two, with the Neapolitan and Turkish, four of the twelve, are fully equal to the best of the first volume; indeed, there is not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is the cleverest and most tasteful of English composers. The Poetry is by the late Harry Stoe Van Dyk.—*Vide Literary Gazette*.

Published by Mayhew and Co., 17, Old Bond-street.

Where may be had the following New Songs:—

- 'Rise, gentle Moon,' sung by Miss Love, with the most enthusiastic applause, and nightly encored, in the historical drama of 'Charles XII.,' composed by John Barnett, with a beautiful Lithographic Portrait of Miss Love. 2 6
- 'My sweet Guitar,' sung by Miss Love with distinguished applause; composed by John Barnett. 2 6
- 'Here's a Health to Merry England,' National Song; sung by Mr. Braham, composed by John Barnett. 2 6
- 'Listen to my Wild Guitar,' written as a companion to the celebrated Serenade, 'The Light Guitar,' composed by John Barnett. 2 6
- 'The Chimes of Zurich,' sung by Miss Love, written by Harry Stoe Van Dyk, composed by C. E. Horn. 2 6
- 'Sweet Evening Star,' answer to Barnett's celebrated song, 'Rise, gentle Moon,' composed by Joseph Hart. 2 6

London: Printed and Published every Wednesday Morning, by WILLIAM LAWES, at the Office, No. 4, Wellington-street, Strand.

THE ATHENÆUM

AND

LITERARY CHRONICLE.

No. 84.

LONDON, WEDNESDAY, JUNE 3, 1829.

Price 8d.

SCOTT'S NOVELS.

THE NEW EDITION OF WAVERLEY—ANNE OF GEIERSTEIN.

SIR Walter Scott is labouring to prolong at one end the spreading woof of his productions, and at the other to cut off the ravelled ends and repair the dropped stitches which disfigure its earliest folds. He has published a new novel, and corrected, and commented on, the first of his old ones. We fear that the majority of novel readers (a brotherhood of which we are proud to acknowledge ourselves the humblest members) will attach a relative importance to these two events, very different from that which we are inclined to assign them. We now look forward to a new novel by 'the Author of Waverley,' with scarcely a keener interest than is excited by the prospect of a few hours' agreeable society. There can be no doubt as to the kind of entertainment which will be afforded to us. The powers and resources of the author's mind have been often and thoroughly laid open to us. We have learned to know and admire his clear view and entire mastery over the one stable, circumscribed, and shining world of his fancy. We can estimate in all their force the readiness and confidence of his sway within that sphere; and, having long ago perceived that there is no war on the frontiers, no dispute about boundaries, no endeavour to enlarge the realm, we never look to him for any account of newly-discovered provinces, formidable powers overcome, outlying deserts brought under cultivation, or wandering tribes subdued and civilised. We have said that he is thoroughly despot in the world of his fancy; and we have said this for the exact purpose of making it understood that the world in question is a very different one from ours. If he were master over the world in which we live in the fashion of Shakspeare's mastery over it, he would be another man than 'the Author of Waverley,' and would assuredly not be the idol of all the people in Europe who need the amusement of setting up idols in their drawing-rooms. But of the highest influences which sit on the hidden thrones of nature, and yet guide and complicate its slightest movements, of those principles which Shakspeare knew to be the concealed main-springs of the creation, and even of those parts of them which we find among our streets and firesides, Sir Walter Scott knows but a little. Of the relations in which we stand (not habitually, indeed, but whenever we feel the importance of those relations) to society, to truth, to beauty, to our powers and duties, and to God; of the forms under which mankind conceive necessity, and freedom, and existence, law, order, permanence, nature, and themselves; of the inextricable links of passion and reflection; of wherein consists the health, and wherein the frailty, of the mind;—of all this we can discover nothing in the Waverley novels. In matter, the character of their author belongs to the market and the law-court; in spirit, he has aimed at being, and is, the master of the wardrobe to the universe.

Nor let it be said that a novel ought not to exhibit any of those subjects of thought which we have spoken of. If it be at all better than a high form of the 'Gentlemen's Fashions for June, 1829,' or 1529, it ought to exhibit the minds of men as they are, and as they feel that they may be; for this feeling also is a part, and a precious part, of themselves. There is no human being

who has not sometimes known a graver and more profound anxiety about some of these points than about any of his worldly concerns. These are the mazes in which so many, who amid the snares and pitfalls of society walk upright, bold, and safe, must blindly and ineffectually grope. The vague and mysterious emotions connected with these ideas will needs be spectres and demons, if they are not strengthened, vivified, and illumined into guardian angels and companion gods. This is felt darkly and ignorantly indeed, but still with an over-awing and ever-recurring force, even by those who are utterly unable to render to themselves any account of their own consciousness. How else is it that 'Hamlet,' the play of Shakspeare which it is hardest to comprehend, which, probably, is comprehended by no one so well as 'Twelfth Night,' or 'The Tempest,' by almost all instructed men; how comes it, but from a thirsting after a knowledge of the deep and spiritual, so much of which is dimly shadowed in this drama, that it is the most popular of all those wondrous creations? How else can we explain the strong grasp laid by Mr. Godwin on the public mind, in novels as dark, and hard, and narrow as you will, but in which man is presented as feeling himself under the dominion of that lowest of spiritual conceptions, which yet hath in it much of the spirit, an encircling and constraining destiny. These books reveal no flowing eloquence, no bright description, no busy incident, nor glittering costume; they have nothing of the smiles or the enterprise of life, not even a casual touch of fanciful imagery or good-humoured impulse. All this 'Waverley' and its fellows have, and a thousand other gay devices from that enchanted loom. Yet we have no fear of being contradicted when we assert that nothing in all these novels, not even that noble tragedy of Ravenswood, occurs more frequently or more solemnly to the mind, in its most earnest moods, than do the pale, stiff beings who dwell in the twilight cavern of Mr. Godwin's thought. Sir Walter Scott has for ever surrounded our sunny walks with troops of brilliant and fantastic beings, like the morning clouds. Mr. Godwin dogs our footsteps with a colourless and melancholy shadow, which presents, however, some distinct lineaments of ourselves. Sir Walter Scott has given us heaps of shining and well-minted coin, which we may use as toys for our idleness, or even as serviceable money for our intercourse with the world; but they are not of the fineness which will withstand the furnace and the touchstone. The amulet which is to guard our life must be made of virgin gold. These pieces have much of magical delusion, much of worthless alloy; and the elemental substance is of one of the lower and corruptible metals. In the clumsy and rusty medallions which we receive from the author of 'Caleb Williams' and 'St. Leon,' with little of beauty, with much of clay, and ashes, and corrosion, with a large admixture of the coarsest iron and the most drossy lead, there is yet one grain of gold fit to be employed in forging a ring such as that of Solomon or that of Gyges.

Do we mean to say that any comparison can fairly be drawn between the endowments of these two men? Assuredly not. The one has a thousand almost unequalled talents; the other, but a single stern and dim conception. But the instance will serve to illustrate the difference in kind between the powers which 'the Author of Waverley' has, and the powers which he has not; and we

shall perhaps convey to novel-readers a more vivid feeling of what we mean if we say that every thing is moved in Scott by the force of circumstance and accident; that Godwin has perceived in one particular, and with regard to a single form of human nature, the existence of relations between our thoughts, lying far deeper and the source of infinitely more agonising struggles than can be affected by outward changes.

Neither do we desire to be understood as condemning Sir Walter Scott for not doing what he has not professed to do. To him be the glory of succeeding in what he has undertaken, and that no enterprise for a carpet-knight; of reviving the fresh and unreflecting emotions of our childhood with regard to external nature and the pageantry of society; of teaching the multitude that there is a verdure in old times which stretches, like a long meadow beside a river, till it melts into the green beauty of the spring whose air we breathe; of leading them to believe that an accurate study of outward forms is not unimportant towards attaining a knowledge of the inward spirit; of proving to the most light-minded, by the example of the most celebrated of living writers, the close connection between a vivid fancy and a clear comprehension on the one hand, and, on the other, the kindest and most tolerant feelings for all mankind; of pouring forth a flood of wit, which is dashed with no waters of bitterness; and of stirring a thousand real and active sympathies without ever having recourse to affected eloquence or diseased sentiment.

We do not complain of Sir Walter Scott, because doing all this he does not perform much besides. Our quarrel is with those who, not content in attributing to him all the merits that he has, would also clothe him with honour for those to which he has no pretensions; who, not satisfied with giving him the palm-branch, the laurel-wreath, the helmet, and the diadem, would also shade his brow with the fillets of an awful priesthood, among whom he has never sought admittance. The crowd, indeed, are satisfied to read his works, and laugh and wonder, as they would at a puppet-show. But there are in England many scores of small, dinner-table philosophers, whose words are mighty over the souls of the lieges, and who think that they display a wise and discerning enthusiasm for genius, and a due reverence for that age which is distinguished by their existence, in exalting Sir Walter Scott over the heads of Homer, and Cervantes, and Shakspeare. This apotheosis is evidently absurd, if for no other reason, yet for this—that all which really is in the Waverley novels is understood and admired by half the reading population of Europe, and therefore cannot be very deep or difficult.

We hope that our readers will now perceive our reasons for anticipating the commentaries and corrections of 'Waverley' with far more curiosity than we felt about 'Anne of Geierstein.' The latter would add nothing to our knowledge of Sir Walter Scott, the former might give us much. The new novel might show more fully the strength and range of those talents of which we already enjoy so many achievements; nothing was more unlikely than that it would display any powers of a kind which 'the Author of Waverley' has not before exhibited. His method of composition was long since fixed; and to the realising of this conception, he had for years been devoting his best abilities. His readers had crowned his de-

sign with their utmost approbation; and it was obvious that he himself could not have produced so many lively and various works in so few years, unless he had found a strong and continued pleasure in this particular mode of mental exertion. There was, in short, no ground whatever for expecting any change of system; and the appearance of the book has not belied the stars.

On the other hand, how differently had we a right to hope as regarded the prefaces and notes to the new edition of these novels! 'The Author of Waverley' was about to tell the secret of his genius; the man whose works are the delight of Hungarian chiefs, and the text-book of morals for Danish theologians, whose portrait is the household-god of a hut in Wallachia, and his name a spell that encircles our country with additional honour in every town of Europe from Lisbon to Tobolsk, and rules alike on the banks of the Ganges and the Mississippi. The most hidden springs of his mechanism were to be explained; and the enchanter was to utter at noon-day, and before the world, the words which had enabled him to charm our thoughts, delude our eyes, and compel spirits to his bidding. These, at least, were the expectations of many persons. It indeed was very natural to suppose, that if such an author were to tell us all he knew about the construction of his works, a strange and sudden light would be let in on the dark places of psychology; and some of our more enthusiastic friends were inclined to believe that we should hear of a new power in the human mind, expressly fitted for the writing of popular novels, discovered about the time when steam-boats were invented, and now to be made public, and sold, we suppose, under the letters patent of his Majesty, to whom the work was to be dedicated.

Our readers may see, by turning back to an article on Sir Walter Scott's Prospectus, which appeared in our pages some time ago, that our hopes were not quite so lofty, though we, undoubtedly, were far more curious as to this matter than as to the appearance either of Mr. Attwood's speech on the currency, or the providently puffed 'Adventures of a King's Page.' We did not suppose that Sir Walter Scott would give any very full account of the process in his own mind, because we were convinced that he could not give a very accurate one. But, whatever he was to say about himself, it would assuredly be interesting. He would, probably, tell us nothing but facts which might have been known to any of his friends; but these would furnish matter for inference. The bloom and fragrance of any great writer's mind is sure to be found in his writings. But in these there is sometimes wanting some little link connecting what cannot separately be understood, some brief word explaining a great enigma; and this autobiography may supply. Of such revelations, we have nothing in Sir Walter's preface. But this short discourse gives us a curious view of 'the Author of Waverley's' early life, and is valuable inasmuch as it proves, what it is always pleasant to see established, a complete unity of spirit through the whole life of a man of genius. As far as we can see, his boyhood and manhood have been equally divested of all reflective power; there never was any attempt to make his life a harmonized and methodical work of art, any more than it is attempted in his novels to give us an orderly exposition of universal life: he had always the same love of action and enterprise; always, we doubt not, the same shrewd humour, the same clear view of what lay around him and before him, the same passive reverence for all above him. But we are very strongly inclined to think, that if, instead of going from the old library, and the bare mountains, to the studies of the Scotch Bar, he had been sent to some such institution as our English universities, a very different unity of life might have been the result from that which has actually existed. Those years rightly employed would have given him a precision and firmness of thought, the want of which is very

obvious in the constant vagueness and inaccuracy of his language; and would, perhaps, have taught him to look at a higher region than that which he now inhabits, with the calmness and simplicity so admirably displayed in his present mode of considering whatever has come under his observation. Yet the results of that strange and chaotic education are so excellent that we have no right, it is a disparaging of Providence, to look away and take counsel how they might have been better. Marvellous that a sprite so honest, so goodly, and so strong, should leap out amid the smoke of a cauldron, into which were thrown a thousand elements of weakness and perversity. There is, however, remarkable on the other side, and sufficient perhaps to overbalance years of illness, and cart-loads of 'Cyrus's' and 'Cassandra's,' that through illness and novels, the young romance-writer seems to have entirely escaped the Scotch University system, of cramming 'information' into boys of fifteen, pouring water into dirty and leaky buckets, by way, not of washing off the filth or stopping the leaks, but of presenting the water for the drink of the thirsty; a scheme to which Walter Scott does not appear to have been subjected. The world would otherwise in all probability have wanted 'the Author of Waverley.' Hence we may learn that even to turn a boy loose in a miscellaneous library is not so destructive as to make him run the gauntlet among a dozen professors of a dozen 'ologies.'

The notes and the engravings of the new edition of 'Waverley' are rather a greater annoyance to any judicious reader of the novel than we had anticipated, and our expectations were pretty large. We have taken the trouble to compare a chapter of the new work with that in the old; and we find the alterations to be exceedingly trifling.

We must still say a word about 'Anne of Geierstein.' As to melo-dramatic excitement, it is undoubtedly inferior to many of its predecessors; but in this point it ranks above all the very late ones except 'The Talisman,' and we must go back to 'Quentin Durward' before we meet with any other much superior to it. It contains in the first volume a picture of the old Swiss life, very much more valuable in our eyes than could have been any excellence of plot. Arnold Biederman and his sons, with Anne of Geierstein herself, move as brightly and freely as the personages of Schiller's 'Tell.' The father and the niece are the glories of the group; for the sons are sketches, except Sigismund, who is an ill-drawn ass; and as to Rudolph Donnerhugel, we confess we find it hard to make up our minds whether he is a genuine Swiss, or a foppish and cunning impostor, half Frenchman, half Italian! Charles the Bold is spirited, like almost all Sir Walter Scott's historical characters (except the noblest subject of them all, Oliver Cromwell). The hero and his father are little better than walking gentlemen. Margaret of Anjou and René, especially the latter, would scarcely add any honour to the worst of Mr. Colburn's mock Sir Walter's. The Black Priest of St. Pol is about the most notorious failure in all the Waverley novels, excepting always Wayland, Smith and Mr. Fouchstone, if that be his name, in 'St. Ronan's Well.' The Governor of La Ferette is so well given that it is a pity he should come to harm. The Secret Tribunal is an entire failure; and on the whole the book would be exceedingly improved if it were curtailed by a third. Yet, take it as it is, and it contains more pleasant writing, spirited dialogue, and brilliant description, than all the other novels, except Sir Walter's own, which have been published in England since the appearance of 'Anastasius.'

O that the sire of that most profligate Greek would beget such another villain! We would devote to him as long as an article as that we have now written about Sir Walter Scott. If this be not sufficient encouragement to the author of 'Anastasius,' we must even be content to remain Hope-less.

We give some extracts from 'Anne of Geier-

stein,' which we think will be considered to justify our opinion of the merits of the first volume. An Englishman and his son are travelling in Switzerland, and the young man is saved from imminent peril by a maiden whom 'the Author of Waverley' describes as follows:

'An upper vest, neither so close as to display the person, a habit forbidden by the sumptuary laws of the canton, nor so loose as to be an incumbrance in walking or climbing, covered a close tunic of a different colour, and came down beneath the middle of the leg, but suffered the ankle, in all its fine proportions, to be completely visible. The foot was defended by a sandal, the point of which was turned upwards, and the crossings and knots of the strings, which secured it on the front of the leg, were garnished with silver rings. The upper vest was gathered round the middle by a sash of party-coloured silk, ornamented with twisted threads of gold; while the tunic, open at the throat, permitted the shape and the exquisite whiteness of a well-formed neck to be visible at the collar, and for an inch or two beneath. The small portion of the throat and bosom thus exposed, was even more brilliantly fair than was promised by the countenance, which last bore some marks of having been freely exposed to the sun and air, by no means in a degree to diminish its beauty, but just so far as to show that the maiden possessed the health which is purchased by habits of rural exercise. Her long fair hair fell down in a profusion of curls on each side of a face, whose blue eyes, lovely features, and dignified simplicity of expression, implied at once a character of gentleness, and of the self-relying resolution of a mind too virtuous to suspect evil, and too noble to fear it. Above these locks, beauty's natural and most becoming ornament—or rather, I should say, amongst them—was placed the small bonnet, which, from its size, little answered the purpose of protecting the head, but served to exercise the ingenuity of the fair wearer, who had not failed, according to the prevailing custom of the mountain maidens, to decorate the tiny cap with a heron's feather, and the then unusual luxury of a small and thin chain of gold, long enough to encircle the cap four or five times, and having the ends secured under a broad medal of the same costly metal.

'I have only to add, that the stature of the young person was something above the common size, and that the whole contour of her form, without being in the slightest degree masculine, resembled that of Minerva rather than the proud beauties of Juno, or the yielding graces of Venus. The noble brow, the well-formed and active limbs, the firm and yet light step—above all, the total absence of any thing resembling the consciousness of personal beauty, and the open and candid look, which seemed desirous of knowing nothing that was hidden, and conscious that she herself had nothing to hide, were traits not unworthy of the goddess of wisdom and of chastity.

'The road which the young Englishman pursued, under the guidance of this beautiful young woman, was difficult and unequal, but could not be termed dangerous, at least in comparison to those precipices over which Arthur had recently passed. It was, in fact, a continuation of the path which the slip or slide of earth, so often mentioned, had interrupted; and although it had sustained damage in several places at the period of the same earthquake, yet there were marks of these having been already repaired in such a rude manner as made the way sufficient for the necessary intercourse of a people so indifferent as the Swiss to smooth or level paths. The maiden also gave Arthur to understand, that the present road took a circuit for the purpose of gaining that on which he was lately travelling, and that if he and his companions had turned off at the place where this new track united with the old pathway, they would have escaped the danger which had attended their keeping the road by the verge of the precipice.

'The path which they now pursued was rather averted from the torrent, though still within hearing of its sullen thunders, which seemed to increase as they ascended parallel to its course, till suddenly the road, turning short, and directing itself straight upon the old castle, brought them within sight of one of the most splendid and awful scenes of that mountainous region.

'The ancient tower of Geierstein, though neither extensive, nor distinguished by architectural ornament, possessed an air of terrible dignity by its position on the very verge of the opposite bank of the torrent, which, just at the angle of the rock on which the ruins are situated, falls sheer over a cascade of nearly a hundred feet in height, and then rushes down the

defile, through a trough of living rock, which, perhaps, its waves have been deepening since time itself had a commencement. Facing, and at the same time looking down upon this eternal roar of waters, stood the old tower, built so close to the verge of the precipice, that the buttresses with which the architect had strengthened the foundation, seemed a part of the solid rock itself, and a continuation of its perpendicular ascent. As usual, throughout Europe, in the feudal times, the principal part of the building was a massive square pile, the decayed summit of which was rendered picturesque, by flanking turrets of different sizes and heights, some round, some angular, some ruinous, some tolerably entire, varying the outline of the building as seen against the stormy sky.

A projecting sally-port, descending by a flight of steps from the tower, had in former times given access to a bridge connecting the castle with that side of the stream on which Arthur Philipson and his fair guide now stood. A single arch, or rather one rib of an arch, consisting of single stones, still remained, and spanned the river immediately in front of the waterfall. In former times this arch had served for the support of a wooden drawbridge, of more convenient breadth, and of such length and weight as must have been rather unmanageable, had it not been lowered on some solid resting place. It is true, the device was attended with this inconvenience, that even when the drawbridge was up, there remained a possibility of approaching the castle gate by means of this narrow rib of stone. But as it was not above eighteen inches broad, and could only admit the daring foe who should traverse it, to a door-way, regularly defended by gate and portcullis, and having flanking turrets and projections, from which stones, darts, melted lead, and scalding water, might be poured down on an enemy who should venture to approach Geierstein by this precarious access, the possibility of such an attempt was not considered as diminishing the security of the garrison.

In the time we treat of, the castle being entirely ruined and dismantled, and the door, drawbridge, and portcullis gone, the dilapidated gateway, and the slender arch which connected the two sides of the stream, were used as a means of communication between the banks of the river, by the inhabitants of the neighbourhood, whom habit had familiarised with the dangerous nature of the passage.

Arthur Philipson had, in the meantime, like a good bow when new strung, regained the elasticity of feeling and character which was natural to him. It was not indeed with perfect composure that he followed his guide, as she tripped lightly over the narrow arch, composed of rugged stones, and rendered wet and slippery with the perpetual drizzle of the mist issuing from the neighbouring cascade. Nor was it without apprehension that he found himself performing this perilous feat in the neighbourhood of the waterfall itself, whose deafening roar he could not exclude from his ears, though he took care not to turn his head towards its terrors, lest his brain should again be dizzied by the tumult of the waters as they shot forward from the precipice above, and plunged themselves into what seemed the fathomless gulf below. But notwithstanding these feelings of agitation, the natural shame to show cowardice where a beautiful young female exhibited so much indifference, and the desire to regain his character in the eyes of his guide, prevented Arthur from again giving way to the appalling feelings by which he had been overwhelmed a short time before. Stepping firmly on, yet cautiously supporting himself with his piked staff, he traced the light footsteps of his guide along the bridge of dread, and followed her through the ruined sally-port, to which they ascended by stairs which were equally dilapidated.

The gateway admitted them into a mass of ruins, formerly a sort of court-yard to the don-jon, which rose in gloomy dignity above the wreck of what had been works destined for external defence, or buildings for internal accommodation. They quickly passed through these ruins, over which vegetation had thrown a wild mantle of ivy, and other creeping shrubs, and issued from them through the main gate of the castle into one of those spots in which nature often embosses her sweetest charms, in the midst of districts chiefly characterised by waste and desolation.

The Castle in this aspect also rose considerably above the neighbouring ground, but the elevation of the site which towards the torrent was an abrupt rock, was on this side a steep eminence, which had been scarped like a modern glacis, to render the building more secure. It was now covered with young trees and bushes, out of which the tower itself seemed to rise in ruined dignity. Beyond this hanging thicket, the

view was of a very different character. A piece of ground amounting to more than a hundred acres, seemed scooped out of the rocks and mountains, which, retaining the same savage character with the tract in which the travellers had been that morning bewildered, inclosed, and as it were defended, a limited space of a mild and fertile character. The surface of this little domain was considerably varied; but its general aspect was a gentle slope to the southwest.

The principal object which it presented was a large house, composed of huge logs, without any pretence to form or symmetry, but indicating, by the smoke which arose from it, as well as the extent of the neighbouring offices, and the improved and cultivated character of the fields around, that it was the abode, not of splendour certainly, but of ease and competence. An orchard of thriving fruit-trees extended to the southward of the dwelling. Groves of walnut and chesnut grew in stately array, and even a vineyard, of three or four acres, showed that the cultivation of the grape was understood and practised. It is now universal in Switzerland, but was, in those early days, almost exclusively confined to a few more fortunate proprietors, who had the rare advantage of uniting intelligence with opulent, or at least easy, circumstances.

There were fair ranges of pasture fields, into which the fine race of cattle which constitute the pride and wealth of the Swiss mountaineers, had been brought down from the more Alpine grazings where they had fed during the summer, to be near shelter and protection when the autumnal storms might be expected. On some selected spots, the lambs of the last season fed in plenty and security, and in others, huge trees, the natural growth of the soil, were suffered to remain from motives of convenience probably, that they might be at hand when timber was required for domestic use, but giving at the same time a woodland character to a scene otherwise agricultural. Through this mountain-paradise the course of a small brook might be traced, now showing itself to the sun, which had by this time dispelled the fogs, now intimating its course, by its gently sloping banks, clothed in some places with lofty trees, or concealing itself under thickets of hawthorn and nut bushes. This stream, by a devious and gentle course, which seemed to indicate a reluctance to leave this quiet region, found its way at length out of the sequestered domain, and, like a youth hurrying from the gay and tranquil sports of boyhood into the wild career of active life, finally united itself with the boisterous torrent, which, breaking down tumultuously from the mountains, shook the ancient Tower of Geierstein as it rolled down the adjacent rock, and then rushed howling through the defile in which our youthful traveller had well nigh lost his life.

Eager as the younger Philipson was to rejoin his father, he could not help pausing for a moment to wonder how so much beauty should be found amid such scenes of horror, and to look back on the Tower of Geierstein, and on the huge cliff from which it derived its name, as if to ascertain, by the sight of these distinguished landmarks, that he was actually in the neighbourhood of the savage wild where he had encountered so much danger and terror. Yet so narrow were the limits of this cultivated farm, that it hardly required such a retrospect to satisfy the spectator that the spot susceptible of human industry, and on which it seemed that a considerable degree of labour had been bestowed, bore a very small proportion to the wilderness in which it was situated. It was on all sides surrounded by lofty hills, in some places rising into walls of rock, in others clothed with dark and savage forests of the pine and the larch, of primeval antiquity. Above these, from the eminence on which the tower was situated, could be seen the almost rosy hue in which an immense glacier threw back the sun; and, still higher over the frozen surface of that icy sea, arose, in silent dignity, the pale peaks of those countless mountains, on which the snow eternally rests.

What we have taken some time to describe, occupied young Philipson only for one or two hurried minutes; for on a sloping lawn, which was in front of the farm-house, as the mansion might be properly styled, he saw five or six persons, the foremost of whom, from his gait, his dress, and the form of his cap, he could easily distinguish as the parent whom he hardly expected at one time to have again beheld.

He followed, therefore, his conductress with a glad step, as she led the way down the steep ascent on which the ruined tower was situated. They approached the group whom Arthur had noticed, the foremost of which was his father, who hastily came forward to meet him, in company with another person of advanced age, and stature well nigh gigantic, and who,

from his simple yet majestic bearing, seemed the worthy countryman of William Tell, Stauffacher, Winkelried, and other Swiss worthies, whose stout hearts and hardy arms had, in the preceding age, vindicated against countless hosts their personal liberty, and the independence of their country.

With a natural courtesy, as if to spare the father and son many witnesses to a meeting which must be attended with emotion, the Landamman himself, in walking forward with the elder Philipson, signed to those by whom he was attended, all of whom seemed young men, to remain behind:—They remained accordingly, examining, as it seemed, the guide Antonio, upon the adventures of the strangers. Anne, the conductress of Arthur Philipson, had but time to say to him, "Yonder old man is my uncle, Arnold Biederman, and these young men are my kinsmen," when the former, with the elder traveller, were close before them. The Landamman, with the same propriety of feeling which he had before displayed, signed to his niece to move a little aside; yet while requiring from her an account of her morning's expedition, he watched the interview of the father and son with as much curiosity as his natural sense of complaisance permitted him to testify. It was of a character different from what he had expected.

We have already described the elder Philipson as a father devotedly attached to his son, ready to rush on death when he had expected to lose him, and equally overjoyed at heart, doubtless, to see him again restored to his affections. It might have been therefore expected, that the father and son would have rushed into each other's arms, and such, probably, was the scene which Arnold Biederman expected to have witnessed.

But the English traveller, in common with many of his countrymen, covered keen and quick feelings with much appearance of coldness and reserve, and thought it a weakness to give unlimited sway even to the influence of the most amiable and most natural emotions. Eminently handsome in youth, his countenance, still fine in his more advanced years, had an expression which intimated an unwillingness either to yield to passion or encourage confidence. His pace, when he first beheld his son, had been quickened, by the natural wish to meet him; but he slackened it as they drew near to each other, and when they met, said, in a tone rather of censure and admonition, than affection—"Arthur, may the Saints forgive the pain thou hast this day given me!"

"Amen," said the youth. "I must need pardon, since I have given you pain. Believe, however, that I acted for the best."

"It is well, Arthur, that in acting for the best, according to your froward will, you have not encountered the worst."

"That I have not," answered the son, with the same devoted and patient submission, "is owing to this maiden," pointing to Anne, who stood at a few paces' distance, desirous, perhaps, of avoiding to witness the reproof of the father, which might seem to her rather ill-timed and unreasonable!

"To the maiden my thanks shall be rendered," said his father, "when I can study how to pay them in an adequate manner; but is it well or comely, think you, that you should receive from a maiden the succour which it is your duty as a man to extend to the weaker sex?"

Arthur held down his head and blushed deeply, while Arnold Biederman, sympathising with his feelings, stepped forward and mingled in the conversation.

"Never be abashed, my young guest, that you have been indebted for aught of counsel or assistance to a maiden of Unterwalden. Know that the freedom of their country owes no less to the firmness and wisdom of her daughters than to that of her sons. And you, my elder guest, who have, I judge, seen many years and various lands, must have often known examples how the strong are saved by the help of the weak, the proud by the aid of the humble."

"I have at least learned," said the Englishman, "to debate no point unnecessarily with the host who has kindly harboured me;" and after one glance at his son, which seemed to kindle with the fondest affection, he resumed, as the party turned back towards the house, a conversation which he had been maintaining with his new acquaintance before Arthur and the maiden had joined them.

Arthur had in the mean time an opportunity of observing the figure and features of their Swiss landlord, which, I have already hinted, exhibited a primeval simplicity mixed with a certain rude dignity, arising out of its masculine and unaffected character. The

dress did not greatly differ in form from the habit of the female which we have described. It consisted of an upper frock, shaped like the modern shirt, and only open at the bosom, worn above a tunic or under doublet. But the man's vest was considerably shorter in the skirts, which did not come lower down than the kilt of the Scottish Highlander; a species of boots or buskins rose above the knee, and the person was thus entirely clothed. A bonnet made of the fur of the marten, and garnished with a silver medal, was the only part of the dress which displayed any thing like ornament; the broad belt which gathered the garment together, was of buff leather, secured by a large brass buckle.

But the figure of him who wore this homely attire, which seemed almost wholly composed of the fleeces of the mountain sheep, and the spoils of animals of the chase, would have commanded respect wherever the wearer had presented himself, especially in those warlike days, when men were judged of according to the promising or unpromising qualities of their thews and sinews. To those who looked at Arnold Biederman in this point of view, he displayed the size and form, the broad shoulders and prominent muscles, of a Hercules. But to such as looked rather at his countenance, the steady, sagacious features, open front, large blue eyes, and deliberate resolution which it expressed, more resembled the character of the fabled King of Gods and Men. He was attended by several sons and relatives, young men, among whom he walked, receiving, as his undeniable due, respect and obedience, similar to that which a herd of deer are observed to render to the monarch stag.

While Arnold Biederman walked and spoke with the elder stranger, the young men seemed closely to scrutinize Arthur, and occasionally interrogated in whispers their relation Anne, receiving from her brief and impatient answers, which rather excited than appeased the vein of merriment in which the mountaineers indulged, very much, as it seemed to the young Englishman, at the expense of their guest. To feel himself exposed to derision was not softened by the reflection, that in such a society, it would probably be attached to all who could not tread on the edge of a precipice with a step as firm and undismayed as if they walked the street of a city. However unreasonable ridicule may be, it is always unpleasant to be subjected to it; but more particularly is it distressing to a young man, where beauty is a listener. It was some consolation to Arthur that he thought the maiden certainly did not enjoy the jest, and seemed by word and look to reprove the rudeness of her companions; but this he feared was only from a sense of humanity.

She, too, must despise me, he thought, though civility, unknown to these ill-taught boors, has enabled her to conceal contempt under the guise of pity. She can but judge of me from that which she has seen—if she could know me better, (such was his proud thought,) she might perhaps rank me more highly.

As the travellers entered the habitation of Arnold Biederman, they found preparations made in a large apartment, which served the purpose of general accommodation, for a homely but plentiful meal. A glance round the walls showed the implements of agriculture and the chase; but the eyes of the elder Philipson rested upon a leathern corselet, a long heavy halbert, and a two-handed sword, which were displayed as a sort of trophy. Near these, but covered with dust, unfurnished and neglected, hung a helmet, with a visor, such as was used by knights and men-at-arms. The golden garland, or coronal twisted around it, though sorely tarnished, indicated noble birth and rank; and the crest, which was a vulture of the species which gave name to the old castle and its adjacent cliff, suggested various conjectures to the English guest, who, acquainted in a great measure with the history of the Swiss revolution, made little doubt that in this relic he saw some trophy of the ancient warfare between the inhabitants of these mountains, and the feudal lord to whom they had of yore appertained.

A summons to the hospitable board disturbed the train of the English merchant's reflections; and a large company, comprising the whole inhabitants of every description that lived under Biederman's roof, sat down to a plentiful repast of goat's flesh, fish, preparations of milk of various kinds, cheese, and, for the upper mess, the venison of a young chamois. The Landamman himself did the honours of the table with great kindness and simplicity, and urged the strangers to show, by their appetite, that they thought themselves as welcome as he desired to make them. During the repast, he carried on a conversation with his elder guest, while the younger people at table, as well as the

menials, ate in modesty and silence. Ere the dinner was finished, a figure crossed on the outside of the large window which lighted the eating hall, the sight of which seemed to occasion a lively sensation amongst such as observed it.

"Who passed?" said old Biederman to those seated opposite to the window.

"It is our cousin, Rudolph of Donnerhugel," answered one of Arnold's sons eagerly.

The annunciation seemed to give great pleasure to the younger part of the company, especially the sons of the Landamman; while the head of the family only said with a grave, calm voice,—"Your kinsman is welcome—tell him so, and let him come hither."

Two or three arose for this purpose, as if there had been a contention among them who should do the honours of the house to the new guest. He entered presently; a young man, unusually tall, well-proportioned and active, with a quantity of dark-brown locks curling around his face, together with mustachios of the same, or rather a still darker hue. His cap was small considering the quantity of his thickly clustering hair, and rather might be said to hang upon one side of his head than to cover it. His clothes were of the same form and general fashion as those of Arnold, but made of much finer cloth, the manufacture of the German loom, and ornamented in a rich and fanciful manner. One sleeve of his vest was dark green, curiously laced and embroidered with devices in silver, while the rest of the garment was scarlet. His sash was twisted and netted with gold, and besides answering the purpose of a belt, by securing the upper garment round his waist, sustained a silver-hilted poniard. His finery was completed by boots, the tips of which were so long as to turn upwards with a peak, after a prevailing fashion in the middle ages. A golden chain hung round his neck, and sustained a large medallion of the same metal.

This young gallant was instantly surrounded by the race of Biederman, among whom he appeared to be considered as the model upon which the Swiss youth ought to build themselves, and whose gait, opinions, dress, and manners, all ought to follow, who would keep pace with the fashion of the day, in which he reigned an acknowledged and unrivalled example.

By two persons in the company, however, it seemed to Arthur Philipson, that this young man was received with less distinguished marks of regard than those with which he was hailed by the general voice of the youths present. Arnold Biederman himself was at least no way warm in welcoming the young Bernese, for such was Rudolph's country. The young man drew from his bosom a sealed packet, which he delivered to the Landamman with demonstrations of great respect, and seemed to expect that Arnold, when he had broken the seal and perused the contents, would say something to him on the subject. But the patriarch only bade him be seated, and partake of their meal, and Rudolph found a place accordingly next to Anne of Geierstein, which was yielded to him by one of the sons of Arnold with ready courtesy.

It seemed also to the observant young Englishman, that the new comer was received with marked coldness by the maiden, to whom he appeared eager and solicitous to pay his compliments, by whose side he had contrived to seat himself at the well-furnished board, and to whom he seemed more anxious to recommend himself, than to partake of the food which it offered. He observed the gallant whisper her, and look towards him. Anne gave a very brief reply, but one of the young Biedermans, who sat on his other hand, was probably more communicative, as the youths both laughed, and the maiden again seemed disconcerted, and blushed with displeasure.

Had I either of these sons of the mountain, thought young Philipson, upon six yards of level greensward, if there be so much flat ground in this country, methinks I were more likely to spoil their mirth, than to furnish food for it. It is as marvellous to see such conceited boors under the same roof with so courteous and amiable a damsel, as it would be to see one of their shaggy bears dance a rigadon with a maiden like the daughter of our host. Well, I need not concern myself more than I can help about her beauty or their breeding, since morning will separate me from them for ever.

As these reflections passed through the young guest's mind, the father of the family called for a cup of wine, and having required the two strangers to pledge him in a maple cup of considerable size, he sent a similar goblet to Rudolph Donnerhugel. "Yet you," he said, "kinsman, are used to more highly flavoured wine than the half-ripened grapes of Geierstein can

supply.—Would you think it, sir merchant," he continued, addressing Philipson, "there are burghers of Berne who send for wine for their own drinking both to France and Germany?"

"My kinsman disapproves of that," replied Rudolph; "yet every place is not blessed with vineyards like Geierstein, which produces all the heart and eye can desire." This was said with a glance at his fair companion, who did not appear to take the compliment, while the envoy of Berne proceeded: "But our wealthier burghers having some superfluous crowns, think it no extravagance to barter them for a goblet of better wine than our own mountains can produce. But we will be more frugal when we have at our disposal tuns of the wine of Burgundy for the mere trouble of transporting them."

"How mean you by that, cousin Rudolph?" said Arnold Biederman.

"Methinks, respected kinsman," answered the Bernese, "your letters must have told you that our Diet is likely to declare war against Burgundy."

"Ah! and you know then the contents of my letters?" said Arnold; "another mark how times are changed at Berne and with the Diet of Switzerland. When did all her grey-haired statesmen die, that our allies should have brought beardless boys into their councils?"

"The Senate of Berne, and the Diet of the Confederacy," said the young man, partly abashed, partly in vindication of what he had before spoken, "allow the young men to know their purposes, since it is they by whom they must be executed. The head which thinks, may well confide in the hand that strikes."

"Not till the moment of dealing the blow, young man," said Arnold Biederman, sternly. "What kind of counsellor is he who talks loosely the secrets of state affairs before women and strangers? Go, Rudolph, and all of ye, and try by manly exercises which is best fitted to serve your country, rather than give your judgment upon her measures. Hold, young man," he continued, addressing Arthur, who had arisen, "this does not apply to you, who are unused to mountain travel, and require rest after it."

"Under your favour, sir, not so," said the elder stranger; "we hold in England, that the best refreshment after we have been exhausted by one species of exercise, is to betake ourselves to another; as riding, for example, affords more relief to one fatigued by walking, than a bed of down would. So, if your young men will permit, my son will join their exercises."

"He will find them rough playmates," answered the Swiss; "but be it at your pleasure."

The young men went out accordingly to the open lawn in front of the house. Anne of Geierstein, and some females of the household, sat down on a bank to judge which performed best, and shouts, loud laughing, and all that announces the riot of juvenile spirits occupied by manly sports, was soon after heard by the two seniors, as they sat together in the hall.—Vol. i. pp. 64—93.

LANDOR'S IMAGINARY CONVERSATIONS.

Landor's Imaginary Conversations. Second Series. 2 vols. 8vo. Colburn. London, 1829.

(Continued from p. 328.)

If we succeeded last week in convincing our readers that there is one conception which, above all others, Mr. Landor has endeavoured to realise in his mind and in his writings,—namely, a conception of the highest form which it is possible for the mere animal life of individuals and nations to assume—our task in criticising the dialogues with which he has lately presented us will be greatly lightened. It will be confined to an examination of the occasions when the author has been successful in embodying his idea; of the occasions when he has been carried by the force of those influences which we mentioned as frequently producing a disturbance and contradiction in his feelings into a region higher than that in which he habitually dwells, and of the occasions where the natural gravitating tendency of a speculation which is busy merely with what is tangible and corporeal, has degraded him actually to the level of that existence which, that he may contemplate it aright, he ought to overlook.

The dedication to Sir Robert Wilson, on the Prospects of Greece, and the Duty of Christendom with regard to her, is a specimen of solemn and

elaborate rhetoric such as we rarely meet with in these days. Those who are so weak-minded and unfortunate that they are not able to dis sever this subject from the associations of French and English charlatanism which surround it, even if this composition do not excite their exhausted and deadened sympathies, will, nevertheless, find themselves repaid for the study of it, by its merit only as a work of art. The following passage will give them some notion of the tendency which Mr. Landon's thoughts have to throw themselves into a Grecian mould. There is no reason why the last sentence should not have slipped out of one of the orations in Thucydides.

'An alliance offensive and defensive with Greece, would render us invulnerable in the only part of the world where we have lately shewn our feebleness. We should unite to us a maritime power, which within half a century would of itself be equipollent on the sea with France; and we should attract to our merchants those advantages of commerce in the Levant which at present lean toward her. The great Chatham, if he had lived in our days, would have cast on every side around him the seeds of small maritime and small constitutional States. We may extend our dominions in many ways; we can extend our power in this only. None of our late ministers have had clear views or steady aims. We have been hovering on the shores of Greece, until the season is going by for aiding her; and another Power will soon have acquired the glory and the benefit of becoming her first protectress. If a new world were to burst forth suddenly in the midst of the heavens, and we were instructed by angelic voices, or whatever kind of revelation the Creator might appoint, that its inhabitants were brave, generous, happy, and warm with all our sympathies, would not pious men fall prostrate before Him, for such a manifestation of his power and goodness? What then! shall these very people, these religious, be the first to stifle the expression of our praise and wonder, at a marvel far more astonishing, at a manifestation of power and goodness far more glorious and magnificent? The weak vanquish the strong; the oppress stand over the oppressor: we see happy, not them who never were otherwise, not them who have made no effort, no movement of their own to earn their happiness, like the creatures of our imaginary new world, but those who were the most wretched, and the most undeservedly, and who now, arising as from the tomb, move the incumbrances of ages and of nations from before them, and, although at present but half-erect, lower the stature of the greatest heroes.'

In general the sentiments expressed in this dedication will only shock those who are kept in constant alarm, lest their feelings should run away with them, . . . an apprehension suggested by the same prophetic wisdom, which, as Fielding has remarked, induces the ugliest women to set the strictest watch and ward upon their virtue. There is, however, one passage, which, if it chance to encounter the eyes of a Quarterly Reviewer, (especially of that eminently strict and high-minded one, who, his chief endowment being a certain exquisite modesty, must feel somewhat wounded by his introduction into one of these dialogues, even in the respectable company of a foreign monarch, an English Home Secretary, and an interpreter,) may possibly furnish the text to as many and as true insinuations against the character and principles of the writer, as have been heretofore bestowed in the same exemplary work upon Shelly, Keats, and Niebuhr. The sentence is this: 'I never can be induced to imagine that the extinction of all the tribes in Africa and all in Asia, with half of the dwellers in Europe, would be so lamentable as the destruction of Messolonghi, or even as the death of Bozzaris.' Now, though we do not by any means, for reasons which we shall presently mention, agree in the sentiment of this passage, we would, nevertheless, very earnestly represent to those honest persons who may, stimulated by the first perusal of it, or by the denunciation of the Review, upon which their opinion depends, close the book at once, and condemn the author,—that in so doing they will be sanctioning a much more widely mischievous principle than is implied in this passage, even supposing it to have the worst possible meaning which ingenuity

or malice can assign it. Of all the evils which infect the literature of this age, there is scarcely any so enormous as that which has been produced by the constant exposure of authors to that order of persons who have been rightly denominated 'mob-sycophants.' To the constant fear that some member of this class, which constitutes the effective force of our reviews, magazines, and newspapers, will drag them before the tribunal of public opinion, not, as the Athenians were, for a smuggled basket, but even for a single suspected fig, and to the too well-grounded conviction of the small chance which they have of obtaining justice from the crowd of voices which prevail there, we may fairly attribute the cowardice of our modern writers, the feebleness and common-place of the greater number, the bantering and paradoxical tone adopted by a few, that good-natured friends, if they should be hard pressed, may be able to plead that they were only half in earnest, the addition of clever men to those kinds of writing which require no expression of earnest feelings upon any question; lastly, the loss of all steadiness in following out an idea, or pursuing a train of scientific investigation; for how can there be any steady sequence of thoughts, or laborious linking together of truths, when any term of the series, any step in the demonstration, is liable to be overhauled by the most ignorant of informers, for the purpose of being submitted to the most ignorant of judges? While we are bawling about the freedom which we enjoy in being able to bring books into the world without the help of a government accoucheur, this oppressive and intolerable censorship the terror of which occasions more miscarriages and abortions, and peoples the world with more sickly and rickety infants, than all the causes together that have ever been at work to frustrate great conceptions, is boasted of as a glory of the nineteenth century. The more, therefore, does it behove every person who is really zealous for the honour and independence of literature, not to yield to hasty suspicions when he encounters any strange proposition in the writings of a suspected man, not to be frightened by seeing it printed in staring letters and marked with notes of reprobation (like those which are affixed to some of Shakspeare's finest scenes, in Pope's edition) by some popular reviewer, but on the contrary to examine it he doubtful assertion, (especially if, as in the present case, it has none of the glitter of affected paradox) the more diligently and the more favourably, because he feels that where there is courage there may be truth, and because he knows that with most men originality is by far the worst of crimes and the most detestable of heresies.

If our readers approached the examination of the sentiment to which we have been alluding in this spirit, we should not despair of convincing them, that, though there be in it something of error, that error is neither so vast as they would at first sight conjecture, nor at the present time likely to be the least mischievous; and that it arises, moreover, naturally and necessarily out of that which we have described as constituting the leading peculiarity of his mind. In the ancient world, there was, properly speaking, no sense of individuality. Men appeared in each other's eyes, as to those which were miraculously restored to sight, like trees walking. Except for the very highest philosophers, it was far too refined a speculation to follow the spirit of the universe into the myriad forms of men or animals in which it might choose for a while to enshrine itself. It was in nations only that there seemed to be space enough for its permanent habitation. The Greeks could not but feel that among them it dwelt visibly in a thousand shapes and forms, that it put on their helmet, enshrined itself in their statues, lived beneath the shadow of their temples, and was married to their immortal verse. They were equally satisfied that to other nations this presence was denied, and that to some they were to introduce it. Hence, as has been often remarked, the ab-

surdity of condemning the ancient nations for showing a recklessness of life in the extension of their conquests. They were showing the greatest reverence for life, since they were extending it over what they considered a region of death.

Christianity introduced a new element into the calculation, by teaching the doctrine not merely of a general immortality to all that lives, which was as much an article of faith in the old world as in the new, and is, in fact, implied in the consciousness of life, but of a separate resurrection for every individual soul. Hence, each numerical unit of humanity possesses a value in our eyes which it could not possess in theirs; hence the opposition which our religious feelings make to wars of conquest and aggrandisement; hence the obliteration of that very broad and glaring distinction between the civilised and the uncivilised portions of the world. Now nothing can be more obvious than that Christianity should have the effect of making us regard life as a thing of much higher value, as a much more solemn trust, than it was considered by the men of the ancient world. While, therefore, a belief in it would make us regard with some apprehension Mr. Landon's doctrine, which sets too little store by individual life, we should regard with far more jealousy any notion which, professing to be founded upon this just principle and to extend its application, by teaching us to overlook all differences between men, to hold cheap the superiority of those who possess more life and more soul than their neighbours,—should, in fact, frustrate its whole end and purpose. Our present tendency is to this dangerous extreme. The equal importance of all the members of the human family is asserted with dangerous solemnity and without the least qualification from our pulpits, though the ground of the proposition—which is, that every man possesses a rational soul—is often proved to be inapplicable in the very sentence which contains it, by the preacher affirming that a very large portion of mankind is in no better condition than the beasts which perish. And while this contradiction in his reasoning is all which averts the inference that there is no difference between *individuals* whose souls are cultivated, and those which are utterly inactive and dead, there is nothing whatever to prevent the most mischievous doctrines being founded upon it with reference to our condition as nations. Already are we exhorted by well-meaning persons to suspend our sympathies for the progress of intelligence, civilisation, and freedom, when they are to be purchased by any large sacrifice of human life,—already have we been told, in plain terms, that it would have been better for Europe * to sleep quietly under the incubus of the Roman superstition, than that the wars which followed the excitement produced by the Reformation should have taken place:—already has the still more fearful doctrine been promulgated, that, even if our national existence were threatened by an invader, it would be our duty to give up that which legally as well as morally constitutes us Persons, to become Things, rather than shed human blood. Principles so alarming as these cannot be better encountered than by their extreme opposites. Mr. Landon's doctrine, if unchristian, is not more unchristian than that of the peace societies; and, from the collision of the two, we may hope to see the true principle result, which is the Christian one, that there is an immeasurable difference between the value of different human lives,—that no comparison exists between the worth of a free-man's existence and a slave's, but that the slave has a value and sacredness of his own, because he has the capacity of becoming a freeman.

This point furnished us with so important an illustration of the tendency of Mr. Landon's mind, and at the same time of the advantage which may result from that tendency even when it appears to be perverse and mischievous, that we could

* See Thrush's 'Letters on the Unlawfulness of War.' Longman, 1828.

not resist entering upon the subject, though we foresaw that it must delay us some time in our progress. We will now proceed to the Dialogues.

The first is between Boccaccio and Petrarch. It is graceful and Italian; in all points of costume, as usual, appropriate and striking, and as usual throws extremely little light upon the characters of the men who take part in it. Of the two, Boccaccio is evidently the author's favourite: he seems to have rather an overweening delight in exhibiting Petrarch's weaknesses—perhaps from a conviction that his weaknesses have been more powerfully and enduringly mischievous to his country's literature than the strength of many worse men.

Of the dialogue between Lucullus and Cæsar, we have already afforded our readers a specimen; but we must not dismiss it without saying, that of all the dialogues in this and the preceding volumes, we should be inclined to fix upon this as the most complete realization of Mr. Landor's idea. It is deficient in no quality of first-rate excellence. As a view of Roman policy—as a picture of the Republic in that age—as a contrast between two of the most remarkable men of any age—as an illustration of Roman gentleness and Roman dignity—as an exhibition of the author's keen love for the beautiful in nature and art, (a love, however, expressed in the language suitable to the stately conceptions of his interlocutors),—we can consider nothing more perfect.

To this delightful dialogue succeeds one which is obviously entered as a direct contrast to it, between Mr. Pitt and Mr. Canning. In Mr. Landor's preface, he defends himself against the usual charging of dealing hardly with the memories of the recently dead, by the usual defence, that the principles of which they were the bodily representatives still live. Our objection is different, and is not anticipated by this answer. If the author's object was to place in the strongest light the broad lines of the ancient policy, as contrasted with the refinements of the modern, he should have chosen his specimens fairly on each side. Lucullus and Cæsar should have been pitted against Ximenes and Charles the Fifth, against Macchiavelli and Pope Alexander, against Walsingham and Raleigh. It is the ordinary law in the comparison of all styles of art, that the originators of each should be placed side by side; not the masters against pupils, men of genius against mechanics. If his object was not to compare two kinds of art, but merely to exhibit the greatness of his heroes by contrast with the littleness of ordinary men, the examples of the latter class should have been taken from beings who had been nurtured under the same sky, and had sucked the same breasts. Antony and Dolabella would have been surely more appropriate than Messrs. Pitt and Canning. And lastly, if his wish was not, as we have imagined from the juxta-position of these dialogues, and from the antithesis which seems to be contained in many passages of each, to contrast his Romans and his Englishmen, but merely to exhibit the petty and impoverished notions of statecraft entertained by Mr. Pitt—this object would surely have been far better attained by bringing his hand-to-mouth policy into contrast with the speculations of a far-reaching and statesmanlike intellect, than by merely introducing him as the lecturer of a docile and admiring pupil. But with the man who was best fitted to take part in such a dialogue, with the man who was born to convince the world, if any thing would convince it, that genius is not mischievous even in men who are to govern empires, Mr. Landor has no sympathy—only, so far as we can discover, because, though possessing all the courage of Phocion, and more than all the philosophy of Cicero, he was not a Phocion or a Cicero in an age when it was a far higher, more difficult, and more useful achievement to be an Edmund Burke.

We were about to proceed with the other dia-

logues; but the temptation to extract in the one between Odysseus Tersitza and Trelawny, would be irresistible; so we will defer further criticism till we can gratify our inclination.

JOURNEY FROM CALCUTTA TO EGYPT.

Narrative of a Journey from Calcutta by Way of Egypt, in the years 1827 and 1828. By Mrs. Charles Lushington. Small 8vo., pp. 284. Murray. London, 1829.

We may lay it down as a general principle that no one ought to travel, or at least to write travels, but philosophers and women, a Humboldt or a Mrs. Lushington. Few things are more annoying to persons of the finer sensibilities which belong to critics, than the strange medley of unconnected and discordant speculations which your 'very clever man' usually intermingles with his descriptions of places and persons. He always thinks it necessary to give you a theory instead of attending only to those matters on which it is the business of wiser men than himself to theorise. He must be for ever saying something smart or profound; and, as the 'very clever man' of society seldom thinks it worth while to meditate afar off, or lay any stable foundation of truth before hand, as he fancies that what for every one else is dust, becomes for him when he chooses to gather it from beneath his feet, handfuls of sequins, pearls, and diamonds, he pushes under our noses his extempore philosophy and accidental systems, with as much gravity and pertinacity as he might, perhaps, be justified in displaying if he were the appointed expositor of Newton or Plato. Take up any of the moralisings of any common book of travels, and what a wild medley do you discover of battling principles, solemn nothings, great truths set aside, without being understood, in a parenthesis, politics here represented as the universal science, and there stuffed into the breeches' pocket of morality, religion in one page unchecked and omnipotent, and in the next trampled and despicable beneath the hoofs of utility.

We find nothing like this in the writings of a philosopher. In them no truth is stated without its limits; no apparent exception is exalted to be the law, but neither is any left without its explanation. The reflections are chiefly valuable as appended to the most important objects perceived; but they never seem 'got up' for the occasion, or introduced from behind like the monster in a melodrama, at the moment when they are most wanted, but when there is no reason in their own nature for their appearance. Knowledge has no scenic tricks, and obeys not the call of the dirty prompter Vanity.

It is remarkable also, that in the books of the 'clever men' to whom we have been alluding, the descriptions are generally as confused as the doctrines. The quacks are as incapable of seeing, as of thinking, accurately. And indeed, there is a great advantage for such worthies as these giants of modern literature, in dimness and vagueness of vision. For where they are not ingenious enough to make the theory fit the phenomenon, it is pleasant, and saves perplexity, to accommodate the fact to the explanation. Thus it is that we rise from the perusal of a 'clever' book of travels, not only with our intellects wearied and fretted by the unprofitable labour of disentangling and reconciling a thousand heaped and heterogeneous fancies, dark follies, and ignorant audacities; but with a consciousness of doubt and annoyance as to the things of the material world and imprecating deserved curses on the light-fingered and mountebank talent which enables a man to muddy the colours of the rainbow, to darken for us with the mists of his vanity the bright atmosphere under which it was granted to man to behold this blessed earth, and to perplex our conceptions of outward objects, that we may attend to nothing but the sophisms and slight-of-hand of his unbalanced intellect.

What an agreeable contrast is there to all this when we meet with a book like the present. A woman, (if she be not awkwardly strutting, as some use, in men's habiliments,) if it never occur to her, as it never ought, to be any thing but a woman, perceives vividly, feels keenly, and describes simply; but leaves it to us to deduce inferences, and build systems. We find in this little work no drawing-room or toilet-table attempts to solve the mysteries of the universe in five minutes; no complete philosophies of history in three sentences, made *ex improviso*, on occasion of finding a rusty denarius; no reflections dancing a pirouette through the limbo from Adam to the day of judgment, *a-propos* of an Egyptian shoe-tie. Every page is a clear and living picture of a portion of God's earth or man's old trophies. And Mrs. Lushington is evidently persuaded that no sounding words from her, or from any one, could add to the strength and solemnity of feeling which all men must experience in reading plain and definite descriptions of a temple first filled with worshippers three thousand years ago, or a sepulchre larger and more gorgeous than a modern palace, in which the corpse of a Pharaoh was buried. The utter absence of pretension or affectation adds a great and universal charm to the clearness and variety of painting, and the lively intelligence, displayed by the fair traveller in every page of her narrative.

We give, as a specimen of her manner, a part of her account of the journey between Cosseir and the Nile:

'Some time elapsed before so large a party as ours could be accommodated with camels; they were procurable in any number, though they could not be collected without a little delay. They were white and black, besides the usual dun colour. I may here remark, that the distinction between the dromedary and camel is no further known in Egypt, than that the former is used for the purposes of riding and dispatch, the latter, for the conveyance of burthens.

'Our cavalcade consisted of ninety-six camels, besides many asses; no great number, when it is to be recollected we carried with us tents, clothes, wine, water, and provisions. The Captain, and one of the officers of the *Palinurus*, had joined our party, and with them several lascars, who were of great use in pitching our tents, &c. &c.

'For Mr. L., myself, and two servants, we had twenty-two camels and three donkeys. I was to travel in a covered litter, called a *Tukhtie rowan*, somewhat resembling a Sicilian lettiga: this was made at Bombay, of the strongest possible materials; and, in consequence of its weight and size, it was necessary to employ the largest and tallest camels for its conveyance. The machine, from its height, presented a formidable appearance, being raised six feet above the ground; and I had to ascend to it by a ladder, which, from the unsteadiness of the camels, was rather a difficult undertaking.

'The Arabs having lashed the trunks after their own method, to my astonishment, I found myself in actual progress about noon on the 28th. But, without Mr. Elphinstone's servant, Antonio, and the additional assistance of Mr. Porter, the officer of the *Palinurus*, I think I might have been in the Desert still. The concourse of people, the roaring of the camels, the vociferations of the servants and lascars, in their vain endeavours to make the Arabs understand and move—(and, as usual, the less they could make them understand the louder they bawled)—one camel rising with half its load, another throwing down the whole of his; others making off altogether, every driver secreting as much of the cord that was given to him as he could hide, snatching from the man next to him the quantity required; the combat that ensued, the one universal clamour for *backsees*, their struggle against each other to obtain it, presented a scene of confusion and uproar which, though to the gentlemen, from its strangeness, it might prove amusing, to me was somewhat alarming, particularly as I was, for a short time, left alone with the drivers.

'My interpreter, who was a Darfour man, and who professed to understand Hindoostanee, could not comprehend one word I said to him, which increased my discomfort. At this moment my *tukhtie rowan* was assailed by five or six dancing-girls, called *Almehs*. I immediately lowered the silk blind, which, however,

I thought they would have torn off in the same clamour and struggle for *buckees*. I could not help seeing them as I strove to keep down the curtain; and it was impossible to behold them without disgust. Their countenances appeared inflamed by drinking, their persons were greatly exposed, and altogether, they more resembled common robust English women under the influence of liquor, rather than what I had fancied of the delicate and elegant Egyptian females. They wore the same full petticoat as the nautch girls of India. I may seem capriciously affected by the customs of the inhabitants amongst whom I travelled; but to me these women appeared doubly bold and degraded from the absence of the veil. It is so entirely contrary to the prejudices of the country for a female to appear without it, that the lowest peasant's wife will not allow any one to pass, without drawing her muffler of coarse blue cloth closer round her face; and to expose it thus must be the height of abandonment.

"In the *tukhte rowan*," says Hajji Baba, "when the mules take to trotting, or when the one proceeds willingly and the other refuses to go, except by beating, the sufferer in the cage between both undergoes strange motions." The motion, at times, in the camel *tukhte rowan*, was so violent that it put me to great pain. I was the more surprised at this, as on first setting off, the animals stepped well together, and we moved on most comfortably. Every half hour I had to complain, and Mr. Porter, the officer before alluded to, kindly "new-rigged the tackling," as he phrased it. It was at last discovered by mere accident, that as soon as the drivers thought they could do so without detection, they slipped off part of the cord harness which kept the litter steady, although they saw how much I suffered; yet, for the sake of this trifling acquisition, they would have harassed me during the whole journey. The next morning, one of the same Arabs harnessed a vicious camel to the *tukhte rowan*; away flew my litter over the plain, fortunately without me, and was with difficulty recovered; and then, while the camels were in this unsteady state, I was hoisted in at the door in a very unceremonious manner, my ladder having been forgotten in the confusion.

The whole business required some courage, as owing to the delay I was left nearly alone, and was fearful of being benighted. This, however, was the last of my disasters; for I found, on my arrival at the halting ground, that the delinquent had been reformed by a bastinado, inflicted by the Chioush who attended us,—the usual Turkish recipe for all misdemeanours.

My maid was placed the first two days in a sort of basket with a hood, fastened on the back of a camel; but, though well padded, she found the motion so severe, that she was glad to descend, and she performed the rest of the journey, with perfect ease, on a donkey. The gentlemen, also, except two, having tried the camels, preferred this humble conveyance, walking and halting as they felt inclined. Indeed, were I to undertake the journey again, I should dispense with the *tukhte rowan*, and adopt this mode of travelling.

Though much variety of country occurrence cannot be expected in the Desert, I may say, with truth, that the passage through it was to me very interesting and agreeable. For the first three stages, the road was diversified by some inequalities of ground and remarkable passes through the rocky mountains; but the course of our journey, in general, lay through an arid plain of sand and stones, about two or three miles in breadth, bounded by rocks of sandstone of an almost uniform appearance. On the second day's march, I saw one or two trees; and the road was so varied, that I could then scarcely believe myself in a Desert, which I had always pictured to my imagination as a dreary and interminable plain, with heavy loose sand, curled into clouds by every breath of wind.

Our second place of encampment was truly singular, our tents being pitched in a sort of circus, about two miles in extent, completely closed in (except at two passages) by rugged mountains, part of which rose above our heads almost perpendicularly. I left my bed before daylight, when the whole camp was buried in sleep, and indulged my astonishment at the novel spectacle of tents surrounded by numerous camels, with their drivers and burthens, ranged in a circle, according to the position of their respective masters. I wondered to find myself thus tranquilly situated in the Desert, whose difficulties had been so magnified; and I looked up to the canopy of stars, the view of which was so remarkably bounded by the belt of mountains, with feelings which I shall not now attempt to recal in their original intensity.

I cannot imagine that any climate in the world can excel that of the Desert, at the season we crossed it.

I never found the heat of the sun injurious, nor did any of the gentlemen of the party, who were exposed to it many hours each day. The air was so bracing, that, although I had caught a severe cold the day of my arrival at Cosseir, which caused acute pain in my face, and ended in an abscess, yet I felt the fatigue of being so long on the road, the want of sleep, and the labour of packing, &c., less than I should an evening's drive in a carriage in the hot weather in India.

Anniversaries passed in strange countries, and at a long distance from home, are generally celebrated by travellers with extraordinary zest and cordiality; and, though I am apprehensive of being considered tedious in dwelling upon what indifferent persons may deem uninteresting, yet I will venture to describe the fête which Mr. Elphinstone gave us on New Year's-day, 1828. Ill as I was, and fatigued by pain rather than the journey, I wished, on this day, to join the gentlemen in the dinner tent; and I confess I was amused by the contrast of the narrative which I had been reading, with the appearance of the table and party before me. The author of the book in question described the delight of the traveller on arriving at the wells where we were then encamped, and his satisfaction, after all his privations, and quenching his thirst with plenty of water; and, in short, would have impressed us with the notion that the Desert he had passed, and in which we then were, was such a one as depicted by Burckhardt, abounding in sand, hunger, and thirst.—But, behold our party, consisting of ten persons, sitting in a comfortable tent, lined with yellow baize, and cheerfully lighted up; a clean table-cloth, and the following bill of fare: roast turkey, ham, fowls, mutton in various shapes, curry, rice, and potatoes, damson tart, and a pudding; madeira, claret, sherry, port, and Hodgson's beer. For the dessert, Lemann's biscuits, almonds and raisins, water-melons, pumplenose, (or shaddock,) and a plumcake as a finale!

What astonished me, was the ease with which the whole arrangement of our meals was conducted; however, I believe this was principally to be attributed to the skilful superintendence of Mr. Elphinstone's head-servant, Antonio. He was active and strong; a good tailor, and a good cook; speaking a little of most languages, but being master of Arabic, French, and Italian. He mended my harness like a practised saddler; and, in short, could do any thing and every thing as it was required. The cook, dining-tent, and apparatus, were sent forward early in the morning, before we started ourselves, and at six in the evening our dinner was ready.

While traversing the Desert we met numerous droves of camels, the Arabs belonging to which offered us for sale grapes, dates, water-melons, and ready-boiled hard eggs. Every person was so inoffensive, that, after the first day, the gentlemen laid aside their arms, as useless incumbrances, and travelled with such perfect security, that individuals were occasionally separated from the caravan without any fear of molestation.

BOTANY.

An Encyclopædia of Plants; comprising the Description, Specific Character, Culture, History, Application in the Arts, and every other desirable particular respecting all the Plants indigenous, cultivated in, or introduced to Britain; combining all the Advantages of a Linnean and Jussieuian Species Plantarum, an Historia Plantarum, a Grammar of Botany, and a Dictionary of Botany and Vegetable Culture. The whole in English: with the Synonymes of the commoner Plants in the different European and other Languages; the Scientific Names accentuated, their Etymologies explained; the Classes, Orders, and Botanical Terms, illustrated by Engravings; and with figures of nearly ten thousand species, exemplifying the several Individuals belonging to every Genus included in the Work. Edited by J. C. Loudon, F.L.S., H.S., &c. The Specific Characters by an Eminent Botanist: the Drawings by J. D. C. Sowerby, F.L.S.; and the Engravings by R. Branstetter. 8vo., pp. 1159. Longman and Co. London, 1829.

To the students of Botany and the lovers of flowers, the work before us is, in our opinion, the richest present which ever came from the press; being full, complete, and (considering the countless number of minute details) of very extraordinary accuracy; while it is withal cheap, when compared with the immense prices of such works as 'The English Botany,' or 'The Botanical Magazine,' the only publications which, though very

different in plan, can at all come into competition with the 'Encyclopædia of Plants.' M. Persoon's 'Synopsis Plantarum,' published in 1803, is nearer in plan than the work before us to any we are acquainted with; but Persoon's book, which is a mere abridgment of the 'Species Plantarum' of Linnaeus, and is illustrated by no figures, falls infinitely short of this, where we have nearly ten thousand figures, with faithful abridgments, not only of the 'Species Plantarum,' but of almost every botanical work of authority, both British and foreign.

The 'Encyclopædia of Plants,' indeed, contains every thing requisite for the botanical student, as it contains the best glossary of the scientific terms which we have met with; the whole well illustrated by accurate engravings, and, what we think still better, by references to plants, exemplifying the terms. With respect to the system adopted, it contains both that of Linnaeus and that of Jussieu—the first very properly forming the basis of the descriptive part of the work, while the second is afterwards developed with sufficient minuteness to serve every useful purpose. It may not be uninteresting to our readers to take a brief glance at the two celebrated systems and the authors of them.

Every body who has ever heard of botany has heard of Linnaeus, the celebrated Swedish Professor, to whom almost all the parts of natural history owe their present nomenclature. This is the extraordinary man, who, in his boyhood, wandered on foot from Upsal to Lapland, and published at his return a Flora of the country, accurate and distinct even to a miracle. This is the man who set aside all preceding naturalists as mere dabblers, and erected for himself a system entirely new, which contained, or was intended to contain, all the individual minerals, plants, and animals, found on the globe. And this is the man, who, from his death till now, has been called by the boarding-school Miss, as well as the most learned Professor, the great and immortal Linnaeus; and his system has been looked upon as equal in stability to the Newtonian system itself. But the immortality of fame, though loudly resounded and widely spread, cannot be insured to any man or to any system; for hundreds and hundreds more, who have figured in their day, and have been honoured with the addition to their name of immortal, have long been forgotten, or are fast sinking into forgetfulness. We have to record the great and immortal Linnaeus among the latter; his system is rapidly declining in popularity and his celebrated name must follow the fate of his celebrated system. We have one very strong fact to support this assertion; all the elementary botanical works lately published, both in this country and on the Continent, talk of Linnaeus and his system, as a mere introduction to the science, and direct their chief attention to the system of Jussieu. The recently published 'Grammar of Botany,' by Sir James Smith, is chiefly an account of Jussieu's system; and the descriptions of British plants by Dr. Hooker, and by Mr. Grey, are in the same style. But Mr. Loudon, in the work before us, has given the lead to Linnaeus.

The grand aim of Linnaeus seems to have been, to make his system a practical index to nature—an index which could be used for every specimen of every production, mineral, vegetable, or animal, or rather to make the specimens an index to his book, so that a person acquainted with his terms and his system, upon meeting with a strange plant or animal, has only to examine its parts and structure, in order to discover at once where it is placed and described in the Linnean arrangement; which, in the 'Encyclopædia of Plants,' is carefully attended to. Now all this, it will be granted, is exceedingly useful for accuracy and distinctness. The older botanists and herbalists contented themselves with vague and tedious descriptions of plants, which it was scarcely possible, even with the aid of their bad prints, to identify with a single specimen. The evil result-

ing from this inaccuracy was most serious; for (to mention only one instance) many plants are employed in medicine, and a single mistake in collecting these may endanger the lives of thousands. This is not a fancy. The evil has been repeatedly and seriously felt. And, if Linnæus had done nothing more than introduce accuracy in distinguishing plants and herbs, he deserves most highly of science, and he deserves no less highly of all who ever require the aid of medicine. We shall not now stop to illustrate the advantages which he has conferred on the agriculturist and the gardener; but we shall venture to point out some of the defects of the system, though most of these, we believe, may be rather imputed to the followers of Linnæus, than to Linnæus himself.

With the exception of its accuracy, then, and its utility as an index to nature, this celebrated system has little to boast of; and the knowledge of a mere Linnæan botanist appears to be exceedingly circumscribed, and of small value. He hunts so incessantly after minute and barely palpable distinctions, or slight variations of number, form, and colour, that much useful knowledge, and practical and enlarged views of nature, are utterly neglected. The descriptions are dry, barren, and uninteresting; so much so, that nobody would think of sitting down to read a single page of the 'Systema Naturæ,' except by way of consultation, any more than to read a page of a School Dictionary. Now, what would any one think of making Johnson's Dictionary the only book in English Literature, the very summit of his studies in Belles Lettres; and not only so, but of asserting that it contained all requisite information in literature or science? Yet precisely similar is the practice and the profession of the disciples of Linnæus, and by the thorough name-knowing botanist, those who cultivate the physiology of vegetation, or investigate the economical uses of plants, are considered to be engaged in a very inferior sort of inquiry, which is contemptuously stigmatized by the name of *popular*. This is going rather a step beyond Linnæus himself, who, according to his biographers, 'never failed to display, in a lively and convincing manner, the relation subsisting between the study of nature, and the public good, by showing how greatly this agreeable employment may add both to individual comfort and emolument.' In his published works, however, we have scarcely any thing of all this, but instead of it, endless subdivisions, and minute and useless details of the shapes of leaves and the structure of flowers. He asserts, indeed, in so many words, that 'the test of a good botanist is to know the greatest number of species,' without saying a word about public economy, or important uses. Such, then, is the Linnæan Botany, that the books upon it cannot be read, as other books are read, for instruction, or amusement, but must only be consulted to discover whether the cabalistical characters there agree with any given plant or flower. This, however, which is its leading characteristic, is also its leading excellence.

The judicious editor of the 'Encyclopædia of Plants' has adopted the system of Linnæus so far as it forms an index to the plants indigenous or introduced into Britain; but he has also added to the descriptive details of each genus, many important and useful remarks, not to be found in any other botanical work with which we are acquainted, with reference to the cultivation and uses of the several species.

The formation of the seed through the instrumentality of the various parts of flowers, is the basis of the system of Linnæus. The stamens and the pistils and the germen, are the three instruments chiefly concerned in this process; and, as these vary in number and position in different species of plants, this difference of number was made the distinctive characteristic of the classes and other divisions. Jussieu, on the other hand, takes his distinctions of divisions from the seed-

ling leaves, or rather from the appearance of the first germination of seed after it has been sown. Every seed consists of a skin enclosing the *albumen*, a medley or fleshy substance usually white, analogous to the white of an egg, and destined to nourish the first bud of the plant till it can of itself derive nourishment from the ground; and the embryo or germ, corresponding to the yolk of an egg, which after budding forms the root and stem of the plant. Attached to the germ at its first budding, we find, in most plants, two, in others one, and in a third class none of what are termed cotyledons, or seed-lobes. Every one who has attended to the first appearance above ground, of plants raised from seed, such as turnips, must have remarked, that the seedling leaves (as they are termed) are very different from the leaves of the full-grown plant. These seedling leaves are the expanded cotyledons; and it is these cotyledons which Jussieu has fixed upon as one of the leading distinctions of his classes:—*Acotyledones*, without seed-lobes; *Monocotyledones*, with one seed-lobe; and *Dicotyledones*, with two seed-lobes. Further, Hypogynous means, inserted under the germen, or seed vessel; Epigynous, inserted above it; and Perigynous, inserted into the flower-cup, or into the flower-leaves, or *petals*, which form the *corolla*. Apetalous means without flower-leaves; Monopetalous with one flower-leaf; Polypetalous with more than one flower-leaf.

To his classes and orders, Jussieu has annexed an appendix of more than a hundred genera, which as yet have not been distributed (perhaps it may be impossible to distribute them) among the preceding orders. It has been, and continues to be, a leading object with the most learned botanists to arrange these genera: and Brown, De Candelle, Ventemat, Salisbury, and Link, have successfully applied themselves to the task. We may remark, that, though this is called a natural system, and the system of Linnæus an artificial system, it does not appear to us that the one is much more natural than the other. This, if we had leisure, we could most amply show. In this pretended natural system of Jussieu, for example, we are met at the very outset with most violent and unnatural associations. In the second order of the first class, the sea-weeds are classed with lichens, though the sea-weeds are of a leathery gelatinous structure, and growing under water, while the lichens, as is well known, are crust-like and skinny, closely adhering to trees, stones, rocks, and ruins, and giving them the grey aspect of antiquity. Is this natural, we ask? and if not, is it not rather ominous to be met at the very threshold with so incongruous an assemblage. It reminds us of the Linnæan Zoology, in which the bat comes between man and the apes and monkeys, because the female bat suckles its young similar to that wise and visible animal which Linnæus calls *homo sapiens*. Linnæus, however, did not profess, as Jussieu does, to make a natural system. Upon the whole, it does not appear to us, that much advantage is to be gained by adopting this system of Jussieu. On the contrary, it takes away from us the facility which the 'Index Botanica' of Linnæus affords, of instantly discovering the name and description of any plant previously unknown to us, provided we find it in flower. As a work of ingenuity, and laborious research, and minute study, we are ready to bestow our admiration on the system of Jussieu. But this is as far as our admiration can go. The exercise of the memory is certainly of the first importance; but it is very possible to be a good botanist, according to the test of Linnæus; namely, the knowing of a great number of plants with their names, (as it is possible to be very skilled in all that is taught in our schools of the classics, logic, and mathematics,) without having much useful learning,—without having the judgment trained to habits of cautious induction, and of making general and enlarged inferences. This appeal to the memory, at the expense of active

judgment, is the great defect of all our famous systems, whether of botany or of the other departments of natural history; and with none more so than those daily starting up in France, and clamorously lauded by their imitators in Britain. But we hope the day is not distant, when the memory of naturalists will be in part emancipated from the burden of trifling details and useless names, and their judgment expanded to the great and beautiful system of the creation of God.

Without greatly exceeding our limits, we could not expatiate farther on these two leading systems of Botany; but whoever is desirous of seeing them both amply exemplified, may be referred to the 'Encyclopædia of Plants,' which forms, indeed, a very complete botanical library, and affords information that it would, at a moderate estimate, require several hundred pounds' worth of other works on Botany to supply.

NEW MUSIC.

Six Canzonets. The words by Lord Byron. Composed by John Lodge, Esq. Chappell.

THESE are not an importation, or adaptation, or *risfacciamento* of foreign music pressed down and simplified for English use, but a *bona fide* collection of things original, and therefore rare. This consideration so strongly prepossesses us in favour of any work submitted to our notice, that we are almost suspicious of our own opinion, and induced, therefore, to crop off a little from the luxuriance of our praises. Having premised this, we proceed to say that the well-known words of these canzonets are very cleverly arranged, and the charm which they have so long possessed is not marred by the music with which they are now accompanied. This is not negative commendation, for all that it may seem so; for the lines of Lord Byron are always of that varied and vigorous character as to call for an exercise of the very highest powers of composition in him who would illustrate them. These powers are most certainly developed in the present production, and the diversity of style required is not lost sight of in the midst of more intense qualities and characteristics. No. 1 is to the Barcarole words, 'Tis sweet to hear at midnight,' in 6-8 time, andantino, with an undulating accompaniment, well expressing the motion of the waves, and of the gondola floating upon them. No. 2. 'Through cloudless skies,' in the key of A major, 2-4 time, a graceful andantino grazioso. No. 3. 'In vain my Lyre would lightly,' in the key of E major, 6-8 time, a most expressive andante; the last line of each stanza subsiding into a pathetic adagio, with great truth of sentiment. No. 4. 'They name thee before me,' taken from the famous 'When we two parted in silence and tears,' and arranged with a good deal of feeling, though we are sorry for the mutilation of the entire poem. No. 5. Perhaps the happiest of the whole, is an elegant allegretto, in the key of A major, 2-4 time, with a flowing and picturesque accompaniment to the words, commencing, 'Adieu, adieu! my native shore.' No. 6. 'These be none of beauty's daughters,' an andante, in 2-4 time, which we do not otherwise admire than as exhibiting a great facility in the management of the instrumental part, which represents the various shading of the song with very great success, particularly in the calm monotony of the portion which describes the lulling of the water. Throughout the whole volume, we see great ingenuity and command of scientific resources, which have led the composer to display his strength chiefly in the accompaniments; a fact perilous, perhaps, to the popularity of his music. We trust it may be otherwise, for the satisfaction of musical justice.

An article on 'Don Giovanni' is unavoidably omitted from the pressure of other matter.

A LETTER TO THE SENATE OF THE UNIVERSITY OF CAMBRIDGE ON THE APPROACHING ELECTION.

GENTLEMEN,—It is now publicly announced that your present representative has received the expected reward for his legal and parliamentary merits by a promotion to the Bench, and that you will therefore be immediately called upon to elect his successor. Such an event must be interesting, to you and to all who cannot separate an anxiety for the future prosperity of your University from a recollection of the benefits which they have derived from it. To you and to them, however little either may distract themselves with the hubbub of ordinary politics, it can never be a question of trifling moment, who shall express the feelings of that which should be emphatically the mind of England, with respect to her laws, her government, and her religion. If the country at large does not share in this interest, its indifference must arise either from a very bad state of public feeling, with respect to the importance of learning in the regulation of affairs, or from an experience of some grievous neglect on your part in giving it the weight to which it is entitled. If he can succeed in stimulating you to the inquiry, whether one or both of these two causes be in operation to frustrate one of the principal objects of your institution, and if so, whether it is in your power to repair the mischief, the object of the humble individual who now addresses you will be accomplished.

Gentlemen, if the question which you have now to determine were, whether you should send to the Commons House of Parliament a Whig or a Tory, I should not have troubled you with this letter; or at any rate I should have selected another medium for the publication of it than a Journal devoted to science and literature. But this point, you are well aware, is not the one which you will be called upon to discuss with your consciences at the present time, or probably for a long time to come. To whatever cause it is owing,—to the greater Catholicism of men's minds which enables them to overlook petty differences, or to their indifference which prevents them from perceiving any,—to our having sounded the depths of all opinions till we have found the point of their coincidence, or to the ground immediately under our feet having been so slippery that we cannot even maintain our position on the surface,—the fact is undoubted, that the old boundary lines of the various provinces of political belief are becoming every day less discernible, and that the sectarian spirit of the country, now-wise extinguished or lessened, though somewhat bewildered by the loss of its favourite designations, is looking for some new national assembly, to make a new departmental arrangement of its cumbrous empire. Nor, I suppose, will the proudest admirer of these obsolete titles, maintain that when they are banished from the rest of the world, they ought to find an asylum in your ancient halls. On the contrary, it will be generally allowed that they were merely—like the red marks painted upon the hides of sheep, that the owner of a flock may be able to distinguish the members of it from the neighbouring ones—necessary for those who have no natural distinctions, or are liable to lose them in the attrition of society, but perfectly superfluous in those who live apart from the world, and have true characteristics stamped within, of which these are but the external symbols. The absurdity was, that you men of learning as you are and philosophers as you ought to be, should ever have exacted such a test of qualifications from your candidates as their acquaintance with the masonic signs of party—and not at all that you should abandon them now, when all the rest of the world has done the same. No, gentlemen; the representative of a University has no business now, nor ever had any business, with Whiggism or Toryism—what manner of man he ought to

be, should be determined by a far different, a far higher criterion.

The House of Commons is a representative of the different English classes. Some of these are not adequately represented, which is a defect in the system of the House of Commons—they are all of them too broken, too discordant, too hostile, which is the defect of the state of feeling in the country. But still whenever any interest is predominant in any town, borough, or county, that interest is supported by the member who is returned for it: in the counties, the interest of the large proprietors—in the close boroughs, the interest of their owners—in the towns, the interest of whatever branch of commerce or manufacture prevails there. It were to be wished, of course, wherever any great body of men, such as the hardware-men of Birmingham, or the cotton-spinners of Manchester, have not a voice in the Legislature that they should obtain one; and it were to be wished far more fervently, that all the classes—landed proprietors, commercial men, and manufacturers should feel, as a better moral education would enable them to feel, that there is one great common interest which is more valuable to each of them than that one which is peculiar to them, and which common interest, therefore, members should be selected to express. This, however, being the principle of our English representation, it is proper to inquire what the interest is which should be predominant at your University, the nature of which your member should understand, the object of which he should prosecute. What is that which should be as dear to you, as the West India Trade to the merchants of Bristol, or as the shawl trade to the manufacturers of Norwich? And if it should appear that you have overlooked this interest in support of other ends, it will be worth while to know whether you have only merged that which was private and personal in some wide theory of good, or whether in neglecting that object you have neglected the object which it was most important for the country's advantage, as for your own, that you should keep in sight.

Gentlemen, it seems to me, that the interest which has been committed into your keeping, the interest which it behoves you to watch over at least as jealously as any body watches over the particular mystery which it professes is,—the INTELLIGENCE of this country. This is your high calling; for this were you created, for this were you fenced with dignities and endowments, needful protections against the disposition which wealth has always shown, when it has not been counteracted by some such state provision, to sacrifice the cultivation of men's higher interests to the pursuit of mere physical enjoyments—for this did our forefathers commit that apparent anomaly of giving to a body of recluses a vote in the management of public affairs. For do not suppose that this arrangement was made because it was foreseen that questions would come once in a quarter of a century before Parliament remotely relating to the laws and discipline of your University, and which it would require some representative specially acquainted with its constitution to expound. Our ancestors were not such refined calculators, nor did they hold the elective franchise so cheap that they would grant it for an end which a lawyer hired for the occasion would accomplish as well, nor forget so easily what were the peculiar objects for which they had established institutions for education that they would in mere sport turn them from their appropriate functions to another and a vulgarer one. No, it was for a very different reason that they placed this power in your hands. They felt that, however wisely they had contrived the system of parliamentary representation to express the total mind of the country, nevertheless, the House of Commons would fail to express it—not merely from defects in its constitution, not merely from feelings then unknown growing up in the country—but also because that which should

be a concentrated national mind would be too often split into fragments, parcelled out amidst guilds, corporations, and factions, and therefore incapable of making itself heard through any one clear and harmonious voice. They knew not how to avert the evil which they beheld from afar; but, perhaps, they might discover a partial remedy for it. It was indeed to be expected that in a Legislature which was occupied by fifty conflicting interests, each fighting for a predominance to which none was entitled, there could be few broad views, little statesmanlike policy. But could not an infusion of the lacking virtue be introduced from some other quarter? Was there no one interest in the state which even a superficial mistaken estimate of its nature could not set in factious opposition to other interests—one which would naturally and necessarily seek a representative for it in that very class from which none of the other interests could ever seek theirs—one, consequently, which would be the means of sending to Parliament the best supporter of that which is the true concern of the whole state, the best counterworker against those plots and conspiracies which have for their end the establishment of some petty despotism within it? That interest they believed was the one of which you are the protectors. If in the majority of towns and counties, men were selected not for their general wisdom, but for their empirical knowledge of some one subject, or for their interested care for that above all others, this could never happen to you. Your subject was the whole field of human wisdom, and there was nothing to determine you in a preference for any one corner of it, except that the pasture there was greener and more nourishing. Elsewhere, it was an act of virtue, an instance of resistance to the selfish tendencies of human nature scarcely to be expected from ordinary bodies, if a man should be elected who had more concern about the whole nation than about the plot of ground which returned him. But you—though from learned and godly men a sacrifice might naturally be looked for, which could not be expected at the hands of the ignorant, yet no sacrifice is required—you have to select with reference to your own proper vocation, and you will select the most desirably for your country. Among others it may be an excuse for choosing a mere mouth-piece for their own narrow feelings, that they understand his qualifications, but are not competent to pronounce upon those which would fit him for the legislator of a whole people. But only by stultifying yourselves, only by denying that you are fit men to have any influence over a school of learning, could you plead that other merits are more intelligible to you than those which entitle a man to the rank of a philosopher; that it is easier for you to know whether he is a clever lawyer or political trader, than whether he understands what constitutes a state, how it is to be governed, and how defended.

This, Gentlemen, must have been the intention of your ancestors, when they conferred on you the right which you are so soon to exercise. Two representatives would surely have been enough for the very paltry market-town in which your colleges are placed, if it had not been believed that the choice of the worshipful body of Aldermen who preside over its affairs would be somewhat different in kind from that which would be made by the members of learned and religious foundations.

Each class they thought would choose persons, if not of their own class, at least whose understandings approached their own calibre;* and those ancient persons had no fear that in doing so, the University would select men who were too philosophical to be good statesmen. They had no notion that a man was the less likely to be prac-

* Lest we should be supposed to mean any insult to the present members for the town of Cambridge, it may be as well to mention that his Grace of Rutland, and not the Aldermen of the borough, elects the representatives at present.

tical, because he had spent that time in studying history, which others spend in making out accounts or drawing pleas. In the simplicity of their hearts, they fancied that the business of a philosopher is quite as favourable to the acquirement of clear and steady views of mankind, as even that of an inmate of a public office; and that the *horæ subsecivæ* of the former are likely to be almost as well employed in strengthening and improving their views by personal experience. They believed, such was their rudeness and simplicity, that clerkly men in the sense in which Sir Thomas More and Lord Bacon were such, might govern empires nearly as well as a clerkly man in the sense in which Mr. Herries deserves that appellation. And even if they had deemed it quite impossible for a philosopher to acquire the knowledge of routine which is possessed by those who have no other, they would have yet reflected, that, since in the respectable and powerful class of country gentlemen there is a considerable number who are guiltless both of routine and philosophy, and yet are justly thought worthy of seats in the House, the absence of one merit ought not to work a disqualification which the absence of both does not work. Such arguments, perhaps, ought to have no weight with men of the present age; but, if arguments will not, experience must. We may maintain against the shrill laughter of all antiquity, that a man of routine and a practical man mean the same thing; but we cannot maintain it in despite of our own knowledge and our own suffering. We know that a man of routine and a practical man, instead of being synonymous terms, are as nearly as may be the antipodes of each other. We know that men of routine are a set of huckstering paltry theorists, who have a new expedient for every accident, a new treatment for every paroxysm of the same fever. We know that they are practical in nothing, unless to be practical mean to be undecided, temporising, contradictory; and we know, or we ought to know, that there is but one mode of restoring regularity and practical health to our system, which is to place it under the care of statesmen instead of clerks, of philosophers instead of empirics.

Gentlemen, it was your duty to have given the Legislature, statesmen and philosophers. This obligation was laid upon you from the moment that you obtained the right of sending representatives. It was one of your highest privileges, it was one of your most solemn responsibilities. By discharging this duty, you would have given a test of the sincerity and faithfulness with which you will keep all the other trusts that have been committed to you,—you would have been able to give the best evidence of what men your institutions were capable of rearing—you would have been able to make your voice heard on behalf of principles against the sandy shifting morality and politics of the age—you would have done more good for the country than all the schemes for reforming the constitution of the Legislature, that have ever been devised, for they would make it a more exact expression of the feelings, that is to say of the ignorance, of the country—you would have introduced into it a portion of knowledge and truth. You had every conceivable motive, you had every conceivable facility, for making the experiment. You could not ask, as others, what are two votes among so many, for it was not a question of votes; and two men of genius, or one, you know, are sufficient to shed across a whole generation. You could not urge, as others might do, that it was difficult to make men in a single day for your tasks; for you had them for years in your power—years, each one of which should have contributed to create and fashion them.

I appeal, then, to your consciences, Gentlemen, how has this duty been discharged? Whom have you, the guardians of the intelligence of England, commissioned to defend its interests? What philosophers have you called from their lonely cells to speak openly the truths which they have been

meditating secretly? What have you done to strengthen morality and government and law, by electing men who were competent to expound them as realities to men who regard them as mere names, and to defend them against men who are glad enough to eat of their fruit, while they are undermining the roots? If such men have not been produced, what can be urged in your behalf? Not that they do not exist, for the elements of such characters must always exist; and what, if this were true, could be said for the education which had not nurtured these elements into men? Not that they are too poor to be sent into an assembly, in which wealth and not intelligence is the qualification; for the wants and temptations of such men are not numerous; and if a plain and comfortable provision be all that is required, how is it possible that a university chest, which is easily unlocked whenever it is thought expedient to affront your venerable halls and chapels with the neighbourhood of Mr. Wilkins's lath and plaster, should refuse to furnish the pittance?

Has Cambridge, then, looked for its representatives among such men? Have they not been men seditiously picked from those classes out of which there is all but a certainty that no wisdom, no statesmanship, will arise? Former elections have generally laid, as the present is likely to do, between young scions of noble houses—nurslings of public offices—and lawyers. I speak of classes, not of individuals, and therefore I have a right to say, in spite of any exception that Mr. Cavendish may present to the remark, that strength and maturity of mind, a very profound acquaintance with history, habits of reflection, catholicism of feeling, and, what is equally necessary with any of these gifts, and necessary to most of them, an extensive acquaintance with literature,—are not generally to be expected from those gentlemen among the Aristocracy who have not yet attained the age of twenty-three years. I speak of classes, not of individuals; and therefore I will not be deterred by any scintillations of genius which may have appeared in Mr. Bankes, from affirming that the strongest thinking, the most enlarged habits of mind, do not form the characteristic features of men who have been trained to be Under-Secretaries. I speak of classes and not of individuals; and, therefore, however false the proposition may be in the case of Mr. Alderson, I will not suppress my conviction, that a very high sense of moral dignity, an open English tone of feeling, a courageous embracing intellect, can be sought for in few places more hopelessly than among Barristers.

And yet it is from this last class—this class of lawyers, this class which the worldly declaim against as too worldly, which the unprincipled shrink away from as too heedless of principle, which in its own catalogue of its own virtues inscribes the trick of rising to the top of the profession as the highest,—it is from this class that you are most proud to select your representatives; it is the men of this class whom you send to support intellect and morality; these are your statesmen and philosophers!

I have much more to say upon this subject, but my letter has already run to a greater length than I intended; I will, therefore, add but one word more, not—be not afraid, Gentlemen—for the purpose of exploring the motives which have led to the conduct I have been exposing, but to point out the effect which it has produced in frustrating the other objects for which you exist as a University. You cannot suppose that your example can be without effect upon the younger members of your body, or that the marked preference in your mind for certain intellectual qualities and dispositions can be without a counterpart in theirs. Already has this effect become most painfully manifest. They see how you dispose of your honours; they feel what a low, cringing reverence science and literature pay to the talent for setting on in the world, and to all who possess

it; they hear you defending your institutions not by citing the instances so numerous in your earlier history of *MEN*—great *MEN* who have been nurtured in your school—Bacon, Miltons, Cudworths; but appealing, Oh shame! as the best witnesses of its good effect, to the men, who, having first received honours in your University, have afterwards scrambled upon the necks of attorneys or by clinging to the skirt of some patron, to honours in the world—they hear too these boasted luminaries themselves, who at your commemoration dinners, profess that they owe every thing to the University—in other companies sneering at your institutions, and declaring, with a wink, that it was to no mathematical or classical knowledge that they owed their 10,000*l.* (a declaration which the Cudworths and the Barrows would have felt to be a consolation, though not an acquittal, to their consciences)—they hear all this and what follows? What can follow but that they act upon the principle which by your words and deeds you have recommended—consider success in the world as the only end of life—scout knowledge, except so far as it is desirable to this end—and pursue it only so far as with their weak eyes they can see that it is desirable for this end—consequently neglect the studies of the University, and pursue any dissipation, however ruinous, instead of it,—and, finally, go forth into the world, making your system an excuse for all the crimes which they choose to commit; and, though effecting nothing by their words, yet by the evidence of their lives, proving, that by some means or other,—whether through the fault of the institutions or of those who administer them men do not trouble themselves to inquire,—bad principles are sown, and brought into maturity, in institutions for the promotion of sound learning and religious instruction. Gentlemen! are your institutions answerable for this?

I am, Gentlemen, your obedient humble servant,

L.

THE DREAM OF THE WEST WIND.

WEARIED with roaming woods and leas,
He came on trembling wings from far,
And calmly sank that western breeze
In glimmering cave of gem-like spar.
His pinions, wove of light and dew,
Lay like the veil a queen has worn,
On greenest moss where gently grew
Flowers that had never seen the morn.
His breathing filled the cell with air,
A whispering charm, a tranquil joy;
And a lone spring sang softly there,
And kissed and cooled the dreaming boy.
His brow was like the clearest cloud
That e'er made soft a star of June;
And thither swarmed a silent crowd
Of thoughts, like elves around the moon.
He dreamed of that far western wood
When first he woke amid the dawn,
Ere man had broke the solitude,
Or sprites had all from earth withdrawn.
And then he dreamed how forth he sprang
A warrior child on rushing wings,
While with his speed the forest rang,
As to the winter's shouts it rings.
Again he felt his onward sweep,
As in that first triumphant pride,
Again he coursed in vision deep
The rolling sea, the grey, the wide.
He dreamed that early fisher's boat
Was sinking at his blast again;
And wailing round him seemed to float,
Breathed from the dim engulfing main.
But now there came a thousand dreams
Of all the gay, the sweet, the wild,
Whate'er delight with heavenly gleams
Had fed the West's enchanted child.
He thought on all he e'er had stolen,
Of scents, and smiles, and marmoured pleasures,
Despoiling flowers with gladness swollen,
And rifling nature's subtle treasures.

Last in his slumbering fancy showed
The fairest vision of them all,
The loveliest maid that e'er abode
A woodland Nymph, in leafy hall.

Her hair like sunshine round her hung,
Her brow was smooth as pearly shell,
Her eyes with laughing life were young,
Her whisper chimed like festal bell.

The sleeper woke; 'twas now the hour
When he was wont to seek the isle,
Where in her green and lonely bower
She wove her web, and sang the while.

The dreamer, like a shining mist,
Rose from the moss, and swam in air,
And, deftly poised as him might list,
Danced for a moment glittering there.

Then like a bird upon the wing,
A bird of heaven, away he bore,
Cleaving the skies, a cherub thing,
To reach that islet's haunted shore.

There the bright wanderer of the world
Would sink from flight, and find his nest,
And with his silken pinions furled,
Sleep on a soft and heaving breast.

THE NEW HALL AT CHRIST'S HOSPITAL.

THE ceremony which took place on Friday last, on occasion of the solemn opening of the New Hall at Christ's Hospital, has been fully reported by the Daily Papers, to which, in truth, the relation of these and similar proceedings belongs much more properly than to a journal such as ours. For this reason, we shall treat all further notice of that event as superfluous, and proceed, without other preface, to make a few observations on the architecture of the new edifice.

We have no hesitation in expressing, at the very outset of our remarks, the satisfaction we derived from perceiving in this building, at the first and slightest glance, an exception in a very important point to the generality of modern erections. The far greater number of these, be they public or private, have a common fault; namely, the absence of all evidence of the true feeling and character of the style which the architect professes to adopt in his design. In the numerous and unfortunate—attempts to bring Greek architecture into vogue, this fault seems to be pretty universally felt and acknowledged; and the perception of it has produced a re-action against the application of the style itself. The same is the case with regard to the instances in which Old English architecture has been the professed model of imitation, however strange it may appear that Englishmen should not be able to employ with success a style peculiarly and emphatically said to be their own, and however distant may be the period at which the persuasion of this incapacity will be as general as is the conviction of the abortive results of the attempts to adopt the style of the Greeks. Here and there, indeed, there occurs an instance of the adaptation of old English architecture, to which this censure would not apply. The improvements at Windsor, the St. Peter's Church at Brighton, and one or two of the new churches in the neighbourhood of town, may be referred to as worthy of exemption from the reproach; but the catalogue of such honourable exceptions would be but a short one. Were it to be made, the building now under our particular attention would certainly deserve to hold in it a distinguished place.

In the design of the New Hall, the architect has very judiciously had an eye to the period of the foundation of the Institution, and with equal taste as regards the choice of a style, and judgment as regards its reference to the period with which it is associated, has adopted the description of architecture which prevailed about the time of Edward VI. The palace at Hampton Court seems to have furnished the model after which many of the most important details, the windows, the pinnacles, and the chimneys, have been fashioned.

The general effect of the exterior, with its

repetition of bold projecting buttresses, is noble. The most striking characters are, simplicity and beauty of proportion, two qualities sufficient of themselves to entitle the building to be pronounced a good one. The cloister which composes the basement, by the deep masses of shadow formed in its recesses, contributes immensely to the general effect of the entire edifice. The arrangement of the windows is in perfect accordance with the character of the building and style of the architecture, of the simplicity and grandeur of which it abundantly partakes. The polygonal towers form a graceful termination, but would have produced, we think, a better picturesque effect, and have afforded a more decided boundary to the building, had they been more lofty; the battlement, with its pinnacles, gives a beautiful and varied finish to the elevation. The minor details are, generally speaking, beautiful, and show the result of careful study; but there are some dissonant parts: in the enrichment, for instance, over the arches of the cloisters, in the manner in which the labels over the large windows terminate running on to lose themselves in the buttresses, and in the carved work, or corbels, under the small pinnacles over the centre of the windows, the style which pervades the general design has not been preserved with sufficient strictness.

These animadversions on the exterior lead naturally to the conclusion, that the general effect of this building displays a nice and true feeling of the character of the style adopted: in respect to the details, similar praise cannot be bestowed but with qualification.

The southern side of the Hall, which is that which we have been engaged in noticing, is the only part of the edifice on which it has been considered advisable to bestow architectural embellishments. The northern side, and the ends, are plainly executed in brick-work; and, we conclude, will be concealed by other portions of the Hospital.

The open arcade or cloister, which forms the pierced basement to the building, is admirably adapted for the purposes of the establishment forming a sheltered place of exercise for the boys. In an architectural point of view, the general effect within the cloister is agreeable; at the same time, it is open to the objection, that it is not Gothic or old English. The series of very flat pendentive domes which, in the vaulting, are substituted for the groining usual in Gothic cloisters, are more Italian than English in form. The domes are beautifully executed in brickwork.* The ribs which separate the domes are harsh; they would have been less faulty had the angles been splayed. The key-stone, sculptured with the Blue-school cap and belt, and the trencher and bowl represented on the key-stone of the spacious vaulting of the kitchen, are pleasant, ingenious, and by no means inappropriate attempts at those symbolical conceits which our old monkish architects so much delighted in.

So much for the exterior design. On entering the building and advancing to the principal staircase, the expectation receives an unexpected shock. This with the vestibule, where the opportunity was afforded of producing great and delightful effect, is altogether a failure: it is bald and devoid of character. Advancing to the hall, however, the disappointment is forgotten. Here again the general effect is admirable. The vast dimensions, the grand proportions, and the simplicity of the arrangements, renders this one of the finest in Europe, and, as regards rooms of the kind in this country, second only, though at a wide distance to Westminster Hall.

The two small windows at the eastern end are not in accordance with the rest of the Hall; the old painted glass with which they are glazed, fine

* The manner in which these domes are turned was first introduced into this country, if we mistake not, by Messrs. Strutt of Derby.

as it is, has too powerful an effect, and puts the principal windows to shame for their own poverty and nakedness. It would be a satisfaction to know, that the quantity of fine old stained glass already used has not exhausted the entire treasure in this description of ornamental material possessed by this establishment, and that more remains behind, to be hereafter employed in the embellishment of this grand room. A little more of the carved wood-work, such as that which adorns the pulpit, might be appropriated with very happy effect.

The fittings up and finishing of the interior of the room,—the pendants of the ceiling, the galleries, the screen, the inclosures, the seats on the dais, and even the inscription and benefaction boards, are not worthy of the magnificence of the rooms itself. Without presenting any fault glaringly offensive, they fail, because we miss in them true spirit of old English architecture; they bear not that stamp of study and of intimacy with the character with which it is proposed to invest them, which are observable in the general effect. The choice of the lamps we throw on the shoulders of the Furnishing Committee: we could not for a moment suspect the architect to whom we are indebted for the general design of this noble edifice, of having had any concern in the selection of them.

Verrio's magnificent and gigantic painting is admirably adapted for the room. That by Holbein, and the assurance that it is by him, excite a regret that it is not in a better light.

The kitchen, which runs through the area and the basement stories, is superb. The fine gigantic piers, in single blocks of stone, which support the double range of vaultings, carry us far backward beyond the times of our Gothic forefathers to the days of the hardy workmen of Cyclopean walls.

In respect to the construction of this building, we know of no edifice, in these 'degenerate days,' by which it is surpassed. The front of the cloister deserves especial notice. This is built of blocks of Haytor granite, of massive and noble dimensions,—a particular, in which departure from the manner of the architects who flourished during the reign of the founder, may be freely pardoned. The cornice and enrichment immediately above should have been in the same material. Expense has not been spared in other parts of the building, nor should it have been considered in this. The superstructure is in Portland stone. In the liberality with which all expense necessary to give full scope to the reasonable views of the architect and to make the building complete, as in many other respects, this fabric forms an example for all public works.

We trust we shall not appear over fastidious in the animadversions which, in the conscientious performance of the duties of impartial criticism, we have made on the slight defects observable in this edifice. On the whole, it gives us great satisfaction, that with the same scrupulous regard to strict justice—the measure by which all works of merit aspire to be judged—we can conclude with applauding the New Hall of Christ's Hospital, as one of the finest of all modern Gothic buildings, and as a work which does not shrink from comparison with many of the finest old Halls at the Universities of Oxford and Cambridge.

EXHIBITION OF DRAWINGS BY TURNER.

THE Proprietor of the Drawings made by Mr. Turner, for the work 'England and Wales,' now in a course of publication, has formed them into a gallery for the purpose of gratuitous exhibition at the Egyptian Hall, Piccadilly. We were at the private view yesterday, but too late to allow of our doing more at present than to pronounce the Exhibition one of the most interesting, elegant, and delightful we have ever visited. The drawings are splendid specimens of taste and execution, and, collected and hung together as they are here, produce an effect beyond expectation brilliant and beautiful. Two or three views in Italy, the commencement of a work of Italian views after drawings by Mr. Turner, form part of the collection. We propose to notice them in detail in our next Number.

THE LAST THREE DAYS OF A SUICIDE.

(Translated for 'The Athenæum'.)

THE French Journals have related the deplorable event which occurred at Montmorency on the 29th of April last. Two lovers,—a young man of twenty-one years, Sub-editor of the Journal 'Le Voleur,' and a dress-maker much younger,—yielding to the influence of a consuming passion, put an end to their lives in the most shocking and tragic manner.

Young D—— determined, before death, to draw up a recital of the causes which led to it, and to describe the sensations that had agitated him from the period when he formed the fatal resolution to the last moment of his life. This sad recital we now lay before our readers. It was addressed to the office of 'Le Voleur,' with a letter under cover, bearing the post-office mark of 'Enghien, 29th April at noon,' which contained an earnest request that this might be published as a preventive to the conjectures which the dreadful event would call forth.

'The title of my book will be original, "The last Three Days of a Suicide;" it will have no preface, and will be short; for, in very truth, I have but three days to write it in, a part of which must be devoted to duties which I will fulfil to my latest moment. It will be interesting—I am at once its hero and its author.

'Yesterday, Thursday, April 23, I resolved to die; and on Monday the 27th of the same month, I intend to put that resolve in execution.

'In tracing the last three days of my life, I do not wish to transfer to my readers the *ennui* which has always oppressed myself. My heart was continually the prey of that vulture, which never leaves its victim; it passed with me from the arms of one woman to those of another—But I anticipate.

'I married Mademoiselle P——, after an eight months' courtship. She was formed to make me happy, had not that horrible *ennui*, or rather my romantic imagination, rendered me incapable of enjoyment.

'A very particular friend of mine had for some time been used to speak to me of a dressmaker, young, pretty, sensible, and sprightly; in fact, he said so much about her, that I conceived a great desire to behold the little phenomenon. I obtained other directions, and, the first Monday in December, I laid wait for Laura, who had spent the Sunday with her friends. I had scarcely been in attendance a quarter of an hour, when I saw tripping gaily along a young female, whom, by her lively mien and white veil, I knew to be my modiste. I will sketch her portrait; every body does not know her, and no one will be sorry to learn something of a woman who could inspire a passion like that which still devours my poor friend, and which burns this very moment in my own bosom.

'Laura is a very little girl, between seventeen and eighteen;—there is never any certainty about a woman's age;—her complexion is neither pale nor fresh: it has a slight tint of brown given it by the sun of Italy, where she lived some time. Her chestnut locks float at will and appear almost always neglected; her blue eyes are rather lively than beautiful, some think them roguish; her chin is pretty; her mouth small and particularly ravishing; but she can give it, if she will, an expression of disdain which deters and annihilates. She does not seem to have received a first-rate education; but she expresses herself with ease and correctness. Her letters have the form and tone of romance: she is witty and wonderfully shrewd. With boundless gaiety she unites, in order to make herself indispensable to her acquaintance, the ability to sing in a superior style, which she always does with the most amiable complaisance. Such is the woman for whom, and with whom, I am about to die.

'I had promised my friend to obtain a glimpse of Laura, that I might give him my conscientious opinion; but, I faith, yielding to a spontaneous impulse which even now I cannot explain, I accosted her without knowing what to say next. She was fluttered at the first word: this was the very thing for me: it gave me time to recollect myself and prepare a subject of conversation. As I saw she had determined not to listen to me, I tried to engage her curiosity by representing myself as the friend of A——: I thought even to make her accept my arm. This piece of gallantry was a dead loss. Nothing daunted, I hinted at the

jealousy of A——, and told her, that the poor young man would infallibly have taken his own life, had I not fortunately arrived in time to stay his rash hand. A slight smile, which I saw pass over her lips, told me with whom I had to deal; and, abandoning fine speeches and the moving effects of deep passions, I spoke naturally: she answered rather reservedly, that, as she had given M. A—— no title to herself, she was astonished at his jealous indications, which besides were unfounded, and that she was offended by his unseemly indiscretion. I then protested to her that I was acting on my own responsibility, and that it was only a guess: she did not look as though she believed me. In brief, I conjured her to consider me as a mediator in the event of any quarrel, and thereupon presented my card, which she took out of politeness.

'For eight days, I did not see her. I suffered a wearisome uncertainty, and was planning the means of speaking to her again, when an occasion offered of itself. A—— came, full of sorrow, to tell me that he had observed great coldness in her whom he believed, however, he had interested. "She interprets your timidity," said I, "into slight; give over useless sighs, and go directly to the point." "I dare not," was his reply. "Get an intercessor, then," rejoined I swiftly. "Who?" said he; "you are the only one, Stephane, that could do me this service." I squeezed him affectionately by the hand, in token of my devotion; and it was agreed that the next day I should speak to the cruel fair. Reproach and indignation were the result of the interview; and the same day I ventured a letter, in which ostensibly I pleaded the cause of A——, but which, at bottom, was only to serve myself. It ended nearly as follows: "If A—— loved you less, he might rest satisfied with the title of friend." Here followed a parallel between the friend and the lover, entirely to the advantage of the former; and then I said:

"If love should ever prove unkind,
I'll help thee all his wrath to meet;
Or if he come with hand inclined
To scatter flowers beneath thy feet,
My heart with joy will then overflow:
Yes, Laura, from this hour depend,
Come shine or shower, come weal or woe,
On me as on a constant friend."

'I wrote with conviction: but time grows short, and I must hasten forward. This letter was followed by many others, which ended in her reply. Assignations were made and accepted.

'A—— learnt all, and wrote to me that I was a scoundrel. I went to see him, and succeeded in persuading him that he was wrong. This reconciliation displeased Laura, who thought she saw in it the proof of what she endeavoured to persuade herself; namely, that we were in league to amuse ourselves at her expense. She entreated me to leave her to herself. I was disobedient, and she did me the justice I deserved. My rival, whom I cannot censure, assisted by a coterie of modistes, formed against me, struck his last blow: he made my delicate friend acquainted with the disorder she was going to introduce into my house, and I was a second time dismissed. But how little does the voice of reason avail against that of love! She trampled underfoot all human considerations, and after six weeks of sentimental walks, made me happy—or, as I should rather have said, completed my misery. I saw her too seldom for the impatience of my desires, and in a moment of despair, I wrote the following:

"Come let us die! Our love's deep thirst
The arid earth may ne'er supply;
But death the envious bar will burst,
With which our path in time is curst."

Come let us die!

"Come let us die! Reveals the tomb
A better life in yon dark sky:
With laughing loves I see it bloom;
Hark! hope re-echoes through the gloom,"

Come let us die!

"Come let us die! For though again
We there should be condemn'd to sigh;
Yet will we count it richest gain,
That we shall share each other's pain."

Come let us die!"

'To this she made me no reply, and I myself forgot a design which, however, as it afterwards recurred to me, was my sole resource.

'My wife was kept in entire ignorance; (I suppose she will not know of my infidelity till she hears of my death;) but I shuddered at the idea of the pain she would feel in the certainty of having been betrayed. I considered this the instant of my guilt and that of my mistress; for if I cherished Pauline too much to determine willfully to cause her pain, I idolized Laura to such a degree, that I could not resolve, by death, to set aside the fear that she might become another's.

'We revived the subject of death; and never, I

swear, was a question, apparently so serious, discussed in so unconcerned a style. In fine, on Tuesday, the 21st, I received a letter, of which the following is a faithful copy:

"The prospect of the future terrifies me: if thou lovest me, thou wilt not hesitate. I hate life: I see nothing but torment. To live apart from thee is impossible: I should always be the prey of inquietude and weariness.

"On therefore—death for me! I contemplate it with secret joy. What should I have to regret? My parents? They will prefer my death to the knowledge of my shame! If there be any thing in the world you would regret, remain.

"I will not complain, and I shall have courage enough to rid myself of a life which is insupportable. I have considered well. I cannot be happy but with thee. All is opposed to my happiness. I will die. Answer me concerning it. Thy friend,

"LAURA."

'My reply was short: "Thou knowest my resolve, to follow thee every where: it is unchangeable."

'However, I must confess I paid no great attention to what I wrote, though I knew Laura had a character that was firm and capable of executing whatever she proposed, if only out of self-esteem. I was to see her on Thursday morning, and I thought no more about it.

'It is Friday midnight when I close this kind of historical summary. I will now carry back the reader to the moment when my resolution of murder and suicide was irrevocably taken. I will add no varnish, but be true rather than brilliant.

'I will begin by drawing my own portrait, part of which I transcribe from a passport which I received about a year ago:

"Aged 20, stature 81 centimetres, hair black, forehead middling, eye-brows black, eyes grey, nose middling, mouth middling, beard brown, chin round, face oval, complexion clear." These materials would compose a handsome lad enough; and I venture to flatter myself I am not amiss. Some slight alterations are necessary to adapt this portrait to the time present.

'I am now 21; my height is about five feet nine. To make myself cognisable to every body, I will observe, that, although rather slender for my height, my bodily strength is astonishing, particularly within the last eight or ten months, my address and vivacity such as acknowledge none but very powerful obstacles, and my vigour so great that I can contend with a horse for swiftness and for length of way. I have a look of goodness and mildness which deceives every body. My eyes are expressive, and my hair singularly beautiful. My smile would be agreeable, if it were not always spoiled by an expression of severe scorn. Such is my outside; would to God that within I had been as fair! I am vile, passionate, with a choler that breaks out in fury and rage; I defy the most intrepid man to calm me by reason when the demon is completely raised. My eyes, red as blood, appear as if starting from their sockets; my face becomes horribly livid; my long locks stand on end; and a kind of whitish foam issues from my quivering lips. Whenever I fall into this condition, I am sure for four or five days to have a slow fever. My character is proud, and made up of self-love; and I delight in counterplot. By flattery you may turn me as you will. For my revenge, I could do any thing. Prejudice and fear have no power over me. To counterbalance these defects, I have a few feeble good points—complaisance, generosity, and goodness of heart.

'Thursday, April 23.

'At six in the morning, I was in the Rue d'Hanover; Laura did not keep me waiting. She appeared as though she had not slept: but she was quite cheerful. When she came up, I was smoking a cigar, which I hastily threw down: "The smell of a pipe," says Charlet, "annoys a woman." "Heavens! what charming gaiety!" "Ah! you are here!" "Yes, hast thou any good news for me? "Certainly—I die on Monday." "Without me?" "That would be my only disappointment." "Thou shalt die content—on Monday!" In the same moment a slight mist spread over my sight: objects appeared to be placed at a great distance—every thing wore an aspect of stupidity—I looked with pity on men eagerly running to their affairs.

"Thou lookest sad," said Laura after a moment's silence." "Me! quite the reverse," I replied, endeavouring to smile. Two or three jests which I found occasion to throw off, gave me a real gaiety, in which Laura appeared to share; and, as we passed a battalion of the Royal Guards, she said, "Shall we remain on earth and beat the drum?" pointing at two of those machines which fatigued me with their monotonous

din. The tone in which she made this exclamation, heightened our mutual hilarity. "So you quit life without regret?" said I. "Yes." "Without fear?" "Yes." "Hell!" "I don't believe in such a place; on death, the entire being returns to nothing. What dost thou think will become of thee?" "My love, I expect to return to earth." "I understand—thou believest in the Metempsychosis!" "No, not precisely; that supposes the migration of the soul of man into the body of some animal; but, in my opinion, it must pass into some other man. I compare this world to a theatre, where, in a grand spectacle, the performers change their dresses in the wings, afterwards to replace their companions, who, with the same preparation, will return to replace them—that is to say, I believe the earth always contains the same number of inhabitants; that while the population increases in one part of the globe, war, pestilence, or some other scourge, depopulates in proportion the opposite countries. The earth is the womb in which we are re-formed and renewed. Every thing comes from her, every thing returns to her; and each living being, in eating her productions, feeds on the body of its similar, which Nature has made it her law to re-produce." "My love!" interrupted Laura, "this is too serious—let us talk of something else." "Willingly." "How shall we die?" "I will kill thee first; and then I will turn against myself the arm that has wounded thee." "Art thou sure thou wilt not fail me?" "Be assured, my hand will not tremble." "If you draw a pistol on me, only let it not be at my head; I don't wish to be disfigured." "Oh, you coquette! Well! I will aim it at thy heart."

"At this stage of our conversation, we met a nursemaid carefully leading a very little infant. "What is the use of all this care?" said Laura with a sigh; "arrived at our age, perhaps it will imitate us: good parents, you will have laboured only for your own distress;" and she fell into a profound reverie. "No," she resumed, rousing herself, "no, I will not write directly to my father, the intelligence would kill him: I will address the letter to one of his friends, who will use discretion in making him aware of what has happened."

"We were still talking of the uneasiness that our absence would occasion, and of the means to be used for avoiding suspicion and putting conjecture at fault, when we arrived at the end of our walk. "On Monday!" said Laura, reluctantly leaving me; "I will write thee to-morrow evening." I followed her with my eyes, as far as the Rue Louis le Grand, when, signing me an adieu, she seemed to repeat—on Monday! She disappeared, and I remained as in a desert. It was my breakfast time, but I felt no appetite: I therefore went to my office; when, on M. B— inquiring after my health, I could not prevent a smile.

"The image of my good aunt now occurred to me; I could not hide from myself the pain my death would give her, aggravated, as it would be, by murder and suicide. The remembrance of her acts of kindness lay like a heap of iron on my heart. I made an excuse for going out, and it was time; for I was choking; but the air restored me. Suddenly, I conceived the plan of writing down all that I felt, and went with eagerness to the task. My sensations of sadness disappeared, and the arrival of M. C— put me in perfect good humour—that man's originality always amused me. With twenty interruptions, I wrote till four o'clock, when I left the office to join my wife. On the way, my ideas and reflections were muddy and confused. I felt nothing distinct or fixed. A beggar asked an alms, and I gave him a small piece of money, after which I felt more easy.

"Pauline," I exclaimed, as I entered the house, "I set out on a journey on Monday." "What!" "Don't alarm thyself—only for a day, and with an excellent purpose—I have got a situation!" "Lucrative?" "Six thousand francs at least, by report." "Nonsense! thou wouldst be more gay if it were true." (It seems I did not look so joyous as I endeavoured to do.) "It is most true!" "And have you got it honourably?" "I would not have accepted it otherwise." "God! how glad my father and mother will be! I shall keep the purse, shan't I?" "It shall be entirely at thy disposal." (She then mentioned several things which she would buy.) "Five hundred francs a month, without reckoning thy own property! We shall easily save something. We will have a little girl, like our Stephanie; and perhaps we shall be able to keep her." The words went like a dagger to my heart. "Pauline! we will stop there; say nothing more about it!" Dinner was served, but I ate very little. At half-past six I fell asleep with my head on the table, though I seldom go to bed before midnight. "People don't sleep before their wives, when they have been the whole day from home," said Pauline, waking

me. "Thou hast interrupted a singular dream: I thought thou wast a widow, and wast going to be married." This was false; but I wanted to prepare her for the fatal event.

"Oppressed with sleep, I was forced to go to bed. I slept six hours. On getting up, I thought I recollected having dreamt that an unforeseen circumstance had threatened my design the instant I was going to execute it; and, at length, I was satisfied that it was so.

"I wrote till eight. At ten, I was at the office alone, and engrossed by the idea of death, which now presented itself to me with the vagueness of presentiment, and now with the dread of reality. The following are nearly the thoughts that prevailed in the chaos of my disordered imagination.

"Well, I will die; I must. My wife would soon discover my infidelity, and how could I bear her just reproaches? Yes, I must die. She is young; the child she had by me is dead. Let her be free, and another more reasonable will afford her the happiness which she cannot expect from a character so romantic and extravagant as mine. She loves me, and the facts that accompany my suicide will wound her self-love. But she will forget me. I can die; but why not die alone? Why should I plunge a father into sorrow by snatching a beloved daughter from his bosom? Alas! Laura, thou art willing; and since (forgive this fear) thou mightest give thyself to another—to another, my blood boils! Yes, my love, even if thou wert not forced to marry by thy friends, I know thy heart; it would not long retain my memory. I know the ardour of thy passions. Thou must die! What wouldst thou do here? Marry a man who would cherish thee a few months, and then desert, deceive, or ill-treat thee; labour, endure privations, and be worn with cares, rear children in pain, and for what? To become bad subjects—suicides! Thou must die!

"Oh but that Minister to whom it was represented as highly advantageous that every one should live, had good reason to reply, "I see no necessity for it!" The soldier who goes, comes, halts, eats, sleeps, at the word of a boor who frequently, a few months before, had the command of a yoke of oxen only,—the living puppet whose sole means of existence is extorting a few monotonous sounds from a cracked fiddle,—the mendicant who limps and looks haggard to excite the pity of the rich,—the vagabond whose dinner depends on his meeting with a fool,—the merchant who, weary of a whole day's addition and multiplication, goes from his counting-house to his bed, sleeps, awakes, and returns ever to the same dull round,—the slaves who break stones on the highway for their bread,—how tenaciously they cling to life, the fools!

"M. C— entered opportunely to enliven me: he was humming over *Le Comte Ory* parodied, and I laughed most heartily. M. E— then stepped in, whom I requested to get me tickets for *Les Variétés*, which he did with his wonted readiness. It was the last pleasure I designed for my wife, a miserable compensation for the pain I was so soon to inflict upon her.

"Near the theatre I met Pauline, one of the actresses: her figure pleased me, and I even turned back to admire it again: this was my last touch of that kind.

"Desiring to leave my wife something that might help to make her comfortable, I went to a professional man to inquire the form of a bequest which I wished to make in favour of her: the question surprised him. "What now?" said he. "My dear fellow, I have to fight a duel, and prudence—" "Leave the duel alone, and preserve yourself for your friends." "I must fight, my self-opinion is compromised."

"At the play I was amused with the prolonged laugh it excited in my wife. It simply prevented me from reflecting. On our return, I wrote till one in the morning and slept till six, without either dreams or restlessness to disturb me. I wrote again, and by nine had come to this point of my story.

"In going to business, I began to reflect on my past life. I recollected having formerly had a presentiment (and I have seldom been deceived by presentiments) that I should not die a natural death, which I mentioned to several persons. While thus occupied, the postman brought me the following letter:

"Stephano, it is finished; I am more determined than ever. I have entered on a career too painful to retract. The more I reflect, the more am I convinced that death is our only resource, unless I give thee up. Thou knowest that is impossible: my resolution, therefore, is irrevocable. I feel no regret, though yesterday I wept a good deal, when thinking of my father; but to-day I am firm and resigned. Adieu, dearest friend—Monday at nine! Write to me on Saturday. Think of me,

"LAURA."

"The following is my answer:

"Laura, thou weepst. Canst thou have presumed too much on thy courage? Thou wilt see thy father to-morrow. Defy thy heart. Thou hast determined it; my arrangements are made; my arms are prepared; consider, therefore, that thou canst only choose whether to die by the hand of a lover, or to fall beneath the stroke of an assassin."

"It was not true that my arms were ready; but I immediately prepared to make the purchase, and ran to Lepage's. I was insensible to the sight of the pistols which I selected; but when I handled them, they felt heavy and cold; and, pretending that the price was too great, I went out hastily, more sad than when I came, saying to myself, "I am but twenty; youth and health gild my prospects, and yet I think of death! Yes, I will;—why should I remain longer in the world, pursuing the pleasures it contains? Vain pleasures! They are, alas! incessantly the same; and misery only takes new forms, each more dreadful than its predecessor. No child calls me father: she whose happiness was confided to me, will owe it to the tenderness of her friends, and to union with a man more worthy of her than I. My good aunt herself, consoled, will rejoice at my death, when she reflects, that, in deferring it, I should have compromised the peace and tranquillity of a sensible and virtuous wife, on whom children would, perhaps, have soon appeared to impose, along with the duty of living, the obligation of witnessing their sufferings. But let not those to whom I was dear, forget me quite, if they can recall my name without shame, and without anger! You, especially, the parents of my Pauline, you will think of me! Ah! could you read this heart, long since stung with remorse,—this heart, which, though consumed with a burning passion, still preserves for your child that purity, that sweetness of affection, which her charms and her virtues were made to inspire—you would pity me—you would see that, from the diverse feelings that torment me, I have but one shield—one refuge—Death! Yes, death! thou smilest upon me—thou art lovely: come, haste, I wait thee without fear; stiffen this blind body, the slave of a soul whose passions have made it their sport. Let my soul, freed by thy impending stroke, escape more calm and peaceful from its horrid dungeon! What its future fate may be, concerns me not! What have I to reproach myself withal? This some fools consider an act of cowardice: is it not, on the contrary, the sublime of heroism and courage? He who in the field of slaughter performs feats of valour, may sometimes not be brave: he may only be obeying the dictates of self-love, or the law of self-preservation. He who, on the loss of his fortune, or his wife, yields to despair and dies, may be a coward; but the man who, calmly surveying every thing around him, goes straightway to the tomb; who looks at death beforehand; who outfaces—turns—conquers it, that man is no coward. No; he only wanted the circumstances which make a hero. If I shall have enjoyment in the other world, why delay to quit this, where I am useless and shall soon be a subject of affliction? If I must suffer there, what are twenty or thirty years in the gulph of eternity?"

"At six I was at *Les Variétés*: my dark thoughts were dissipated; and I laughed, with all the world, at the jests of Vernot Mimi Sentbon, and cordially hissed "La Cousine Thérèse." These two duties performed, I went into the Café des Panoramas, where the first person I saw was M. B—. We talked about the new play, and the occurrences of the day: his cousin came up, and joined in the conversation. When we parted, he gave me his hand with much affection, and wished me good-night. At the sound of this friendly adieu, I felt all my nerves contract themselves; and, had I not made a powerful effort to restrain myself, I should have squeezed the blood from his fingers. I went home.

"On Sunday, after a very tranquil night, I ran to the Rue d'Hanover, at the hour when I knew Laura would be going to the house of her parents. I had only time to ask her if her resolution was still the same; and receiving an answer in the affirmative, I left her. I went to a reading-room; and while endeavouring to digest the immense rubbish of the metropolitan journals, I fell asleep. I believe, (God forgive me!) it was over the "Journal des Débats."

"I never passed a more careless evening than that before the day fixed for my crime. A circumstance, singular enough, occurred about six o'clock the same day, when I happened to meet Laura, with her father and two female friends: she appeared in the very extreme of gladness. Again I slept profoundly, and on Monday morning, at six o'clock, I rose and prepared for my pretended journey. I will not attempt to paint

my emotions when Pauline gave me her last kiss, and bade me her last adieu, because I am determined to die without shedding a tear.

'At nine I was in the Passage du Caire. Laura came, and was perfectly calm.

Montmorency, Wednesday, April 20, 1829.

'During the three days that I have been here, I have thought of death only when I looked at the old asylum of Rousseau, and when I asked myself if I could die? Yes, I replied; the tired traveller seeks repose.

'It is now four o'clock: there are two weddings in the apartment under ours, which we have not left since Monday evening. We hear the lazy accompaniments of their much freer joy,—we hear their bursts of noisy mirth, and the heavy-paced sounds of their music,—all which are about to be suddenly suspended by the explosion of death. Come, M. C—! quick! an article! show us the whole tribe of the White Horse running headlong in the direction of the startling sound. Picture the terror of the young couples, to be swiftly chased away by the serene smile of satisfaction; for the untimely interruption of their ball will but bring them sooner into each other's arms. Let no one be surprised at this frivolous vein: it is not feigned. My hand and my look caress with delight the weapon which will soon tear open my breast, when it has pierced Laura's heart, whose own face is now lit up with smiles. Nevertheless, my aunt—Pauline! Paul—Paul—Pauline! Adieu! Adieu!

The first impulse of the editor of 'Le Voleur,' on receiving this fatal communication, was to hasten to Montmorency. A hope remained that the discovery of the last preparations for this deed of blood might have intercepted the dreadful purpose of the writer. This hope deceived his friend to the very last, who, arrived at Montmorency at the inn chosen for the consummation of the tragedy, learnt that no report had been heard. It was not even known whether the two guests were in their chamber, or had gone to take a walk. No one answered to their call, and they forced an entrance. The bed had been placed across the door; and the first sight which, when it was opened, presented itself, was that of the two bodies stretched on the floor and bathed in blood. A handkerchief was tied round the eyes of Laura, whose heart had been transpierced by a ball. After wounding the woman of his love, the miserable man's hand appeared to have become less steady; and in firing at himself he had partly missed his aim, the ball having entered too low; and, in the terrible agonies of death, he had turn himself severely in various parts. It was singular that the two empty pistols were found placed parallel on the table, without a single spot of blood on either. The noise of their explosion had been covered by the boisterous merriment of the wedding-party below.

They had been heard singing together the whole day; and ten minutes or so before the time when it is supposed they had fulfilled their design, they were seen gaily returning from a neighbouring wood, and drawing near to warm themselves at the kitchen fire. 'Come, let us go up,' said Stephane to Laura, who, after seeming to hesitate an instant, replied, without change of countenance, 'Yes, let us go up,' and herself led the way. They had written a letter to the innkeeper, Leduc, expressing their regret that his house should be the scene of their death; that the forest was the place they had first in view; 'but it was cold,' they added, 'our hands trembled, and the fear of failing in our design made us return.' The letter finished by a detailed account of their expenses, a gratuity, and the bequest of Laura's shawl to one of the girls of the inn.

The horror of this dreadful catastrophe is the more difficult to describe, that it has been witnessed; and any further attempt at describing, instead of exaggerating beyond the truth of the facts, would but weaken their impression. Stephane D. was an orphan; Laura had only her father at Paris. This sudden and afflicting event was not communicated to the friends of the two unfortunates till the earth covered their mangled remains, to which the sternest compassion cannot refuse a tear.

THE CURATE.—A TALE.

(Continued from p. 330.)

AND I
Blame not this dispensation. For the high
And holier home, whose glory from afar
Shines on his wanderings like a guiding star,
Hath little which this world of sense can deem
More real than visions of a fever dream;
And good men here must like tired pilgrims creep
In rough paths, else, o'ercome by pleasant sleep,
They might lie down on the way-side, subdued
By songs of birds, and murmuring gales, imbued
'With flower-exhaled scents.' Now pain hath power
To lead men up to virtue, in the hour
Of grief or persecution to make strong
Their lively faith, and from all taint of wrong
To winnow them for heaven. Our tears are vain,
For this, in his worst times of grief and pain,
Was Walter's firm reliance; till it made
Him love his tribulations. In the shade
We now were seated, from the galling rays
Of the hot sun defended; but the praise
I gave my friend moved my meek love to ask
Of his life's story. Since she knew the task
Of calling back long vanish'd memories,
Shadows of youth and manhood, ever is
Filled with sad pleasure; and perchance she thought
That in my tale must somewhat be unwrought
Of my youth's history. I replied,—'This true
And most dear friend from a high lineage drew
A name unspotted, in ancestral worth
Wealthy, and to the dower of his birth
Gave back tenfold. We know not what we gain
Of thought and feeling from the joy or pain
Of infancy; yet surely much that springs
From childish acts, now long-forgotten things,
Informs us still, and through the troubled ways
Of life companions us; making our days
Bright as their dawn was bright; and, when they rose
In darkness, loaded with a storm of woes.
For 'tis the mind within us, by the states
Of past existence moulded, that creates
Its present; all that sense enjoys or fears,
Youth, age, wealth, poverty, e'en joy and tears,
We make e'en as we will from our own light
That burns within, shedding a glory bright
E'en on the meanest things.' Upon the grass
Beyond you, love, look at that broken glass;
'Tis useless; yet the glorious sunbeams blaze
Refracted from it in a thousand rays,
And cause that useless fragment to appear
A burning splendour: so from the high sphere
Of our own soul we send the unchanged day
Which doth the varied shapes of dust array
With all the brightness they possess, transform
Their nature, robing dead things with the warm
And pulsed frame of life, and interfuse
A blank creation with a thousand rainbow hues.
Therefore I think that Walter's gentle mind
Is linked to the rough scenes he hath left behind,
When he found nought but harshness from his kind,
And made a friend of nature; to her love
Rendering all love he felt; on cloud or grove
Bestowing all the affections which he feared
To cast away on men. He had been reared,
E'en from the moment when his life began,
In solitude; his sire was a stern man,
Whose youth hardship had seared; in a fierce strife
With poverty he past his noon of life,
A soldier by the camp made hard and cold,
Till, while far off he toiled for fame and gold,
His hair grew grey. And then some kinsman died,
Some distant, unknown kinsman, scarce allied,
Childless; from India then the soldier came
Amongst us to uphold an honoured name,
The heir of large possessions. Youth was fled,
And youthful hopes, by the wild life he had led
Soon crushed; for through all fortunes in the stead
Of those affections which have strength to stay
Our weary steps fainting on life's rough way,
Pride, and a fierce self-seeking will, had been
The spirit that bore him up. And these, I ween,
May sometimes lend a seeming strength, and steel
Our hearts against such ills as worldlings feel,
Neglect or poverty; but in the hour
Of hought prosperity, such feigned power
Melts from us, and as one in a lone wood
Wandering beighted, thro' the solitude
Of life we rush trembling: the glorious dower
Of natural beauty decks the autumnal bower;
Bough twined with bough, in close embraces, weaves
A living canopy of verdurous leaves;

O'er all his path the starred mosses stray,
And roses perfume all his pleasant way,
Yet this unmeasured wealth of scents and trees
The sad wayfarer knows not: in the breeze
Which wafts the fragrance from the blooms, he hears
Only a dirge, and clothed in darkness fears
The paradise he moves in; did the day,
The day of love shine on us, we should stay
Our course to share the universal pleasure,
And feel the wealth of nature's offered treasure.
This Hardyng could not: he had borne the jeers
Of men he scorned: fierce pride which men's hearts
sears,

Gave scorn for scorn, and made unwilling peers
Of rich and poor: but when broad lands and gold
Became his heritage, his heart was cold
And he ruled harshly: to a strange estate
Coming a stranger worn and desolate,
And there was little which might make him blest
In wealth, or calm his spirit's stern unrest:
His line the peasant knew not: none could tell
Tales of his infancy, his youth: in dell,
In rock and stream he found no friendly place,
No spot which childhood's half-remember'd grace,
Which hardy youthhood, which manhood's stately
prime,

Bound with the feelings of the present time,
And hallowed with the dreams of years gone by.
All these were but dead forms to a dead eye;
He came like one, who with a price of gold
Wins ancient peership: no tradition old
Linking him to the green moss-covered wall,
The copse, the streamlet or the waterfall;
And so he moved in park or gilded hall,
Like to a ghost who haunts a corridor
In the old pile he used to rule of yore.
His neighbours loved him not, for on his brow
Gloom ever sat
That the unhappy man could from the past
Recal few glad remembrances which cast
Forward the shadows of the bygone time,
And paint the future with the hues sublime
Of happiness enjoyed and gratitude.
So ever as he had been, stern and rude
He mingled with his kind.

(To be continued.)

ROYAL INSTITUTION.

ETRUSCAN VASES.

THE fictile vases of the ancients formed the subject of the lecture with which the company were favoured by Mr. Singer, on Friday last. The discourse commenced with an exposition of the misapplication of the name of Etruscan, which in modern times had been given to these vases,—an appellation not justified either by the fact that the use of the vessels originated in Etruria, that it was in that country that they were principally made, or that the greatest number or best of them had been discovered there. The larger proportion and the most curious specimens, it was shown, had been found in the tombs of Sicily; the most splendid and the finest in manufacture had been furnished by the town of Nola in Campania. Very many had been found in Greece: those yielded by the tombs of Athens and Corinth were particularly referred to. To all these the vases which had been found in the country comprised within the limits of ancient Etruria, were inferior in form, material, and workmanship. Whatever grounds there might be for speculation as to the particular signification of the vases, or the meaning of the figures and scenes with which they were ornamented, Mr. Singer treated it as clear from the situations in which they have been met with that they had a very particular reference to the funeral rites. They have been almost uniformly found in tombs, arranged around the body in certain, and, it would seem, in prescribed positions; one being placed between the legs, and another on the chest, while a lamp was occasionally, if not generally, suspended near the crown of the head: others were deposited more negligently about the vault with various articles, such as small figures of the Penates, buckles, and other ornaments, utensils, rings, and egg-shells. The number and splendour of the vessels in a vault varied, there is good reason for concluding, according to the

rank of the deceased: the largest tombs have furnished the vases of the most elegant form.

With regard to the meaning attached to these vases, Mr. Singer inclined to concur in the suggestions of Lanzi and Visconti, grounded on a passage in the 10th Nemean Ode of Pindar, and which had been partially adopted by Mr. Christie, that the most elaborately painted of the vases had been awarded as prizes at the festival of the Panathenæa; after which they were carefully preserved by the victor, and deposited with him in the grave. Not that the use of such vases was confined to those who had been honoured with prizes: the custom, there is no doubt, was common if not universal; and there were a class of painters or artificers whose calling it was to prepare and paint vases for the dead. In proof of this, Mr. Singer quoted a passage from Aristophanes, also cited by Mr. Christie. In the comedy of the *Εκκλησιάζουσαι* a young man, jeering an abandoned woman, and reminding her how near she was to the grave, says,

'But you wretch, I am afraid of that lover of yours.—What lover?—Why, of him the first of artists.—Who is he?—He who paints the *Lecythi* for the dead.'

The use of the *Lecythus* was illustrated by another passage:

'Away you went and left me like a corpse, except that you neither crowned me nor laid upon me the *Lecythus*.'

The scholiast interprets the *Lecythus* to denote both a lamp, and an oil vase from which to fill it.

The reference of the decorated vases to the prizes obtained in the contests at the Panathenæan festival, however correct as far as it goes, is not sufficient to account for the number of vessels of that description which have been discovered; but this difficulty has been most satisfactorily obviated by the Cav. Inghirami,* a distinguished Italian Antiquary, and Mr. Christie, who simultaneously, or at least without communication with one another, have coincided in regarding the scenes figured on the fictile vases as symbolical of the mystic theology of the ancients, and more especially as representing the Eleusinian mysteries.

As to any further use for these vases than as mere honorary testimonies to the merit of the dead, various conjectures have been hazarded. Mr. Millingen has expressed the opinion, that they had contained the wine, oil, and milk, which was poured over the body; and Mr. Singer, speaking in approbation of this suggestion, observed, as in some measure a corroboration of it, that it was the custom to place a vase, containing lustral water, at the door of the house in which lay a corpse.

The earliest vases were plain, composed of simple clay, of which they retained the colour. To these succeeded vases with red or purple ground, having the figures in black; the latest are those of which the figures are red. The specimens which exhibit the greatest variety of colour are the polychromatic vases of *Ægina*, and these are the most rare of all.

In treating of the forms of the vases, Mr. Singer adopted the classification of Mr. Christie, and considered that the larger vases of the ancients had been designed after the capsules of certain plants of the water-lily kind, drawings of which were exhibited, and contrasted with drawings of vases. Four of these were specified, as given by Mr. Christie: The *Nelumbium* of Egypt, approaching to a conical form; the *Nymphaea Lotus* of Egypt, of oblong spheroidal form; the *Nymphaea Alba* of Greece, oblate spheroidal; the *Nurphar Lutea* of Greece, of which the capsule is urceolate. Hence, said Mr. Singer, Mr. Christie has arranged his vases in classes, as *Nelumbioides*, *Loto-ides*, *Nymphæo-ides*, and *Nupharo-ides*. The *pericarpia*, or seed vessels of other plants, as of the poppy, and pomegranate, are to be traced in the forms of others, and especially of the smaller vases of the ancients, and in the spe-

cimens of *crepundia*, or children's baubles of diminutive pottery.

Mr. Singer, in addition to the classification of the vases of the ancients, after their forms, suggested the propriety of arranging them according to the subjects which their embellishments represented; as for example: 1st Class, those which alluded to the gods, their loves, &c. 2. Those which commemorated heroes and their exploits. 3. Dionysiacs, a particular class, representing bacchical scenes and processions. 4. The vases illustrating events of civil life, marriages, and births. 5. Those containing subjects which related to funeral rites. 6. Gymnasiac, or having reference to public games. 7. Such as alluded to religious mysteries.

In the most ancient vases, it was observed, Dionysiac scenes were the most frequent. The most distinguished for superior style in art, are those on which mythological subjects are treated.

In the course of the lecture, Mr. Singer took occasion to remark on the extraordinary silence of ancient authors on the subject of these fictile vases, but objected to the conclusion which some persons thence had drawn, that they were deemed unworthy of notice, because they were so common, or because they were executed by artists of inferior order. The Romans prized them as relics of antiquity, and were supplied with them from the sepulchres of the ancient Greeks. Strabo was referred to, as mentioning a tomb at Corinth, which supplied a vast number; and at the conclusion of his discourse, Mr. Singer exhibited a specimen of a cylindrical vase, found at Athens, by Dr. Clarke. This relic appeared to be very curiously inscribed, and was adorned with figures which had been considered, (not on very satisfactory grounds, as it appeared to many of the hearers of Mr. Singer,) illustrative of the sculptures of the tympanum of the Parthenon.

After the lecture by Mr. Singer, which was listened to throughout with great interest, and which, on more than one occasion, elicited marked applause, Mr. Faraday announced, that on the following Friday evening, Dr. Clarke would give a narrative of his visit to the summit of Mont Blanc.

The table of the library exhibited various works on vases and other antiquities, and a few vessels of ancient British ware found in excavating for the foundations of West Catherine Docks. Among the other curiosities was a plate,—the original which was suspended from the shelves of the bookcase,—of an historical flag, representing the emigration of the cinnamon peelers of the Island of Ceylon, painted principally in black and red colours on a white ground. The figures and composition called to mind the paintings found in the ancient Egyptian tombs.

THE DIORAMA.

THIS pleasing exhibition has been re-opened with the paintings, 'The Interior of the Church of St. Peter's, at Rome,' and 'The Village of Thiers.' St. Peter's stands first in the 'scheme'; and, as we thence infer, is considered by the proprietors to be the view most likely to be attractive and popular. We are of a different opinion, and shall, therefore, take the liberty of giving nature precedence of art; the more especially, since the landscape comes recommended to us by the clever and well-known pencil of M. Daguerre. Without disparagement, then, to M. Bouton, to his holiness the Pope, or to the manes of any of the Santi Padri, whose bones, now divested of their infallibility, moulder in the sacred vaults of the Vatican, we reverse the order of the catalogue, and give the preference to the 'View of Thiers,' a country village in France, in the department of the Puy de Dome.

This picture presents one of those delightful picturesque scenes peculiar to mountainous districts, in which the wild and desert character, the bare and steep and rugged summits of the elevated regions combine with the beauties of a

milder aspect of nature, with the low murmur of the brook winding through the dell, and with gentle declivities, rendered fertile by the labours, and decked with the dwellings, of man.

The particular subject of the picture now exhibiting has all the peculiar ingredients of the picturesque. In the foreground is a stream confined to its course by a sloping mound of large and massive pebbles, over which the water from a mill-dam above, spreads itself, although scantily, on its way to rejoin the original current. A bridge of steep and awkward ascent, neglected and well nigh in ruins, conducts to the village, and more immediately to a dwelling, of which the eaves widely overhanging afford an excellent opportunity for the light-and-shade effects of the Diorama,—a few scattered huts, the populous part of the hamlet, with small allotments of cultivated land cribbed from the flanks of the mountain, succeed; a rural chapel, to the beauty of which accident and situation have contributed far more than the designs of the architect, is seated higher up in the mountain and overlooms the defile. At this spot, the dark woods begin to clothe the sides of the mountain, rising abruptly to those regions unfavourable to vegetation, where the soaring and barren summits arrest the clouds in their passage.

The scene is well and naturally delineated; the effects of light and shade in the foreground, in the bridge, and in the roof of the cottage more especially, are, as is usual in pictures of this description, quite illusive. The motion of the water, and the rising of the smoke from the cottage, and other tricks by which it is sought, but in vain, to aid the effect of the drawing, present to the wonder-loving wherewithal to exclaim about.

M. Bouton has been much less successful in his attempt to represent the 'Interior of St. Peter's'; the impression made on the mind by that glorious nave and dome in their reality, has nothing in common with the idea which this picture would convey of the proportion and magnificence of the Vatican Temple. We had promised ourselves far better things from the Diorama.

KING'S CONCERT ROOM.

We were present at the Morning Concert of Messrs. De Beriot and Labarre, on Monday. Of Labarre and De Beriot, it is but just to say, that they are undoubtedly the first performers on their respective instruments in England; and probably (with the exception of Paganini on the violin) in the world.

In producing richness of tone from the harp, Labarre is unrivalled: the clearness and delicacy of his piano passages are wonderful; while, under the guidance of his excellent taste, he throws so much variety into his playing, that the attention of his audience never flags. He displays his taste, moreover, in playing fantasias containing pleasing airs, and of a very happy length, so that it is always regretted when he concludes. In an Irish fantasia, which he played on Thursday, he introduced 'St. Patrick's Day in the Morning,' with most delightful effect.

M. De Beriot's performance on this occasion was also admirable. It is not easy to imagine a more perfect command of the violin, actuated by an exquisite feeling, than was displayed by him generally, but more especially in the performance of the first air of his own composition, in his duet with Miss Bissett. That lady exhibited great power on the piano-forte; but the piece was not well chosen, and it went off heavily. The trio, from 'Il Matrimonio Segreto,' was admirably sung by Mademoiselle Blasia, Madame de Vigo, and Madame Malibran, who also sang the duets of 'M'abbraccia,' and 'Ricciardo! che veggo!' with Donzelli. Madame de Vigo gave the very pretty little Spanish air 'Bajelito,' accompanied on the harp by Labarre: Donzelli sang 'Il mio tesoro intanto,' in his very best style, and was deservedly encored. De Regnis makes a great mistake in singing an exceedingly unmeaning, stupid air, which he calls 'Le nouveau tambour,' and in which he introduces some most absurd grimaces, which he greatly errs in considering humorous: he made some amends by singing 'Mentre Francisco,' with Giesebelt, in a very clever manner.

* 'Vasi Fittili.'

THE SPANISH BAZAR.

We hope our readers have been at the Spanish Bazar. We are sure that, if they have, they will not forget the occurrence and its circumstances. We write this, not from any notion of giving them information on the subject, but because we feel inclined to occupy ourselves with a pleasant recollection. And what can be pleasanter or more lively than the spectacle of a score of graceful and well-dressed women busying themselves, many among them with the wild eagerness of country girls, in selling a thousand glittering toys, the price of which was to flow from their hands to the dreary hovels of exiles, and the hearths of squalid want? Englishwomen have often been accused by those who knew little about England, of being deficient in vivacity and spirit. Here was an occasion proper for calling out these qualities; and we will venture to assert, that no Frenchwomen ever were gayer or more brilliant than the ladies who sold their various merchandise at the Spanish Bazar. Reticules, ribbands, scarfs, penknives, handkerchiefs, drawings, toys, baubles, pincushions,—what a heterogeneous assemblage of all that is light, useless, and shining! He who escaped from a wilderness of millinery and its guardian Nymph, came at the next step on a dealer in trinkets and engravings, the amulets of some bright Enchantress. Dare to resist the wiles and spells of these; and you came at once on a sparkling Countess of witty celebrity, commanding you to purchase her original report of a far pleasanter debate than any that ever occurred in the House of Commons. Tell us of the wood-nymphs of Greek Romances, or the damsels of the old pastoral world! There has been more peril to the fancy and the purse in the Hanover-square Rooms, than ever lurked in the thickets of mythology, or sported on the banks of any golden river in the fields of antiquity. Yet we envy not the man who left the realm of fairy without feeling that both his spirits and his pockets had been lightened.

LIST OF BOOKS PUBLISHED DURING THE WEEK.
